The great New York paper, the New York Mirror on Saturday, May 13, 1961, in commenting upon the contributions of outstanding Americans of Italian ancestry, wrote a life story of Dr. Sammartino. In that article, the feature writers, Ara Piastro and Harry Altshuler, describe the manner in which the dream of Dr. Sammartino became a great university. On one occasion I attended a ceremony at Fairleigh Dickinson University, at which the young ladies who were about to graduate made their debut before the parents, public officials, and outstanding citizens. It was a thrilling experience and one in which I shall never forget. I believe that the article in the New York Mirror would prove of interest to the readers and will demonstrate how one man can make his imprint upon Americans seeking higher education and can prove an inspiration to those who desire enlightenment and educational opportunities.

The article follows:

HIS DREAM BECOMES A GREAT UNIVERSITY

(What makes a community a good place to live in, what makes a nation great? People—the devoted ones, the dedicated ones whose lives stand as shining examples to the rest of us. It's high time to recognize, among these builders of our civilization, the many and notable contributions of citizens of Italian birth or descent. Here is the seventh article of a new Mirror series about some outstanding members of this group.)

(By Ara Piastro and Harry Altshuler)

Fairleigh Dickinson University began with a haunted house.

It was a handsome but unused 25-room mansion known as "The Castle," in Rutherford, N.J. What haunted it was not a spook, but the thoughts of Dr. Peter Sammartino, who saw it frequently in 1933 when, just across the street, he was courting Sylvia Scaramelli, who became his wife late that year.

"What a wonderful place that would be," he kept thinking, "to start a college."

Dr. Sammartino was associated at the time with New College, part of Columbia University Teachers College. With some other educators, he had conducted a survey of the higher education needs in the Rutherford area. Local high school principals were complaining that many of their better students had to give up plans for college because the colleges were too far away and too expensive.

The house and the idea continued to haunt Dr. Sammartino, but through the

years of the great depression little could be done about it. Finally, late in 1941, he and 16 of the high school principals interested Col. Fairleigh S. Dickinson, head of a surgical appliance concern, who bought "The Castle" and handed it over to them.

On December 3, the New Jersey Board of Higher Education tentatively approved their plan to establish a college. Then came December 7—Pearl Harbor. The following day, the board of higher education met to reconsider. By a single vote, the college plan squeaked through. A year later, Fairleigh Dickinson opened its doors, as a 2-year junior college, with a student body of 59 coeds and 1 lone 4–F.

Currently the university has 14,000 students on three campuses. It has a 4-year college of liberal arts and sciences, it has the only new school of engineering established in this country in the last last decade, a school of business administration, a school of education, a school of dentistry, and a graduate school. Dr. Sammartino has been its president and guiding hand from the beginning.

He was born in New York City on August 15, 1904, one of the two children of Guy and Eva Sammartino. The father had come to this country in 1901, working first as a pastry chef, then as a wholesale dealer in pastry.

Peter attended Stuyvesant High School and City College here, playing piano in an orchestra to help meet his expenses. He did graduate work in education at New York University, taking his master's degree in 1928 and his doctorate in 1931. Interested in teaching French, he topped off his own background with courses at the Sorbonne in Paris.

He taught for several years in New York City schools before going to Columbia's new college, where he was chairman of the language department.

Somehow, he found time in the midst of this busy career to write a number of language textbooks, as well as studies of educational techniques and philosophy, and on the side to pursue such diverse hobbies as golf and folklore.

The phenomenal growth of Fairleigh Dickinson stands as a living monument to his beliefs that a college can "give training in some career field so a student can achieve economic security within a reasonable time after graduation," and at the same time, "give a cultural background of general studies, vital and dynamic, to help a student live a full and successful life."

This his work has accomplished for the community—and its larger meaning to the Nation cannot be overlooked either. That value, Sammartino has written, "is to point out how a region can help meet its higher education needs without recourse to tax funds."

His work is a lesson that has inspired and will continue to inspire teachers as well as students.

Foreign-Made Glass

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to bring to the attention of the Congress a statement written by Mr. Thurman M. Nelson, president of Local No. 5, United Glass and Ceramic Workers of North America, from Shreveport, La. This statement refers to the flood of foreign glass which is being imported into this country.

On March 14, I appeared before the U.S. Tariff Commission, urging that this Commission take immediate action in further curbing the imports of foregn glass made by the low-paid workers in foreign countries at this time. I thought the reception given to me and others by the U.S. Tariff Commission was excellent and I was buoyed up with the thought that the Commission would give the glass people throughout the country a quick decision. Months have gone by since then and no decision has come from the Tariff Commission. In the meantime, conditions in this country in the glass industry have become more acute. Foreign-made glass continues to pour into this country in competition with glass made by American workmen.

Within my own home city of Shreveport, La., there is a large glass factory, owned by Libbey-Owens-Ford. Hundreds of workers are employed in this industry. They are outstanding citizens with reputations for paying their bills, supporting local civic projects, and rearing their families in this community as American citizens should do. I want to join with others who are working toward the reducing of foreign-made glass, in support of these people. They are fine citizens and they should have our active and aggressive support.

Before the glass industry reaches such a point that it may have to close the doors of many of its plants, I make another appeal to the Tariff Commission to make an early decision on the request submitted to it for the reduction of foreign-made glass in competition with our own products.

This statement is as follows:

On March 14, 15, and 16, 1961, the U.S. Tariff Commission held escape clause hearings concerning the imports of window glass from abroad.

Since the imports of window glass ran 425 million square feet in 1959 and approximately 354 million square feet in 1960, the domestic industry finds itself reeling under the impact.

Other than the Libby-Owens-Ford Window Glass Plant in Shreveport, La., a city of some 175,000, there is very little industry as this is an oil and gas center. The glass industry is known as a "family" industry and we have second and third generations of numerous families employed in the Shreveport plant.

This fact in itself illustrates that a glass worker would be very much out of place in any other industrial plant even if Shreveport were an industry city.

We have made a plea to the U.S. Tariff Commission through our international office for relief through the establishment of quotas as outlined in section 7 of the trade agreements legislation. We are therefore very prayerful that this relief will be granted so that this old American industry can continue to be enjoyed by the present workers and the glassworkers of the future.

If the U.S. Tariff Commission recommends relief for our glass industry, we hope and pray that you will give it your most serious consideration.

Respectfully yours,
THURMAN M. NELSON,
President, Local No. 5, United Glass and Ceramic Workers of North America, AFL–CIO.

Uneasy Alliance

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Gaston Coblentz which appeared in the New York Herald Tribune on May 5, 1961. This is the first of Mr. Coblentz' reports from Romania:

BORDER CONTROLS STRINGENT—ROMANIA AND HUNGARY: AN UNEASY ALLIANCE OF TWO COMMUNIST NATIONS

(By Caston Coblentz)

CLUJ, RUMANIA.—Coming from Hungary, the fascinating northern route across Rumania to Bucharest begins near Oradea with one of the most stringent frontier inspections in Europe.

Although the frontier runs between two Communist nations, the Rumanian side is guarded by high wooden watchtowers. Three are visible from the border-crossing point.

The scene somewhat resembles the watchtower network the Hungarian Communists have erected along their common border with neutral Austria some 250 miles farther west.

Rumania is, in a number of respects, a land of still tighter controls than Hungary. It has for example, built watchtowers of the same type at various points along its borders with Yugoslavia and even, in northern Moldavia, as some localities on the long stretch of Rumanian frontier that faces the Soviet Union.

AHEAD OF THE BARRIER

The exhaustive customs check at Oradea starts when a stiff-gestured Rumanian soldier steps athwart the highway to halt approaching cars, a few feet before the Rumanian frontier barrier. The inspection takes place before you are allowed to pass the barrier.

Pactically everything has to be taken out of the car. The inspector's intention seems to be concentrated on preventing letters or political literature from being smuggled in. Virtually every book or pamphet in the baggage is rifled.

Casually but systematically, you are asked whether you speak Rumanian, whether you have relatives in Rumania, and, above all, whether you speak Hungarian.

The latter question is of primary importance in this region, the westernmost portion of Transylvania, where some 1,600,000 Hungarians live under Rumanian rule. Northern Transylvania, long a source of conflict between Hungary and Rumania, was recovered by the Rumanians at the end of World War II.

STILL A SORE SPOT

While territorial issues between Eastern European states are officially stated to have been liquidated by their common Communist allegiance, it is apparent that the Transylvania matter is still alive in many minds in each area.

In Budapest, this correspondent heard Hungarian Communists speak acidly about it. One of them, a man of 50, raised in Oradea, referred to the town exclusively by its Hungarian name, Nagyvarad. In common with his secretary, a woman born in the same area, he bitterly asked a reporter to give the town his best wishes, somewhat in the manner of West Germans speaking of their lost homes in the Polish-ruled Oder-Neisse area.

Moreover, Hungarian Communists complain that the Rumanian Government is exasperatingly slow in granting visas for Hungarians, Communist or otherwise, to visit relatives in Transylvania. It is reported to take a month to 6 weeks to obtain a visitor's visa, if it is granted at all.

NOT HARD FOR WESTERNER

For a Westerner in possession of a visa, the crossing at Oradea is tedious, but not difficult. After about an hour's formalities you are permitted to proceed eastward.

After Oradea the first Rumanian town with any kind of hotel is Cluj. Like every other place in the region, it also has a Hungarian name, Kolozsvar. It is reached over 90 miles of good asphalt road, along which you gain a vivid impression of Rumanian life.

In Oradea, khaki-uniformed Rumanian soldiers sauntering in a nicely kept park give snappy off-duty salutes to officers strolling amid baby carriages and scampering children on a quiet afternoon.

On the eastern outskirts, a militiaman steps into the middle of the road, notes the license numbers of passing cars and writes them down.

A dozen miles farther on, a long string of small covered wagons driven by some of the most poorly clad peasants in southeastern Europe heads slowly in for the Monday morning market.

ROADSIDE PROPAGANDA

Large numbers of billboards begin to appear on the road, at intervals of 200 or 300 yards. It is a far greater concentration of Communist roadside propaganda than is visible in Hungary or Bulgaria. The posters carry monotonous slogans about fulfilling the current 5-year plan. The texts are in print too small for automobile or truck drivers to read in full, and seem intended primarily for the peasant drivers of the thousands of plodding carts that creep along the roads.

While stopping to read a poster, this correspondent was approached by a motorcyclist, a man of about 48. After a preliminary reconnoiter, he explained that he was a Hungarian living in this part of Rumania and he described Transylvania as currently "occupied" by the Rumanians. He soon raised the subject of Cuba. He had heard about it on the radio, he said. How could the United States have possibly failed to help the invading rebels crush Fidel Castro? he asked with a gesture of dismay.

GAYETY AND RAGS

At Urvind, practically every white house fence is painted with red or blue Communist slogans, many of them in Hungarian.

At Grosi, the entire town is out for a stroll. A half dozen peasant girls are dressed in beautiful national costumes, a riot of bright colors richly embroidered on black cloth. Other peasants are literally in rags.

A few miles onward, a factory is topped with the usual red star and decorated with the oldest of Communist slogans: "Proletarians of the World, Unite."

The process of parking a car in a Cluj garage overnight requires filling out a duplicate form that records where you came from and where you are going.

The 150-mile road to Rumania from Budapest, Hungary, leads to Biharkeresztes, a mud-street village in eastern Hungary, flush on the Rumanian border.

As the asphalt highway bears eastward out of Budapest across the plains, the sights along the way show countryside conditions in Hungary 5 years after the Soviet Army's suppression of the 1956 uprising.

WORKERS WITH CARBINES

The first traffic is a six-truck convoy of workers armed with carbines and wearing red armbands. Heading into town for a Communist ceremony in the capital, they form part of the reconstructed factory militia of the Janos Kadar regime and are among the diehard supporters of Hungarian communism, a small minority in the country, now as before. They are extremely hard-faced in appearance, almost brutal.

On the outer edge of Budapest, there is a large Russian Army barracks along the road, topped with a red star. A few Russian soldiers kick a ball in a sloppy courtyard. Soldiers' wives wander around the barracks, and a few children play something resembling basketball. These troops, also visable on the opposite end of town, are part of the multidivision Soviet force that remains encamped around the city and elsewhere in Hungary.

At Szolnok, about 15 small, new 1-family brick homes are under construction on the outskirts, a characteristic sight in Hungarian villages now. The shops in this rural center of 35,000 persons are better supplied than would be expected. Store windows display rather attractive clothing, and, among other items, pretty toys.

In this area, collective farms are seen in increasing numbers. At one or two, half a dozen tractors are alined under open sheds.

CHECK THOSE NUMBERS

Near Puspokladany, at a red-starred Hungarian military barracks, a soldier with slung rifle on a low guard tower brusquely motions passing cars to go faster. He records the license numbers through binoculars.

At the eastern end of the town a small synagogue is now used as a granary. A girl of 14 offers the assurance that there are no more zhidos (Jews) left in Puspokladany. The windows of the synagogue are smashed. Only the wrenched Stars of David are left in the iron window grillwork. Above the boarded front door, still legible scriptural tablets are engraved in stone.

Grain is heaped in sacks in the entrance and piled loose in the center of the synagogue under the small dome.

Statement of Dr. Freddy Homburger on Using Nation's Health Research Potential

---

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following :

STATEMENT PRESENTED APRIL 20, 1961, BY FREDDY HOMBURGER, M.D., CAMBRIDGE, MASS., IN TESTIMONY BEFORE THE LABOR, HEALTH, EDUCATION, AND WELFARE SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS OF THE HOUSE OF REPRESENTATIVES

Mr. Chairman, gentlemen; my name is Freddy Homburger and I am president of Bio-Research Consultants, Inc., in Cambridge, Mass., a firm which carries out consultant services to the chemical, pharmaceutical, cosmetic and food industries. I also serve without salary as president and director of Bio-Research Institute, Inc., of Cambridge, Mass., which is a nonprofit research organization. I come before you as a private citizen not representing any group or organization and I appreciate the privilege of being heard.

To back up the pertinence of my testimony, allow me briefly to review my professional experience in this field which qualifies me as an informed and competent expert on the subjects I am going to discuss. Since 1941, when I came to this country from Switzerland, I have been engaged full time in medical research and teaching and have served in various faculty positions at Yale, Harvard, Cornell, and Tufts Medical Schools and at the Sloan-Kettering Institute for Cancer Research. My last academic appointment was that of research professor of medicine at Tufts University and director of their cancer research unit from 1948 to 1957. I have published more than 145 scientific papers, mostly on experimental biology, cancer, and geriatrics; edited two standard reference works on cancer research, and authored a book on cancer and another on geriatrics. During my career, I have been responsible for the administration of $1,164,020 of U.S. Public Health Service research and teaching funds. I have repeatedly testified before congressional committees and have appeared in newspapers in favor of increased Government support of medical research. I believe that what Congress has done in the past two decades to further the progress of the health sciences will go down in history as one of the great examples of intelligent cooperation among people for the welfare of mankind, and I also believe that the U.S. Public Health Service has done a unique and magnificent job in administering these programs. If these achievements are to be equaled or exceeded in the decades to come, we must have the courage continuously to adapt administrative methods to the changing demands of the times, to face our failures and omissions objectively, to learn from our mistakes and to take action which will prevent future failures and correct past omissions:

1. I submit that we could do much more effective research work than is being done at present to protect the public from cancer-causing agents in consumer goods.

2. I submit that we are not making the fullest possible use of the Nation's health research potential.

3. I submit that the methods used in evaluating research grant applications for support by the U.S. Public Health Service are unnecessarily cumbersome, wasteful of scientific manpower time and not designed to select for support the most important type of research.

I submit that the specific and constructive suggestions I am about to make can, if adopted, effectively overcome the shortcomings just listed.

REGARDING POINT 1

To hasten research designed to give the Food and Drug Administration the methods it needs to enforce the Delaney amendment of the Food and Drug Act and to improve methods for the evaluation of safety of foods, drugs, and cosmetics, I suggest that it is necessary to appropriate funds for such research to the Food and Drug Administration itself, both for intramural work and for a grant-in-aid and contract research program. In my estimation, such a program could be started with a $5 million appropriation for this purpose, together with another $5 million for construction of needed laboratory space in addition to those construction funds now contemplated for the Food and Drug Administration, and in addition to any funds now budgeted for FDA research.

In the field of cancer prevention, we face today a methods gap. We have a law designed to keep from human consumption all cancer-producing substances, but we lack the methods to determine exactly what constitutes a cancer hazard, even for the test animals. The U.S. Public Health Service has taken the position that "the development of bioassay procedures of limited usefulness does not really constitute research" at the very time that the Food and Drug Administration is crying for means to develop these very methods. To round out the fundamen-

XUM

tal research work supported by the Public Health Service in these areas, applied research is needed in fetal, newborn, and adult animals of various species and strains and by various routes of administration, in tissue cultures, micro-organisms, etc. There are today innumerable consumer items which have never been adequately tested because of lack of quick, economical, and reliable methods. It took over 2 years of experimental studies to learn, for example, that Safrole, which has been widely used in soft drinks and is contained in many flavoring agents, is actually a cancer producer in rats. What could be done by effective methods to protect the public against other types of hazards is illustrated by the experience with dinitrophenol, which for years was used as a weight-reducing agent until it became evident that it caused cataracts of the eyes. Dr. Bernard Armbrecht, of the Food and Drug Administration, has now developed a method, using chickens that can demonstrate this toxic property of drugs in a matter of days.

It is eminently reasonable to spend money on the development of preventive measures by reducing to an unavoidable minimum the presence of toxic and carcinogenic matters in the environment, and money so spent will eventually reduce the amounts now expended for research on the diagnosis and treatment of cancer and other diseases. The agency to do this most effectively and with the greatest awareness of the practical problems to be met is the Food and Drug Administration which now has practically no funds for such research.

REGARDING POINT 2

To utilize more fully the Nation's health research potential, better use must be made of the independent research institutes which already exist in this country, outside of universities and hospitals and sometimes loosely affiliated with the latter, and the creation of many more such institutes must be encouraged. I suggest that Congress make certain that research funds be available for independent research institutes on the same basis as they are available to academic institutions. It is further suggested that the full cost of research be paid to independent research institutes whose sole function is research. In addition to this, it is urged that $50 million be appropriated for awards to qualified scientists to enable them to organize, construct and equip 100 independent research institutes at the rate of 2 in each State of the Union, to be operated by Government and private grant-in-aid support. My own experience has shown that less than half a million dollars suffices to create adequate facilities for up to 10 senior scientists and their personnel to conduct research in the life sciences. We have, in the Bio-Research Institute, 7 senior scientists, 45 assistants, and 35,000 animals.

In 1960, 935 institutions were given 11,279 research grants totaling $193,820,591. Of these, 95 organizations, or 10.2 percent can be considered as independent institutes. These independents received 360 grants, or 3.2 percent of the total grant number amounting to 4.6 percent of the money, or $8,931,126. It is not suggested to reduce the research funds available to medical schools, but it is strongly urged to make available sufficient additional money to multiply and strengthen independent institutes. We suggest a new and bold approach toward increasing research in the fight against disease at relatively little cost and without deterring the program already underway in medical schools. This will create more opportunities for full-time researchers to function most effectively in their chosen profession. We spend much time and money today to train scientists, but many of them, after years of such training, have no place to go where they can employ for the benefit of mankind their hard-earned skills. Independent research institutes could provide full-time research opportunities for these highly trained people.

In large academic institutions, today's emphasis is on teamwork and this is indispensable for the progress of a certain type of research. The new, original and imaginative research, however, on which all other types of progress must be built, springs from the minds of individuals who often have difficulty finding their place within a team. It is around such individuals that independent institutes must be built. The universities, with their team efforts, educate a type of scientist who admirably work together in committees, research teams and departments of large laboratories, but nowhere are we training, systematically, the leaders of tomorrow who will guide new scientific developments. Such leaders can emerge from independent institutes.

Research in the independent institute can be as good as in any school or hospital. Years ago, most research was a part-time endeavor, best carried out in a school or hospital with the rest of the time spent in teaching and patient care. Today's research is largely a full-time profession; thus, the researcher often becomes a liability rather than an asset to an institution devoted to teaching or patient care. So far, our research support policies have not kept pace with this development.

The full-time researcher is most productive in an institute organized for full-time research and, per dollar spent, the return will be far greater in the independent institute than under any other system. That the independent institutes are effective and productive is shown by the fact that these institutions which, as stated before, received only 3.2 percent of the grants awarded, contributed 5.3 percent of the 2,815 scientific papers presented this month at the annual meetings of the Federation of the American Societies for Experimental Biology.

In the biologic sciences, we are concerned with the preservation of life, health and happiness,-but in these days of unremitting ideologic struggle, we cannot forget that the very same scientists who labor to preserve health are also one of our most important defense assets. During the cold war the productivity of the Nation is dependent on a healthy labor force and in case of a hot conflict, especially, one involving atomic warfare, biologic knowledge needed for the development of defensive and protective means against the hazards of such a war may spell the difference between survival or destruction. A network of research institutes scattered throughout the Nation could save American science from obliteration if the great urban medical centers were to be destroyed.

Finally, large size in research is an impediment rather than an asset. Here, more than in other fields, we must return to the old American principle of individual enterprise and encourage those who have the courage of pioneering. It is from small independent seeds that all great American achievements have sprung and it is from such new centers built around imaginative and creative men that new progress will emanate.

REGARDING POINT 3

Further to enhance the use of the Nation's research potential, it is suggested that Congress request a study of the methods used at present by the National Institutes of Health to evaluate requests for research grants; this study to be made by experts in the fields of business management and data processing in cooperation with scientists not now associated with the evaluation system, the councils or the study sections.

Uncounted man-hours are needlessly spent today by applicants in the preparation of project grant applications and by scientists of the study sections and councils in reviewing such applications. Consider that, on the average, five pages be written per application. Assuming a rate of rejection of 33.3 percent which prevailed in 1959 (Allen: Science, November 1960), 16,900 scientists wrote 84,500 pages of applications (these are multigraphed for review, with 40 copies of each, or a total of 3,380,000 pages of paper). Put end to end, these papers would reach twice across the United States from Boston to Los Angeles, and stacked, they would be more than twice the height of the Washington Monument. Assuming only 3 days of work per application, which is probably far too conservative, this means that 50,700 working days, or about 283 man-years of highly skilled scientific manpower are spent each year for the simple purpose of applying to the National Institutes of Health for research support. Nearly a thousand scientists serving on councils and study sections review these applications, each member of such groups spending at least 2 weeks per year at this task leading to another 40 years of scientific manpower, or a total of 243 man-years. Viewed differently, it would mean that in each of our approximately 80 medical schools, 27 scientists are, in effect, working full time all year just writing or evaluating appliactions for money. The lucky ones who receive the grants are then informed (and wisely so) that they "are not required to follow the specifific details of the project submitted for review." Dr. Ernest M. Allen has recently reviewed in Science the reasons for disapproval of grant applications, and Dr. Yohan Bjorksten, of the American Institute of Chemists, has commented on these reasons in a letter to Science published April 7, 1961, which I should like to place in the record and which concludes that "the criteria now being applied in the National Institutes of Health, according to Allen, would have resulted in refusal to support those investigations which became milestones of progress in medicine."

This system of study section reviews has also led to the formation of an oligarchy of scientists on the inside, who hold power over the majority of scientists who are on the outside, and this opens the door to domination of trends in science by those few who, in the judgment of a minority which selects them, are the so-called distinguished scientists. In the cancer field, for example, this has led to waves of succeeding fashions in research. Where, for example 5 years ago virologists had difficulty getting support, today applications dealing with viruses are favored.

Obviously, in the light of present knowledge, such work was as important then as it is now. For a time, chemotherapy was the most fashionable thing, and before that, endocrine studies, and so forth. If the scientific community as a whole, rather than 1,000 scientists, were to influence awards of grants, more orderly progress on a broader front would result.

It is merely suggested here that Congress order an independent, expert study of the problem, but I should like to go on record as believing that scientists who had previous and renewed National Institutes of Health support must get such support thereafter simply on demand if they choose to submit a brief request, subject to appropriations and to be continued only if meritorious work results. The study sections which will review and evaluate such work and will judge new applicants should be limited to three members chosen from a panel, one member chosen by the applicant and two by the Surgeon General. The panel from which these experts would be selected should include all scientists who ever had National Institutes of Health grant support or are otherwise qualified as experts. It would no longer be necessary to write lengthy appli-

cations; no meetings of large groups would have to be held, each applicant would have at least one friend in court chosen for his specific knowledge of the man and his problem, and the scientific community would be far better represented. The selection of the two experts for the Surgeon General could be made in minutes by IBM machine, and the entire evaluation process could be handled in 2 weeks with one-tenth of the paperwork. The advisory councils could be enlarged to include sufficient members so that an adequate number of them could meet at least every month and final decisions could be made far more quickly than is now possible.

No system can be perfect which must channel funds into the unknown, such as is research. However, the present method is no longer geared to the needs of this age and holds within it the dangers of Lysenkoism, where the thoughts of a few can misguide the scientific efforts of many. Science thrives best in a free and democratic atmosphere and the advisory function on Government spending in this field must be returned to a more representative segment of scientists, rather than to be held by select committees.

Year after year you listen to a number of expert witnesses urging you to appropriate more money for medical research because of the progress we have made and because of the important work that remains to be done. I have, in the past, added my voice to this plea, and I do so again. Even if none of my suggestions were adopted, a good job would be done by the Public Health Service, as well as by the Food and Drug Administration. But we must have the courage to recognize where there is space for improvement and to do something about it. President Kennedy has called on us Americans to ask what we can do for our country. This witness has deeply pondered that question and concludes that we must bring to the attention of our Government whatever experience we have amassed in our professional life that might be of help to the country. It is in this spirit, and out of a sense of obligation and gratitude to the United States and to its Public Health Service for the opportunity of a lifetime of research that I have come here to be heard and to suggest that you:

1. Appropriate $10 million of separate research and research construction funds for the Food and Drug Administration;

2. Encourage independence in research by strengthening independent research institutes and create new ones throughout the country by a special appropriation of $50 million; and

3. Take action to bring about modernization, streamlining, and democratization of the methods whereby National Institutes of Health grants are evaluated.

Respectfully submitted.

FREDDY HOMBURGER, M.D.
CAMBRIDGE, MASS.

A Matter of Judgment

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. WALLHAUSER. Mr. Speaker, the editorial writer for the Newark, N.J., Star-Ledger, in the editorial appearing on May 13, 1961, which is attached herewith, has, in my opinion, put his finger on an important factor in a bipartisan approach to foreign affairs.

He points out that all criticism must not be submerged and that the purpose of a loyal opposition is to keep the Nation strong and to keep the Government alert.

A MATTER OF JUDGMENT

Former President Eisenhower, for years the target of sharp critical barbs from his Democratic opponents, has announced that he will not retaliate in kind. He is advising Republicans to support President Kennedy's foreign policy and to refrain from destructive criticism in these times of crises.

Kennedy undoubtedly appreciates the support given by his predecessor in the White House, but unity behind any policy should result from unified belief that the policy is the correct one, or at least that it offers sufficient hope of success to warrant a chance.

A bipartisan approach to foreign affairs will not be effective unless there is agreement, or at least near-agreement, on principles. Americans are not likely to hold their tongues for long in the absence of such agreement.

In foreign policy the ultimate aim is the same for almost all Americans, whether Republican or Democratic. There is no such solid agreement, however, on how to achieve these aims.

The Republicans are seeking to develop into a party of loyal opposition—one which will not put party advantage over national interest. This does not mean that all criticism must be submerged. If it were, there would be no opposition, loyal or otherwise.

The purpose of a loyal opposition is not to weaken a country and its government. On the contrary, this opposition serves to keep the Nation strong and to keep the Government on its toes.

Republicans, as the opposition, must be wary of divisive tactics which will give aid and comfort to the hostile nations challenging us. But this does not mean they must remain silent. Good judgment, not silence, is needed.

City Wage Woes

EXTENSION OF REMARKS
OF
HON. DURWARD G. HALL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. HALL. Mr. Speaker, it is my belief that the minimum wage bill recently enacted into law was a poor bill and ultimately will have serious affect on our economy. There were many arguments against this bill which were never considered in our discussions and to illustrate one of these I include, under unanimous consent, in the RECORD the following editorial which appeared in the Joplin Globe on May 7, 1961:

CITY WAGE WOES

Joplin taxpayers have been warned by City Manager Don Harmon that in 4 months the city's annual expense will jump some $17,292. That's when the new Federal minimum wage of $1.15 an hour goes into effect.

Joplin's city charter provides the city cannot pay any employee less than the Federal minimum wage. The added cost will be due mainly to wages to city firemen, who are on duty 72 hours a week.

It would be nice if the city could pay all employees higher wages. But Joplin needs streets and many services, and around three-fourths of general revenues now go for salaries and wages.

With taxpayers already hard hit by Federal, State, school, and city taxes, the council must budget closely. It isn't as rich as Uncle Sam. So it well may be time to think about changing the charter provision tying Joplin city wages to the Federal minimum, which goes up another 10 cents in 2 more years.

A mere local government trying to watch its finances cannot afford, so it seems, to bind its spending to a Federal administration which is less than cautious in fiscal policy and uses the cuff freely.

Address of Mayor Robert F. Wagner at Testimonial for Labor Secretary Arthur J. Goldberg

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. ANFUSO. Mr. Speaker, on Monday, May 15, 1961, I was privileged to attend a testimonial luncheon given by the mayor and the city of New York at the Waldorf Astoria Hotel in honor of Secretary of Labor Arthur J. Goldberg. This is one of a series of such luncheons planned with the members of the President's Cabinet who thus have the opportunity to meet with financial, industrial, labor, and civic leaders of New York to present the policies and programs of the present administration. It should make for better understanding and greater unity by all concerned.

In introducing Secretary Goldberg, Mayor Robert F. Wagner made some very fine remarks. In fact, I regard it as one of the best introductions I have ever heard. He spoke not merely of the man, but what he stood for in this hour of national crisis. Mayor Wagner spoke of Secretary Goldberg's objectivity in his present post. Although Mr. Goldberg was formerly associated with the ranks of labor, the Mayor emphasized, he realizes that there are two sides to a coin and two sides to every story.

Mayor Wagner referred to Secretary Goldberg's own words when he said that he was "not representing the labor movement in this administration," but considered himself a "counsel for the public interest." Mr. Goldberg has made these words come true through his deeds and action. His most significant contribution to date is the creation of the President's Labor-Management Advisory Committee whose task it is to solve common problems of interest to labor, management, and government.

It was a wonderful idea to have this dinner in New York City, which Mayor Wagner aptly describes as the "mirror of the Nation."

Under leave to extend my remarks, I am pleased to insert into the RECORD the

text of Mayor Wagner's address in introducing Secretary Goldberg:

REMARKS BY MAYOR WAGNER AT TESTIMONIAL LUNCHEON FOR HON. ARTHUR J. GOLDBERG, MONDAY, 12:30 P.M., MAY 15, 1961, WALDORF-ASTORIA HOTEL

Commissioner Patterson, Secretary Goldberg, distinguished guests and friends, it is a source of great pride and pleasure for me to participate here today and to honor, in the the name of the city of New York, our honored guest and my good friend, Secretary of Labor Arthur J. Goldberg. In honoring him, we also honor the great combined labor movement which he served for so long, and the national administration for which he is such an articulate and enlightened spokesman in the field of labor-management relations.

We are both fortunate and honored to have him here with us today. These occasions are not merely luncheons for the purpose of entertaining a visitor, but briefing sessions where members of the President's Cabinet can come face to face with leaders in our financial, industrial, labor and civic life to present the administration's policies and programs.

Perhaps, in a way, our honored guest symbolizes our changing times. We no longer have as Secretary of Labor, to represent this great segment of our population in the President's Cabinet, an industry man with some sympathy for labor, but instead a labor man who understands and sympathizes with the problems of industry. How times have changed, and how much for the better.

Since he entered the Cabinet, Secretary Goldberg has been no stranger to us here in New York. We were the beneficiary of his valuable mediative talents in a strike involving our harbor railroad tugs.

I alluded to the fact that our guest symbolized our changing times, and the changing status of labor in our national life. He received his law degree at Northwestern University in 1929 being, incidentally, top man in his class.

After a short general legal practice, he was drawn to the then resurgent and growing labor movement by a sense of idealism and a dedication to the cause of economic justice and a better way of life for the workingman.

His ability as a lawyer brought him to the posts of general counsel to the CIO, and to the United Steel Workers, and as special counsel to the AFL–CIO.

He also served as counsel to the Ethical Practices Committee of the AFL–CIO which adopted a policy of self-discipline and a program of self-policing for the labor movement.

His broad outlook and depth of vision dramatizes the changing status of labor that has come about in the lifetime of most of us here.

Labor, both organized and unorganized, reached the lowest point of its fortunes during the early days of the great depression.

During the great upsurge of economic and social reform that reached its high water mark during the early days of the New Deal, primarily through section 7A of the National Recovery Act, later the backbone of the Wagner Act, organized labor at last found itself in an atmosphere conducive to growth.

Long denied its right to organize into unions of their own choosing and bargain collectively, the working men and women of this country flocked into labor organizations in unprecedented numbers.

In this atmosphere of growth, the emphasis was on recognition, on obtaining long deferred dignity and security and on long overdue wage raises, reduced hours and improved conditions of employment. In this struggle for growth and recognition with its emphasis on so-called bread and butter issues, it was only natural that for a time organized labor, absorbed with its own problems, tended to divorce itself from other aspects of our national life. Confronted with a day-to-day fight for very survival, it understandably had little time or inclination to participate more fully in community life or to see itself as an integral part of a much broader picture, the whole Nation.

This concept has largely changed. Though it still must apply itself to the daily "bread and butter" tasks of handling grievances and negotiating contracts for improved wages, hours and working conditions, organized labor has found its place as an integral, vital part of our whole Nation.

In other words, labor has achieved status, it is no longer an enemy to be grudgingly tolerated but a full partner with industry in our economic life.

With this changing role, of course, have come new concepts, new emphases and new responsibilities.

As I stated earlier, the appointment by the President of Secretary Goldberg, symbolized this changed relationship between labor and management in this country. Secretary Goldberg has already faced the basic challenge raised by his appointment. This challenge simply put was this, could a man identified for such a long time with the labor movement, objectively and successfully carry out the labor policies of the U.S. Government?

Secretary Goldberg left no doubt about his personal feelings concerning this challenge. In his own words, he made it clear that he was "not representing the labor movement in this administration" but considered himself a "counsel for the public interest."

In his few short months in office, he has demonstrated to everyone that these words were no convenient rhetorical expressions. He made it clear from the start that he was not going to preside over any mere pedestrian administration of the Labor Department.

He assumed the burden at once as a Secretary of Defense for the Nation's economy seeing his role as a domestic counterpart of that of the Secretary of Defense, realizing that our enemy at home and abroad must be fought on both levels, military and economic, and that sound domestic economic health was a necessary ingredient in the larger worldwide struggle.

Shortly after taking office, he made a tour of the States where unemployment was at its worst, in which he not only talked to Governors, mayors, businessmen, and labor leaders but to hundreds of unemployed as well. In his own words, he said: "We had to show these people that their Government has a heart, as well as a head."

Equipped with a broad understanding of the dimensions of the economic challenge and with a familiarity of the long- and short-term problems, Secretary Goldberg has played a vital and decisive role in the shaping of the administration's antirecession program. He carried the ball on Capitol Hill for President Kennedy's first two major bills, extension of unemployment compensation and minimum wage increase. He has attacked, with vigor and intelligence, two of the most vexing sore spots in our economy, the problems of the depressed areas and the plight of the migrant worker whom he has characterized as "the forgotten man."

He has realized, as few have, that one of the main causes of idleness in our depressed areas is the problem of automation and that people, long out of jobs, must be trained to do something different than they have done in the past, and that Government must supply some of the money for this retraining. He has vigorously dedicated himself to the cause of helping our minority groups, to see that discrimination in employment practices will be eliminated as far as possible.

Above all, Secretary Goldberg's main contribution and the most potent expression of his philosophy has been the creation of the President's Labor-Management Advisory Committee, consisting of seven business representatives, seven from labor, five from the public, with the chairmanship alternating between the Secretaries of Labor and Commerce. (He is now the first Chairman.)

The creation of this Committee, backed by the wholehearted cooperation of the administration marks the first genuine and sincere effort to bring together the combined creative genius and ability of labor, management, and Government in an effort to solve our common problems.

It brings together, at high level, both sides of labor and management; in an effort to recognize what these problems are and to understand their relative positions in regard to them. Together, labor and management face the vexing problems of foreign competition, automation, migrant labor and unemployment.

These domestic problems are present in an international atmosphere of grave crisis and tension. They must be faced together and solved together.

New York, it has been said, is a mirror of the Nation. What happens nationally affects us as a corporate being and what we do here has national overtones.

I want you to know, Mr. Secretary, that this city points with pride to its efforts to solve these problems on our own grassroots level. Administered by our city labor department, we have through executive order set up a "little Wagner Act" which has supplied a system of labor relations similar in many fundamental respects to the system under Federal and State laws for workers in private industry.

A Commission on Intergroup Relations has been created to promote harmony and good will in human relations among the various ethnic racial and religious groups residing and working side by side in New York City.

A committee on exploitation of workers has been established to help workers, primarily Negroes and Puerto Ricans, who are victimized by collusive agreements between unions and management.

This city has, for a long time, a nondiscrimination policy in its public housing and the New York City Fair Housing Practice Act, which eliminated discrimination as to race, color and religion or national origin in the rental, leasing or sale of private housing and makes of New York a real open city.

We have bent all of our efforts to make political and industrial democracy operate on our local grassroots level. Against this background, I commend you for your efforts to perpetuate our democratic institutions by developing in this country an enlightened, foresighted and realistic program of labor relations.

It is with deep pride that I present to you, in the name of the people of the city of New York, this medallion which reads: "Presented to Arthur J. Goldberg, Secretary of Labor, statesman and leader, dedicated to the principles of a just and equitable relationship between management and labor, by Robert F. Wagner, Mayor of the city of New York, May 15, 1961."

And with this, Secretary Goldberg, go my sincere personal best wishes and esteem.

Study of the Effects of Imports and Exports on American Employment

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. SAYLOR. Mr. Speaker, my friend and our distinguished colleague Mr.

DENT who represents the 21st District of Pennsylvania is to be congratulated on his plans as chairman of the special subcommittee of the House Committee on Education and Labor to make a study of the effects of imports and exports upon American employment. I have received his invitation to provide information that might be helpful in the pursuit of his study; I and my entire office force will, of course, cooperate in every way possible.

There is no doubt but that the Dent special subcommittee can make an invaluable contribution toward a new approach to international trade. Now is the appropriate time for this investigation to begin. The Reciprocal Trade Agreements Act expires in 1962. Before Congress even considers its extension, all the facts about the impact of imported commodities should be available to Members of the House Committee on Ways and Means. Because of the many important measures that will be before that committee during the second session of this Congress, Congress itself will understandably not have sufficient time to delve into the subject to the extent that is warranted and necessary. The Dent subcommittee, by undertaking to probe all facets of the subject, will thus have obtained vital data that can be used by the committee responsible for initiating the trade agreements extension.

I have today written to local civic, labor, management, and other relevant organizations in my district inviting them to cooperate with the new subcommittee. I submit that my friend, a colleague, will be welcomed enthusiastically should he decide to hold hearings in the 22d Congressional District of Pennsylvania, but I am fully aware of the demands that will be made upon him in various areas of the country. Our particular region offers especial evidence of the destructive consequences of unfair competition from abroad.

The wide varieties of manufacturing and processing industries in central and western Pennsylvania can provide vital evidence for the import-export study. The textile industry has suffered severe damage from the inequitables of foreign goods. This product of alien countries has been entirely responsible for depriving our people of many man-years of employment.

Our glass industry has experienced continuing damage from imported products made in countries where wages are a small percentage of those made in this country. The effect of excessive imports extends into machine tools, electrical equipment, pottery, dental and medical equipment, and even household furnishings and kitchen appliances.

While the Dent subcommittee's assignment may primarily relate to economic implications of international trade, the study will unquestionably provide documentation that will prompt Congress to insist upon substantial cutbacks in the imports of numerous commodities because of their threat to the national security. Many of the industries enumerated above as well as other independent and allied industries, have been reduced to the level of uncertainty with respect to their role in a national emergency.

Mr. Speaker, it is difficult to comprehend how the State Department can continue to insist upon policies that are not reconcilable with fundamental defense requirements. What Congress must begin to do is review the accomplishments of State Department activities at least in the postwar years. Such an investigation would disclose one of the most consistent records of failure and tragic frustration ever compiled, and Congress might finally come to realize the absolute source of our difficulties in the field of international trade. The next step is for this legislative body to reassume the obligation entrusted to us by the Founding Fathers in the Constitution. Had the State Department enjoyed any measure of success in its diplomatic overtures and negotiations, its apologists might have some excuse for the policy of disregarding domestic need in favor of diplomatic expediency.

Each succeeding failure in the field of international policy places a greater responsibility upon the defense mechanism of our own country. For this reason alone, progressively tighter restrictions on imports that affect the national security should have been imposed during the past decade—must we continue to have failure upon failure in our international affairs without even an occasional victory to cheer us.

The crisis in the Carribbean must surely have jolted even the most inert minds into realizing that it is foolhardy to rely on foreign sources for fuel to drive our domestic economy and to stand ready to serve the military machine.

American refineries were expropriated with least difficulty and far less time than it takes two railroads to merge in this country. Regardless of how soon the Peril of the Antilles is deposed, his brief career should stand as a monument to the ineptitude of our State Department and its spokesmen. It should be recorded indelibly in handbooks to be used as primers for Members of Congress and all Government officials concerned with this Nation's self-sufficiency in an era of global tension.

I am certain that the evidence generated by the Dent subcommittee hearings in the months ahead will be invaluable to Congress when it considers reciprocal trade policies next year. I urge all Members of Congress whose constituencies are affected by excessive imports to cooperate closely with the subcommittee. Whatever be your local domestic problem, caused by unfavorable trade agreements, whether it be the result of too much oil, too much fish, too many textile products, too many farm products from foreign countries, or too much of anything else that affects the people in your district, your State, and your country it is time that we get together on common ground and work out our problems to the best advantage of the Nation and our constituencies—from both the defense and the economic standpoint.

Government's Plans for Farmers

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following article by Hugh Cosline in American Agriculture of May 20 is an excellent review of the effects of the present farm bill, passed by the 87th Congress. Of course this law is simply more of the same, and of course it is putting agriculture and the American farmer in a straitjacket.

GOVERNMENT'S PLANS FOR FARMERS

(By Hugh Cosline)

The present administration has announced its intention of taking effective steps to increase farm income.

The first method proposed is to increase supports, at the same time preventing troublesome surpluses by strict production controls on a bushel and ton basis rather than by depending solely on reduction in acreage. However, it is understood that if supports and controls do not do the job, there will be no hesitation to try other methods, including, if necessary, compensatory payments—polite words for the Brannan plan.

In one sense, what we so glibly term "the farm problem" is really an administration problem, a problem which was inherited by the present administration—but which was also inherited by the Eisenhower administration.

Be that as it may, the present administration had three choices of action: one was to continue the old programs, with resulting continued increases in Government-held farm products. One reason why this was impossible was the growing sentiment by consumer-minded Congressmen to do something to stop this pileup.

The second choice was to get out of "the mess" entirely by cutting off all programs as soon as possible. This was unthinkable politically, and in fact, has never been seriously suggested by responsible people. The results would be tragic. What has been proposed and never seriously tried was a gradual reduction in supports and a steady trend toward getting Government out of the farm business.

The third alternative was to get in deeper, and this was the approach the administration adopted.

Supports on manufactured milk, have already been increased, but, strangely, without any provision for controlling output. That will come later.

The feed-grain program now in effect meets the requirements of high supports plus strict controls. While it has been labeled voluntary the advantages of participation are so large that it becomes difficult for a farmer to turn it down. Also there is the implied threat that the cash corn price will be beaten down by sales of Government-held corn, as well as the possibility that those who stay out will be denied supports in the future, or at least penalized. In addition, while it is voluntary in the sense that no farmer is required to participate, considerable pressure has been used to sell the program to farmers.

Wheat presents another grave problem to which attention is promised, the approach likely being similar to the feed grain law. The commodity by commodity program is

favored by some farm groups, and some advantages are apparent. The question does come up as to what effective approach can be taken on perishables, such as fruits, vegetables, and poultry products?

What can we expect in the way of results from Government action?

No one can argue that farm prices will not be upped at least temporarily, but serious doubts can be raised as to the ultimate effect. One distinct possibility is that controls necessary to prevent full production under high supports will necessarily become so severe that Government will to all intents and purposes put agriculture in a straitjacket.

It has been repeatedly pointed out by responsible people that high supports must necessarily be accompanied by strict controls. You just cannot have high prices due to supports and also complete freedom to produce. It's high time for food producers to decide which they want.

Another possible, perhaps probable, outcome of the feed grains law is that control efforts will be ineffective, and that present attempts to remedy the situation will actually complicate it and get it into a bigger agricultural mess than we are now in. Already ways are being suggested for getting around the feed grain law.

One effect that seems almost certain is that the chief beneficiaries of Government programs will be the larger farmers. Farmers with operations too small to produce at average costs or below can well be encouraged to hang on to an impossible situation a few more years. Their problems will be postponed, but never solved.

When anyone points to the shortcomings in any course of action, it is only fair to ask, "What alternative do you suggest?"

There is only one real alternative, one which has been proposed for years but steadily ignored, while the situation worsened. That alternative is slowly and gradually to reduce supports and again to permit farmers to run their own business. If this program had been adopted soon after World War II finished, or even after the Korean conflict, American agriculture would be in a far sounder position that it is now.

In an early issue we plan to give you some of the implications of the proposed Agricultural Act of 1961 now being considered by Congress.

Questionnaire Results for 1961

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. ROGERS of Florida. Mr. Speaker, every year since coming to Congress I have conducted a poll of the people of the Sixth District of Florida to seek their views on major issues expected to come before the House of Representatives.

This year the response exceeded 48,387 returns. By mailing back such a big response the people of the district indicate their concern in the affairs of their Government, and these citizens deserve praise for taking the time to study the issues and make their opinions known. The fact that every questionnaire is signed indicates a firm conviction of opinion and it is most helpful to me to have the views of so many.

The newspapers of the district publish the questionnaire as a public service, and additional mailings are made from lists to the entire area.

So that all Members may have the benefit of this questionnaire, under unanimous consent I include the results in the RECORD:

Congressman Paul G. Rogers' 1961 questionnaire results

Total response 48,387

[In percent]

Question	Yes	No
1. Do you favor reduced foreign aid spending?	91	9
2. Do you favor the proposal to make a compulsory medical care plan for the aged part of the social security program?	55	45
3. Do you favor using Federal funds to aid depressed areas?	70	30
4. Do you favor Federal aid for—		
(a) School construction?	52	48
(b) Teachers' salaries?	33	67
5. Do you feel that the Federal Government should assist in solving problems affecting migrant laborers?	56	44
6. Do you favor legislation which would—		
(a) Raise the minimum wage from $1 to $1.25?	56	44
(b) Extend the coverage of the present wage and hour law?	61	39
7. Do you favor my proposal for systematic annual repayment of the national debt?	95	5
8. Would you favor an amendment to the Taft-Hartley labor law which would permit union picketing at construction sites?	21	79

A Sense of Freedom

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 17, 1961

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an excellent address by F. J. Rarig, president of the Board of International House of Philadelphia, Pa., delivered before the students and faculty at Lincoln University on October 27, 1960, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A SENSE OF FREEDOM
(By F. J. Rarig)

It is delightful to return to Lincoln on such a lovely fall day. I have often recalled with pleasure the gracious reception you gave me 2 years ago on a day when your campus looked as beautiful as it does today.

My remarks today might be said to be a report to you on my personal effort during the past 2 years to preserve and extend some of the social and human values enshrined in the humanities. I discussed some of these values and their meaning to us in my talk 2 years ago on "Is There a Conflict Between Science and the Humanities?" Since that time I have become involved in work on behalf of the foreign students who are studying in our community. My talk today might be said to be an analysis of my justification for devoting a considerable amount of my free time to this work on behalf of young people from other lands who have come here to study and to learn first hand about our country and our way of life.

In 1860 two systems of justice, each housed within the borders of the United States, clashed in an agonizing ordeal. After 4 years of war, the Union, which had been a house divided against itself, was put together again through the assertion of fantastic military power.

Justice Holmes who, as a young man, had served the Union Army well in that Civil War, has given us a trenchant rule of political behavior which has behind it the weight of his experience in that war and the authority of his great knowledge of history.

Let me warn you that we should each of us accept the obligation of proving the great Justice wrong, or we must, by peaceful means, make the free society the dominant society—we must win the cold war. For Justice Holmes generalized regarding the lesson of history and of the Civil War with the following maxim: "When two systems of justice clash," he said, "war is inevitable."

No one in this audience needs to be told why I suggest that this law of political behavior is germane to the world political scene in 1960. Surely, it does not strain historical metaphor to suggest that the world today is a house divided against itself with two clashing social systems representing two systems of justice engaged in a global struggle for the minds of men and the allegiance of their hearts. Ironically, this world of 1960 is a community more interdependent and closer to its parts than was the national community of 34 United States 100 years ago.

Certainly, the two systems of social justice which occupy this divided planet in 1960 are in conflict. Conduct which is virtuous under one system is criminal under the other. In one, the state compels the acceptance of the only lawful religion—Marxism—and places the full weight of its authority in support of atheism.

In the other, the Constitution forbids the State to enact any law respecting religion and guarantees freedom of worship to all religions.

One system was created to destroy private property and to collectivize under state ownership the means of production and distribution. The other was established to protect private property and to provide a secure environment for private enterprise. Under one system, the prime objective of all law and all effort is to establish the power and authority of the state. The welfare of the state is the paramount concern. Under the other, ultimate power is reserved to the people. The state is given only limited power and the welfare and freedom of the individual is of paramount concern to the state. The individual is protected in the exercise of basic rights which are enshrined in the Constitution and vigilantly enforced by an independent judiciary.

Under one system, criticism of the government outside the prescribed procedures and channels of the only lawful political party is treason. Freedom to speak is freedom to agree. Under the other, freedom of the individual and of the press to criticize the government is considered indispensable to the welfare of the government.

In brief, it is the monolithic society against the open society. It is the police state versus the democratic state. It is collectivism versus free enterprise. It is mobilization of economic power to support and advance the political objectives of the state versus enterprise organized for private gain. It is the pyramid of feudalism versus the diffused effort of individual enterprise.

Where these two systems resemble one another the resemblance is the result of imperfection—the failure of the actual operation to conform to one or the other of the antithetical theories which is supposed to define the society and its operation.

Compared with these two systems, the systems which clashed in America 100 years

ago were almost identical. Still, it was said by our sage, that when two such social systems clash, war is inevitable.

Well, you might say, if war is inevitable why not get it over with? Why not press the green button? Why not let our bombs go with SAC and Polaris? Strike both East and West and over the top of the world. Demolish the Soviet Union and Soviet China in simultaneous all-out attacks.

Even if annihilating attack had been the way out, it is probably no longer a means of escape from the stricture under which Holmes' law places us. Politically and morally, this preventive war was not available to us. We were right not to make use of it when the naked power was ours and ours alone. Now the balance of power has shifted and our security depends upon the Russians' sense of self-restraint. We have arrived at the point of balance of terror and some well informed men say that we are now vulnerable to attack so devastating and so complete that if attacked, we could not retaliate.

Even if the balance of power has not shifted as far as some people say it has, or has not shifted at all, reason and fear alike tell us that we cannot exercise our ancient privilege to die fighting for our country. War has become a luxury which we cannot afford but still the awful lesson of history is that when two systems of justice clash, war comes. In circumstances analogous to these in the year 1860, at Cooper Union, Abraham Lincoln concluded the address which made him President of the United States with the following peroration:

"Wrong as we think slavery is, we can yet afford to let it be alone where it is, because that much is due to the necessity arising from its actual presence in the Nation; but can we, while our votes will prevent it, allow it to spread into the national territories, and to overrun us here in these free States? If our sense of duty forbids this, then let us stand by our duty fearlessly and effectively. Let us be diverted by none of these sophistical contrivances wherewith we are so industriously plied and belabored—contrivances such as groping for some middle ground between the right and the wrong; vain as the search for a man who should be neither a living man nor a dead man; such as a policy of don't care on a question about which all true men do care; such as Union appeals beseeching true Union men to yield to disunionists, reversing the divine rule, and calling not the sinners, but the righteous to repentance; such as invocations to Washington, imploring men to unsay what Washington said and undo what Washington did.

"Neither let us be slandered from our duty by false accusations against us, nor frightened from it by menaces of destruction to the Government, nor of dungeons to ourselves. Let us have faith that right makes might, and in that faith let us to the end dare to do our duty as we understand it."

One hundred years ago slavery was not permitted to spread throughout the land. War came and thousands died fighting that the Union might survive free from the cancer of slavery. If we cannot fight a war against slavery in the year 1960, what is our duty and how do we discharge it? Are we to sit idly by while the globe shrinks and slavery spreads throughout the world? While nations freed by the decent impulses of our own tradition are chained to Moscow in the name of anti-imperialism and people's democracy? Beguiled by a fraudulent claim that all-pervasive tryranny is freedom—that terror is a new political servant of the people—that peaceful democracies are warmongers? Beguiled by the language of our revolution spoken by the agents of today's practitioners of the most ancient form of government—tyranny?

Will Americans respond to the call of duty in the cold war? Most of us are bored with the whole thing. A few of us try to keep well enough informed to be able to make what passes for intelligent criticism of our Government's policy. But for the most part, we do not trouble to inform ourselves regarding the forces which threaten to destroy us. The gyrations of the stock market concern us more than the state of our preparedness.

We luxuriate in the comfort of our homes and clubs and amuse ourselves, at best, with cultural and outdoor interests and, at worst, viewing perversions of art and life that become more and more gross as our entertainers seek desperately to discover some novelty or crudity that will stir us from our sophisticated ennui.

Fight for our country—oh yes! We will fight bravely for our country when and if it is possible to do so. But as for living, we will live for ourselves.

My suggestion is that our duty is to live not for ourselves alone but for our country as well. To live effectively for our country we must convey to others the "sense of freedom" that is our heritage and we must prove ourselves to be citizens worthy of this heritage. This "sense of freedom" is the intangible product of the free society—the most potent product which we have to give to the world. It is this "sense of freedom" planted and nurtured in the hearts of men which dooms the system of justice which is in conflict with our system of justice. Our task is to spred this sense of freedom to the peoples not yet committed to one or the other of the conflicting systems. Once imbued with this sense of freedom, these people will recognize the spurious claims of Communist agents and resist the encroachment of slavery. They will, with our help, build in their countries the institutions of the free society which alone are consistent with the dignity of man. Then slavery will be confined to those areas where its actual presence confronts us today and gradually there will develop even in the totalitarian countries the sense of freedom which will alter their institutions and produce a system of social justice whose commitments and aspirations we can trust. When that day comes, the cold war will have been won. The basis of the present deep conflict between the social systems will no longer exist and war will not be inevitable.

How do you spread the "sense of freedom"—how do you innoculate people emerging from fuedalism with a love of and a dependence on the institutions of the free society which took centuries of trial and error and suffering to develop among the few people who enjoy their benefits today?

For my part, I am convinced that the most effective way to communicate the meaning of freedom to people in countries which have been subjugated for centuries is to give the youth of these countries the opportunity to experience freedom in America—by studying in American schools, working in American business, visiting in American homes, playing with Americans, and living and traveling in America with Americans. As I see it, we must share our good fortune with others, and particularly with the youth of the new and emerging nations.

This we can best do by inviting their able young men and women to America for training and education.

If these young people will accept our invitation and come to America, we must be prepared to provide them with a worthwhile and constructive introduction to the American community outside of the academic community as well as within the academic community. This we can do most effectively by placing our student guests as quickly as possible in American homes so that the first few days in the United States are spent with an American family. Host families serve as orientation instructors, guides, and counselors. They provide assistance to the students in finding living quarters, registering at school and learning the homely details of the business of daily living in the United States.

During their stay in America, our guests should be offered continuing hospitality in American homes.

Such hospitality in American homes is the key to a constructive community experience for the foreign student in America. The American family at home is the most potent source of the freedom virus. Few people from any country can resist the informal charm of the child-centered American home. There is no cold war propaganda weapon that can match it in persuasive power. It speaks a language that transcends all barriers and it strips away prejudices and stereotypes carefully nurtured by Communists and reinforced by cheap U.S. films and cheap U.S. magazines.

Next in importance to home hospitality is student social life and recreation. This is where our International House in Philadelphia really shines. At our new building we offer a pretty wonderful social center—a home away from home that is literally a warm and gracious home for some 65 resident foreign students and 20 resident American students. This home is also a meeting place and entertainment center for all foreign students and their friends.

We owe it to the potential leaders of these lands to show them how we have kept the faith which is implicit in our heritage of freedom by showing them our contemporary American institutions as they really are. The best thing we can possibly do is to present our record of accomplishments and failures in all humility. It is the best thing we can do—first, because it is the honest thing to do, and secondly, because it will be the most effective possible demonstration of how hard it is to maintain freedom and to be worthy of freedom.

We cannot transport the institutions and the environment of America abroad and when we try to communicate the meaning of America to people abroad by writing and speaking and through exhibits we find that the effort not only seems to fail, it seems to aggravate the envy, the jealousy—and the hurt of those who hear about opulent America, and read about opulent America but do not experience hard working America. Yet we spend millions on our propaganda and information programs—not without some effect—but the effort is out of all proportion to the result. The opposite is true when we can expose a foreign student to American institutions. He learns at once that we are human, that we work hard, that we are not all materialistic bores and that many of us are neither racial or religious bigots—and if he experiences America deeply enough, he will also experience the "sense of freedom." Once the student, who comes from a land that has never known freedom from fear and freedom from want, senses what it means to be free from fear, he has picked up a virulent virus that can raise havoc with the regimented utopia of theoretical communism or any other system of tyranny.

I say this despite the shortcomings of our present pattern of living which certainly only approximates and does not conform to the ideal pattern of ordered liberty. Perhaps there is no better proof of the depth of our commitment to freedom, however, than the fact that we are voluntarily striving to arrive at a true state of harmony between the races by the painful process of overcoming ignorance, fear, and hatred through democratic procedures and the development of mutual respect. Little Rock may be a lost battle in the propaganda war, but it is only one battle in and only a part of the best war that any nation ever de-

cleared—a war against racial discrimination and race hatred. We can at least be proud that this war has been declared and that our institutions and most of our people are committed to its successful outcome. I proudly assert that no other nation is grappling with this vicious problem on such a vast scale or more courageously or with surer prospects of a lasting victory.

I do not claim that our guests will place this hopeful interpretation upon our current social scene. I do not claim that every exposure to America will convert the observer to our way of life.

I am fully aware that in bringing foreign students here, we are risking that the reaction will be adverse. After all, we are dealing with something as elusive as creating a sense of freedom when the reaction goes correctly and perhaps an aggravated sense of bitterness when it does not go correctly. The all pervasive fact is that we are dealing with human beings representing diverse interests and motives and reflecting different cultures, different political systems, different economic systems, different religions, different moralities, and different ethical conceptions. An amazing combination of abilities is needed to insure that the right reaction takes place when such a heterogeneous group of students is exposed to the uncontrolled and uncontrollable myriad of influences which is the democratic American community.

Of one thing I am confident, our society has produced as of the year 1960 the people and the facilities with which to carry out this sharing of our experience and our good fortune. But we will not be successful in truly helping others unless we dedicate ourselves to the task and unless we are prepared to abandon perverse prejudices and sacrifice a measure of personal convenience. Can we do less than this? We are, after all, the trustees of democratic institutions produced out of a true revolution in 1776 and vindicated three generations later in a terrible yet magnificent war for social justice.

Let us admit that we have not fully kept faith with millions who labored and died that our free institutions might exist. But we have by no means failed completely. We have fought two World Wars against tyranny and emerged from the second of these as the generous, if not always bright, leader of the free world.

We are the somewhat battle-weary inheritors of freedom and we now have the awesome duty to transmit our heritage to others that they may know the meaning and value of freedom so that they may take up in their turn the fight to preserve and extend its institutions.

I say that the simple and practical way to keep the faith and to meet our obligations is to open our arms in welcome to all qualified young people who will come to study, to work, and to live with us as our guests. While we share our good fortune with them, we must also share the common struggle for freedom. To the greatest possible extent they should become involved in this struggle so that they will be educated in the values and the problems of the free society while they acquire the training needed to bring their countries abreast of us technologically, commercially, and industrially.

By giving all that we have to give of our educational facilities and of our experience in the struggle for social justice, including the lessons of our terrible era of slavery and of our terrible civil war, we may well discover within ourselves new resources which will enable us to grow with the new nations and rise with them to that higher level of social behavior which must be attained if nationalism is to give way to a world community based upon mutual trust and human brotherhood.

Let us then invite these young men and women to our country. Let us welcome them with the warmest possible hospitality. But in our pleasure at their coming, let us not forget the seriousness of the joint adventure or the awful import of the plea of the French Revolutionist, that should be in our hearts, if not on our lips, as we extend our hands in friendship—"Be my brother or die."

Let us so conduct ourselves toward our guests that when they leave our land, they will respond, "We are brothers. We shall not die. For there shall be a new birth of freedom throughout all lands and among all people; and peace, based on freedom, shall prevail throughout the world."

The Need for a National Fuels Policy

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 17, 1961

Mr. BYRD of West Virginia. Mr. President, we have in the Honorable John M. Kelly, Assistant Secretary of the Interior for Mineral Resources, an erudite and forceful pleader for an understanding by all producers of natural fuels of the need for a national fuels policy. This is attested to in an address which he made on April 13, 1961, before a meeting of the Independent Oil Producers & Land Owners Association, Tristate, at Evansville, Ind.

I feel that Secretary Kelly's remarks deserve the attention of Americans in all walks of life, and for this reason I ask unanimous consent to have his speech printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY ASSISTANT SECRETARY OF THE INTERIOR JOHN M. KELLY AT MEETING OF INDEPENDENT OIL PRODUCERS AND LAND OWNERS ASSOCIATION, TRI-STATE, EVANSVILLE, IND., APRIL 12, 1961

America has many modern faces—a composite face of many people living in and contributing to many ages. Our society is in the atomic age, in the space age, the steel age, the chemical age, the electronic age, and the age of energy.

And, unlike Shakespeare's seven ages of man, our modern ages are ticking forward simultaneously, in continuity. Furthermore, the ages of our world are interdependent—each existing only because of the contribution of the other.

The demands of these ages on our natural resources are unparalleled in history. Usable mineral resources are being exploited at a tremendous and accelerating pace. Not only do we need mineral raw materials for fuels, chemicals, and machines, we also need them for building and construction materials, for agriculture, and for transportation.

We have used, are using, and will continue to use our mineral wealth lavishly. During the first half of this century, we have consumed 26 billion tons of coal, 40 billion barrels of petroleum, 3 billion tons of iron ore, 22 million tons of lead, 26 million tons of zinc, and 33 million tons of copper. In the short span of half a century, we have utilized up the products of eons of geologic time.

Our Nation covers only 8 percent of the land area of the world. Our people comprise less than 10 percent of the world's population. Yet, annually, we consume a little more than half of the world's petroleum production, about one-half the supply of iron and manganese ores, and about a third of the world's production of copper, lead, and zinc.

The problems of filling, and keeping filled, America's mineral resource cupboards are tremendous. In many instances, we are not self-sufficient and must depend wholly or in part upon the products of other nations to meet our requirements. In this connection, we are buyers in the marketplace with the other industrialized nations of the world. In other mineral areas, we need today—or in the foreseeable future—supplemental supplies of mineral resources from other lands to meet our mounting requirements. Finally, in some areas, our Nation and its businessmen compete with other nations in meeting world demand for certain minerals.

This interdependence of nation on nation leaves no room for isolation in natural resource development and use because our economic progress, our national security, and our essential foreign policy aims will not permit us to emulate the ostrich.

Many solutions are advanced to meet some of the more vexing problems we face. While these solutions are wrapped with sophisticated and often self-serving drapery, the position of any group is generally governed by the dictates of its pocketbook.

There was a time when America could afford to dissipate its energies leisurely in segregating the wheat from the chaff in conflicting economic positions of various industries. However, our society has changed. Our world has changed. Today, more than ever before in its history, our Nation needs straightforward, clear-cut thought and decision—decision which meets the test of the public interest first, special interest second.

Today, the leaders of industry and the leaders of government are bound together by mutual responsibility for the social, economic, and political impact of our individual actions on the affairs of our country and of our world. We in government, and you in industry, must accept this responsibility—a responsibility which we must meet on common ground, side by side.

In his inaugural address, President Kennedy also uttered these now-historic words, "Ask not what your country will do for you—ask what you can do for your country." A few days later, in his first message to the Congress, the President pledged his administration "to a continuous encouragement of initiative, responsibility, and energy in serving the national interest."

These are times which demand far more than mere cooperation between government and industry. In this troubled world, a world restless, changing, a world challenging old ideas and moving toward new horizons—in a world of this fabric, the United States must demonstrate that its economic system is efficient, that it is flexible, and that it is the servant not the master of a great people. Such demonstration demands, on the part of us all, an identity of purpose and a dedication to the common interest.

The petroleum industry is one of the key building blocks in the foundation of American economic strength. The industry is essential to the welfare and social progress of our Nation and the free world. We in the Kennedy administration know its importance, we recognize its complexities, and we respect the intelligence and ingenuity of those who direct it.

In looking realistically at the future, the petroleum industry itself must bury the shibboleths and totems of the past—the outworn creed that looks at cooperation with government as a mutually antagonstic part-

nership, temporarily formed by expediency—at government, as an evil to be tolerated.

Government is inescapably involved in this industry, and this involvement—particularly in the Department in which I serve—will grow rather than diminish in the years ahead. The petroleum industry itself, on many counts, has actively sought this involvement as being in its own best interests. Conversely, it must willingly accept government as a referee of the industry, as its shield in foreign affairs, and as the protector of the public interest.

We have a new administration in Washington, a new attitude toward national affairs, and a new dedication to the principle of mutual action in the best interests of the people. We have a Secretary of the Interior who personally maintains an open door and an open mind on the pressing subjects of natural resource development.

And, his policy is also my policy in the field of mineral and fuel resource matters falling under my jurisdiction.

The door of my office—and the doors of those who work in the mineral and fuel bureaus of the Department—will always be open to your industry, to the coal industry, to the extractive industries, and last but foremost of all, to the public.

We want your ideas, we seek your counsel, and we value your suggestions. There will be times when we will not see eye to eye—when our views will not coincide. Responsible government cannot let others make its decision by default, and this administration intends to renew and revitalize responsibility in government.

There will be times when our views will be identical—and I hope this will be the rule—because that which is in the best interest of the American people is also in the best interest of American industry, whether it be oil or oysters.

In recent years, fuel programs have been hammered out behind locked doors. We in the Department of the Interior intend to reverse that trend. We actively seek greater public participation in government, greater public awareness of the programs of government and their impact on all aspects of American life.

We seek an active, participating citizenry from all walks of social and economic life which will work together without regard to personal interest but dedicated rather to the utilitarian principle of the greater good for the greatest number.

In the area of our Nation's mineral resources, we face many problems—complex problems which were not made in a day and which will not be solved by a stroke of a pen or in a constant reassurance that we live in the best of all possible worlds.

In the metals and the nonmetalic mineral industries, we have—as in the petroleum industry—a mixed picture. A number of commodities have shown steady growth and radical progress has been made with respect to some of the newer metals.

It is, however, in the group of metals which in their own right are as essential to our economic well-being as oil that serious difficulties have been encountered in recent year. I speak primarily of lead, zinc, and copper.

Lead and zinc have been subject to declining domestic production and increasing pressures from imports. The copper industry has been affected materially by events in distant parts of the world with resulting instability, although production has expanded. Speaking parenthetically, this should have a familiar ring to this audience.

These are pressing problems which require—and which will get—a substantial portion of my energies and the energies of my staff.

In coal, we have the problem of an underdeveloped, underused natural resource. Let me say, at this point, that underdevelopment of a vital natural resource is as abhorrent to true conservation as wasteful use.

The coal industry today has fewer employed miners than in the year 1890—the first year for which reliable statistics are available. Coal production declined drastically from 1947 to 1958, and, while minor gains were achieved in 1959 and 1960, the rate of activity is falling again in 1961.

We have a coal industry which cannot be allowed to decline and also expected to meet the greatly increased demands which would be placed upon it in time of national emergency. This is a disturbing situation—a situation to which the Department of the Interior will direct its efforts to alleviate.

In oil, we have almost a parallel situation. Current refinery capacity and current crude oil productive capacity in the United States, even after allowance for a defense reserve, exceeds the consumptive capacity of the American people.

However, this is more closely defined as a current economic problem, as distinct from some of the more technological problems which stand in the way of a marked increase in coal consumption. No matter which economic crystal ball you look into, the picture is always the same: Progressively mounting petroleum requirements in the years ahead.

Here is the crux of the petroleum problem. Reserves of crude oil available to the people of the United States must be abundant, must be secure, and must be available on a reasonable economic basis.

In this regard, we are distressed by the 1960 showing in exploration and development. In 1960, the volume of new crude oil discovered in the United States was only slightly higher than in 1946. Furthermore, the addition to proven reserves by extension of known fields was the lowest in 10 years. It was only through an increase in natural gas liquids that total liquid hydrocarbon reserves made any advance over 1959 levels. Here also, the picture is not completely bright because the discovery rate of natural gas liquids was also declining.

Although we have skirted them briefly, I think we can see a similarity in the various minerals problems of the Nation, a basic pattern of immediate abundance of resources, underdeveloped demand, and overdeveloped productive capacity.

These problems present a unique, tremendous challenge to American ingenuity, for we must show the world we have the maturity and vision to make our basic abundance a blessing, rather than a millstone around our economic necks.

Turning now to the more immediate matters of interest, Secretary Udall has pledged the Department of the Interior to a "new look" at the oil import program—the philosophy which underlies it, the machinery by which it operates, and the effectiveness of this machinery in meeting the objectives of the program.

This searching reappraisal for residual fuel oil has been completed. We feel that some of the earlier inequities have been eliminated and that the residual portion of the program is more firmly based, more responsive to public policy, and more soundly geared to efficient supply and distribution.

We intend to give the crude oil portion of the program equal scrutiny in the weeks ahead. Yesterday in San Antonio, I announced that two public hearings have been scheduled—one in Washington on May 10 and 11, the other in Los Angeles on May 4.

We approach this review without preconceived conclusions, as we did in the case of residual fuel oil. We want to hear all views on the question of the need for import controls. From those who feel such a program is necessary, we want to know why, we want to know how it should be operated, how import levels should be set to whom allocations should be given, and on what basis should they be set. We want to know where the inequities lie, and we want specific suggestions to alleviate them.

We want all interested parties to come to us, to give us their thinking on the best way to do the job—if, in fact, the job should be done. In the future, let no one say that he has not had his day in court, that this administration embarked on a course of executive action without full public participation, that all points of view were not fully considered and fully weighed.

I would not predict the outcome of this review, for the basic decisions belong to Secretary Udall and the President, but I will say we are determined that a review of the crude oil import program will be fair, open, impartial, and thorough.

We come now to the subject of another review—that of a congressional fuels study, a study of no little controversy in the petroleum industry.

President Kennedy and Secretary Udall has firmly endorsed a balanced, long-range fuels study which uses the test of the public good as its cardinal principle. In Secretary Udall's words, "we cannot in something as important as fuels and energy let policy be set by drift and default." For this reason, the administration is supporting legislation which provides for a thorough study in the national interest.

Let me say this—no one can dispute the right of the Congress of the United States to initiate such a study.

Let me also add this—unthinking, blind opposition within the petroleum industry to an impartial, long-range study can easily leave the mistaken impression that the interests of the industry are somehow different than the interest of the Nation as a whole.

For these reasons, I am personally gratified that in recent weeks, many responsible leaders within the petroleum industry have endorsed a national fuels study.

We have much to gain from a thorough look at where we have been, where we are, and where we are going. I, for one, would like to know the answers to some of the more searching questions, questions such as:

What public policies are necessary to insure an adequate, dependable fuel supply for the Nation in order to achieve a healthy, balanced development of the national economy?

Can our present Federal, State, and local laws and programs promote the public interest in the wise development of our fuel resources?

Finally, how can we define in specific terms what the public interest really is, when confronted with the technical, economic, and international problems entailed in fuel resource development and use?

Hand in hand with this demand for greater national purpose goes the need for sound maturity. We cannot teeter-totter between sudden hysteria when something goes wrong and smug complacency when things seem bright.

In America today we need continuity of purpose. Too many Americans have been prone to accept the attractive but fatal fallacy that there is some easy way to build a progressive and abundant society in a peaceful, free world—a way which does not demand personal participation and personal dedication.

In the days and years ahead, we must form balanced judgments based on mature values—hardheaded judgments based on cool logic rather than the heady intoxication of emotion. Lipservice to catch words and the slogans must be replaced by a creative and realistic attack on the problems which confront us.

America is moving forward. The petroleum industry will go with it—or be left behind. In times of national peril, the in-

XUM

dustry has responded promptly, meeting its challenges with credit and honor. This selfless effort must now become the industry's watchword as it moves ahead in the mainstream of American life and American purpose.

Henry Ford's Contribution to Aviation

EXTENSION OF REMARKS
OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. LESINSKI. Mr. Speaker, coming from a district where the vigor and imagination of the people have produced many historic benefits in the past and where that same vigor and imagination is being applied for the future welfare of America, I am pleased to present for the RECORD the story of Henry Ford's adventure into aviation as an outstanding example. The story as it appeared in the American Legion magazine, of May 1961, follows:

MR. FORD'S TIN GOOSE—THEY DON'T MAKE PLANES NOWADAYS LIKE THE FABULOUS TRI-MOTOR THAT FORD BUILT

(By W. E. Davis)

Every day a school bus leaves Port Clinton, Ohio, and picks up six children on their way to school at Put-in-Bay. At the end of the day it returns them to their homes.

However, the operation is unusual for two reasons. The children live on three islands in Lake Erie, their school is on still another island, and the "bus" is an old Ford tri-motor plane. Leaving Port Clinton the flying bus goes to Rattlesnake Island, then to North Bass Island, then to Middle Bass, and finally to the school at Put-in-Bay, which is also an island. Rarely is the "bus" late and almost never does a flight have to be canceled because of bad weather.

This same plane performs other chores. Time and again it has served as a flying ambulance, hauling sick island residents to mainland hospitals. Little wonder that this rugged tri-motor Ford plane, dubbed the "Tin Goose," has not only carved a niche for itself in history but has also earned a lot of affection for its good deeds.

By modern-day standards, the ancient trimotors should have been dead, buried, and forgotten years ago. They were the rage of aviation during the Roaring Twenties, when flappers sneaked off for a nip of bathtub gin. The trimotor came to life before, and flexed its sturdy wings during the Great Depression, yet lived to tell an aviation story in spite of it.

Every trimotor built—and there were exactly 199 in all—can claim a share of the title of aviation's granddaddy. Ford's corrugated steel giant was the first all-metal passenger plane. It contributed to American history, carrying Adm. Richard E. Byrd on the first airplane flight over the South Pole.

It lugged thousands of bags of mail and freight between American cities, with not one accident. And it performed like a never-tiring workhorse, year in and year out, in the desolate jungle areas of Central and South America, in Russia and China and Japan, flying lifesaving cargo into postage-stamp landing areas where even smaller planes feared to go.

The man given singular credit for developing and overseeing Ford's aviation pioneering was the late William B. Stout. Oddly enough, up until the time he died, he had hoped the day was not too far distant when a new breed of trimotor would roll off a California assembly line, nearly 30 years after trimotor production had shut down. But when he died 5 years ago at 76, so did any hope for reactivating the famed plane.

Stout had already made his mark as a design engineer before being bitten by the aviation bug. Among his design credits were theater seats which pushed back when the patron stood up, and the world's first high-speed pullman car.

In 1923, he got the idea that a metal airplane would be cheaper, safer, and more durable, plus better able to handle a large load of cargo.

Stout's hopes and dreams, of course, could never become real without money. He developed a plan to get to the men who might be interested in helping such a revolutionary idea develop.

A letter was sent to 100 Detroit businessmen, asking each of them for $1,000. One contingency was that they promise to bid the money goodby forever. In exchange, they were to receive a series of weekly newsletters explaining the fundamentals of aviation, plus a report of Stout's activities.

Stout received 65 replies immediately, and they eventually grew to 128. The Stout Metal Aircraft Co., Dearborn, Mich., found itself off and running, and it was quickly able to square its debts.

The company's first product was a single-engine plane of all-metal construction. It attracted plenty of attention from all sides, with two more than casually interested spectators being motor genius Henry Ford and his son, Edsel.

The business so intrigued Ford that he bought out the Stout interests in 1925. He immediately built a factory and airfield, hiring Stout as vice president and general manager of the Stout Metal Airplane Division of the Ford Motor Co.

A newspaper of that time echoed both Ford's and Stout's sentiments. It said, "This business venture will accelerate airplane development by backing the design with the diversified resources and experience of Ford Motor Co."

The newspaper's prophecy was to be true several years later.

Ford, in his typical "get it done fast" fashion, immediately set up a Dearborn-to-Chicago freight airline. Ford's efficiency took this plan from the idea stage to the first scheduled flight in exactly 1 week's time.

With the big auto company showing the way, Stout and his associates developed the first Ford trimotor in 1926. Many said Stout's design closely resembled the German Fokker, also a three-engine airplane. But rather than being fabric-covered like the German ship, the American trimotor was all metal.

The first trimotor differed from its later brethren in several important respects. Pilots in World War I liked the idea of an open cockpit. With the wind blowing in his face, the pilot could tell whether the ship was slipping or "mushing" in flight. So the trimotor bowed to the pilot by having an open cockpit, now relocated near the plane's nose rather than toward the rear as in planes of that time.

The pilots also feared the fast landing speed of the trimotor—an incredible 60 miles per hour—so Stout slowed down the landing by mounting the engines downward from the wing, giving the necessary drag.

Stout, however, won a personal victory in gaining a closed cockpit after several test pilots nearly froze to death in winter flights. The trimotor thus became the first transport plane which combined enclosed cabin, brakes, heater, cantilever wings and doughnut tires.

Stout didn't gain the heater without a stern battle, however. One economy-minded Ford official decided a heater meant too much extra cost and ruled this accessory out. To prove his point, Stout got the man into a heaterless trimotor, lifted the plane to 10,000 feet, where Stout donned a sheepskin jacket and waited. A few minutes later, the official, with teeth chattering behind blue lips, decided it was necessary to include the heater in every trimotor produced.

In 1926 alone, 1,000 flights, each carrying 1,000 to 1,500 pounds of airmail and Ford cargo, shuttled between Chicago, Detroit, and Cleveland. That year, the sturdy trimotors logged over 200,000 miles, and not a single accident marred the record—that year or any other.

Ford was determined to make aviation a going industry. The company turned out factory-trained mechanics, set standards for airport design, built concrete runways, experimented in radio and navigational aids, produced dirigible mooring facilities, and aided aviation wherever it could.

The company poured hundreds of thousands of dollars into newspaper and magazine ads to keep people abreast of flying's progress. One newspaper editorial credited the company with "doing more to popularize flying among the public than all of the stunts that have been stunted, at the risk of life and limb. * * *"

A $500,000 plant fire in 1926 failed to slow down trimotor production for long. Within 4 months planes were again rolling. By the end of 1927, 14 were built. Two years later, 146 had rolled off the assembly line.

The trimotors were soon in tremendous demand. Major American airlines, including United, Pan American and Eastern, found the 12 seats just right for passengers, and the big cargo area the answer to their freight needs. Foreign countries joined the enthusiastic response.

The giant planes were adaptable for many purposes. For approximately $50,000 (the Ford roadster sold for $435 at this same time) the buyer got an airplane that had a cruising speed of 112 miles per hour, with a maximum of 135. If one engine conked out, the trusty Tin Goose limped along at a steady and reliable 112 miles per hour. Cruising range of the ship, which had a length of 50 feet and a wing span of 79 feet, was about 450 miles, or approximately 4 hours.

In 1930, a souped-up trimotor succeeded in establishing a multiengine speed record of 164 miles per hour.

What made the Tin Goose a wanted item were its quick takeoff, heavy load capacity, slow speed and high rate of climb. Even today, a loaded trimotor can be off the ground in about 6 seconds, equal to about 200 feet.

As popularity increased, options were added to cater to everyone's interests. Trimotors were available with overstuffed chairs, divan, card tables, refrigerators, lavatory and running water, all depending on the customer's preferences.

The trimotor undoubtedly made its most significant contribution to history in 1929. Adm. Richard E. Byrd enlisted the aid of 4 trimotors and 50 men to prepare for his 1,600-mile flight to the South Pole. His trip in the *Floyd Bennett* was preceded by weeks of preparation. Prior to the flight, the weather was so cold that the engines had to be warmed with a gas torch. Oil was heated on a stove before being poured into the engine.

Limping along in 15-degrees-below-zero weather, the trimotor struggled ahead. In order to get across two of the jagged peaks guarding the polar plateau, Byrd gave orders to dump 250 pounds of food and supplies—a 3-week emergency backlog in case they were forced down. Pilot Bernt Balchen coaxed the trimotor upward—she responded—and the ship with its 15,000-pound load

edged over by a scant few feet. The 18-hour flight made history and gave the United States an aviation "first."

The Tin Goose also contributed to the humor of the times. In 1928, Mrs. Calvin Coolidge was selected to christen a plane inaugurating the first mail and passenger service between the United States and South America.

The plane chosen for this "first" was a Fokker dubbed, appropriately, the *Christopher Columbus*. Unknown to many, the *Columbus* had been damaged the week before and was unable to fly.

Rather than spoil this monumental occasion, a Ford trimotor was flown in for the christening ceremony, her fuselage emblazoned with the freshly painted letters *Christopher Columbus*.

Mrs. Coolidge smashed the champagne bottle, cameras clicked, and the stand-in trimotor zoomed away—not to South America, as originally scheduled (and as the crowd believed), but back to New York where the real plane was undergoing repairs.

Another humorous anecdote of the late 1920's was pictured in the New York Times roto section. An 8x10 photo showed how it was "possible to climb to the tail of a trimotor in flight to make repairs." A man was pictured hanging below the fuselage, halfway between the tail and the door, at a 1,500-foot altitude.

The caption read, "Another step to greater safety in passenger flying." No comment was made on what repairs would be needed on a plane capable of flying straight and level enough to enable a mechanic, with no parachute, to attach his belt to a cable and slide to the tail.

The Ford trimotors were gaining world fame, and cloth-covered planes such as the Fokker were fast disappearing. The death of famous Notre Dame football coach Knute Rockne in a Fokker plywood model signaled the death knell of these ships. His death was attributed to "structural failure in a storm," but the possibility of dry rot in the superstructure was not entirely discounted.

The trimotors were heralded for their many unique uses. Royal Typewriter Co. bought one and equipped it with a hatch hole, manned by a shipping clerk. The ship visited out-of-the-way typewriter distributors by air, parachuting machines three at a time in remote areas to save landing time.

In 45 days, the plane flew 14,350 miles to 114 cities in 27 States delivering its airborne booty. A humorous editorial of the time asked the question, "What's going to happen when they start delivering pianos this way, particularly when the parachute doesn't open?" Luckily, no one ever found out.

A new Ford trimotor plant had stepped up production from three a week to one a day. But increasing economic gloom abruptly curtailed production. In 1933, the trimotor factory was out of business. The tightening market, need for a faster, more economical plane, the accidental death of three Ford test pilots, and the money lost by Ford in producing the planes were the chief reasons.

Fortune magazine estimated Ford lost between $1 and $3 million in building trimotors.

Now, nearly 30 years later, 11 of the original 199 are known to be operating. Two make regularly scheduled commercial flights from the mainland to the tiny islands of Lake Erie. In summer, the planes are jammed with vacationers. During winter months, when the lake is frozen solid, the trimotors zip into the tiny airfields with food and supplies.

The Johnson Flying Service of Missoula, Mont., uses several Ford trimotors for hauling freight, spraying timber, and carrying parachute-jumping forest firefighters. The high stabilizer allows a chute-free fall, making the trimotor a real favorite with jumpers.

Passengers and crew alike praise the high-mounted engines and square picture windows, which allow maximum visibility.

An Arizona sportsman-pilot has a trimotor which he uses to fly hunters and fishermen in and out of remote hunting areas. Mules or a smaller plane might attempt to do such a job, but they couldn't carry the load or save the time possible with a trimotor.

Other Tin Geese are still believed to be in use in Central and South America, hauling diesel oil and mining equipment in and out of hard-to-reach areas.

About 10 years ago, these limited but necessary modern-day needs got veteran Stout interested in once again cranking up trimotor production. Original blueprints of the trimotor plane were presented Stout and his fellow California business associates by Henry Ford II, then company president. At that time it was Stout's hope to build 100 trimotors at a sale price of $100,000 each—with no structural changes except for smaller, more powerful engines.

One contemplated change in the modern-day counterpart was brakes mounted on the pedals, rather than the outmoded hand-brake located between the pilot and co-pilot. The ship's overall weight would closely conform to the original 12,500 pounds.

Perhaps nostalgia contributed more than anything to Stout's enthusiasm. He had found memories, and at least one memento—a tiny piece of trimotor metal sent to him by an Air Force general. It came from an aged Tin Goose used to evacuate personnel from Bataan in the Philippines during World War II.

Although the 15-year-old trimotor could comfortable accommodate about 12 people over a 300-mile range, the dependable Goose had been flying evacuees 500 miles over water twice a day—with passengers aboard.

The evacuation plane was later found as a pile of scrap by the general, who reported it had been strafed almost beyond identity by the Japanese.

Incidents such as these no doubt contributed to Stout's fond memories, for he helped create a plane successfully used by the Army, Navy, and Marines, a plane that operated on wheels, floats, and skis, a plane that had carried searchlights, dusted timber, sprayed crops, hauled machinery, gas, oil, live cattle, and precious human cargo.

Perhaps a new Tin Goose may someday become a reality. But without the guiding force of William B. Stout, it's a remote possibility.

The Tin Goose has made a contribution to history as no plane before it ever did—and quite possibly—as no other plane ever will.

State of California Department of Public Works Adopts Resolution Regarding Highway Advertising Problem

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. DOYLE. Mr. Speaker, I have obtained unanimous consent heretofore to bring to your attention, and that of my other distinguished colleagues, a letter, with copy of resolution adopted by the commission on April 13, 1961, concerning the very important subject of "Outdoor Advertising Along the Interstate Highway System," from Mr. Robert B. Bradford, director of public works and chairman, California Highway Commission:

STATE OF CALIFORNIA,
DEPARTMENT OF PUBLIC WORKS,
Sacramento, Calif., May 12, 1961.

Hon. CLYDE DOYLE,
House of Representatives,
Washington, D.C.

DEAR MR. DOYLE: On behalf of the California Highway Commission, I respectfully submit for your consideration a resolution relative to regulation of outdoor advertising along the Interstate Highway System, which resolution was adopted by the commission on April 13, 1961.

This resolution recites the difficulties experienced by California, along with most other States, in execution of the Federal-State agreement required to establish eligibility for Federal participation in the cost of regulatory measures.

Further, the resolution requests consideration of extension of the July 1, 1961, deadline for execution of the Federal-State agreement.

In forwarding this resolution to you, I would like also to comment on the general situation of the highway program in California. Since passage of the Federal-Aid Highway Act of 1956 by the Congress, California has made optimum use of available Federal funds, matched by State funds, in advancing the expanded highway program. Our most serious problem has been the recent uncertainty as to the amounts of Federal funds which would be available. Not only have the fiscal uncertainties slowed the rate of progress below that necessary for completion of the Interstate Highway System on schedule, but it has also posed problems of efficient utilization of the capabilities of the construction industry, which has an overall effect on the general economy.

It has been most encouraging to note that the Congress is making definite progress toward resolving this matter.

In further regard to the outdoor advertising subject covered by the California Highway Commission resolution, we sincerely hope that you will be able to support appropriate legislation to extend the present deadline. We would be most happy to furnish any additional information you may desire on that subject or on other highway matters.

Respectfully,

ROBERT B. BRADFORD,
Director of Public Works and Chairman, California Highway Commission.

CALIFORNIA HIGHWAY COMMISSION RESOLUTION

Whereas under the Federal Aid Highway Act of 1958 provision was made for increased Federal participation in the cost of certain portions of the Interstate Highway System for States which regulate outdoor advertising on areas adjacent to the Interstate System; and

Whereas such increased Federal participation is conditioned upon the execution of an agreement between a State and the Secretary of Commerce by July 1, 1961; and

Whereas most States, including California, have been unable up to this time because of legal and administrative problems encountered to obtain necessary legislation to comply with the Federal requirements: Now, therefore, be it

Resolved by the California Highway Commission, That it requests that the time for the execution of such agreements be extended beyond the date of July 1, 1961, in order that further study may be made of the problems involved at both the State and Federal levels; and be it further

Resolved, That copies of this resolution be transmitted by the secretary of this commission to the Senators and Representatives

from the State of California in the Congress of the United States; and be it further

Resolved, That this resolution be spread upon the minutes of the California Highway Commission meeting of April 13, 1961.

Catholic School Crisis Underlined by Furor on Aid

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. PUCINSKI. Mr. Speaker, the Chicago Sun-Times has started an excellent series on the problems of America's Roman Catholic parochial schools, which today absorb an estimated 5,300,000 of the Nation's total elementary and high school age population.

I should like to call this excellent series to the attention of my colleagues particularly at this time since Congress is presently considering legislation to provide Federal aid to help solve the Nation's educational crises.

I believe the Chicago Sun-Times and the two outstanding journalists who have prepared this series deserve our highest commendation. This excellent Chicago newspaper is indeed rendering an outstanding public service in helping all of us better understand what a vital role the Roman Catholic parochial schools play in our Nation's overall educational program.

Mr. Speaker, the first two articles of the Chicago Sun-Times follow. I will insert into the RECORD the rest of the series as it is published:

[From the Chicago Sun-Times, May 14, 1961]

CATHOLIC SCHOOL CRISIS UNDERLINED BY FUROR ON AID

(This is the first of a series of articles examining the issue of Federal aid to schools—private as well as public. This national issue has focused attention on the Roman Catholic school system. The series was written by Terry Ferrer, education writer for the New York Herald Tribune, and Dolores McCahill of the Sun-Times.)

(By Terry Ferrer)

NEW YORK.—American Roman Catholic parochial schools—the largest nonpublic system of education in the world—are facing a period of unprecedented crisis.

Never before in the century-old history of mass Catholic education has the parochial school been so sharply in the limelight, so bitterly involved in national controversy over Federal aid to education, so hard-pressed to meet the exploding needs of Catholic families.

The 5,300,000 children in Catholic elementary and secondary schools this year—92 percent of the nonpublic U.S. school enrollment—are indicative of the fantastic growth and mounting pressures on those schools.

In 1900, 1 of every 20 children in school in the United States was attending a parochial school. This year, the figure is 1 of every 8. In New York City alone, every third child between 5 and 18 years of age is now in a parochial school. In Pittsburgh, it is about 1 of every 2.

While this year's national public school enrollment of 36,305,000 elementary and high school students dwarfs the Catholic parochial figures, the fact that since the turn of the century the public schools have a little more than doubled their pupils. In the same period, the Catholic parochial schools have increased enrollment almost 6½ times. And even so, an additional 5 million Catholic pupils—many of them unable to gain admission to a parochial school—are in public schools this year.

As for the future, no cardinal or bishop, no priest or layman is willing to predict with certainty what will happen. All conceded that the number of prospective parochial pupils will continue to rise, even as the number of Roman Catholics has—47 percent in 10 years for a current total of more than 42 million.

DEMANDS FOR AID

The Catholic parochial school—major investment of the Catholic Church in the United States—is short of money, short of classrooms, short of teachers. Voluntary Catholic support of these schools has been generous, but the crush of numbers has overwhelmed the amount of dollars, estimated at $1.5 billion a year in maintenance alone.

Out of this background of need and pressure has come this year the most insistent Catholic demand to date for Federal aid to parochial schools.

The acrimonious debate over including church-related schools in President Kennedy's $5.6 billion aid-to-education program has already delayed the administration timetable on education help by almost a month.

The Catholic hierarchy has no quarrel with the President's higher education provisions—including a direct Federal grant of $350 per student to public, private or church-related colleges who accept the proposed 212,500 Federal college scholarship winners over the next 5 years.

INJUSTICE SEEN

But both prelates and Catholic laymen, by and large, feel that it is unjust and discriminatory to exclude Catholic parochial schools from the $2.3 billion proposal for public elementary and secondary schools, which provide that Federal funds can be used at the States' option for school construction or teachers' salaries.

The President has said that he believes that Federal aid for "constructing church schools or paying church school teachers' salaries" is unconstitutional as a violation of the principle of the separation of church and state.

At a March 2 meeting in Washington, the administrative board of the National Catholic Welfare Conference, representing the Catholic hierarchy in this country, asked for long-term, low-interest loans to private schools, which would total about $350 million as part of a Federal aid program.

DELAY IN HOUSE

At no time during their meeting, it is understood, did the bishops discuss the possible advantage or disadvantage of having a Catholic President consider their request. Rather, they felt, Federal aid to education of one kind or another may well become law this year. The President campaigned vigorously on the issue, and only legislative tieup in the House Rules Committee held up such legislation last year.

The Catholic bishops reasoned that any pattern of Federal aid to education laid out this year would become the model for permanent Federal aid. Parochial school help, they believed, should be part of that pattern.

The Catholic bishops' requests prodded the administration into a legal examination of the constitutionality of such loans. In a brief prepared by the Departments of Health, Education, and Welfare and Justice, the administration heard on March 28 that both loans and grants were deemed unconstitutional.

Within a week, the National Catholic Welfare Conference had decided to step up the loan requests and try for grants for construction of nonreligious facilities and perhaps for lay teachers' salaries.

SPELLMAN A SPOKESMAN

Most vociferous and most persistent spokesman for these new requests has been Francis Cardinal Spellman, archbishop of New York. As head of an archdiocese which currently enrolls 216,013 pupils in its parochial schools—more than the combined public school enrollment of the States of Delaware, Vermont, and Alaska—Cardinal Spellman believes there is a "large gray area of constitutionality" in the Government's March 28 brief.

In a fresh expression of his views April 29, the cardinal made these points:

There is "common ground" legally for resolving the controversy over Federal aid to church-related schools. The Government's memorandum made "three substantial concessions to the position taken by proponents of aid to church-related schools."

First, the cardinal said, it might be permissible for the Federal Government to provide for church-related schools "nonreligious facilities" such as gymnasiums, cafeterias, laboratories, and medical-dental facilities, and "perhaps for the compensation of teachers of secular subjects." Second, Federal funds might be loaned to church-related schools to build nonreligious facilities. And third, the memorandum concedes that it might be constitutional to provide parochial students with secular textbooks and nonreligious equipment. Also, the cardinal said, income tax benefits to parents might be another form of aid.

GALLUP POLL CITED

The majority of Catholics, both religious and lay, reportedly agree with the cardinal's position. A recent Gallup poll reported that two-thirds of the Catholics questioned felt that Federal aid should go to Catholic and other private schools as well as public. Conversely, almost two-thirds of the Protestants polled were for public school aid only. The National Council of Churches, representing almost 40 million Protestants and Eastern Orthodox, opposes Federal aid to church-related schools.

The second largest parochial system in the country is operated by the various Lutheran bodies, and they are opposed to any Federal help for their schools. But it must be pointed out that 8 major Lutheran churches, including the Missouri Synod—with the biggest church-school enrollment—currently enroll 178,139 pupils, according to figures compiled by the National Lutheran Council, against the Catholic count of 5,288,705.

Meanwhile, in Washington efforts are underway to solve the bitter fight over Federal aid, perhaps through combining the $2.3 billion school-aid bill with a measure extending and liberalizing the National Defense Education Act of 1958, which expires in 1962.

PRESSURE FROM LAYMEN

Catholic churchmen believe that the voice of the layman is louder in demanding more parochial schools than ever before. The Reverend Neil G. McCluskey, a Jesuit who is dean of the School of Education at Gonzaga University in Spokane, Wash., and one of the leading Catholic educational theorists, puts it this way:

"There is a tremendous pressure from laymen, more than ever before. For the first time, parents feel that the parochial schools belong to them. They just used to leave the schools for the bishops and priests to look after, and parents just expected to be serviced by such schools. Fifteen years ago, for example, Catholic parent-teacher organizations simply didn't exist. Now they are growing every day. These parents believe the situation is desperate for these schools—

and they are aware that they are part of them."

The Right Reverend Frederick G. Hochwalt, director of the education department of the NCWC, testified before a Senate Education Subcommittee that parochial schools perform a public function by educating large numbers of children under standards accepted by the State as fulfilling its requirements of compulsory education.

PARENTS AGREE

The Catholic parents who are pounding on the doors of the already overcrowded parochial schools agree. Forty-five percent of elementary Catholic children and 55 percent of Catholic high school students are now unable to get into parochial schools across the country.

And the specter of insufficient funds and increasing pressure on these schools haunts layman, nun and priest alike.

[From the Chicago Sun-Times, May 15, 1961]

COSTS TIGHTEN GRIP ON CATHOLIC SCHOOLS

(This is the second of a series of articles on Federal aid to schools, private as well as public. The series was written by Terry Ferrer, New York Herald Tribune education writer, and Dolores McCahill of the Sun-Times staff.)

(By Terry Ferrer)

NEW YORK.—To many of the 139 million Americans who are not Roman Catholics, a parochial school is something of a mysterious place. The average non-Catholic thinks vaguely in terms of a catechetical school—one entirely staffed by nuns, brothers or priests who lead the children in prayer and teach them Christian doctrine all day long in a dingy classroom.

That is a fallacious picture. To begin with, none of the 50 States would permit daylong religious teaching. Parochial schools must conform to the same State instruction requirements time as do public schools.

Nuns and brothers no longer man teachers' desks in parochial schools single handedly. For every three nuns, brothers or priests teaching in these schools in 1959–60, there was one lay teacher, or a ratio of 108,452 religious to 34,878 lay teachers. While both nuns and brothers continue to increase, their numbers are being drawn from the low-birth period of the 1930's, and there are simply not enough to go around.

The phenomenal rise in the number of lay teachers—they have increased more than eight times since 1920 and more than five times since 1945—is putting a large hole in many a parish budget. To make the future even gloomier, the National Catholic Educational Association predicts that sometime in the 1970's there will be 2 lay teachers for every 1 religious teacher.

While many Americans believe that nuns and teaching brothers receive no salary, each of them does receive a stipend, nationally averaging from $650 to $1,250 a year, which goes to their religious orders to maintain them.

But the lay teacher receives a salary three to four times that amount, estimated at an average national figure of $3,400 for an elementary school teacher and $3,650 for a high school teacher. Even with this added expense to the parish, lay teachers do not begin to receive the salaries of public school teachers. The National Education Association has computed the national 1960–61 average public school teacher's salary at $5,215.

In the archdiocese of New York, for example, the 164 brothers teaching in 327 elementary schools receive $1,500 to $1,740 a year, while the 2,946 nuns in elementary teaching get $1,200 to $1,380. The 1,200 elementary lay teachers are paid $2,100 to $2,400.

In the 99 New York archdiocesan high schools, the 359 brothers receive stipends of $1,560 to $1,800 per year, and the 718 nuns get $1,440 to $1,620. The 528 lay teachers are paid "no less than $2,600." An archdiocesan study is now under way to find means of raising lay teacher salaries, according to the Rt. Rev. John Paul Haverty, archdiocesan superintendent of schools.

The difficulty of finding even this many lay teachers is evident when their salaries are compared with the single-salary scale in the city's public schools. It runs from $4,800 to $8,300 in 14 steps.

The construction of new parochial schools and the modernization of old ones is booming, and the so-called dingy classroom is fast being outgrown.

While there are no official national figures available on the amount of parochial school construction now going on, a survey conducted last year by the magazine Catholic Building and Maintenance showed that in 1961 Catholic schools will spend almost $100 million in maintenance, operation, and renovation of their facilities. In 1958 alone, the magazine said, $175 million was spent in new elementary and high school construction. Next fall, 190 new elementary schools and 30 new high schools will open.

In the New York archdiocese, more than $98 million has been poured into the building of 1,498 elementary and 495 high school classrooms since 1945. In the same 16 years—a "boom" period in all school enrollments—the archdiocesan school enrollment almost doubled, jumping from 132,623 to 216,013.

TWENTY-FIVE MILLION DOLLAR DRIVE

Last September, Francis Cardinal Spellman announced a $25 million drive for school building funds, largest in the history of the archdiocese. It has already been oversubscribed by more than $13 million. With the money, the cardinal plans a new seminary, four new archdiocesan high schools, and a pool of funds to finance future high school construction.

In Brooklyn, a $25 million drive begun last year is also oversubscribed by $13 million. Ninety percent of the funds raised will be used to start six new diocesan high schools. Since the end of World War II, parochial enrollments in Brooklyn have jumped from 131,855 to 210,668, and schools from 197 to 231. An estimated 100 more high school classrooms and about 500 elementary classrooms have been built.

NEW DIOCESE

In the booming new diocese of Rockville Centre, N.Y.—created less than 4 years ago and embracing Nassau and Suffolk Counties—$43 million has been spent in that period for 28 new schools and 27 additions to provide 673 new elementary classrooms, 2 new high schools and 1 college building.

Since 1945, the parochial school population has almost quadrupled, with elementary enrollments jumping from 16,796 to 61,244 this year, and high school pupils rising from 2,345 to 8,962.

The archiocese of Newark, N.J., has also announced a $25 million drive for funds to build eight new regional high schools, a building for its seminary, and four homes for the aged. The new high schools will accommodate 12,000 more boys and girls than the present 21,624.

CHICAGO COMMENT

In Chicago, largest archdiocese in the country with more than 2 million Catholics, Msgr. William E. McManus, superintendent of schools, does not care whether there is Federal aid this year or not. He said recently, "We're going to have 125 new classrooms next fall, no matter what they do in Washington."

Who pays the bill for all these projects? The answer, of course, is the Catholics themselves. Pastors of churches are responsible for supporting the schools attached to them. The diocesan school is supported by the Catholics of that diocese, while the private Catholic schools—considered a part of the Catholic school system—charge tuition comparable to other private schools.

In elementary schools, the cost to the church per pupil per year is about $120 on a national average, according to figures of the National Catholic Educational Association. The parent pays about a third of this in comparatively low tuition and books and other small charges. But, naturally, he pays again by putting money in the collection plate.

In the New York archdiocese, the tuition is about $20 or $30 per 10-month school year. In New York high schools, the average tuition is $100 to $150 a year in the parish and diocesan schools. In Philadelphia, the high schools are free. In Chicago, the high school tuition runs about $225 a year.

Throughout the country, parochial schools participate in the Federal or State school lunch program. In 16 States, they receive free pupil transportation, and in Oregon, Louisiana, Mississippi, and New Mexico parochial children receive free textbooks.

Last year, parochial schools in the United States borrowed about $1 million under title III of the National Defense Education Act for science, mathematics, and foreign language improvement. Unlike public schools, which receive matching grants, private schools are only entitled to borrow Federal funds.

Since the principal support for parochial schools comes from Catholics, many of them argue that they are already paying a "double tax"—especially in fast-growing suburban districts. They pay for both new public schools and new parochial schools. And many of them feel, as one priest said, that a new Federal aid program excluding them would bring a "triple tax" since their Federal taxes would be used to finance a new program in which they had no part.

Yet Catholics today are already accused of sabotaging public school budgets and bond issues to support their own schools. The record may be poor in some States, such as Rhode Island. But after the New York State budget "revolt" of 1959, when 34 budgets went down to defeat, the State education department in Albany launched an investigation to see if parents of parochial students had helped to defeat the budgets. It could find no evidence of Catholic efforts to hinder public budgets.

As Archbishop Karl J. Alter of Cincinnati, chairman of the administrative board of the National Catholic Welfare Conference, has stated: "It would be a dereliction of duty and an offense against both justice and charity if it were to be assumed by representatives of church-related or private schools that their own interests could prosper at the expense of public school interests. No responsible Catholic authority has ever advocated any such attitude."

But for the Catholic parent with several children in parochial schools, there is no doubt that the temptation is there.

Agriculture

EXTENSION OF REMARKS

OF

HON. J. ERNEST WHARTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. WHARTON. Mr. Speaker, I recently pointed out to the House that our various governmental programs are working at cross-purposes. We are driv-

ing out our small farmers about as fast as possible and bemoaning our unemployment.

Surely the statistics down in the Department of Agriculture must show that the large and flexible farm operations have continued to hold their own, but the smaller and possibly more inefficient operations, face steadily declining incomes. Under all of our so-called farm programs, either the consumer or the taxpayer has to pay the bill and it has grown to be no small item. I do not know whether it is fair to say that a marginal farmer would probably be marginal in other pursuits as well, but I do know that he has been largely overlooked in most of the farm programs. The surpluses can be eliminated only if some of the big producers are induced to alter their habits.

I am advised that Congress is soon to vote upon a do-it-yourself scheme which, in my opinion, is strictly old hat. How about the existing milk orders which were set up on that basis, to be altered only upon the vote of the producing farmers? The Department tolerated group voting, which meant that the individual had no vote at all. Disparity in producer payments and technicalities by the dozen crept in, but certainly not through any effort on the part of the farmers. I think we should take a long hard look at the milk order procedure before embarking on countless other enterprises of this nature.

Comments on the American Customs of Observing Holidays

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. BROYHILL. Mr. Speaker, Mr. Leon K. Bryner, 1001 27th Street South, Arlington, Va., a most patriotic citizen of my northern Virginia district, has written a letter to me which merits insertion in this RECORD so that my colleagues and all persons who follow the proceedings of Congress may have the benefit of his thoughtful comments on the American custom of observing holidays.

With your permission, I shall include Mr. Bryner's entire letter below:

WHAT WILL YOU BE DOING?

Certain national holidays have been set aside for special observance—Memorial Day, the Fourth, and Veterans' Day. But what do most of us do on any or all of these commemorative days? Well, here are just a few for instances:

Sleep late, perhaps to recharge the old battery after last night's all too successful party.

Work around the car, the home or apartment; interspersed with an occasional beer, julep, highball, or collins; or merely sit in front of the TV, or play bridge.

Play golf, or visit the club and sunbathe at the side of the pool.

Go to the ball game, the races, or perhaps a movie.

Take the family to the beach, or on a picnic.

Take advantage of the long weekend by visiting friends or relatives. Like as not if you don't, they may get the same idea and you'll be stuck.

Or, perhaps just sit and gripe because the weather has interfered with your plans and your holiday.

There are many variations of the above, all of which omit both the spirit and the intent to which each of these days is dedicated; namely, to each individual giving a bit of oneself; and to a personal rededication to the task ahead. Today's younger generation have not the least conception of the meaning of observance. Observance in its true sense went out of fashion about the time the age of the goof off phased in. It was superseded with more and more pleasant living, with less and less personal acceptance of duty except perhaps to the family and to self.

There may be those with honest doubts as to what is expected of them in observing these days. They may challenge the need for personal observance in this day of highly organized society in which organizations take care of the formalities of observance. But observance is everyone's business—a personal responsibility not to be delegated or ignored. As to how one can observe such days properly; there are several ways. But the underlying theme of each is beamed at individual participation. Take time out to pause, reflect, and thank God for our country and its way of life. Then ask oneself, how can I be effective in helping to keep it that way and to make it better? Our heritage is what it is because it was fought for and won the hard way, by individuals with a compelling sense of duty and responsibility. It just didn't happen perchance, nor will it remain here long unless we free ourselves of our complacency.

Another symbol common to all 3 of these days—display Old Glory proudly. How long has it been since you last did that? There may have been times when you considered those who did eccentric. Have you ever sat down alone or with the family and attempted to analyze, for example, what Memorial Day really means? How can I demonstrate the sort of observance the day deserves?

There are many cemeteries in every nook and corner of this land, none of which doesn't have its graves mutely testifying to abandonment by those who no longer care, or are too far removed to decorate or maintain the grave site.

So much for Memorial Decoration Day; each of the others has its special significance, and purposeful meaning, if we would only take time to search them out and to regain and restore lost values. It is much later than we think.

Sincerely,

LEON K. BRYNER.

Talking Back to the Admen

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1961

Mr. LINDSAY. Mr. Speaker, Marya Mannes, in a recent speech before the Association of National Advertisers, underscored the lengths to which some advertisers are willing to go in their efforts to persuade us to want a lot of things we do not need and buy a lot of things we cannot afford.

Miss Mannes' forceful and delightful plea for a saner, more reasonable approach to advertising has my wholehearted endorsement. I am quite sure my colleagues will feel a similar response and I urge them to read the excerpts from Miss Mannes' speech which appeared in the May 1961 issue of the Reporter. Under unanimous consent I include these remarks in the Appendix of the RECORD:

TALKING BACK TO THE ADMEN
(By Marya Mannes)

Asking me to address a conference of advertisers is a little like having a rabbit address a planned parenthood meeting. To put it gently, you and I don't always see things the same way. I keep accusing you people of making us people want a lot of things we don't need and buy a lot of things we can't afford. And I scream just as loudly against having to work my way through three pages of ads in order to find one column of print as I do against having the televised life of Churchill interrupted by a dietary product. Sir Winston, of all people: Where would he have got on Metrecal?

But relax, as you boys say. Underneath the Amazonian form, this fuzzy-headed starry-eyed do-gooder exterior—underneath all this beats the heart of a sucker. I too want to be a younger, fresher me. A little of that cream every night and I will be. I too want to own a swimming pool so that I can meet a better class of people. I too believe that if I use that soup mix my husband will murmur sweet words. Your message, gentleman, gets through to me.

Moreover, my dreams of a better society where you people don't clutter up our lives with urges to consume are matched by plain commonsense: I know you are here to stay, that our economy might grind to a halt without you, and what's more, that a nation forced to read text without the distraction of girls in bras and liquor in bottles would be a nation of hopeless neurotics.

So I'm going to be constructive if it kills me. How? By giving you one consumer's reactions as to the degree of success or failure your ads enjoy with me, whether on paper or on television. It is my contention that especially on television you are pitching too low and treating us like the mentally retarded. The male voices you use to sell us soap or detergents or waxes or polishes would do splendidly in clinics for the emotionally disturbed—so kind, so gentle, so tender, so repetitive. Do you really think we need that much soothing?

Furthermore, I would like to tell you certain things that you keep showing us we do but which we never do. No. 1: no woman in her right mind takes her wash to the window to see if it's white. No. 2: no woman in her right mind rubs her cheek on newly washed diapers. No. 3: all women know that no bath soap in the world covers the bath and herself in impenetrable lather. I know it has to be impenetrable for reasons of deceny, but now that we the New Frontier, why couldn't you say, "The lather you see here is not from our soap," or "Men, you can see through our lather."

In other words, be reasonable. The most effective ad on television as far as I am concerned, was the one where a detergent made dishwashing almost nice. That got me—that almost. I've used the stuff ever since.

In passing, I might also add that a good institutional ad is as interesting to women

as it is to men. There is a fascination in seeing how a product is made, and I think we would all prefer to see how some cosmetic is made—or would we?—to looking at some dumb babe tell us that her beauty came from using toilet soap. She'd be beautiful if she used axle grease.

Oh, just one more thing. You are making the rearing of responsible children much harder when you show a kid scribbling on walls, planting dirty fingers on white surfaces, and spilling chocolate fudge sundae on the floor. What happens then? Mommy wipes up after him with Mr. Clean. Moral to the young: be a pig and let Mom worry. You would be doing an immense public service if you showed piggie cleaning up his own mess—as indeed he should.

New York's Reform Democratic Clubs Hail the Anniversary of the Supreme Court Desegregation Decision

EXTENSION OF REMARKS
OF
HON. WILLIAM FITTS RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. RYAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by officers of the Reform Democratic Clubs of New York's West Side on the occasion of the seventh anniversary of the Supreme Court decision outlawing school segregation. One of the characteristics of the reform clubs is a vital concern with issues. This statement reflects their deep commitment to the achievement of full civil rights for all our citizens now—not later:

A STATEMENT BY THE REFORM DEMOCRATIC CLUBS OF NEW YORK'S WEST SIDE ON INTEGRATION IN SCHOOLS

On May 17, 1954, the Supreme Court of the United States handed down its decision in the case of *Brown* v. *The Board of Education* outlawing segregation in the public school systems of the United States.

On this, the seventh anniversary of this momentous decision, we, the Reform Democratic Clubs of the West Side of the Borough of Manhattan in New York City, wish to state our belief in the right of every individual of any race, religion, or creed to equal opportunity and to equal enjoyment of the guarantees given to all citizens by the U.S. Constitution.

The Supreme Court's decision in 1954 was a step toward converting this ideal into a reality. Though much has been done, much remains to be done in education, housing, job opportunities, and voting.

Although 7 long years have passed, only a small percentage of the public schools in the United States affected by the Supreme Court's decision have complied with the decision. Discrimination in employment on the basis of race or color still exists. Few States have as yet enacted legislation prohibiting discrimination in housing; and, in those States which have, the legislation has often proved inadequate to meet the needs. In many States minorities still are not allowed to vote. Without the vote, they have no say in their Government.

Today these minorities in our population are justly demanding that the American political system live up to its ideals. This demand has been articulated through the courts and by social actions such as the sit-in demonstrations.

We reaffirm our support of these efforts by our fellow Americans to acquire political and social equality. We realize that this is a problem for the North as well as the South. It is an American problem; and to solve it we need an American solution.

It is both our hope and our belief that the Federal Government will not shirk its responsibilities in this field and will act affirmatively toward eliminating all inequalities in our society.

It is both our hope and our belief that the State governments will do their part in guarding the rights of their citizens by faithfully implementing the laws already passed for this purpose, and by passing new legislation if needed.

It is both our hope and our belief that the city of New York will continue to take the lead in the advancement of civil rights, and by so doing, promote a vital, heterogeneous city life which will make New York City into a model of urban development.

We, the Reform Democratic Clubs on New York City's West Side, pledged ourselves to continue to support the efforts of government on all levels to end segregation and discrimination in our land. We pledge to continue to aid those community organizations working toward these same goals, and we further pledge to initiate programs of education and social action to help make our country into a land of opportunity for all its citizens.

ALFRED H. KLEIMAN,
President, Riverside Democrats.
ERIKA TEUTSCH,
President, West Side Democrats.
MARTIN BENIS,
F.D.R.-Woodrow Wilson Democratic Club.
FRANCES TEPPER,
Reform Independent Democrats.
RAYMOND GUENTER,
President, New Chelsea Club.

The European Free Trade Association and Its Implications for the U.S. Pulp, Paper, and Paperboard Industry

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter by the American Paper and Pulp Association:

THE EUROPEAN FREE TRADE ASSOCIATION AND ITS IMPLICATIONS FOR THE UNITED STATES PULP, PAPER, AND PAPERBOARD INDUSTRY

(Statement of American Paper and Pulp Association by Robert E. O'Connor)

In a memorandum previously filed with the Department of Commerce, we had pointed out that U.S. industry was faced with discriminatory action on the part of the European Free Trade Association which would put industry generally and the pulp and paper industry, specifically, at a competitive disadvantage. This discrimination has already been evident in the 20-percent tariff reduction shared among the member nations of EFTA with no comparable tariff reductions to nonmember nations, and will be further heightened on July 1, 1961, when an additional 10-percent reduction in tariffs among the members is put into effect. This program of mutual tariff reductions may very well be accelerated even more rapidly than currently anticipated and the ability of a nonmember nation, such as United States, therefore, to compete in markets of member countries in which it had formerly shared, will be virtually lost.

The formation of EFTA and the implementation of its aims will put the U.S. paper industry at a very serious competitive disadvantage. Two of our industry's greatest international competitors, Sweden and Norway, were original members of the European Free Trade Association and more recently, Finland is now participating in this trade bloc and sharing in the same tariff reduction arrangements contemplated by the original seven members. These competitors, therefore, by July 1, 1961, will enjoy a 30-percent tariff preference for their exports to the United Kingdom, which has been one of our industry's major markets for exports of paper and paperboard.

The problem is particularly grave as it relates to U.S. exports of containerboard liners to the United Kingdom, since over the past 3 years exports of this commodity have comprised 90 percent or more of the total U.S. paper/boards shipped to that country. For example, in the year 1960, our domestic industry exported 170,051 tons of kraft board liners to United Kingdom with a dollar value of $21,617,439. We are currently faced with the erosion and ultimate loss of this market entirely to our Scandinavian competitors because of our inability to overcome the substantial tariff differential to which our products will be subjected in contrast to those of the Scandinavian producers who will eventually be shipping these products duty free into the United Kingdom.

At the present time the United Kingdom imposes duties of 14 or 15 percent ad valorem, depending on the weight of the board. These duties are assessed on the CIF price plus an additional amount (called commuted rate) of one-half of 1 percent representing the costs incident to getting the goods through customs. The value is thus higher than our usually quoted U.S. export value, which employs an f.o.b. port of exportation basis.

The effect of the tariff reduction to be shared by the participants in the European free trade area is clearly illustrated by the following computation made just prior to the first tariff reduction by EFTA. In the interest of simplicity we used linerboard of 47 pound weight, which carries a duty of 15 percent. The figure would not vary significantly for the next lighter weight if 14 percent were used. The tabulation is in terms of prices then existing.

	Export from United States	Export from Scandinavia
C.i.f. price	$134.55	$135.00
C.i.f. price less cash discount	133.41	132.30
Present duty	20.11	19.94
Duty July 1, 1960	20.11	15.95
Duty Jan. 1, 1970	20.11	0
Net price plus duty	153.52	152.24
Net price plus duty, July 1, 1960	153.52	148.25
Net price plus duty, Jan. 1, 1970	153,52	132.30

As the foregoing table shows, United States and Scandinavian net prices plus duty were then very close—as they had to be in a competitive market. The difference was $1.28 per ton.

On July 1, 1960, as a result of the 20-percent reduction in duty under the EFTA Treaty, the difference increased to $5.27 per ton. By 1970 (or sooner), when duties will have been entirely eliminated, the difference in favor of the Scandinavian competitors will be $21.22.

These figures are based on the assumption that c.i.f. prices will remain constant. This assumption is probably unwarranted. Freight rates now are very low. In all likelihood, these rates will increase substantially. With any increase in freight rates, the duty will increase. These, therefore, are minimum differentials.

In order to remain competitive, U.S. manufacturers will have to reduce their prices by approximately $21 per ton. A reduction of $21 per ton from present prices will produce so low a return at the mill as to make export sales unprofitable and will probably eliminate completely our export trade in kraft linerboard to the United Kingdom.

The need for help: Without the help of our Government, we will be compelled to stand by and see the gradual attrition of this sizable export business. We ask that our Government, through every means at its disposal, endeavor to secure for our domestic industry equality of tariff treatment with Scandinavia.

If EFTA's contemplated tariff reduction in internal tariffs should be extended to the United States by the United Kingdom, we would then be in a position to compete on equal terms for sale of our kraft linerboard in the United Kingdom. Scandinavian competitors now have and will continue to have important advantages over us by virtue of geography alone. We do not ask for assistance in this respect, nor do we venture to request any alteration in the EFTA Treaty. But an extension of the tariff reduction to the United States is entirely consistent with the EFTA tariff plan and is essential if our market in the United Kingdom is to be saved.

The pulp and paper industry position on export trade can be reduced to one fair and simple objective: That the U.S. pulp and paper industry be accorded the same tariff treatment and other trading privileges as the pulp and paper industry in other countries producing like products for world trade. We simply ask for the opportunity to compete without the burden of discrimination.

It is our hope that this position and our request for governmental assistance in this area will be prominently kept in mind by our Government representatives during the GATT negotiations.

Another War?

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. HOFFMAN of Michigan. Mr. Speaker, will we again be called upon to say goodby to loved ones, some of whom may return permanently disabled—others who will never come home?

There is every reason to be apprehensive, fearful, to gird ourselves for determined effort, be willing to sacrifice to preserve this a free, independent nation, where we and those we bring into the world can continue to enjoy the freedom and opportunity which have always been ours.

Another war confronts us because we have pledged help to others throughout the world who are less fortunate. We have forgotten that self-preservation always has been, and ever will be, uppermost in the minds of individuals and nations. When the chips are down every individual, every nation, always has and will continue to look first to its own welfare and existence.

As a member of so many international organizations, we have surrendered our right to act independently, even though our own existence be at stake. On our doorstep, in Cuba, because of our international agreements, the Communists have been able to establish a base—in violation of the Monroe Doctrine. Were it not for our international agreements, we could, and long ago, had we the spirit of the forefathers, have kicked the Russians, the Communists, from Cuba—blockaded the island itself if necessary.

Carried away by the natural and laudable desire to be helpful to others, listening to the preachment of intellectuals and internationalists whose objectives are laudable but impossible of attainment, we have fought and sacrificed not only to bring peace throughout the world, but to make the intellectual and spiritual standards of all others conform to our own.

Nowhere in America is there a reading or listening intelligent individual who does not know that, because of our commitments to international organizations, disputes in the Middle East, in southeast Africa, in Germany, in South America, as well as in Cuba, war is on our doorstep. We have spread our power too thin, in too many places. Overextension, over-commitments threaten our ruin.

The President—an earnest, able, patriotic and courageous young man—is rightly apprehensive of what may befall. Some have criticized him because he relies to such a great extent upon members of his own family. For my part, I can understand his need for confidence in his advisers. Today, he does not know which way to turn for sound, patriotic advice.

A few years ago, the State Department, upon which he should be able to rely, was shot through and through homosexuals, moral perverts and Communists. Today, there is no certainty that in it Communists do not know and betray to our enemies our most secret plans and accomplishments. Recent developments in Cuba may indicate that such is the fact.

The President has wisely called upon many of his political opponents, experienced individuals, to advise and help him, and, without exception, all have given him of their best. However, the ultimate plotting of our course rests with the President, a burdensome responsibility which he has generously assumed. I doubt not that he has asked for Divine guidance.

We have been told that "God helps them that help themselves." As individuals, we cannot shirk our responsibility. Likewise, we cannot shirk our own responsibilities, either as individuals or as a Nation, to see that we remain strong, do not lose our freedom, our ability to defend our independence as a Nation.

Our efforts to help others will be futile if they continue to refuse to do their part toward the attainment of their own freedom and independence.

We cannot turn back the pages of history, rechart our course. New scientific and productive methods and achievements have created tremendously destructive and costly weapons. Another war may turn back for centuries present-day civilization. Our individual and national responsibility to our own and future generations cannot be shirked. Other nations, powerful because we have built up their strength, now challenge our ability to successfully meet a destructive war. The President has called for and we are preparing to defend the continued existence of our Government, of our way of life.

Throughout the country individuals and corporations granted billions of your tax dollars are engaged in the production of things and weapons needed if we are to preserve our own existence. This program we must all support. We can no longer tolerate the existence of groups or organizations which render production for defense more costly or inadequate.

When the Congress appropriated billions for the production of missiles, other implements of defense, at plants in Florida, in California, and other places throughout the United States, a few greedy, selfish groups took advantage of the opportunity and the need to secure for themselves benefits to which they were not entitled, the granting of which threatens our very existence. Some of these strikers received as much as $700 a week, in just one case added $692,000 to the cost.

While the average member of a union is just as patriotic, willing to pay his or her share of the tax burden, make as great a contribution to the general welfare, engage in combat fighting, as are the members of any other civic or religious group, because of the special privileges and benefits which have been granted, some few leaders and individuals have been able to and have taken advantage of the present situation.

For more than 20 years, when war or unemployment threatened or were with us, they have interfered and sabotaged our efforts to be ready, insisted that they alone should have the available jobs, and at a price named by them.

I need but cite strikes in Detroit more than 20 years ago where the Navy, in need of equipment necessary for national defense, was held up for 24 and again for 41 days by strikes, the issue being additional benefits for those engaged in such work.

Some have forgotten that, on May 25 of 1946, when strikes by railroad employees threatened to tie up the transportation system of the Nation, President Truman came before Congress and demanded, and the House passed by a vote of 306 to 13, legislation which gave him, as President, authority to seize some industries and imposed upon the railroad strikers the necessity of either permitting the railroads to be operated or themselves being drafted into the armed services where they would receive the pay of a serviceman. The strike ended very quickly.

Is there any reason why some should enlist or be drafted into the armed services while jobs in factories producing munitions of war should be available only to members of unions; nonunion men, veterans, and taxpayers, discriminated against?

In Michigan, employees in several plants, in order to keep production going, voluntarily took a lessened, a decreased wage, willingly offered to work additional hours. What a contrast between the action of these patriotic employees and those to whom I have just referred and who were in a situation to prevent us from adequately preparing for war.

The remedy?

Recently, Senator MCCLELLAN suggested that, in such situations, some of the special privileges and benefits granted to unions and their members should be suspended.

Twenty years ago, legislation designed to prevent the abuse and misuse of special privileges by any organization which interfered with our national welfare, public health, or our ability to defend ourselves, was introduced by me, but it never, because of the political power of a few union leaders, received consideration.

Another bill has just been introduced which would take from employees and unions, when they sabotage our national defense, the special privileges and benefits granted them by Federal legislation.

Our Constitution defines treason: I quote:

> Treason against the United States, shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort.

Get that? Giving them "aid and comfort."

Neither a lawyer nor a judge is needed to determine that, if you are drafted or enlist in the defense of our country, I, working in the plant which produces a gun or the shoes you must wear while at the front line, by refusing to produce those things you need, am giving "aid and comfort" to the enemy—otherwise defined by that short and ugly word "treason."

No one is asking that those who are sabotaging our national defense, our ability to preserve ourselves and protect our position in the world, be punished by hanging, the punishment prescribed by the Constitution for treason, or even by imprisonment or fine. All anyone is suggesting is that those who strike, who refuse to work, while being permitted to refuse to contribute to our national defense, shall not be permitted to hinder others from carrying on; that the organizations to which they belong be deprived of the special privileges which they are abusing.

Just as the father takes from the son who drives the family automobile in a reckless, dangerous manner, so, too, should organizations and individuals who misuse and abuse to the detriment of the public the special legislation, privileges and exemptions which they enjoy, be deprived of those special privileges when misused or abused.

Those who pay, the parents, the wives, the sisters, the children of those who are called to the armed services, should insist that our legislators—whether in State or National office—give first consideration to the national good, the welfare of all, rather than granting some special benefit to members of particular groups and organizations expecting in return support, come election day.

Back of this whole present-day effort to involve us in war throughout the world, then to sabotage our production, are the Communists, and we, because of the foolish agreements we have made, seem to be powerless to act independently, act effectively.

The least we can do is to make an effort to prevent those here at home from interfering with our efforts to preserve our national welfare and sovereignty.

Let us once more make our own independence, our own welfare, our own security, our first consideration.

"Rotten" Boroughs in the States

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. MULTER. Mr. Speaker, the following editorial appeared in the Saturday Evening Post of April 22, 1961. It reflects a growing feeling among responsible elements outside of Government that Government—and particularly its legislative branch—is not truly representative of the people. This article deals with the State legislatures. It is my feeling that the Congress also must recognize the serious inequities existing in the present apportionment of congressional districts.

In commending this article to the attention of our colleagues I would also respectfully suggest that they examine my bill H.R. 841, to provide for a new apportionment of congressional election districts. The editorial follows:

TOO MANY STATES FAIL TO ABOLISH "ROTTEN" BOROUGHS

The recent ruling by an Indiana superior court judge that the Indiana Legislature is null, void and unconstitutional points up the sorry fix that a number of our State governments have got themselves into by not tending to their knitting. The Indiana constitution stipulates that the general assembly shall reapportion itself every 6 years in accordance with population growth and shift, but the legislators have not done this since 1921.

Indiana is by no means the only State that has been lax in reapportionment. Alabama has had no legislative reapportionment since 1901. Iowa last reapportioned its lower house in 1927 and its senate in 1911. Kentucky has ignored the matter since 1942, and Louisiana since 1921. Massachusetts has had no reapportionment in its house of representatives since 1947, and Mississippi has touched neither its house nor senate since 1916. North Dakota's last reapportionment was in 1931. Yet all these States are required to reapportion their legislatures every 10 years or oftener.

Vermont is in a class by itself in this field, not having got around to reapportionment since 1793, 2 years after it joined the United States. But Vermont at least has the excuse of a constitution that is somewhat vague on the duties of legislators in this regard. Not so Tennessee, which has sat tight on reapportionment ever since 1903, and consequently finds itself haled before the U.S. Supreme Court. Tennessee's legislative districts vary in population from 3,900 to 75,000, and it is charged that this violates not only the State constitution but the "equal protection of the law" clause of the 14th amendment.

Numerous test suits of a similar nature, originating mostly in expanding metropolitan areas, have been brought in the Federal courts in the past 15 years in an attempt to make the representatives of the people live up to their constitutional duties. Only a few weeks ago New Jersey legislators hurriedly voted a law to reapportion their seats when the State supreme court threatened to do it for them if they did not act.

All this seems so unnecessary. The reapportionment provisions of the State constitutions, like those of the U.S. Constitution, reflect fundamental principles of American Government and are meant to be carried out. Representative government is weakened when it permits rotten boroughs.

One trouble is that most State constitutions put the responsibility for reapportionment exclusively on the legislature, which is the very body most sensitive to changes of this nature. All the delinquent States listed above are found in this category. Many States have safeguards against legislative inaction. Some take the power to reapportion entirely out of legislative hands and set up special apportionment boards to handle the problem. Others give the legislatures a reasonable time to act, but if they don't, alternative procedures can be called into play.

In a time when the States are hard put to hold their own against the looming Federal colossus, it seems essential that the State governments should make every effort to become as effective and responsible as possible. It is pretty obvious that a legislature which is set up exactly as it was in 1921 or 1901 or even 1947, taking no account of subsequent population changes, is not reflecting the will of the people.

House Concurrent Resolution 298

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1961

Mr. MERROW. Mr. Speaker, Premier Khrushchev and his associates in international communism, with the full cooperation of Dictator Fidel Castro, are making attempts to extend the system of communism to and within this hemisphere. This is most dangerous to our peace, to our safety, and to our security. Faced with the intolerable communistic Cuban situation, we must in the interest of our national security reaffirm the Monroe Doctrine by an immediate air and naval blockade of Cuba. This will make clear to the world that we do not intend to tolerate the Castro menace and that we are taking positive and effective action to prevent the extension of the system of communism in this hemisphere.

XUM

On May 9, 1961, I introduced House Concurrent Resolution 298 expressing the sense of the Congress that an immediate air and naval blockade of Cuba should be imposed for the purpose of implementing the Monroe Doctrine.

The resolution is as follows:

Whereas the Monroe Doctrine expresses the historic policy of the United States with respect to the Western Hemisphere; and

Whereas the United States considers any attempt on the part of foreign powers to extend their system to any portion of the Western Hemisphere as dangerous to our peace and safety; and

Whereas the United States considers that any interposition by any foreign power in the affairs of the Western Hemisphere can only be considered as the manifestation of an unfriendly disposition toward the United States; and

Whereas it is impossible that any foreign power can extend its system to the Western Hemisphere without endangering our peace and happiness, and it is equally impossible that we should behold such extension in any form with indifference; and

Whereas recent events in Cuba and elsewhere in the Western Hemisphere have indicated that attempts are currently being made to provide a permanent foothold for international communism in this hemisphere: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that the Monroe Doctrine should be reaffirmed by the immediate imposition of an air and naval blockade of Cuba by the United States for the purpose of preventing further intervention or exercise of control by foreign nations affecting the internal affairs and destinies of nations of the Western Hemisphere.

The adoption of the foregoing resolution will make clear to the world that we do not intend to tolerate the Castro menace and that we are taking positive and effective action to prevent the extension of the system of communism in this hemisphere.

The Confederate Cemetery in Washington County

EXTENSION OF REMARKS
OF

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. MATHIAS. Mr. Speaker, a poignant reminder of the Civil War exists in Washington County, Md. The Confederate Cemetery at Hagerstown contains the bones of over 2,500 southern soldiers who died in battles and skirmishes at various places in Maryland and in nearby Pennsylvania. In connection with the Civil War Centennial commemoration I include the following history of the Confederate Cemetery:

THE CONFEDERATE CEMETERY IN WASHINGTON COUNTY

Only one Confederate cemetery exists in Washington County. This is very significant as Maryland was a border slave State where North and South now clasp hands. There are no Confederate war dead in Pennsylvania except two graves in Fulton County at McConnellsburg. Here two graves were missed when the Confederate dead were collected after the war.

After the battles of South Mountain and Antietam and the consequent engagements in Maryland, the dead of both sides were interred in graves, mounds, gullies, gutters, ravines, quarries, rock crevices, sink holes; in fact, in any place where they could be quickly buried. At Fox's Gap in South Mountain, 100 of the dead "Boys in Gray" were dumped into an old well. Rows of dead in ridges extended across some of the best fields of farms where the fighting took place. These were the furrows where the dead had been hastily covered the day of the battle or the days that followed. Graves were in gardens, along the roads, in fence corners, by springs and streams, and under trees.

In March 1865 the State of Maryland, by an act of the legislature appropriated $7,000 and appointed four trustees to purchase and enclose a suitable lot on ground on the Antietam Battlefield as a final resting place for the remains of the brave soldiers on both sides, the boys of the North and the boys of the South. Appropriations by other Northern States, whose troops participated in the battle, together with an additional $8,000 from Maryland placed at the disposal of the board of trustees, brought the total to about $70,000. When the lot was purchased, however, the Northern States refused to advance their money if southern soldiers were to be interred therein. On the lot was a large rock where it was known General Lee had stood when he watched the battle of the afternoon. They demanded that this be blown out in order that their honored dead be not contaminated with treason.

So the national cemetery became a Union cemetery only. The work of removing the Union dead from the Antietam Battlefield and South Mountain commenced in October of 1866 and was finished in August 1867. The number of bodies buried in this cemetery was 4,759 of which 1,848 are unknown dead. More Union dead are buried at Antietam than at Gettysburg.

The Confederate dead remained untouched except souvenir hunters who scratched out bones, bullets, buttons, and belt buckles for mementos. But every large rain washed out a number of bones. No one was responsible for their reburial, so many bones remained to bleach or wash away in the flood waters of other hard rains. Some bones were even built into stone walls or into stone fences. The South had lost so much of its wealth during the war that nothing could be done by it to remedy these circumstances.

The new-born organizations of Confederate Veterans and the Sons and Daughters of the Confederacy did all in their power to awaken an interest that would provide a more respectable situation for their honored dead. In 1870 a provision was made by the Maryland Legislature for the decent burial of the bones of dead southern soldiers, many of whom were sons of Maryland. The sum of $5,000 was appropriated and the Governor was authorized to appoint trustees to the custody of the money and have the work done.

Governor Bowie named Henry Kyd Douglas, George Freaner, and James H. Gambrill to the board of trustees. Sums of money were contributed by the States of Virginia and West Virginia. The trustees purchased a portion of Rose Hill Cemetery along South Potomac Street in Hagerstown, which they ornamented with a fine monument and called their reservation the Washington Cemetery. It was dedicated on the 15th of June 1877. At the dedication there was a great gathering of people and Gen. Fitzhugh Lee of the Confederate Army was the orator of the day. Later he became Governor of Virginia.

As early as 1872 the work of removing the bones of the Confederate soldiers to this cemetery had begun. All identifications of the skeletons were lost. The bones of 2,500 men were interred.

They were buried in a large mounds at first, which were leveled off into graves later. A number of Confederate graves, in addition to those of South Mountain and Antietam, along the Greencastle-Williamsport Pike, along the northern roads leading into Hagerstown, also at Funkstown, St. James, and Williamsport, put there during the retreat from Gettysburg, together with graves of McCausland Raid of 1864, were opened and the bones were removed to the Washington Cemetery. The last bones of a boy in gray were interred about 25 years ago. The bones were uncovered at Gettysburg when a road was being constructed on the battlefield there.

The grounds of Washington Cemetery, where the graves are, is marked off on the south side by 15 granite blocks or posts connected with a powerful iron chain. One speaker represented them to be the 15 States that would have made up the Confederacy had the South won. The border States of Delaware, Maryland, Kentucky, and Missouri are included. The South never recognized West Virginia as an independent border State. In front of the monument are 7 granite posts connected by a heavy chain representing the original Confederate States. To the right are 7 other granite blocks with a heavy chain attached; why this should not be 11 representing Virginia, Arkansas, North Carolina, and Tennessee that joined the 7 original Confederate States is not clear. In front of the monument outside the circle of graves is the speaker's rostrum built of stone in 1914. Maryland has the soldiers' cemetery marked off from Rose Hill with posts of granite bearing the Maryland seal.

The monument faces the graves of the dead; it is a marble statue of a maiden leaning on an anchor. She represents hope—the hope these men had when they died for a great Southland. But now that the war is over that hope was translated into a new beginning of the South. They accepted the old South's surrender and the start of a new day for its people. Not a soldier who wore the gray after the surrender carried on guerilla warfare or a gangster revenge fight. He stepped from the trenches into the furrow; his horses "that charged Federal guns marched before the plow, and fields that ran red with blood in April were green with harvests in June." The South lost the war but gained the peace.

There are three inscriptions on the monument. On its front are these words: "The State of Maryland has provided this cemetery and erected this monument to perpetuate the memory of the Confederate dead who fell at Antietam and South Mountain." On the right side is inscribed, "The State of Virginia has contributed toward the burial of her dead within this cemetery." On the left side, we read: "The State of West Virginia has contributed to the burial of her dead within this cemetery."

To Persons Interested in Agriculture

EXTENSION OF REMARKS
OF

HON. MERWIN COAD

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. COAD. Mr. Speaker, since the omnibus farm bill was submitted by the Kennedy administration much distorted propaganda concerning it has been disseminated by some of its opponents. It

is incredible to me how the American Farm Bureau makes everything so simple by saying a program is all good or all bad. Every Benson proposal was good and now every Freeman proposal is all bad. One constituent, after a particularly vehement tirade against H.R. 6400 in which he said the whole bill should be killed, was asked if he were opposed to the school lunch program, wool program, and so forth. He seemed quite surprised to learn that they were in this bill as well as several other noncontroversial items. If we are going to legislate in the best interests of the Nation and American agriculture I believe we have to make sure our farmers and agricultural leaders fully understand what is in this bill in order that they may properly evaluate it.

A letter from one group interested in sound agricultural programs has just come to my attention and under unanimous consent I include a copy of this letter from Robert M. Koch, president of the National Limestone Institute to persons interested in agriculture:

MAY 16, 1961.

To persons interested in agriculture:

As has been our custom, we attempt to call to your attention developments here in Washington which we think will be of interest to you and which we believe your local press and other information-media do not make available to you—at least not in as much detail as you would like.

I am sure everyone knows that the so-called omnibus farm bills (H.R. 6400 and S. 1643) embodying many of the Kennedy administration's proposals for getting our agricultural plant in order were introduced in their respective Houses by Senator ELLENDER, of Louisiana, chairman of the Committee on Agriculture and Forestry, and Congressman COOLEY, of North Carolina, chairman of the House Committee on Agriculture. The statements made by these two key legislators at the time the bills were introduced have been reproduced from the CONGRESSIONAL RECORD and are enclosed.

Anyone who has access to the American Farm Bureau publicity knows that they have been bitterly attacking these bills. The National Grange under the leadership of Herschel Newsom, master of the Grange, and the Farmers' Union under the leadership of President James Patton have endorsed these bills. The Georgia State Farm Bureau has already broken away from the national group on this issue, and others are expected to follow suit. The Georgia Farm Bureau president advised Charles Shuman, the president of the American Farm Bureau Federation, that his group was convinced that unless this bill or a modified version of it was enacted into law, sooner or later we would have no national farm program. Many Congressmen, under the terrific barrage of distorted material from Mr. Shuman and his coworkers, are confused because they are getting practically nothing to counteract this. (Three leading farm legislators told me just last Saturday morning that they had received nothing but slanted letters full of misstatements attacking these bills.)

On the other hand, there are a number of Congressmen who fully understand the bills and believe that the Congress should not turn over so much authority to the Executive and only retain a veto power. Many others, however, point to the failure of our present approach and believe we should try something different, particularly in those areas which have acute problems. Furthermore, nothing in these bills prevents the Congress from exercising their present legislative processes in developing farm legislation.

While some are damning the bills in no uncertain terms others are saying that these bills are the Magna Carta for farm people. It provides the machinery whereby farmers themselves working with the Secretary of Agriculture can work out and propose solutions to their own problems on a commodity-by-commodity basis. The objectives of these bills are:

1. To improve and protect farm prices and farm income.

2. To increase farmer participation in the development of farm programs.

3. To adjust supplies of agricultural commodities in line with the requirements therefor.

4. To improve distribution and expand exports of agricultural commodities.

5. To liberalize and extend farm credit services.

6. To protect the interest of consumers.

While some are saying it gives too much authority to the Secretary, others believe adequate safeguards are provided. Plans proposed by farm advisory committees which involve controls or price supports must be approved by the Secretary of Agriculture who will protect the interest of other commodity groups; approved by the President of the United States who will be mindful of the interest of all the people; may be vetoed by either House of the Congress who are concerned about the interests of their own constituents as well as the general public; and finally, must be approved by a vote of two-thirds of the farmers affected who vote in a referendum conducted for this purpose. Most people feel that these are not only adequate provisions but an excellent blueprint of practical democratic procedure.

Congress will have more, rather than less power under these bills, as some of its critics maintain. For example, under existing legislation, the Secretary of Agriculture has wide latitude and discretion with respect to the size of allotments and quotas and the level of price support, whereas under these bills either House of the Congress could exercise veto power.

Neither would these bills disturb existing programs where they are working satisfactorily and the producers concerned are satisfied. By the same token, producer groups who have no program and who do not want one, would continue exactly as they are now.

It seems to me that this approach is in keeping with President Kennedy's determination to see that farmers have an opportunity to achieve an income comparable to that achieved by other segments of our economy for comparable investments in labor and capital.

The following are some recent quotes which illustrate Secretary Freeman's thinking and give the basis for the policies outlined in these bills:

"The problems of agriculture in the United States today, and the prevailing attitudes toward these problems, present us with a paradox that is both disconcerting and challenging. Agriculture in America today is an industry that, in terms of fulfilling its primary function, has achieved phenomenal success. For the primary function of agriculture is to provide food and fiber to meet human needs. Nowhere on earth, and never in history, has agriculture met this function so well as it has in the United States today. The American consumer is better fed, and at lower real cost, then ever before. American agriculture has abolished here in America, one of mankind's oldest anxieties, the fear of hunger and famine. Yet American agriculture is referred to more often in terms of surplus or subsidy than in terms of success. One reason why this is so is that, successful as American agriculture has been in achieving this major function, it does not today provide to farmers the reward that their success deserves. I assure you that you and all other members of ASC Committees will be encouraged to accept every responsibility which, under the law, I can share with you in the development and administration of farm programs. You have the greatest stake of all in the successful administration of farm programs. Farming is your business, your future, and the hope of your children for education and opportunity. It is our firm belief that the ASC farmer-committee system is the most effective and economical method of operation if it operates as originally conceived under enabling legislation. We intend to see that the committee system functions with full authority and responsibility in the days ahead."

You will note that two-thirds of the members of the farmer advisory committees who must consult and advise with the Secretary in working out solutions to farm problems on a commodity-by-commodity basis, must be nominated by county ASC committees. This demonstrates the faith and confidence which the sponsors of these bills, the President of the United States, and the Secretary of Agriculture have in these committees.

I am confident that if you review these bills you will find much of it that you can back without reservation. If there are parts you cannot subscribe to, I hope you will not be completely against the bills as the American Farm Bureau leadership is. American democracy has always been a compromise of many and frequently divergent views. For example, the administration and the congressional committees have already discussed modification of certain provisions and are in complete agreement on several points.

From my talks with agricultural leaders, farmers and people like myself who want to do what they can to help American agriculture, I am confident that there is much in these bills which has universal support amongst the rank and file of farmers. Now that we have a Secretary of Agriculture who not only wants to do something for farmers but wants to make sure the American consumer fully appreciates the terrific job farmers have been doing for them let's give him the tools he thinks he needs. Congress can always veto a program or for that matter withdraw any provisions of these bills. Any Congress can change any law because, under our system of Government, no Congress can bind another.

I hope that, after reviewing this material as well as whatever other information comes to your attention, you will help democracy be effective by getting your views to your Congressman and your Senator. I hope you will let Senator ELLENDER and Congressman COOLEY, the men who will have to guide this legislation through the Congress, know you feel—and get your neighbors and local farm organizations to go on record too. Many fair-minded Congressmen, who have been getting the distortions as outlined so well in the enclosed reproduction of this week's Kiplinger Letter, would, in my opinion, welcome the views of their constituents on this important legislation.

Sincerely yours,

ROBERT M. KOCH,
President.

No Man's Land

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. ROOSEVELT. Mr. Speaker, I have read with interest the article

printed below from the 1960 issue of the Labor Law Journal, written by Jonathan Matthew Purver, which deals with Supreme Court decisions leading up to the 1959 amendments to the Taft-Hartley Act, and feel that the scholarly manner in which the background material is presented will be of interest to my colleagues. It is my hope that Congress will see fit to scrutinize this entire matter carefully.

THE SUPREME COURT AND THE FEDERAL-STATE NO MAN'S LAND

(By Jonathan Matthew Purver)

(This article examines the constitutional sources from which the doctrine of preemption developed and the Supreme Court's decisions pointing the way for Congress to correct flaws in the legislative structure. The publication of this article was recommended by Paul Prasow, a lecturer in personnel management and industrial relations at the University of California at Los Angeles. Mr. Purver is a senior honor student at UCLA.)

Mr. Justice Frankfurter has maintained that one function of the Supreme Court is to study the balance between the respective spheres of Federal and State power.[1] Indeed, not only has the Court studied this balance, but it has in great part determined the respective spheres of Federal and State jurisdiction through its decisions which have established Federal supersession with respect to congressional labor legislation.

The principle of supersession, as discussed by the Court, is that once Congress has legislated within a particular field, State legislation within this field will be inoperative. It thus happens that, upon occasion, State legislation will be considered invalid—or "preempted"—because of the existence of Federal legislation in that area, even though such Federal legislation may appear too general to apply in that instance. In such cases a no man's land is created within the legal system in that the State is not permitted to act because of Federal legislation, although, at the same time, the Federal Government does not act because its legislation is too general in nature and does not provide for action in the specific case at hand.

The effect of Supreme Court decisions with respect to Federal preemption in relation to labor legislation has been to place this "no man's land" of labor law generally within Federal hands, and to allow congressional labor legislation of a general nature to be so construed as to apply to specific cases arising thereunder. Before we discuss and analyze these Court decisions, we shall examine the constitutional sources from which the doctrine of preemption developed in the United States and the legislation which interjected this doctrine into the area of Federal labor law.

The constitutional basis for supersession is found in section 2, article VI, of the Constitution—the "supremacy clause"—which states that "[t]his Constitution, and the laws of the United States * * * shall be the supreme law of the land; and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding." The more specific legislative basis of Federal supersession in the labor field is found in the Labor-Management Relations Act of 1947.

Whereas the National Labor Relations Act of 1935 (Wagner Act) had set down specific actions which the Government would consider to be unfair labor practices on the part of employers, it did not attempt to determine unfair labor practices on the part of labor organizations or their agents. Thus, it remained primarily within the jurisdiction of the States to deal with such union activities as strikes, picketing and boycotts. The Labor Management Relations Act of 1947, which amended the Wagner Act, left intact that part of the Wagner Act specifying unfair labor practices of employers, but added a section delineating unfair labor practices by labor organizations as well. It placed boycotts and other unlawful combinations within the jurisdiction of both State and Federal courts.

Supreme Court decisions (hereinafter discussed) relating to Federal labor legislation—more specifically, the National Labor Relations Act of 1935 and the Labor-Management Relations Act of 1947—permitted the Federal Government to preempt jurisdiction with respect to certain sections of these acts in areas formerly considered within the limits of State authorities.

As the following cases are studied it will be seen that "it is not [always] easy for a State court to decide * * * whether the subject matter [of a labor case] is the concern exclusively of the Federal Board and withdrawn from the State."[2] The Supreme Court has in some instances set those boundaries, while in other cases it has refused to act in this regard, thus requiring congressional legislation to clarify the scope of the functioning of the National Labor Relations Board. These cases shall in turn be discussed.

The remainder of this article shall be devoted to an analysis and examination of the effects of several specific Supreme Court decisions upon jurisdictional problems created by Federal labor legislation and upon the creation and administration of Federal labor law with respect to the "no man's land," culminating in the passage of the Labor-Management Reporting and Disclosure Act of 1959.

During the period from 1946 to 1955, the Supreme Court affirmed the doctrine of Federal preemption of State legislation in the field of labor law through four leading decisions. Each of the last three of these decisions relied heavily upon the precedent established in the case immediately preceding it. The first of the group, however, the *Bethlehem* case, looked to the *Shreveport* doctrine of 1914 for precedent.

BETHLEHEM CASE

The first of these cases, *Bethlehem Steel Company* v. *New York State Labor Relations Board* (12 L.C. par. 51,245, 330 U.S. 767 (1947)), was brought before the U.S. Supreme Court upon appeal from the Court of Appeals of New York in 1946. The issue in question arose from the fact that the National Labor Relations Board had asserted general jurisdiction over unions of foremen employed by industries subject to the National Labor Relations Act. The NLRB had then refused to certify such unions as collective bargaining representatives on the grounds that it would obstruct the purposes of the act. The Board also maintained that the New York State Labor Relations Board could not certify such unions, because for it to do so would conflict with the National Labor Relations Act and, consequently, with the commerce clause of the Constitution. The Circuit Court of Appeals in New York had, nonetheless, upheld the State labor relations board in such certifications, and the Bethlehem Steel Co. brought the case before the U.S. Supreme Court on appeal.

Mr. Justice Jackson delivered the opinion of the Court, stating that "[t]heir [New York's] labor relations are primarily of interest to the State * * *. [But] the subject matter is one reachable * * * under the Federal commerce power, not because it is interstate commerce but because * * * Congress can reach admittedly local and intrastate activities. * * *"

In support of this position, the Court cited *Houston, East and West Texas Railway Company* v. *U.S.* (234 U.S. 342 (1914))—the *Shreveport Rate Case* of 1914—in which Mr. Justice Hughes handed down the classic doctrine that Congress may, upon occasion, regulate local and intrastate commerce "to foster and protect interstate commerce."

With respect to the "no man's land" in labor law, under which prosecution is difficult because jurisdiction is uncertain, Jackson held that "the mere fact of delegation of [Congressional] power to deal with the general matter, without agency action, might preclude any State action if it is clear that Congress has intended no regulation except its own."

The Court made clear that Congress may intentionally reserve to itself specific powers without creating agencies to exercise these powers; and that, in such case, jurisdiction is removed from the respective States. But in the instant case, Congress was even more specific, and the certification of a union as a bargaining representative was clearly within the hands of the NLRB.[3] The opinion of the lower court was reversed.

The Bethlehem case was consolidated with *Allegheny Ludlum Steel Corporation* v. *Kelley* (12 L.C., par. 51,245, 330 U.S. 767 (1947), decided on the same day (April 7). The Bethlehem doctrine was an affirmation of *Packard Motor Car Company* v. *NLRB* (12 L.C., par. 51,240, 330 U.S. 485 (1947), decided a month earlier, in which Mr. Justice Jackson expressed the opinion of the Court that foremen were "employees" within the meaning of the National Labor Relations Act of 1935.

LA CROSSE DECISION

The second case in the series, *La Crosse Telephone Corporation* v. *Wisconsin Employment Relations Board* 16 L.C., par. 64,913, 336 U.S. 18 (1949), was brought before the U.S. Supreme Court upon appeal from the Supreme Court of the State of Wisconsin in 1949. The issue herein arose from the fact that the NLRB has assumed jurisdiction over the industry in question, but the NLRB's standards were different from those applied by the Wisconsin Employment Relations Board, the State agency.

Mr. Justice Douglas delivered the opinion of the Court. He looked to the Bethlehem case for precedent in determining whether, in the present case, the Wisconsin board's certification of a certain union—as the bargaining agent of the employees of La Crosse Telephone Co.—was in conflict with the National Labor Relations Act. The Court held that "certification by a State board under a different or conflicting theory of representation may * * * be as readily disruptive of the practice under the Federal act as if the orders of the two boards made a head-on collision," and that the State board had in this case presented such conflict.

Equally important, the Court maintained that the National Labor Relations Act would have been controlling even if it had not been applied in any formal way to the particular employees. In its decision, reversing the Supreme Court of Wisconsin, which had upheld the Wisconsin board's certification, the U.S. Supreme Court brought congressional labor legislation within the realm of the supremacy clause to a still greater extent than it had in the Bethlehem case—in that now not only was the Federal labor law clearly supreme, but is was supreme even when it did not specify the particular type of employee in question.

GARNER VERSUS TEAMSTERS UNION

The third case in the series, *Garner* v. *Teamsters Union* (24 L.C., par. 68,020, 346 U.S. 485 (1953)), was brought before the Court upon writ of certiorari to the Supreme

Footnotes at end of speech.

Court of Pennsylvania in 1953, and it established the importance of determining the correct tribunal before which a labor case arising under the Taft-Hartley Act can be tried. The issue in question here resulted from a Pennsylvania attempt to assume jurisdiction to enjoin peaceful and orderly picketing for the purpose of forcing an employer to coerce his employees to join a labor organization.

Mr. Justice Jackson delivered the opinion of the Court. The Court held that where a labor dispute affects interstate commerce, a State—in this case, Pennsylvania—lacks jurisdiction to enjoin "peaceful and orderly picketing."[4] The reasoning of the Court was that the enforcement of "public right," a Federal function, supersedes the enforcement of "private right," generally a State function. Here the Court looked for precedent in *Amalgamated Utility Workers* v. *Consolidated Edison Company* (2 L.C., par. 17,055, 309 U.S. 261 (1940), which held that the NLRB is "a public agency acting in the public interest."

Secondly, the Court examined the congressional debates over passage of the Taft-Hartley Act and, noting the importance of correctly interpreting the "congressional will," held that "[t]he National Labor-Management Relations Act * * * leaves much to the States, though Congress has refrained from telling us how much. We must spell out from conflicting indications of congressional will the area in which State action is still permissible."

While the Court maintained that the present case concerned a labor area in which State action was not permitted, it established the more important concept that henceforth it would be the Supreme Court which would, when possible, interpret this "congressional will" with respect to the labor field, as expressed through labor legislation coming before the Court.

Third, and finally, the Court held that part of "[f]ederal law * * * consists of substituting Federal statute law applied by administrative procedures in the public interest in the place of individual suits in courts to enforce common law doctrines of private right."

The Court thus clearly enunciated the doctrine that labor law was to be interpreted in such manner as to place it "within the realm of public interest," and that this was to be done by encouraging such litigation within the framework of Federal tribunals.

The decision of the Pennsylvania Supreme Court, which had deprived petitioners the injunction sought, was affirmed.

WEBER V. ANHEUSER-BUSCH, INC.

The fourth and final case discussed, *Weber* v. *Anheuser-Busch, Inc.* (cited at footnote 2), was brought before the Supreme Court in 1955. The *Weber* case, in addition to reaffirming the decisions of the earlier three cases by citing them as precedent, established several additional doctrines with respect to supersession of State labor legislation.

The issue here in question grew out of the issuance of an injunction by the State circuit court, enjoining the International Association of Machinists Union, an AFL affiliate, from striking the St. Louis Anheuser plant. The injunction was upheld by the State supreme court, and from there it went to the U.S. Supreme Court by certiorari.

Mr. Justice Frankfurter delivered the opinion of the Court, first holding that "the principal question that the case raises * * * [is] whether the State court had jurisdiction to enjoin the IAM's conduct or whether its jurisdiction had been preempted by * * * the National Labor Relations Board. * * *"

To this question the Court cited the *Garner* case, and held that "[a] State may not enjoin under its own labor statute conduct which has been made an 'unfair labor practice' under the Federal statutes."

Thus far the Court followed the lines of precedent of the earlier three preemptory cases. At this point, however, the Court enunciated a new doctrine, holding that Congress did not intend by the Labor Management Relations Act of 1947 to deprive State courts of jurisdiction in all labor disputes affecting interstate commerce, but merely in those situations covered by the Federal law; and that "by the Taft-Hartley Act, Congress did not exhaust the full sweep of legislative power over industrial relations given by the commerce clause."

The Court made clear that, in the instant case, the decision of the State court would be reversed not because Congress had full sweep of power over labor legislation, but because the particular Missouri antitrust laws here at issue conflicted with those unfair labor practices covered under the National Labor Relations Act. Moreover, Justice Frankfurter cited *United Construction Workers* v. *Laburnum Construction Corporation* (26 L.C., par. 68,460, 347 U.S. 656 (1954)) to show that State courts can grant relief against conduct violating both the National Labor Relations Act and State statutes or common law, where such relief is not available under the National Labor Relations Act and where it does not conflict with remedies available through National Labor Relations Board proceedings.

The Court also cited *Allen-Bradley Local 1111* v. *Wisconsin Employment Relations Board* (5 L.C., par. 51,135, 315 U.S. 740 (1942)) as an example of how State courts could enjoin mass picketing, which was a breach of the peace, by the use of State "police power," so as to avert local violence.

The importance of the Anheuser case is that, although reversing and remanding the Missouri Supreme Court, it made it clear that the State courts still retain a great measure of power to deal with labor problems, and that Federal labor legislation, while superior to State labor legislation, leaves much in the field of labor legislation to the discretion of the several State legislatures.[5]

CONCLUSIONS

Thus, the Supreme Court, beginning with the Bethlehem case, clearly established the supremacy of Federal labor legislation with respect to the National Labor Relations Act of 1935; in the LaCrosse case, with respect to conflicting State labor legislation; and, finally, with respect to the Taft-Hartley Act in the Garner and Anheuser cases.

Passage of section 701, title 7 of the Labor-Management Reporting and Disclosure Act of 1959, which substantially removes the "no man's land" in labor law, was in part influenced by various Supreme Court decisions—notably with respect to the Bethlehem, LaCrosse, Garner, and Weber decisions.

As has been discussed, the effect of these decisions was to preclude State labor boards from asserting jurisdiction over matters covered by Federal legislation, even though a gap may have existed in the National Labor Relations Board's jurisdiction. By 1957, the States finally began to accept this "doctrine."[6] The Court, thus, would not take the position of construing inadequate congressional labor legislation to fill gaps in the law. Rather, the Court interpreted such legislation as literally as possible, sometimes denying State labor boards' jurisdiction even though the preemptory Federal labor legislation created a "no man's land."

A recent example of the above-mentioned situation is *Amalgamated Meat Cutters and Butcher Workmen of North America* v. *Fairlawn Meats* (32 L.C. par. 70,564, 353 U.S. 20 (1957)), in which the Court maintained it was never the intention of Congress to have the Supreme Court decide "how consistent with Federal policy a State [labor] law must be," but that such decision was in the first instance given to the Board—although existing Federal legislation did not make this entirely clear.

Another example is *Guss* v. *Utah Labor Relations Board* (32 L.C., par. 70,563, 353 U.S. 1 (1957)), in which the Court held that a State is not free to exercise authority to regulate activities covered by the National Labor Relations Act even when the National Labor Relations Board declines jurisdiction of the specific case over which the State board wishes to assert jurisdiction.

The Amalgamated and Guss decisions thus answered the one question left unsettled in the Garner case: Could the State law apply if the National Labor Relations Board declined to exercise its jurisdiction? In the above cases, the Court answered in the negative.

For this reason, I disagree with a 1957 opinion of the American Bar Association that "the Supreme Court opinion is, in a sense, merely a rationalization of the artlessly drawn legislative command. * * *"[7]

The Court has constantly maintained that "Congress is free to change the [no man's land] situation at will,"[8] and that the Court indeed will not rationalize inadequate legislation but rather will indicate the need for better legislation to take its place. Prior to 1953, the Watkins-Smith and the Ives labor bills,[9] both of which aimed at allowing the Board to cede jurisdiction to State boards when a case had an "insubstantial" effect upon interstate commerce, failed Senate passage.

Beginning with the Garner case in 1953, the Supreme Court decided no less than 16 cases with respect to jurisdictional problems created by Federal labor legislation; and in nearly all cases the Court suggested more adequate congressional legislation to cover this void.

In September of 1959, Congress passed the Labor-Management Reporting and Disclosure Act of 1959. Title 7, section 701(a), reads:

"(c)(1) The Board, in its discretion, may * * * decline to assert jurisdiction over any labor dispute involving any class or category of employers, where, in the opinion of the Board, the effect of such labor dispute on commerce is not sufficiently substantial to warrant the exercise of its jurisdiction. * * *

"(2) Nothing in this act shall be deemed to prevent or bar any agency or the courts of any State * * * from asuming and asserting jurisdiction over labor disputes over which the Board declines * * * to assert jurisdiction."

The Supreme Court thus played a vital role not simply in affecting existing labor legislation, but also in creating Federal labor legislation with respect to the "no man's land" of American labor law. The Court in so many instances had refrained from being placed in the position of having to decide at what point a labor dispute substantially involves interstate commerce that Congress was finally compelled to clarify that henceforth it would be the National Labor Relations Board which could rightfully determine that point, and could, if it wished, delegate certain phases of its jurisdiction to the respective State labor boards.

Thus, the Supreme Court, acting its part in the Federal trilogy of legislative, executive, and judicial branches, has, by determining the relation between Federal and State labor legislative action, pointed the way for Congress to correct flaws in the legislative structure and thus, in turn, implement executive action called for in the public interest.

Members of Congress Have Little Time To Think

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. MULTER. Mr. Speaker, the following editorial comment appeared in the Saturday Evening Post of April 22, 1961. It touches a problem which is with all of us.

OUR MEMBERS, OF CONGRESS HAVE TOO LITTLE TIME TO THINK

"It was all very disillusioning. I went to Washington to see Congress at work. I viewed the House and Senate debates, but where were all the Members? Each Chamber was practically empty. Oh, yes; we went to one or two hearings, but neither hearing had a quorum. .Is this the way our laws are made?"

These are the comments of a high-school student who is interested in public affairs after a visit to the U.S. Capitol. Adult questions or statements are similar, but frequently in a cynical vein.

Despite outward appearances, Congress works hard and conscientiously at its tremendous task.

During the last Congress more than 20,000 bills were introduced—15,506 in the House and 4,658 in the Senate. Of course, this number of bills includes some duplications and various bills which were not under active review. However, a considerable number of them were analyzed and considered. And 800 of them were passed by both Houses and were added to the law of the land in their original or amended form.

However, the detailed study of all of these bills cannot be accomplished on the House floor or on the Senate floor. Therefore, preliminary and careful evaluation of all of these bills is distributed by subject matter among 16 Senate committees and 20 committees of the House, plus additional select and joint committees. Every Member is on at least one committee; many serve on two or more committees. Each committee is busy with hearings and executive sessions. For example, the House Ways and Means Committee of the last Congress heard 703 witnesses during 62 days of public hearings. Numerous executive sessions followed each of these hearings. More than 2,100 bills were referred to this committee. It reported favorably on 98 bills, and 61 became laws.

Members of Congress have competent staffs, but in the final analysis each legislator must make his own decisions. When does the Member of Congress do his meditating? That is a question which many Members of Congress ask themselves.

The Bewildering Issue of Capital Punishment

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by the Honorable James V. Bennett, Director of the Federal Bureau of Prisons in Washington:

WANTED: A FAIR DEAL FOR PRISONERS—IV—THE BEWILDERING ISSUE OF CAPITAL PUNISHMENT

(By James V. Bennett)

WASHINGTON.—Not long ago I attended the funeral of a friend. As I entered the vestibule I noticed one of the church officials standing by and recognized him as a man who had once been sentenced to death. During the services I sat beside another man, who had once been similarly doomed and who for 20 years has led a spotless life as a hard-working civil servant.

Following his conviction and sentence, questions arose as to his actual guilt. President Roosevelt commuted his term to life imprisonment, and later when a full-fledged investigation established his innocence, released him from prison.

He received full pardon from President Truman.

The man who was now serving his church had his death sentence commuted to life imprisonment, and following another commutation further reducing his sentence, he was paroled. Since that time he has devoted his life to the assistance of troubled and unfortunate persons.

These cases make me, and no doubt you, question whether we should retain the capital penalty.

But my life's work has been the protection of society and that is a responsibility that carries with it little room for sentiment.

I cannot help but think of two men now serving out their lives in Federal prisons.

One is still in his twenties, as violent and mutinous an individual as ever a prison held. On separate occasions he has killed one fellow inmate and seriously stabbed another. There is no question that unless he is closely guarded he will kill again.

The other is an old man now. Early in his prison career he stabbed one inmate and a few years later killed a guard. For the protection of inmates and guards alike he had to be closely confined for decades.

I have often wondered if any useful purpose can be served by the lifelong imprisonment of these men. If they had paid the supreme penalty for their terrible crimes, would other inmates subsequently killed in prison brawls now be alive, would the lives of other guards killed in their efforts to protect society have been spared?

The capital punishment issue is indeed baffling, particularly in the wake of the Chessman case.

It is true that although the number of executions has dwindled from two hundred 25 years ago to 50 to 60 in recent years the volume of homicides has not significantly increased. The number fluctuates between 7,000 and 8,000 from year to year.

However, who can say that the use of capital punishment, regardless of the number actually executed, has not had some effect in keeping the homicide rate down even though other crimes punishable by lesser penalties have increased enormously?

I do not take issue with the abolitionists who point out the grimness of execution. I do contest their charge that it brutalizes those whose job it is to carry out the sentence when a court condemns a man to death.

The strongest and most eloquent abolitionists have been prison wardens like Lewis Lawes of Sing Sing, James Johnston of Alcatraz, and Clinton Duffy of San Quentin. Confronted with the necessity of arranging an execution a prison warden's concern must be with the welfare of society, not the plight of the condemned.

These men and others who know the facts about how the death penalty is actually applied in this country lost faith in it as an effective measure.

I believe that the deterrent effect of the death penalty would be more effectively realized if its use were put on a more equitable and judicious basis, and if some way could be found for minimizing the almost endless litigation that surrounds some of these cases. The Chessman case was kept going in the courts for 12 years.

Unquestionably there are some crimes that are so heinous, so outrageous, that society recoils in such horror that execution is the only means of expressing it.

The death penalty, in my opinion, should be retained for such offenses as murder for hire, murder involving a law enforcement officer engaged in his duties, the kidnaping and injury of a child, treason, bombing of an airplane, and bombing of innocent people in a school building or a church.

For all other capital offenses now on the statute books, I would make the penalty life imprisonment.

For the death penalty even under the circumstances I have mentioned I would require the concurrence of the judge and the jury. I would require a separate jury trial on the issue of sentence, as divorced from conviction. I would provide for an automatic psychiatric examination of the defendant prior to sentence, and I would provide for an automatic appeal.

With these safeguards we could assure ourselves that the death sentence would not be lightly or indiscriminately used.

Address by Hon. Stewart L. Udall, Secretary of the Interior, at the Tennessee River Tributaries Association and Elk River Development Association, Fayetteville, Tenn., May 12, 1961

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I bring to your attention, and the attention of my other distinguished colleagues, the very timely, pertinent, and interesting address made by our former colleague, Hon. Stewart L. Udall, who is now the distinguished Secretary of the Interior:

ADDRESS BY HON. STEWART L. UDALL, SECRETARY OF THE INTERIOR, AT THE TENNESSEE RIVER TRIBUTARIES ASSOCIATION AND ELK RIVER DEVELOPMENT ASSOCIATION, FAYETTEVILLE, TENN., MAY 12, 1961

You do me a unique honor in asking me to talk with you about development of water resources. You were in the front lines of the long battle for water development in this region when I was a schoolboy in a little Arizona ranch town. You were among the first New Frontiersmen because you were pioneers in a coordinated comprehensive river development plan. To all of you residents of the Tennessee Valley, the subject of water and its planned control and use is far from novel.

I understand your valleywide association is only slightly more than a year old. You can accomplish much through joint and coordinated action, and you hold it within your power to be of considerable assistance to the directors of the Tennessee Valley Authority. You are holding fast to the original brilliant concept of TVA. You well realize that we can no longer afford to be piecemeal in our development of water resources. We must devise plans which will transcend the interests of individual localities or agencies, and which will conform to a broad plan of integrated development of all the resources of a great watershed. This is no time for standpatters, it is no time for the overly cautious approach to resource development—it is a time for broad gaged planning and bold action. President Kennedy has told us, "Failures to act now may be opportunities lost forever."

Years ago you and other farsighted men set the pattern. You saw the opportunities available in harnessing the mighty Tennessee and making it work for mankind. In so doing, you made the three letters TVA synonymous with the idea of overall basin development.

It wasn't a simple matter. I'm sure many of you vividly rememer the slow and often disappointing struggle which you underwent before TVA became a reality. Perhaps by now, though, that stirring story is "old hat" to some of your neighbors in this valley. I know that you here tonight, representing various area development associations, have not forgotten and will not forget.

The world outside this beautiful valley of yours continues to hold up TVA as a shining example of the best that man can accomplish in utilizing nature. Just 6 days ago, the Christian Science Monitor carried a long story about the Cauca Valley Corp., a new river development effort in the South American nation of Colombia. It quoted the English-speaking general manager of the CVC as saying, "We think we are admirably suited for a TVA-type development." It isn't the admittedly great water development works of Russia that these South Americans look to as a guide—it is your own, our own, TVA. And so it goes, everywhere in the free world. Do not, yourselves, become immune to the great accomplishments around you.

Not all of the development of the Tennessee River region is to be spoken of in the past tense. Part of the job still remains to be done. I'm sure you recall the words of the late George Norris who said in his autobiography that:

"This program of controlling the surplus floodwaters of the great Mississippi Valley by storage in natural reservoirs situated on the main stream and along the tributaries is an immense one. It may never be fulfilled. That depends entirely upon the vision of the American people. It will require a vast amount of money to complete it; it will take years of planning and of labor to meet fully all of its factors; and yet it offers the only promise discovered by men for the effective control of floods and efficient conservation of natural resources."

Yes, you have begun to make real use of your river system—but you've only begun, as George Norris foresaw. Now you face the challenge of continuing with his great vision—yes, and that of many others as well. You who continue to hold to the vision, you who still have the evangelist's fervor and the salesman's persistence, must work together with the officials of the TVA to complete this project that is of great importance to all America. One of the dreams that you in the Southeast have long held is that of joining the Tennessee and the Tombigbee to cut off 600 miles of the long water journey from your ports to the gulf. The TVA itself was once such a pipedream—who knows, perhaps your later efforts will be crowned with success. Certainly, this administration favors a stepped-up program of long-range planning now in the resources field.

You leaders realize, too, that river development doesn't necessarily mean great power dams or navigation channels on every watercourse. You realize that some areas of this vast river basin are best suited for recreation development, others are promising for intensive agricultural undertakings, such as your growing poultry industry, or timber production, and some spots are best retained for the benefit of wildlife. There's room on the big Tennessee and its tributaries for all kinds of development. Not every mile of the system can be developed as a new Pittsburgh—just as not every mile can be drained farmland, a river park or a wildlife refuge. But every mile can be developed in some manner, with due consideration for economics and always with a progressive and farsighted standard of feasibility that holds great faith in the future.

Listen again to George Norris' words: "Every drop of water that falls from the heavens to the earth beneath should perform its proper share of preserving the blessings God intends to bestow upon his people." Every drop of water in this watershed can be made to work, over and over again, and it must be done. The important thing, it seems to me, is to develop this homeland of yours that the natural resources so abundant here are utilized and conserved in the highest and best manner appropriate to the overall concept of basin development.

All of us in the Kennedy administration were enthused and challenged by the precedent-setting special message of the President concerning natural resources. Here was given all of us a blueprint for the construction of an integrated program for the wise conservation and use of our natural resources. If that stirring message could be summarized in only two words, I believe those words would be, "Think big."

We must all think big and act in accord with that thought. Here we can see that even George Norris, who thought some of the biggest thoughts ever to burst forth in the U.S. Senate, didn't think big enough. George Norris almost overlooked one of the primary items in the Tennessee River development—the recreation potential of water. Recreation is a latecomer on the list of benefits of comprehensive river development, and certainly we cannot blame the founding fathers of TVA for initially paying it little heed. But now, in a Nation of rising wages and increasing leisure time, recreational use of the TVA facilities is growing at an astonishing rate. Americans have discovered that yours is one of the most diverse and enjoyable outdoor recreation areas in our Nation. I'm told that an average of $8½ million worth of new recreation facilities is added each year at the reservoirs of the TVA. In addition to a total governmental recreation investment here of $120 million, there has been nearly an equal amount in private recreation investments such as cottages and resorts. You have close to 50,000 boats on your river system. Think what all this already means to the economy of your valley. Think what more it will mean in the years immediately ahead.

Everywhere in the United States recreation is becoming big business. We're going to have to think and act mighty big if we meet the pent-up recreation demand.

We in the Department of the Interior have taken this recreation boom, and the President's message, to heart. We are embarking on some big planning for recreation development throughout the United States. We feel that this is the moment of decision. What we do, or don't do, in the next 10 years will set the character of this Nation for generations to come. America's open space is disappearing rapidly at a time when all signs point to mounting demands for parks, parkways, recreation areas, and wildlife refuges. We need open space in which to find outdoor enjoyment and refreshment of mind, body, and spirit.

To meet this need we are laying plans for a program without parallel in our history. Because much of this recreational development is of national impact, we want the Federal Government to take the lead in a program we're calling "Parks for America." And we want to encourage local areas and States to do more through a cooperative effort. Only a few areas and a few States, notably New York and California, are keeping up or vigorously attempting to keep up with the mounting demand.

This generation, as we see it, has a last-chance opportunity to save perhaps 15 or 20 million acres for national parks, another 2½ million acres for national recreation areas, more than a million acres for national parkways and scenic roads such as your Natchez Trace, 4½ million acres for wildlife refuge areas. The program will be costly, but every year we delay the costs will rise. Fortunately, much land we propose to retain as open space already is in public ownership. But for 4.6 million acres of privately held land that we foresee as national park lands, the estimated cost has doubled in the past 10 years, and is expected to nearly double again in the next 10. Make no mistake about it, if we do not act now the opportunity will vanish. What we save in the next 10 years may well be all we will ever have the chance to save.

These aren't the only ways in which we are undertaking to implement the natural resources program outlined by President Kennedy. We hold uppermost his warning that "Our Nation has been blessed with a bountiful supply of water; but it is not a blessing we can regard with complacency." In all those areas wherein we have primary responsibility for multiple-purpose water development we are hard at work drawing up plans for a resumption of the effort that shriveled into near nothingness during the past 8 years. In this we have as a shining example the transformation wrought in hydroelectric power production and consumption by your TVA. That transformation brought you from an area of relatively little electric use to one in which electric power consumption is nearly twice the per capita average for the rest of the Nation.

Too, we accept the goal of developing comprehensive river basin plans during the decade of the sixties, so that all parts of our country can follow the steps to progress that you have made.

And we share with others in the Government a concern that a major breakthrough be made, and made soon, on the growing problem of cleaning up our streams. Conserved water will be of little use if it is polluted water. No longer can we rely on the adage that "dilution is the solution to pollution." Something more, something positive, must be done. We face the imminent peril of having our major rivers become thousand-mile sewers.

XUM

No longer is water pollution a problem of a few metropolitan areas; it is a problem nationwide in scope. To meet it we must spend twice as much on municipal waste treatment plants as we now do. The administration's program for a grant-in-aid system to help communities meet this problem is the start. With its adoption perhaps I won't have to inhale the stench of the Potomac when I drive home on a hot day. Perhaps we will close out the business I read about recently in a magazine—the business some private enterpriser started on the Missouri River. He skims and sells the grease from the surface of the broad Missouri.

Already the Secretary of Agriculture and I are working together in another area to which the President directed his attention. Together we are formulating a comprehensive Federal recreational lands program and working to eliminate conflicts in fish and wildlife programs so that an increased and improved wildlife conservation effort may be made. If this takes some knocking together of a few bureaucratic heads, then Secretary Freeman and I are ready to do it.

I hope it goes without saying that in all these various fields of natural resource planning and development the Federal Government does not desire to move ahead alone. Nor does it expect to. We are heeding President Kennedy's view that only through the fullest participation and cooperation of State and local government and private industry can this task be done wisely and effectively. It's up to you folks just as much as it is to us. Resource development is a must—a natural, if you'll permit the pun. With our soaring population we are facing what I call the quiet crisis. For all its quietness, this crisis in the field of resource development is just as real as the one we face in world affairs. America has the ability to meet this crisis—we aren't a poor nation. Just a small part of the money we now spend on pointed-toed shoes and overpublicized gimmicks can have a beneficial effect for many generations if we direct the money into public investment. As progressive conservationists concerned with the efficient development of our Nation our job is cut out for us.

I'm sure I could do no better than to end with the closing words of the President's natural resources message: "The task is large but it will be done."

The Late John Cashmore, Borough President of Brooklyn

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. ANFUSO. Mr. Speaker, the people of Brooklyn have recently suffered a most grievous loss in the death of their beloved borough president and my very dear friend John Cashmore. He died unexpectedly after suffering a heart attack while being driven home from a dinner in Manhattan Sunday evening, May 7. I was present at the dinner and spoke with him there. A few hours later I heard the news of his death over the radio and was tremendously shocked.

His passing is a terrible loss for Brooklyn. John Cashmore was a great borough president, whose heart was with the people and with the borough he served so well. He was president of the borough of Brooklyn for 21 years. He was often referred to as "Mr. Brooklyn" because of his long years of service in the interests of the borough where he was born, raised, and lived all his life.

John Cashmore was born in Brooklyn on June 7, 1895. He attended elementary school, but was forced to go to work at an early age because of the untimely death of his father. He continued his schooling at night, including law courses at New York University. He enlisted in the U.S. Armed Forces during World War I and served in France. He was primarily a businessman and a public official who gave a lifetime of service to his community and to the people, regardless of race, color or creed.

Cashmore's political career began in 1922 when he was elected to the State assembly on the Democratic ticket. Two years later he was elected to the New York City Board of Aldermen, and then was reelected to five successive terms. From 1937 until 1940 he served in the city council, where he became majority leader and vice chairman. When Brooklyn Borough President Raymond V. Ingersoll died in 1940, Cashmore was elected as his successor and he has served in that office since then. He was reelected in 1941, 1945, 1949, 1953, and 1957. He had become so popular and beloved by all segments of Brooklyn's 3 million population that in the last two campaigns the Republicans supported him, too.

Cashmore's only defeat for public office took place in 1952 when he was nominated for the U.S. Senate against the Republican incumbent Senator Irving M. Ives. He often ran far ahead of the party and on one occasion received 33,000 more votes in Brooklyn than the late President Franklin D. Roosevelt.

His funeral on Thursday, May 11, was attended by many hundreds of people from all walks of life, including a group of more than 200 honorary pallbearers led by Mayor Wagner of New York. The group also included all Members of Congress from Brooklyn, 22 State assemblymen, 9 State senators, members of the city's board of estimate, and many other city and borough officials. He is survived by his widow Edythe, to whom he was happily married since 1926, and a son James and his family.

John Cashmore's death will be deeply felt in Brooklyn. He was dedicated to our borough and to its betterment. He was a distinguished citizen, an able leader, and a devoted public servant. He was a man who inspired great loyalty in all those who came in contact with him, and he returned the same loyalty. It is often said that Brooklyn is more than just a place—it is a state of mind. John Cashmore had a leading role in creating that state of mind in the 21 years that he served as its borough president. The people of Brooklyn will long remember him.

I extend my condolences to his widow and to his son. May the good name that he leaves behind serve as a consolation to them in this hour of their great bereavement.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

Appendix

Free Peoples Need To Stand Up and Be Counted

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 18, 1961

Mr. KUCHEL. Mr. President, last Saturday night in Los Angeles I had the honor to speak at the annual banquet of the Association of American Editorial Cartoonists. I ask unanimous consent that a partial text of my remarks at that time be printed in the Appendix of the RECORD.

There being no objection, the partial text was ordered to be printed in the RECORD, as follows:

FREE PEOPLES NEED TO STAND UP AND BE COUNTED

(Partial text of speech of THOMAS H. KUCHEL, U.S. Senator from California, before the annual banquet of the Association of American Editorial Cartoonists, Biltmore Hotel, Los Angeles, Saturday, May 13, 1961)

The decade of the 1960's will present to the peoples of the earth unbelievable new horizons. Peoples will have traveled to the moon and back, and flights to the stars will be nearer to reality. From earth satellites, global television will reach into the homes of every hemisphere. Weather may well be subject to the control of man. Unimaginable breakthroughs in our struggle against the most dread diseases will have been attained. Twenty-six million young Americans will have come into our labor force for the first time. Our annual gross national product will have expanded from $500 billion to $750 billion.

But unsolved problems of supreme importance remain to plague us. How many people live together in a just peace? How may the United States best assure her own perpetuation? How may the evil dream of international communism for world domination be dissipated? How may freedom live and flourish?

For America, the quest for answers assumes a twofold, crucial importance: one, because we intend to keep our freedom, and, two, because we must, with courage and with vigor, and with honor, fulfill our tasks as leader of the cause of human freedom, a heavy burden which the exigencies of time have thrust upon us.

America is a peaceful Nation. Our people yearn for a just peace. Our history is free from acts of wanton aggression. But there is aggression in the world. The assault upon the peaceful aims by communism seems to be a neverending one. Meeting that assault, meeting it successfully, is the basic issue of the 1960's. It must be met by the free nations of the world, standing side by side, gaining strength from their common resources, and from their common resolve.

I believe in the wisdom of the North Atlantic Treaty Organization comment: "The fundamental historical fact * * * is that the nation state, by itself, and relying exclusively on national policy and national power, is inadequate for progress or even for survival in the nuclear age."

This protracted, interminable conflict with communism can be won only by the free world marshaling and applying its economic, technological, political, and military resources on a collective and coordinated basis. No single state, in the decade of the 1960's, can hope to "go it alone," and still provide security for its people.

We maintain, and shall continue to maintain and strengthen our own American Military Establishment. But we shall also seek to continue and to improve our collective security systems wherever that is feasible.

Our collective security systems came into being in the aftermath of World War II for the purpose of opposing the spread of communism. A few weeks ago, I attended ceremonies at the SHAPE headquarters of NATO, outside Paris, which commemorated the 10th anniversary of the establishment of NATO's defensive shield. I watched with pride, as NATO troops in the military uniforms of their several countries, marched together, an imposing symbol of their nations' compact to defend collectively the security of Western Europe.

And defend that security, they have. We must never forget that since NATO's creation, no free European country has followed her unfortunate neighbor down the dark Communist drain.

The world is in trouble and in turmoil. In every part of the globe, communism probes and penetrates, seeking to find or to develop weaknesses by which it may overrun and subjugate more peoples and more territory. Where it can create and control puppets, it does.

In our own hemisphere, a Communist clique, led by the infamous Castro, increases its control over Cuba. Freedom in Cuba is all gone. Elections are abolished. The highest judicial establishment is the firing squad. Private property is taken over by the Castro forces.

The strength for these opertaions has come from behind the Iron Curtain. Che Guevara, Castro's Minister of Industrialization proudly proclaims a $100 million loan from Russia, a $70 million loan, interest free, from Communist China, and enough more from satellites to total, he says, about a quarter of a billion dollars.

To secure for communism what Lenin called the commanding heights, the Soviet and her pawns have loaded Castro with as much as a hundred thousand tons of military materiel. Castro has paraded over 50 heavy Soviet J-3 and J-4 tanks, plus lines of 55 and 105 millimeter cannon, truck-drawn field artillery, mortars, 6-barrel rocket launchers, 4-barrel antiaircraft guns, and bazookas. He has received an unlimited amount of small arms, and ammunition of all types. While there is no absolute evidence of MIG aircraft, there have been recurring reports along these lines. In any event, Castro's airmen are being trained in the Soviet bloc.

Last July, Khrushchev said: "One should not forget that now the United States is no longer an unreachable distance from the Soviet Union as it was before. Figuratively speaking, in case of necessity, Soviet artillerymen can support the Cuban people with their rocket fire if the aggressive forces of the Pentagon dare begin their intervention against Cuba."

Then on April 22, this year, he said: "I am stating again that our Government does not seek any advantages or privileges in Cuba. We do not have any bases in Cuba and we do not intend to establish any. And if * * * they (American generals and admirals) still try to frighten the people by fabrications about 'Soviet bases' on Cuba, this is obviously designed for simpletons."

Maybe so, maybe not. One never knows what the Soviet leaders really have in mind. But the facts, and the implications point up the gravest kind of question. How do we, the American people, and the American Government propose to answer?

The first obligation of the Government of our country is the security of our own people.

In the furtherance of that obligation, we have adopted, as one technique, the theory of collective security.

In the Americas, we have no unified system of defense such as NATO affords the Atlantic community, although mechanisms for coordinating joint hemispheric action do exist. Basic to this framework is the Organization of American States, agreed upon in 1948, designed "to achieve an order of peace and justice," "to provide for action on the part of (the member) states in the event of aggression," and finding that "an act of aggression against one American state is an act of aggression against all the other American states."

A year earlier, in 1947, the Rio Pact was adopted. It holds, in part: "If the inviolability or the integrity of the territory or the sovereignty or political independence of any American state should be affected by any aggression which is not an armed attack or by any extracontinental or intercontinental conflict, or by any other fact or situation that might endanger the peace of America, the organ of consultation shall meet immediately in order to agree on the measures which must be taken in case of aggression to assist the victim of the aggression or, in any case, the measures which should be taken for the common defense and for the maintenance of the peace and security of the continent."

There is the Declaration of Caracas of 1954, which finds, in part: "That the dominance or control of the political institutions of any American state by the international Communist movement, extending to this hemisphere the political system of an extracontinental power, would constitute a threat to the sovereignty and political independence of the American states, endangering the peace of America, and would call for a meeting of consultation to consider the adoption of measures in accordance with existing treaties."

But there is also a basic U.S. hemispheric policy first enunciated in 1823. It is a rather intriguing fact that in that year, imperial Russian outposts were being established along our California coast. Russian expansionism threatened the Americas equally with the expansionism of European powers in Latin America. How strange this seems today when Soviet expansionism again threatens the New World.

At any rate, President Monroe laid it on the line. We were determined to prevent the encroachment of any outside power upon the

soil of the Western Hemisphere. "We should," he said, "consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and security."

That policy remains, as it should remain, America's policy in the 1960's as well.

Last year, in Brazil, President Eisenhower reaffirmed the Monroe Doctrine, when he said: "I assure you that my Government, while honoring its commitments outside this hemisphere is in no mood to allow its special responsibilities among the American States to go by default. Indeed, these commitments and responsibilities are part and parcel of the same problem—preserving the strength and unity of the free world."

And on the steps of the American Capitol, as he took his oath of office, President Kennedy reiterated that policy and reminded the world that—"This peaceful revolution of hope cannot become the prey of hostile powers. Let our neighbors know that we shall join with them to oppose aggression or subversion anywhere in the Americas. And let every other power know that this hemisphere intends to remain the master of its own house."

In my view, the time has now come for our friends in this hemisphere to stand up and face the need to implement their jointly approved resolutions. The State Department accurately describes Castro's Cuba as a member of the Sino-Soviet bloc. International communism is implacably dedicated to the destruction of free Western institutions.

This is not simply a problem for our beloved Republic. It is the gravest kind of issue for all the peoples of the Americas. In my view, the members of the OAS should stand up and face the responsibilities which they assumed in approving the several declarations to which I have alluded. A meeting of the representatives of the OAS should shortly be convened. The meeting should be called by one of our neighbors or by us. The agenda for the meeting should be unequivocal. The menace of Castro's clique to the political independence of our hemisphere should be clearly enunciated. Arrangements should be agreed upon for collective defense if an act of aggression were to take place against any of us. With equal clarity, the members should agree upon specific diplomatic and economic measures to be undertaken, and undertaken jointly, to isolate this Communist pawn. Economic sanctions should be jointly invoked. It is fantastic, for example, that we, the United States, continue to enrich Castro's regime by about $5 million per month. We prohibit Cuban sugar importation but continue to receive Cuban molasses, tobacco, fruits, and vegetables which totaled $60 million last year. Meanwhile, we prohibit our own people from exporting goods to Cuba with the exception of food, medicine, and medical supplies.

We are playing our part, with our neighbors, in attacking hunger, poverty, disease and despair here in the Americas. We are a minority stockholder in the Inter-American Bank. Congress is about to approve a $600 million appropriation for additional assistance to the Americas. This is a tremendously important joint undertaking. But it is not all that is required. While we try to take care of our own, we shall brook no interference from those whose single aim is our undoing. And in that resolve, let those who spoke with us at Rio, at Bogotá, at Caracas, and at San Jose, now agree to a common course of action which our several statements of common principle require.

I speak tonight as an American Senator devoted, like each of you, to the perpetuation of the Republic. Our country stands for liberty. It is our Nation which must hold high the torch of liberty. We dare not shirk our responsibilities of leadership. Let those who are like-minded repair to our side. Let those who, together with us, courageously underwrote clear declarations of our joint resolve, now stand together before mankind, ready, together, to extirpate communism from the New World; ready, together, to improve the lot of our peoples, their life, their health, their minds, their homes, and their welfare, through freedom and not by slavery; ready to demonstrate to all our unyielding resolve to maintain our freedom. This is a time for free peoples to speak up and be conuted.

I believe, with Lincoln, that sin by silence, when there is a duty to speak, makes cowards of men.

New York's Reform Democratic Clubs Hail the Anniversary of the Supreme Court Desegregation Decision

EXTENSION OF REMARKS
OF
HON. WILLIAM FITTS RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. RYAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by officers of the Reform Democratic Clubs of New York's West Side on the occasion of the seventh anniversary of the Supreme Court decision outlawing school segregation. One of the characteristics of the reform clubs is a vital concern with issues. This statement reflects their deep commitment to the achievement of full civil rights for all our citizens now—not later:

A STATEMENT BY THE REFORM DEMOCRATIC CLUBS OF NEW YORK'S WEST SIDE ON INTEGRATION IN SCHOOLS

On May 17, 1954, the Supreme Court of the United States handed down its decision in the case of *Brown* v. *The Board of Education* outlawing segregation in the public school systems of the United States.

On this, the seventh anniversary of this momentous decision, we, the Reform Democratic Clubs of the West Side of the Borough of Manhattan in New York City, wish to state our belief in the right of every individual of any race, religion, or creed to equal opportunity and to equal enjoyment of the guarantees given to all citizens by the U.S. Constitution.

The Supreme Court's decision in 1954 was a step toward converting this ideal into a reality. Though much has been done, much remains to be done in education, housing, job opportunities, and voting.

Although 7 long years have passed, only a small percentage of the public schools in the United States affected by the Supreme Court's decision have complied with the decision. Discrimination in employment on the basis of race or color still exists. Few States have as yet enacted legislation prohibiting discrimination in housing; and, in those States which have, the legislation has often proved inadequate to meet the needs. In many States minorities still are not allowed to vote. Without the vote, they have no say in their Government.

Today these minorities in our population are justly demanding that the American political system live up to its ideals. This demand has been articulated through the courts and by social actions such as the sit-in demonstrations.

We reaffirm our support of these efforts by our fellow Americans to acquire political and social equality. We realize that this is a problem for the North as well as the South. It is an American problem; and to solve it we need an American solution.

It is both our hope and our belief that the Federal Government will not shirk its responsibilities in this field and will act affirmatively toward eliminating all inequalities in our society.

It is both our hope and our belief that the State governments will do their part in guarding the rights of their citizens by faithfully implementing the laws already passed for this purpose, and by passing new legislation if needed.

It is both our hope and our belief that the city of New York will continue to take the lead in the advancement of civil rights, and by so doing, promote a vital, heterogeneous city life which will make New York City into a model of urban development.

We, the Reform Democratic Clubs on New York City's West Side, pledge ourselves to continue to support the efforts of government on all levels to end segregation and discrimination in our land. We pledge to continue to aid those community organizations working toward these same goals, and we further pledge to initiate programs of education and social action to help make our country into a land of opportunity for all its citizens.

ERIKA TEUTSCH,
President, Riverside Democrats.
ALFRED H. KLEIMAN,
President, West Side Democratic Club.
MARTIN BENIS,
President, F.D.R.-Woodrow Wilson Democrats.
FRANCES TEPPER,
Reform Independent Democrats.
RAYMOND GUENTER,
President, New Chelsea Club.

Making a Job

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, May 18, 1961

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Making a Job" published in the Wall Street Journal of May 1, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MAKING A JOB

While the immediate concern of the Kennedy administration is present unemployment, reckoned at some 5.5 million by Labor Secretary Goldberg the other day, another Labor Department estimate is also causing anxiety in Washington.

It is the prediction that upward of some 13.5 million new workers will enter the labor market during the 1960's, an increase of 40 percent over the influx during the fifties. Will jobs await these jobseekers?

Some economists expect that there will be jobs enough, and more. No one, of course, can guarantee it. But the likelihood of reducing present unemployment and creating future job opportunities will be improved if the Government understands how a job is made.

A real job cannot be made in Washington, as even some of the most ardent proponents of Federal pump-priming concede. Every new job carries an investment price-tag which must be paid by private capital. In

1950, a single job in manufacturing industry cost an investment of $9,500. Today, a capital outlay of almost $20,000 is required. Hence, if the aim is to create as many jobs as possible, the means obviously must be to hold down the cost of providing a job and to increase the amount of capital available for investment.

Additional capital for investment could be released by an across-the-board liberalization of depreciation allowances on plant and machinery. But President Kennedy proposes instead a complicated scheme of tax credits designed to reward certain investment after the fact. Whatever the equity of this proposal, many businessmen regard it as a dubious incentive.

Unrealistic restriction of investment is one Government check on jobmaking. Increasing the cost of a job is another. Inflation generated by Government deficit spending does that. So do direct and indirect charges on the employer, whether in the form of higher contributions to unemployment benefits or through an arbitrarily determined minimum wage. The latter can actually aggravate unemployment in some businesses. More broadly, excessive union wage demands, enforced by the union's unique monopoly power, push up the cost of creating new jobs and thus accelerate the trend toward greater mechanization and automation of industry.

Mechanization and automation will continue in any case; they are the means by which industry maintains its efficiency and competitiveness. But automation need not be a serious barrier to greater employment. Given the right climate, investment in modern machinery can provide more and better jobs. Certainly automation does not stifle employment as surely as Government obstacles to investment and Government-sanctioned inflation of labor costs by monopoly unions.

Thus, the objective of increased employment can best be achieved by permitting industry to keep and invest more capital. That would mean less Government spending, to be sure. But it would also ease Washington's worries about the problem of making all those new jobs.

Blundering Into the 21st Century

EXTENSION OF REMARKS

OF

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. HOLTZMAN. Burnett Roth is a lifelong resident of Florida and a graduate of the University of Florida.

He is presently a member of the National Executive Committee of the Anti-Defamation League and national chairman of its discriminations committee. He is an ADL commissioner representing the Southern States from Maryland to Florida.

Mr. Roth is a respected citizen of the Dade County community, having served in all communal, civic and religious affairs. He is active in and past president of the United Cerebral Palsy Association of Miami, B'nai B'rith, and served as councilman and vice mayor of the city of Miami Beach.

On April 15, 1961, he presented the keynote address at the Florida State Convention of B'nai B'rith lodges and chapters in St. Petersburg, Fla., emphasizing the important role that all Americans must play to insure the preservation of peace in the world and to guarantee the recognition of human rights by the peoples of all nations.

His address follows:

BLUNDERING INTO THE 21ST CENTURY

Ladies and gentlemen, a number of persons have asked me whether my keynote address would discuss in detail the important matters before the world presented in the Eichmann trial; others have suggested that perhaps I was going to discuss the decision entered this day by the circuit court of Dade County, Fla., which concerns itself with religious practices in the public schools; others have intimated that perhaps my remarks would touch upon the delicate problems presented with today's bombing and invasion of our neighboring island of Cuba where human and civil rights and liberties have been desecrated by the present leaders of that country; others have suggested that perhaps my talk would emphasize B'nai B'rith activities, the Anti-Defamation League, the B'nai B'rith Youth Organization program with particular emphasis upon the contribution we should make in supporting that portion of President Kennedy's program which relates to public institutions and programs of education.

But while all of these are important and part of the program of B'nai B'rith and part of the interest of B'nai B'rith, your State B'nai B'rith leadership evidenced its farsightedness when it suggested that in keynoting this working convention, I emphasize the important role that we as Americans must play in the changing world and changing times.

The B'nai B'rith"s many faceted program tional local, and world problems. Our Anti-Defamation League program insures the preservation of the principles of democracy; our youth and vocational guidance efforts insure a recognition of the important part our maturing citizens must play in achieving world peace; the other services of this, the oldest service organization in our land, combine in B'nai B'rith to give this Nation the wealth of our heritage as American Jews.

Today we are concerned with so many national, local, and world problems. Our chagrin at being bested in the successful world-circling flight of the Russian astronaut is tempered by our realization that Khrushchev was correct when he said that the conquest of space "is a victory for all people throughout the world".

If we are disturbed by the disorder in Laos, or the turbulence in the Congo; if we are ashamed of the besmirching of the American flag by the handful of shrieking women attacking a minister of God escorting his child to a school in New Orleans; or if our conscience is shaken by the picture of an Eichmann in an Israeli dock being called upon to answer for the crimes against humanity which resulted in the inhuman sadistic murder of 6 million lives; or if we are incensed by the imitative swastika desecrations of houses of worship in our own State and throughout the world, it is because the world has so shrunk in size. No longer do we think in terms of the 80 days of Jules Verne's imagination; now it is but 89 minutes of the historic flight of Gagarin.

All these, and other problems are related. And all the people of the earth are as one. Determined and dedicated to upholding the dignity of man, and the freedom of the individual under law.

Each of us, whether here in St. Petersburg, Fla., or in the former St. Petersburg, Russia, must know the need of peaceful coexistence. While our aims may be the same, we may attempt to reach them by dissimilar paths. What is good for us, the path we choose, may not necessarily be the path of other persons. But if we all have moral courage, loyalty, and integrity we can maintain inviolate the relations of amity and peace among nations.

It is our responsibility to recognize the dignity of all nations, and their right to run their own affairs. Some may desire to exercise that right with a leftist Socialist philosophy; but however contrary to our principles of democracy they may be, they have that right. Without at the same time violating the principles of human rights as enunciated in the Charter of the United Nations, and as now recognized by the civilized nations of the world.

Much of the world will not buy our anti-communism; not Latin America, not Africa, not even many of our allies in the Western bloc. If we cannot sell our democracy, let us at least be prepared to spread the seed of liberty by a program of realism, not just idealism.

It is in this framework that we must realize that we are truly blundering into the 21st century. There is a new generation emerging in America, a tough generation which does not want to be deceived by shibboleths. These people were born into a troubled world in which our way of life is threatened. But youth is powerful, and can face the monumental problems with recourse to fundamental truths of justice and freedom, and they are prepared to meet the challenge hurled out by President Kennedy by answering him that they are willing to ask what they can do for our country, rather than what our country can do for them.

It is but a short time until the 21st century. How many of us can go back 40 years to the early thunderous twenties—it is as yesterday. Just as tomorrow will see the birth of a new century, which we are not prepared for.

Have you ever wondered what life will be like then? Today we are alarmed with the growing challenges which demand the highest kind of leadership from the policy level to the grassroots. These forces are represented by three phenomena: First is the threat of the ideology of world communism; next is the rising tide of nationalism in the world's underdeveloped areas; and third is the unbelievable advances of science and technology.

The first force, that is, the threat of the Communits philosophy, we have tried to meet in many ways. We have dispensed $81 billion in foreign aid to 70 nations since World War II. Our emphasis was to bolster the allied and uncommitted nations against the Communists. But our handouts have not paid off. And neither have the billions for defense and armaments been fruitful. As President Kennedy said, "The primary purpose of our arms is peace, not war, to make certain that they will never be used; to deter all wars, general or limited, nuclear or conventional, large or small, to convince our potential aggressor that any attack would be futile. Our arms must be adequate to meet our commitments and insure our security."

Most important, perhaps, is the second challenge to world peace, the rising tide of nationalism in the underdeveloped areas.

With our eyes wide open, we must plan intelligently how to give realistic aid to these nations, not just because we can benefit from this aid, but how the world will benefit. The program to spend $11 billion to feed and clothe the hungry and ragged of the world in the next 5 years is a program which will harness America's farm abundance to meet our foreign policy objectives. Out of the storage bins into the bellies of the hungry, should be our realistic program.

This will be one step in the organization of the human and material resources of the free world to benefit mankind, without regard to any economic aggression which we may face of the Communist bloc.

XUM

There is an individual contribution each of us may make toward this worthy ideal. Some will make that contribution in joining the Peace Corps. These volunteers will not convert or propagandize, but will work with their hands in a commitment that all men are equal, working side by side with persons of all faiths, colors, and creeds, and show by example that we can live our democracy. This can prove to be one of the most far reaching instruments for the spreading of brotherhood ever attempted.

Others will contribute by joining movements which mean to change the image of the United States in the minds of those who only know of our prejudice and hate. We have a long way to go. In the United States the Negro and the Jew are still victims of prejudice, and do not have the fullness of opportunity to which all men are entitled.

As former Governor LeRoy Collins said, in addressing our State Anti-Defamation League in December, 1960, "The Negro longs to be treated equally before the law, and not have their worth measured solely by the color of their skin. And this is a goal the Constitution of the United States holds out assurance they can achieve. The struggle toward it is no more their responsibility than ours, if we accept the idea of the brotherhood of man and the dignity of the individual under the fatherhood of God.

"Real progress in race relations depends much less on the desegregation of a school here or there, or on a biracial eating at lunch counters, than it does on meaningful changes in the hearts and minds of the people of a community.

"I am convinced that the antidote to intolerance and bigotry and prejudice is people * * * people learning about people who are different from themselves * * * learning they have common hopes and fears, common concerns and aspirations.

"The great American goal is freedom, both at home and throughout the world. We cannot be free if our minds and hearts are enslaved by prejudice."

American prestige in the Africas has corroded because of racial discrimination. News stories of school desegregation incidents, race riots, and bars to Negroes make the front pages of the African press. We cannot tolerate racial incidents which mar our relations with the new nations of Africa such as occurred last week at Hagerstown, Md., where an African diplomat was refused service in a restaurant. Remember that America has more people of African descent than any African country, except Nigeria. So they are concerned with inequities.

So are all the colored people of the world. Whether negroid or Mongolian. Of the 2,851,000,000 people in the world, half are colored, and sensitive to affronts against their colored brethren.

The young American Negro is identifying himself with the larger struggle for freedom in which our Nation's ideals are proclaimed to the world, but denied to many Negroes at home. Some of these Negroes may be caught up in the Muslim movement which espouses superiority rather than equality. Others will seek to migrate to Africa, reminiscent of the Garvey movement 40 years ago. Still others will seek to insist upon their human rights and dignity in the United States.

And every Negro stands straighter, bolstered with pride at each new African state which gains independence. Just as the American Jews looks proudly at the progress and accomplishments of their coreligionists in the tiny democratic State of Israel; just as most persons look back with some concern and interest to distant points of origin to which even now they find some common bond or heritage, so the Negro looks to Africa.

Nationalism and emotional hunger is felt here, and is felt particularly in Africa. And it is this continent which concerns me most as we blunder into the 21st century. For the peace and dignity of the world depends upon the hunger for independence and freedom which now binds the African continent together.

The African States are gripped in a tremendous unprecedented upheaval. At the start of World War II there were but 3 independent areas in this great continent which comprises one-fifth of the total world's land area, and in which there are now 50 countries, colonies, and territories, with a population of 230 million. Just 4 years ago the former British colony of Gold Coast became Ghana. Since then we have seen an end to empires. Nationalism has swept the continent. Twenty new nations have gained, and are earning, independence. But it is quite a struggle to really earn freedom. The men who lead that struggle still proudly display tribal scars on their faces.

It is a continent which looks hopefully to the future, for everything lies ahead. It seeks not charity but a partnership into which we must join. All of these nations have the lowest possible income, but the greatest potential which will begin to be realized as we blunder into the 21st century.

It is our responsibility to help them overcome their hunger, ignorance, chaos, and desperation. Remember they must try to accomplish in the span of a few years what we have developed over hundreds of years. And in doing this, we will be helping to create social and political and economic conditions in which free institutions may flourish. But this does not necessarily mean that democracy as we practice it will be emulated.

The Africans have persisted in a restless surge toward their destiny of freedom. While initially their goal will be achieved through education, we know that along with that will come the desire for personal gain. The glamor of the big city will lure the Africans into searching for profits, and here we will be faced with human greed and avarice. And here lies a real danger to the peace of the world.

Africa offers a tremendous market, but the risks are great for investment capital. While tax and other concessions are granted to foreign investors, the governments are so pressed to meet their governmental financial obligations that there is the threat of eventually taking over property in the nationalization of certain key industries.

While this may be true to some extent, with intelligent leadership on the part of our Nation, their society may become one in which much of our economic system will be incorporated, while the African does not lose his own economic identity. Their economy may become a mixed one; part free and part government controlled. And that need not be taken by us as an invitation to communism.

We must have faith in our American way of life and our institutions, and trust them to emulate us in the world battle of ideas and ideals of freedom. The nations will accept those of our principles which they feel can best serve their progress and their people.

Since the establishment of Ghana we have been unprepared to meet the challenge of the drive for freedom. We failed to act promptly in the recognition of Guinea in 1958 when it became independent from France, and we have fumbled all along the route, not fatal fumbles, but enough to require the kind of new leadership we are now displaying.

While the day may come when rivalries will exist between the African States, at this time they are united in their determination to remain free from domination of the left, or of the right, from Russia or from the United States.

They look to us for action, and our new leadership is beginning to give it. Several weeks ago an article in Look magazine on Africa, portrayed the Portugal colony of Angola, a nation of 200,000 people, 40,000 of them white; and a nation in which the black man is ruthlessly exploited. Even talking about independence leads to prison there. Look suggested it would be years before independence could come to this downtrodden nation. Yet before the ink on the print was dry, Angola was erupting. Unhappily a desperate people were taking lives ruthlessly. Twenty-eight whites were slaughtered. However ill advised this was, they were on the move against what they considered a tyrannical power.

The Security Council of the United Nations was called upon to investigate the Portugal suppression of riots in Angola. The resolution met the traditional rebuff by the Western majority of Britain, France, Turkey, Nationalist China, Chile, and Equador, on the theory that the U.N. had no jurisdiction.

And here suddenly Secretary Stevenson stated that the United States regretted to find itself in disagreement. For the first time, the United States took an historical step forward, and our representative said to the world, "Angola is but a part of the overall picture of evolution on the African Continent. The views of the United States have not changed since Jefferson wrote, 'We hold these truths to be self-evident, that all men are created equal, that they are endowed by their creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness.' "

Stevenson said that Portugal should plan step by step so that Angola could soon enjoy full self-determination. And the Liberian delegate rose to announce that our action would reverberate throughout Africa and the world.

This reorientation of American policy proved dramatically our real friendship for the people of Africa, and it is so recognized by the world. Particularly by those African-Asian nations which hold 45 out of the 99 seats in the United Nations.

And the very next day Mr. Stevenson took another step forward to end the scourge of imperialism, by voting with a majority of the General Assembly to censure segregated South Africa for its occupation of South West Africa.

Here we are confronted with the apartheid South Africa for its occupation of South Africa, where the whites are out-numbered by the Africans, mulattoes, and Asians 4 to 1. The 4 million whites have ruled the nonwhites with a hard hand. There is no appeal or argument from injustice with the police, the courts and prison. But within the immediate future we shall see some radical changes forced upon South Africa. And only with intelligent understanding will these changes come about without blood-letting.

As we blunder into the 21st century, we can ease the path with continued orientation of our policy toward an intelligent program to help the new nations of the world. As G. Mennen Williams, the Assistant Secretary of State for African Affairs has reported, the Africans want to assure their freedom from colonialism, while remaining neutral in the great power struggle.

This is reminiscent of our own fight for independence. George Washington, in his farewell address, said that it was our duty to remain neutral and urged this neutrality by imposing upon ourselves the mandate "to maintain inviolate the relations of peace and amity toward other nations." It is this same mentality that persuades the African nations today, as we were persuaded in 1796, to remain neutral from the East and the West.

And as Secretary Williams has said, the Africans seek racial equality in the world. Their governmental institutions will fit their own society, and perhaps be more centralized in authority than the Western civilization, but they must plan their economy, not we try to impose ours upon them.

And of course, their standards of health, and vitality, their diet and medical care

must improve. All this will come with the fulfillment of their great desire for education. While they may be ripe for some demagogery, we must exploit our opportunities and meet the leadership challenge. They need our support in meeting their newly assumed obligations.

Twenty-two African States this week submitted their own development plan which calls for an expansion and existing U.N. technical assistance, and establishment of training institutes for technical personnel. They urge the establishment of an economic development bank for Africa, and the creation of an economic development institute for training personnel in economic planning, programing and other phases of economic development.

I am reminded of that portion of the preamble of the Constitution of UNESCO where it is declared that, "Since wars begin in the minds of men, it is in the minds of men that the defenses of peace must be constructed." So must our leadership today, with your support, recognize that the peace we seek must be in the minds of all men * * * whether they be from Communist China, the U.S.S.R., Egypt, Israel, or the rest of the globe.

And the globe is a small one today as we join in paying tribute to Yuri Gagarin, tribute to the nationalism of the African States, and as we pay tribute to the foresight and determination of our President.

Together we can meet these problems, intelligently, forthrightly, honestly, and with concern for others. Through our program of B'nai B'rith, and our interest in and service to our Nation and the world we can make a real contribution to peace and help establish basic human democratic rights.

Let us utilize our Hillel organizations on the campuses of so many of the important colleges of the country to enlist persons to join in the Peace Corp. Our young people are dedicated and should be encouraged to make this important contribution to their country. Perhaps we could go beyond Hillel. Our whole B'nai B'rith framework can be mobilized within the technical and economic assistance program contemplated by our Government and so sorely needed by the nations of Africa.

From among our membership there are hundreds who should be mobilized through the instrumentality of B'nai B'rith; individuals who cannot meet the special requirements of the Peace Corps but who can be integrated in the tremendous program being sought by the African States themselves and encouraged by our Government to give assistance to the nations of Africa in the furnishing of scientific, economic and technical skills. This is in keeping with the heritage of the Jewish people.

By such service can we insure that the technical skills which are so rapidly developing shall be put to the best interest of mankind. And perhaps we can help smooth the way into the rapidly approaching 21st century.

In that era may our children, and our children's children live in peace, contentment and harmony with all the peoples of the world.

Moscow on Day Gagarin Returned From Space Flight

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, May 18, 1961

Mr. BUSH. Mr. President, one of my constituents, Mr. Clayton Willis of Greenwich, Conn., an editor of Newsweek magazine, happened to be in Moscow on the day that Yuri Gagarin allegedly became the first human to make a space flight and return to earth, having lived through the experience. Mr. Willis' impressions on that day in Moscow are set forth in an article which he wrote for the Greenwich Time, our daily newspaper, under the title of "Impressions of Greenwich Man—What Moscow Was Like on Day Gagarin Reported Returned From Space Flight." It is an article which I think may be of interest to Members of Congress. For that reason I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IMPRESSIONS OF GREENWICH MAN—WHAT MOSCOW WAS LIKE ON DAY GAGARIN REPORTED RETURNED FROM SPACE FLIGHT

(EDITOR'S NOTE.—Clayton Willis, of Old Bedford Road, was in Russia on Apr. 12, 1961, when Yuri Gagarin was rocketed into orbit and returned safely. Mr. Willis, upon his return last week, submitted the following impressions for publication in Greenwich Time.)

(By Clayton Willis)

Moscow, a huge, grim city of over 5 million population, was a different city April 12, 1961.

That was the historic day when Yuri Gagarin allegedly became the first human to make a space flight, return to earth, and live through it.

Reports that Gagarin may not have been the first to fly to space were circulating in the western world but it wasn't of the slightest interest in Moscow. The reason—the Soviet citizen never heard about them and may never—except through the grapevine.

I first learned about the Gagarin flight in my hotel about 9:45 a.m., Moscow time (1:45 p.m., Greenwich time). He reportedly took off at 9:07 a.m. (1:07 p.m., e.s.t.). I had arrived in Moscow 6 days before, April 6.

I noticed people gathered around radios in the Metropole Hotel, listening excitedly to reports of the flight.

I rushed out of the hotel from which the Kremlin can be seen, raced across Revolution Square in front of my hotel into Sverdlov Square (one runs into the other) past the Bolshoi Theater, past the Dom Souzou, where the Powers trial was held, turned right on Gorky Street and ran 1 block to the central telegraph office.

The Russian public address system was carrying reports of the space flight. In between reports, the Russian national anthem was booming out of the public address systems, then more nationalistic music. People were talking and gesturing excitedly as they walked along Moscow sidewalks and waited in queues for buses. Some stopped completely.

There wasn't a single newsman at the central telegraph office; so, I dashed out of the large building and hurried a few more blocks up Gorky Street to the Izvestia newspaper office. This is the leading evening newspaper in the U.S.S.R.; Pravda being the top morning paper.

Contrary to Russian custom, no one "intercepted" me at the front door. So, I walked in, crossed the lobby a few steps to the elevator, got in, and went to the top floor. I had never been to the office before and had no idea where I would end up. It turned out that the top editors were on this, the sixth floor.

I saw what looked like a receptionist in a room to my right, but I hurried past her down a corridor into what appeared like the main office. It was. In fact it was the reception room for the chief editor, none other than Khrushchev's son-in-law, Alexei I. Ajubei.

There V. Sdobnov, assistant to the editor in chief; Vikenty Matveyer, a foreign observer on American affairs, were huddled around a radio listening to reports of Gagarin as he was speeding around the earth in his five-ton spaceship, "Vostok" (East).

You just don't pop into Russian newspaper offices unannounced, and I may have been the only Western newsman at Izvestia on April 12, 1961. In fact, Matveyer asked politely, "How did you get here?" He was amazed.

Matveyer said Gagarin was over South America and that he was feeling fine and was weightless, a good sign. At 10:25 a.m., Gagarin said he was coming down as we were standing there listening to the radio reports. He landed 30 minutes later—but I heard this later.

I noticed copies of the New York Times, Newsweek, Time, Life, and other American publications in the office. Those were the only Western publications I saw in the Soviet Union except when I visited the Pravda newspaper office the evening before. The Daily Worker of London and the Daily Worker of New York City were the only exceptions.

Then another foreign observer (writers on foreign countries are called foreign observers—they may observe, but they certainly don't report), Vladimir Silantiev, took me through the whole plant, the pressrooms, the composing room, the city editor's office and so on—all this while Gagarin was reportedly flying around the earth.

Out on the street people were still excited, hands were playing music from the public address system.

I returned to the Central Telegraph Office and it was really popping. S. Yoshikawa, correspondent for N.K.K., Tokyo, was broadcasting from an oversized telephone booth. He was listening to Soviet Central Radio on a portable and put it up to the microphone to carry reports of Gagarin to Japan. Soviet newsmen, more accurately called propagandists, were taking notes of the scene and shooting picture of Yoshikawa and the few correspondents who were there—many apparently still hadn't heard the news and some were working in their offices.

For Moscow, as gray a city as I have ever seen in the more than 60 countries I have visited, this was the supreme moment. The excitement and the gaiety of the people stood in sharp contrast to the huge, carless boulevards, the dull colored and poorly constructed apartment houses which are going up everywhere in Moscow and the Soviet Union, the terribly low living standard of the people.

At the central telegraph office I was asked my reaction to the spaceman. Deliberately being brief, I said, "It is exciting to be in Moscow when this news broke." The reporter never used a word of this in his account which appeared in Moscow News. What he did write, fortunately very little, was completely fictitious. He said only whatever suited his propaganda purposes, the custom of Soviet journalists.

The general impression I got throughout the U.S.S.R. (and I visited 5 of the 15 Republics from Leningrad, on the Bay of Finland, to Alma-Ata, Kazakhstan in Central Asia about 100 miles west of Red China) was that the Reds have achieved much in education, science, industry and the military. But the housing and the clothes are drab and very poor. And the cost of living is extremely high. But, it's important to realize that although in our eyes Russian living standards are miserable, the Russian doesn't have anything to compare his life with. The Russian people complain about their standard of living, but are almost powerless to do anything about it. The Russian press only feeds the people what the Kremlin

wants them to read—so, there's no comparison—that's the danger.

For the military and scientific achievements which give them propaganda value, the Soviets have sacrificed the life of their people. The living standard is improving a little, but it has a long, long way to go. The thing they have the least of, of course, is freedom. They just don't have it in our understanding of the word.

The Concern of the Democratic Party for Small Business—Myth and Reality

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. KEARNS. Mr. Speaker, for a long time now the fearless leaders of the Democratic Party have been hard at work projecting an image of themselves as the one political party concerned with the problems of small business.

They have pursued this through the many avenues they have developed for reaching the public. Members of the Democratic Party in both Houses of Congress are constantly at work on this image, building it up. The press, radio and television find that it helps with the Democratic Party leaders to aid them in the projection of this image.

But the Democratic Party does not stop there. For many years its leaders have, at the same time, been engaged in the projection of the image of the Republican Party as the party of big business.

As a result of long practice the leaders of the Democratic Party have developed to a fantastic degree their expertise in this matter of image projection.

What is the reality behind the myth?

Well, let us look at what the Democrats are doing to a hundred small businessmen just down the street from them on Capitol Hill. It immediately becomes clear that the supposed concern of the Democrats for small businessmen is only a myth.

The Democrats are not even good neighbors.

Suppose a family moved into the house next door to you, and, after getting settled down began shortly thereafter to use the vast powers of Government to dispossess you and push you around?

You would not like it, and the small businessmen on Capitol Hill don't like it either.

If they are forced to move from Capitol Hill, they lose their customers and they lose their means of livelihood.

When they relocate somewhere else they will have to begin a hard fight for new customers and they will have to take these customers away from other businessmen. They may never recover from this enforced move.

Roll Call, the newspaper of Capitol Hill, reports in its current May 17, 1961, issue that Nicholas DeGiovanni, restaurant owner, said he has been on Capitol Hill for 14 years and will join any movement to stop purchase of the block.

According to Roll Call, Mr. DeGiovanni added that if the Government was really concerned with the plight of small businesses it would not be moving out a block of them.

This is exactly the point I have been making.

As a matter of fact, Mr. DeGiovanni might have added that the Democrats in the Congress would not have called the Attorney General—another great champion of small business—into the case to help throw their neighbors out of their places of business, and their homes.

The Government should not take over property under the powers of eminent domain when it does not even have a definite plan for the use of such property. This is totalitarianism.

The indiscriminate use of the vast powers of Government in this instance to satisfy the whims of the Democrats and their desire for wide open spaces is to take a long, long step toward the kind of governments with which we are at war in Europe and Asia.

Dave Bassin, president of the Capitol Hill Merchants Association, whose firm would be purchased under the Democratic move to dispossess the neighboring small businessmen, said, according to Roll Call that "his group will support the Kearns measure and anything else which will allow them to stay where they are."

Mr. Bassin and Mr. DeGiovanni and their colleagues among the small businessmen on Capitol Hill thus have had a personal experience with the reality behind the image of the Democratic concern for small businessmen.

I would judge that they are experts on what lies behind the image which the Democrats have been so industriously building up for so many years.

Actually, the Democrats are no more interested in small businessmen than they are in big businessmen. What they are really interested in, and are deeply committed to, is big government.

What would it cost them, actually, to be good neighbors? The Democrats like to pride themselves on being good neighbors to the rest of mankind.

The Congress has appropriated $80 billion to help businessmen in other nations get back into business and to stay in business.

Here at home, on Capitol Hill, they could not care less.

For the benefit of Dave Bassin, and Nicholas DeGiovanni, let me say that all Democrats are not alike.

Many of them are deeply interested in the plight of Mr. Bassin and Mr. DeGiovanni and their colleagues.

But for some strange reason all of them are silent.

All, that is, except Senator STROM THURMOND, of South Carolina, who has joined me in sponsoring legislation to hold up the impersonal processes of government which the Democratic Members of the Congress have set in motion.

We have made a very simple proposition to the Democrats.

We have said to them, look, why not develop a long-range plan for beautifying the environs of the U.S. Capitol Building?

We have said, why not protect the small businessmen of Capitol Hill in line with the Democratic statements which have been given such wide publicity through the years?

We have said to the Democrats, why not make Capitol Hill as beautiful as Williamsburg, Va.?

We have said, these businessmen on Capitol Hill are wonderful hosts and they make constituents who come to Capitol Hill feel welcome. These constituents are not welcomed by the restaurants and cafeterias run by the Congress in its own buildings. There the signs plainly say, over and over again, "For Members of Congress and employees."

Where will the constituents of Members of Congress go to eat when the small businessmen on Capitol Hill are dispossessed by the Department of Justice and the Democrats in the Congress?

These are the problems, or some of them.

The Democrats seem to be perfectly unaware of the great human tragedy which they are inflicting on the businessmen and residents who are so unfortunate as to be their neighbors on Capitol Hill.

I would say to Dave Bassin and Nicholas DeGiovanni, Do Not Give Up. Hold on to the businesses which you have built up through the years.

I am confident that justice will triumph in the end.

Take your case to the American people. Take it to the voters who elected the Democratic Members of Congress.

The voters will undoubtedly respond, for they believe in fair play. I am confident you will win.

I would only suggest that you mobilize support for the bills which Senator STROM THURMOND and I have introduced.

I include as part of my remarks an article from Roll Call, and the text of the bills which Senator STROM THURMOND and I have sponsored:

[From the Roll Call, May 17, 1961]

HILL MERCHANTS FIGHT ANEW IN 100 BLOCK

Merchants in a block to be levelled for Capitol Hill expansion are launching a new, two-pronged attack at the Government takeover.

One phase is a bill introduced by Represenative CARROLL D. KEARNS, of Pennsylvania, which would prevent expenditures of funds for purchase or demolition of buildings in the Capitol area without a comprehensive plan for the development, preservations and improvement of the area.

The bill, if approved, would block eminent domain proceedings for the purchase of the block, which is bounded by Independence Avenue, First, C, and Second Streets, SE. There is no specific proposal for the use of the property.

The merchants are also planning a private bill which would be tacked onto the appropriations bill. It would authorize payments to them in addition to funds for the physical value of their property.

Several Representatives are looking over the measure for possible sponsorship. It would reimburse owners for intangible good will values of their locations in the event the Kearns bill dies and they must move out.

The private bill will substitute for another bill which had been introduced by Representative CLEVELAND M. BAILEY, of West Virginia, reimbursing the owners for intangibe values. Word leaked out of the Public Works Committee that the bill could not be adopted since it would set a costly precedent.

The Kearns bill will probably be bounced since proceedings are already well underway to buy the property.

Under an order of the U.S. District Court for the District of Columbia, residents must vacate by August 1 and commercial establishments must vacate by March 1, 1962.

Dave Bassin, president of the Capitol Hill Merchants Association, whose firm would be purchased under the Government's move, said his group will support the Kearns measure "and anything else" which will allow them to stay where they are.

Nicholas DeGiovanni, restaurant owner preparing to open a new addition, said he has been on Capitol Hill for 14 years and will join any movement to stop purchase of the block.

DeGiovanni said he hoped the Kearns bill will revive interest, and "maybe someone will lend a sympathetic ear." He said Speaker SAM RAYBURN "has said he needs room to breathe," but "If he does he should go back to Texas."

The restaurant owner added that if the Government was really concerned with the plight of small businesses it wouldn't be moving out a block of them.

Representative KEARNS told Roll Call that the Government should not try to take over the property when it doesn't even have a definite plan for its use.

H.R. 6893

A bill to amend the District of Columbia Redevelopment Act of 1945 to provide for the preservation of the home of John Philip Sousa, and to protect the homes of residents and the businesses and good will of the small businessmen in the vicinity of the United States Capitol Building

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 7 of the District of Columbia Redevelopment Act of 1945 (D.C. Code 5–706) is amended by adding at the end thereof the following:

"(j) (1) For the purpose of providing for the preservation, and maintenance as a shrine, of the former home in the District of Columbia of John Philip Sousa, there is hereby established a board consisting of the conductor of the band of the Untied States Army, the conductor of the band of the United States Navy, the conductor of the band of the United States Marine Corps, and the conductor of the band of the United States Air Force, ex officio, plus ten additional individuals appointed by the President, which shall acquire the home of John Philip Sousa at 318 Independence Avenue, in the District of Columbia, and shall preserve and maintain such home as a shrine dedicated to his memory, and as a museum for the preservation of memorabilia of John Philip Sousa.

"(2) For the purpose of obtaining funds for carrying out this subsection, the board is authorized to accept donations of funds, services, and property, and to conduct a nationwide fundraising campaign. All departments and agencies of the United States, upon request made by the board, shall transfer to the board all memorabilia of John Philip Sousa in the custody or control of such departments and agencies.

"(3) Members of the board shall serve without compensation for their services as such, but they shall be reimbursed for their expenses of travel and subsistence while actually engaged in the performance of the duties vested in the board. There are hereby authorized to be appropriated such sums as may be necessary to carry out this subsection.

"(k) Until a comprehensive plan has been prepared for the proper development, preservation and improvement of the physical environs of the United States Capitol Building and the surrounding complex of Federal buildings, including the Senate and House Office Buildings, the Library of Congress, and the United States Supreme Court, no funds shall be expended for the acquisition of real property or for the purchase or demolition of existing buildings located in the vicinity of the United States Capitol Building and the surroundng complex of Federal buildings."

H.R. 6134

A bill to amend the District of Columbia Redevelopment Act of 1945 to provide for the preservation of restoration of housing and certain other structures in the District of Columbia, where such housing or other structures are not substandard or can be restored to good condition, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 7 of the District of Columbia Redevelopment Act of 1945 (District of Columbia Code 5–706) is amended by adding at the end thereof the following new subsections:

"(j) Notwithstanding any other provision of this Act, (1) housing (including structures of historic or general significance) which is not substandard in any project area shall be preserved and shall not be demolished or included in the acquisition and assembling by the Agency of the real property in such area; and (2) the owner of any substandard housing (including structures or sites of historic or general significance) in the project area which can be rehabilitated or restored to good condition shall be encouraged and assisted by the Agency to undertake and carry out such rehabilitation or restoration, and such housing (or structures or sites) shall not be demolished or included in the acquisition and assembling by the Agency of the real property in such area unless such owner, after having had a reasonable time following notification by the Agency to complete such rehabilitation or restoration, has failed to do so; and in the case of any such failure the Agency, after acquiring such housing (or structures or sites) shall itself provide for the rehabilitation or restoration thereof whenever it determines that such rehabilitation or restoration is desirable or appropriate.

"(k) There is hereby established a Commission, consisting of the chairman of the Committee on the District of Columbia of the Senate and two members of such committee appointed by the chairman; the chairman of the Committee on the District of Columbia of the House of Representatives and two members of such committee appointed by the chairman; the Librarian of Congress; the Chief Justice of the United States; and eleven distinguished cultural leaders from the fields of architecture, history of architecture, landscape architecture, and the other arts appointed by the President; which shall study, develop, and on or before February 15, 1962, recommend to the Congress a comprehensive plan for the proper development, preservation, and improvement of the physical environs of the United States Capitol Building and the surrounding complex of Federal buildings, including the Senate and House Office Buildings, the Library of Congress, and the United States Supreme Court. Until such recommendations have been submitted to the Congress, no funds shall be expended for the acquisition of real property or for the purchase or demolition of existing buildings located in the vicinity of the United States Capitol Building and the surrounding complex of Federal buildings.

"(1) The Committee on the District of Columbia of the Senate and the Committee on the District of Columbia of the House of Representatives, acting separately or jointly, shall conduct a full and complete investigation and study of the following matters as they relate to the Agency and to the performance by the Agency of its functions under this Act:

"(1) Methods of appraisal and land disposition procedures and contracts;

"(2) Compliance with this Act in the development of project plans;

"(3) Reduction of project cost by emphasis on rehabilitation;

"(4) Propriety of excessive credit for noncash grants-in-aid to the District of Columbia;

"(5) Public interest versus negotiation with single developers;

"(6) Establishment of sound accounting and financial practices;

"(7) Lack of provision for privately built middle-income housing;

"(8) Relocation procedures as they relate to displaced persons and businessmen, with special atention to the problems of small businessmen;

"(9) Adequacy of opportunities afforded local contractors and redevelopers to participate in renewal projects;

"(10) Problems of undue delays in restoring neighborhoods to viable condition so as to produce both business and individual tax revenues for local government; and

"(11) Such other matters as are related to the expeditious and efficient restoration of neighborhoods in accordance with provisions of Federal and local laws.

Each such committee shall report to its respective House at the earliest practicable time the results of the investigation and study together with such recommendations as it deems advisable."

S. 1681

A bill to amend the District of Columbia Redevelopment Act of 1945 to provide for the preservation or restoration of housing and certain other structures in the District of Columbia, where such housing or other structures are not substandard or can be restored to good condition, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 7 of the District of Columbia Redevelopment Act of 1945 (District of Columbia Code 5–706) is amended by adding at the end thereof the following new subsections:

"(j) Notwithstanding any other provision of this Act, (1) housing (including structures of historic or general significance) which is not substandard in any project area shall be preserved and shall not be demolished or included in the acquisition and assembling by the Agency of the real property in such area; and (2) the owner of any substandard housing (including structures or sites of historic or general significance) in the project area which can be rehabilitated or restored to good condition shall be encouraged and assisted by the Agency to undertake and carry out such rehabilitation or restoration, and such housing (or structures or sites) shall not be demolished or included in the acquisition and assembling by the Agency of the real property in such area unless such owner, after having had a reasonable time following notification by the Agency to complete such rehabilitation or restoration, has failed to do so; and in the case of any such failure the Agency, after acquiring such housing (or structures or sites) shall itself provided for the rehabilitation or restoration thereof whenever it determines that such rehabilitation or restoration is desirable or appropriate.

"(k) There is hereby established a Commission, consisting of the chairman of the Committee on the District of Columbia of the Senate and two members of such committee appointed by the chairman; the chairman of the Committee on the District of Columbia of the House of Representatives and two members of such committee appointed by the chairman; the Librarian of Congress; the Chief Justice of the United States; and eleven distinguished cultural leaders from the fields of architecture, history of architecture, landscape architecture, and the other arts appointed by the President; which shall study, develop, and on or before February 15, 1962, recommended to the Congress a comprehensive plan for the proper development, preservation, and improvement of the physical environs of the United States Capitol Building and the surrounding complex of Federal buildings, including the Senate and House Office Buildings, the Library of Congress, and the United States Supreme Court. Until such recommendations have been submitted to the Congress, no funds shall be expended for the acquisition of real property or for the purchase or demolition of existing buildings located in the vicinity of the United States Capitol Building and the surrounding complex of Federal buildings.

"(l) The Committee on the District of Columbia of the Senate and the Committee on the District of Columbia of the House of Representatives, acting separately or jointly shall conduct a full and complete investigation and study of the following matters as they relate to the Agency and to the performance by the Agency of its functions under this Act:

"(1) Methods of appraisal and land disposition procedures and contracts;

"(2) Compliance with this Act in the development of project plans;

"(3) Reduction of project cost by emphasis on rehabilitation;

"(4) Propriety of excessive credit for noncash grants-in-aid to the District of Columbia;

"(5) Public interest versus negotiation with single developers;

"(6) Establishment of sound accounting and financial practices;

"(10) Problems of undue delays in restoring neighborhoods to viable condition so as to produce both business and individual tax revenues for local government; and

"(11) Such other matters as are related to the expeditious and efficient restoration of neighborhoods in accordance with provisions of Federal and local laws.

"Each such committee shall report to its House at the earliest practicable time the results of the investigation and study together with such recommendations as it deems advisable."

Let's Put a Poet Into Space

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, May 18, 1961

Mr. WILEY. Mr. President, the world is advancing in the physical sciences at an almost mariculous rate of progress.

The resources of the earth, the element of nature, and now, the reaches of outer space: within the laboratory of man's exploratory spirit, these are subjects for the discovery of new things and new ways to benefit mankind.

Unfortunately, however, our advances in science have not been accompanied by proportionate maturity of understanding in man's relationship to man.

Why? Perhaps, because the tangible is less difficult to master than the intangible; because the physical things usually get a higher priority than do the things of the mind and spirit.

For the most part, such considerations have been peripheral, rather than the heart of day-to-day conduct.

Traditionally, also, our interrelationships have been left to the church, to the poets, to the philosophers.

Now, we find ourselves on the edge of space, teetering on the brink of global war, ready on the launching pad of new progress.

Unless there is greater progress in human understanding, however, the creations of our hands may, instead of serving us, ultimately blow us up.

The time has come, I believe, for a reexamination of our efforts, or perhaps the lack of such broad-scope efforts, for finding new ways of improving the fundamental interrelationships, sometimes conflicting, of humanity.

Recently, the Milwaukee Journal published an article, reprinted from the Saturday Review of Literature, by Mr. Norman Cousins. The article, entitled "Let's Put a Poet Into Space," stresses the need for a better perspective, in effect, attaining a space-eye-viewing, of man's progress.

Mr. Cousins also states that we need to "chart a direction for human survival with at least as much concentration of effort as we are putting into a trip to the moon."

We recognize, of course, that this is not the province of legislation. Nevertheless, national policy is determined, not only by the need of the times, but by the philosophy and perspective of the leaders who make major decisions in our national life.

I ask unanimous consent to have the article entitled "Let's Put a Poet Into Space," printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET'S PUT A POET INTO SPACE

(By Norman Cousins, in the Saturday Review)

The idea of man in space is an explosion in the imagination. It shakes free the sense of wonder; it cracks open a vast area of the human potential; it confronts the intelligence with the prospect of an encounter with the infinite.

But it also adds to the terror. Not terror from what is unknown about space but from what is known about man. These cosmic vehicles are the forerunners of space platforms carrying loaded nuclear pistols pointed at the head of man on earth. A great ascent has taken place without any corresponding elevation of ideas. Man has raised his station without raising his sights. He roams the heavens with the engines of hell.

No human being who ever lived was able to see more of the world than Yuri Gagarin. No human being was ever in a better position to reflect on human destiny. Yet at precisely the moment that he should have been asserting the cause of man he was asserting the cause of the nation.

The one thing on earth that most needed to be left behind—the sense of the tribe—he had carried securely with him. A magnificent new vantage point was not enough to offset an old perspective. Into the center of the focused view came the national flag.

This is not to say that there is anything wrong or unnatural about a surge of national pride over such an event. Nor is it strange that the reaction in the United States should have been registered so largely on the level of the national ego-hurt, with assurances from Government that we were not too far behind. In the context of a struggle for world balance of power, for prestige, and for preeminence, every gain is bound to be posted on the competitive scoreboard.

But at some point the human race must have its innings. An assessment must ultimately be made in terms of human development. In the end, it is not the nation but man who will have to account for the record of life on earth.

The journey into space is, or should be, a sublime experience. The selection of astronauts ought not to be confined to men in the military or in technology. Why not poets, philosophers, or theologians? If it is said that space has stern physical requirements, the problem can be met. There are strapping fellows among those who have demonstrated their capacity to think creatively and who have some convictions about the nature of man.

One of the prime requisites for an astronaut is not just his ability to follow a specified procedure and to take measurements but to be able to be at one with a new environment. A space ship requires true perspective. This is nothing that can be imparted in a course on astronautics; it comes with the responsible development of intellect and insight. A respect for the human spirit may be even more important than a knowledge of centrifugal force.

Moreover, a certain artistry is called for when man proposes to range the universe. For when the astronaut returns to earth his message should be more than excited series of remarks on a fabulous journey. The returning messenger should have the ability to impart a sense of great new connections that may transform life as we have known it.

Men like Paul Tillich, Reinhold Niebuhr, Lewis Mumford, and Robert Frost may be too old to withstand the rigors of training for such an assignment, but at least they ought to be consulted on the younger men who may be equal to the job. In the meantime, the rest of us can try to prepare ourselves to accord a full measure of comprehension to the dimensions of a new age. There is something else we can do. We can try to chart a direction for human survival with at least as much concentration of effort as we are putting into a trip to the moon.

The ADA Is at It Again

EXTENSION OF REMARKS

OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. BECKER. Mr. Speaker, I am inserting herewith an article from the Evening Star of Washington written by

the Associated Press with the heading "ADA Says Red China Should Be Recognized." Mr. Speaker, the Americans for Democratic Action are up to their old tricks of advocating recognition by the United States of Red China as well as admission to the United Nations.

Many of the people associated with the ADA formed the policies years ago that caused the loss of free China behind the Iron Curtain of communism, as well as the loss of many other countries. Certainly their policies at that time were wrong and the policies they advocate today are just as bad and as detrimental to the interest of the United States and the free world:

ADA SAYS RED CHINA SHOULD BE RECOGNIZED

(By the Associated Press)

Americans for Democratic Action urges a start toward diplomatic recognition of Red China "and its accreditation to the United Nations as the government of China."

This should not be done, the ADA said, "as gestures of moral approval of past actions but as a means of establishing the normal channels of international communication."

The ADA's views on China were in a resolution adopted yesterday before its 14th annual convention adjourned.

PROVISIONS FOR FORMOSA

Recognition of the Peiping regime and its accreditation to the United Nations, the ADA said, "would increase our access to information on Chinese affairs and the possibility of affecting Chinese foreign policy."

Admitting Red China to the United Nations, the ADA said, "should be linked to the condition that the inhabitants of Formosa shall themselves democratically decide whether they shall be admitted to the United Nations as an independent nation or that they shall rejoin mainland China."

The Chinese seat at the United Nations now is held by representatives of the Chinese Nationalist Government, which is based on Formosa.

On domestic matters, ADA, a self-described liberal organization, said the Kennedy administration was "drifting into the worst mistakes of the Eisenhower years."

The ADA defined them as "improvisations for segments of full employment and economic growth."

ADDITIONAL RECOMMENDATIONS

The resolution recommended a number of long-range objectives, including:

Expanded support for neglected segments of the economy, notably housing, urban redevelopment, water conservation, depressed areas and constantly expanding consumer purchasing power for a rising standard of living.

The convention reelected Samuel H. Beer, a Harvard professor, as chairman; Mrs. Franklin D. Roosevelt as honorary chairman; Richard C. Sachs, New York, treasurer, and Roy Bennett, New York, assistant treasurer. Paul Seabury, a University of California professor, was elected chairman of the executive committee.

The Case Against Castro

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, May 18, 1961

Mr. PROXMIRE. Mr. President, Arthur Krock writes in the New York Times this morning an article that to me represents a devastating reply to those who contend that this country had not given Cuban Dictator Castro fair treatment.

Frankly, a surprising number of my own constituents persist in arguing with me that we have been too harsh and peremptory in our treatment of Castro. Because this badly mistaken view may be shared by many Americans, I ask unanimous consent that the column in today's New York Times, entitled "The Lively Issue of Castro's Justifications," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LIVELY ISSUE OF CASTRO'S JUSTIFICATIONS

(By Arthur Krock)

WASHINGTON, May 17—Two conclusions reached by this department after an examination of the origins of the currently hostile United States-Castro relations, and published here under date of May 10, have evoked an unusual number of remarkably uniform dissents from readers. These conclusions were:

1. The factual weakness of an advertisement in this newspaper, signed by a number of Harvard professors among other distinguished citizens, which justified Castro's anti-Americanism on the ground that for "at least a year" U.S. policy has been "We must crush Castro," is that it began the chapter of United States-Castro relations in the middle.

2. Castro's unfriendly and illegal acts, and his anti-American incitements of the Cuban population, long preceded the date chosen in this advertisement to demonstrate that the burden of blame is on his government.

In rebuttal of these conclusions the letterwriters generally contended that the United States refused a request from Castro to be invited for talks; rebuffed and snubbed him when he came here in February 1959, to speak to the American Society of Newspaper Editors; and refused his offer at that time and thereafter to negotiate the differences between his regime and the Government of the United States. But the open record is the following:

1. Castro never requested an official invitation. When, on his own volition, he came unofficially to Washington, in April 1959, Secretary of State Herter gave him a luncheon at which no mention of any desired negotiation was made by the Cuban officials present; and, in the absence of President Eisenhower, the Premier was received by Vice President Nixon.

2. On February 22, 1960, Castro did propose—but for the first time—to negotiate with the United States on compensation to American citizens for their property in Cuba that he expropriated soon after his accession to power. However, his conditions were that during the negotiation the United States should bind both the Executive and Congress to refrain from any action which Cuba would consider to affect its interests, while he remained free to negotiate or procrastinate as he chose—conditions obviously unacceptable and, so far as Congress was concerned, constitutionally impossible.

3. From the time Castro assumed power until May 17, 1960, the United States made 9 formal and 16 informal offers to negotiate all differences with Cuba. The first was by Ambassador Bonsal in March 1959. In each note and statement the United States expressed sympathy with the social and economic objectives of the Cuban agrarian reform law under which the expropriation was made.

HERTER'S INDICTMENT

4. At the San José, Costa Rica, conference, August 1960, Cuban Foreign Minister Roa charged that this Government had consistently refused Castro's offers of negotiation. Secretary Herter made and documented this reply: That continuing attacks on the United States by the Castro regime began in January 1959 before the acts it alleges were U.S. aggression. He said also that from this date forward political assaults on the U.S. Government, "and scurrilous attempts to besmirch the characters of its leaders, have nevertheless been consistent and made with increased savagery."

The circumstances that the charges in Castro's justification that this open record refutes are being made by citizens of such quality is strange, disturbing, and mysterious. But it is true, as pointed out in some of the letters, that Castro also can cite grievances prior to the preinvasion programing. For example, the United States did not completely bar arms to dictator Batista until March 14, 1958; sent a marine guard for the Guantanamo pumping station 6 miles into Cuba on July 28, 1958; and concluded a 20-year atomic energy aid agreement with Batista September 9, 1958.

The silly paradox, however, is that all this time U.S. businessmen in Cuba were knowingly financing Castro's revolution by paying their taxes at stations where he could seize them. Prior to that, the taxes on Cuban properties owned by Americans were always sent to Havana, the central collection office, until the other arrangement was deliberately made for the financing of Castro. And meanwhile the State Department was totally ignoring successive warnings from two Ambassadors that the interest of international communism would be served in Cuba by Castro's success.

The John Birch Society—1

EXTENSION OF REMARKS

OF

HON. JOHN H. ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. ROUSSELOT. Mr. Speaker, a leading newspaper published in Whittier, Calif., a city located in my district, has printed a series of five objectively written articles concerning the John Birch Society. This newspaper, the Daily News, is to be commended for basing the articles on facts which many news media have ignored in reporting on the society. Under unanimous consent I include the first three articles of the series in the Appendix of the RECORD:

[From the Daily News, Whittier, Calif., Apr. 26, 1961]

HOW TO TELL A COMMIE FRONT

(First of a series)

The John Birch Society may be a movement aimed at strengthening Americanism and weakening communism, but it is mysterious and controversial, too.

Mysterious although its meetings are public and its membership open to any good American who will subscribe to its beliefs.

Controversial although its business is Americanism.

It has been subjected to criticism by political officeholders, newspaper editors, church pastors, and the man on the street. There has been clamoring for an investigation of its purpose and organization and its founder, Robert Welch.

XUM

IGNORANCE OR MISUNDERSTANDING

Public ignorance or, at least, misunderstanding may be the cause of accusations that have run the gamut from dictatorship to Klan.

But the Birch Society is neither dictatorial nor a form of the infamous Ku Klux Klan, according to Whittier chapter leaders.

Five of the leaders have compiled a five-part series of articles explaining the aims and objects of the society. The series has been jointly written by Augustine Cervantes, of South Whittier; Joseph Coffman, of La Habra; Raye King, V. C. Ramier, and Joseph Sullivan, all of Whittier.

The first article in the series follows:

HOW TO TELL ONE

J. Edgar Hoover tells us in his book, "Masters of Deceit," that a Communist-front organization can be detected by applying the following test:

1. Does the organization espouse the cause of Soviet Russia? Does it shift when the party line shifts?

2. Does the organization feature as speakers at its meetings known Communists or sympathizers?

3. Does the organization sponsor causes, campaigns, literature, petitions, or other activities sponsored by the party or other front organizations?

4. Is the organization used as a sounding board by, or is it endorsed by Communist-controlled labor unions?

5. Does its literature follow the Communist line or is it printed by the Communist press?

6. Does the organization receive consistent favorable mention in Communist publications?

7. Does the organization represent itself to be nonpartisan yet engage in political activities and consistently advocate causes favored by the Communists? Does it denounce both Fascists and Communists?

8. Does the organization denounce American foreign policy while always lauding Soviet policy?

9. Does the organization utilize Communist doubletalk by referring to Soviet dominated countries as democracies, complaining that the United States is imperialistic and constantly denouncing monopoly capital?

10. Have outstanding leaders in public life openly renounced affiliation with the organization?

ATTRACT OR DENOUNCE?

11. Does the organization, if espousing liberal, progressive causes, attract well-known honest, patriotic liberals or does it denounce well known liberals?

12. Does the organization consistently consider matters not directly related to its avowed purposes and objectives?

Let us assume that the average apathetic but patriotic citizen had just read the above 12 items and decided to apply these measures to the organizations in his circles of acquaintanceship. Would he be able to do so effectively? The answer is obvious. He would need to become trained to apply the above measures intelligently. This then requires a thorough education and background in dialectical materialistic communism. How does one receive this type of education so necessary in our defense against internal subversion?

DIALECTIC MATERIALISM

There are a number of organizations usually local in nature which to a pretty good job of teaching dialectic materialism. However, December 1958 Robert Welch recognized the need for a national organization to train and recruit those already trained into an effective coordinated group. This resulted in the conception of the John Birch Society.

Up until the John Birch Society was organized, well-informed and well-trained patriots more or less worked as individuals or in uncoordinated groups and as such did not worry the Communists except as a nuisance. However, after the origin of the John Birch Society, those thousands of concerned people recognizing their former inadequacy in fighting communism joined the society in such numbers that the Communist Party became alarmed and decided to apply their proven forces against them. It was recognized that at the present rate of growth the John Birch Society could attain almost unlimited power to cope with them and thus destroy 40 years of labor. It should be understood that the present status of Communist power in the United States had, except for a brief but fatal effort by Senator Joseph McCarthy, been reached through almost continuous default on the part of the American people

---

[From the Daily News, Whittier, Calif., Apr. 27, 1961]

CONCERNED SHOULD BECOME INFORMED

(This is the second of a five-part series on the John Birch Society. The articles were jointly written by Augustine Cervantes, Joseph Coffman, Raye King, V. C. Ramler, and Joseph Sullivan, all members of the Whittier chapter of the society.—Editor.)

The John Birch Society has tabulated literally hundreds of documented books, tape recordings and reports which it makes available to members and nonmembers alike which will make informed people out of concerned people.

Communists are not alarmed about concerned people; however, they recognize that informed people are dangerous because they can intelligently inform others.

It is the greatest fear of the Communist Party in the United States that despite their tremendous influence in our Government and over all our means of mass communication, the American people will wake up too soon to what has really been happening right under their very noses.

Communism operates for the most part in this country by utilizing front organization and underground activities.

COMMON ORIGIN

Communist-front organizations are characterized by their common origin, the rigid conformity of these organizations to the Communist pattern, their interlocking personnel and their methods generally used to deceive the American public. Being part of a conspiratorial movement their essence is deceptive.

The tactics of these fronts is to push as far as possible constitutional privileges by enlisting through this deception the cooperation of as great a segment of the public as can be deceived.

When activities of the Communists reach the realm of unconstitutional endeavor then the underground members take over. These activities go so far as to place concealed members in government, education, and industry.

PROPER TRAINING

Only organizations with members who have been properly trained can cope with the pressures brought to bear between these front organizations and those concealed underground. By watching the front groups and their unconcealed programs it is simple logic to connect those places in government, education, and industry where the party line expounded by the front groups receives the greatest reception.

It should be pointed out here that in all localities where the Birch Society is active it is well established in short order by its members and other freedom groups utilizing the above reasoning and J. Edgar Hoover's 12 rules for identifying fronts, where the Communist danger points that need to bear watching are.

However, none of these people or organizations are ever labeled Communist by the society or its members. Instead, a system of defense is set up to reduce to zero the effectiveness of the Communist activity. This is accomplished without fanfare or publicity, thus leaving the subversive group frustrated but aware of who was responsible. Reports of facts as to subversive activities observed are reported to national headquarters where once assembled can point to future trends in the fight.

[From the Daily News, Whittier, Calif., Apr. 29, 1961]

SOVIET PROPAGANDA TECHNIQUE STUDIED

(This is the third article of a five-part series on the John Birch Society written by Rave King, V. C. Ramier and Joseph Sullivan, all leaders of the Whittier chapter; Augustfine Cervantes, South Whittier chapter leader; and Joseph Coffman, La Habra chapter leader.)

Everyone who reads the newspapers or magazines, watches television or listens to the radio is aware of the recent great volume of adverse publicity spewing forth against the John Birch Society and its founder Robert Welch.

This is a special type of treatment reserved by the Communist conspiracy for special people or groups that have been really effective and which they cannot directly infiltrate or subvert.

An informative pamphlet printed in the U.S. Government Printing Office, Washington, D.C., on instructions from the 86th Congress, 2d session, entitled "The Technique of Soviet Propaganda" should be read by every man and woman in the United States.

This report is an official document of the Senate Committee on the Judiciary. The purpose of the report was relative to the administration of the Internal Security Act and other internal security laws.

PRESS INVADED

Quoting from page 6 (a) of the Judiciary Committee report as follows:

"There are in the world few organs of the press, even when bourgeois, in which the Soviet apparatus has no intelligence. The main task of auxiliaries in the press is to manipulate the editor, or if that is not feasible, the reporters, without the editor's knowledge. General notions like 'This paper is conservative' or 'Catholic' are not at all sufficient any longer to recognize the policy it follows toward Moscow. Sometimes the managers themselves are unaware that their newspaper is 'permeated.'"

PROPAGANDA PURPOSE

Quoting further (from p. 14) of the Senate Judiciary Committee report under the heading "Breaking Anti-Communists: Slander, Intimidation, Kidnaping, Murder.":

"An important task of Soviet propaganda is not only to circumvent the gullible, but also to reduce those who clearly realize the danger and zealously proclaim it to a state of powerlessness. Against these people are launched campaigns limitless in intensity as in ignominy. The Communists attempt to make lepers of them, to develop veritable reflexes in public opinion so that a halo of hatred will be instinctively associated with their name.

"Communist and crypto-Communist apparatus put all their ammunition to use in this task and shrink from neither slander nor provocation, forgery, nor blackmail. Here auxiliaries play a leading role: that of scandalmongers.

"Sometimes the Soviet apparatus will denounce an anti-Communist as an underground Communist. Sometimes they will lead the police to believe that he is a terrorist or a trafficker. Slander against the anti-Communist writer Victor Serge reached such a point that even well-disposed police services no longer knew what to think."

ACCUSE OTHERS

"The apparatus of Moscow said that Leon Blum was a police auxiliary and purveyor of convicts, charges De Gaulle with having worked for German intelligence, and Soustelle with being a Nazi spy; Syngman Rhee with having sold his country to Japan (charges to be found in the Soviet Encyclopedia or signed by leaders like Maurize Thorez.)

"One of the worst infamies has just been flung at Guy Mollet: he has been accused of nothing less than having denounced people interned with him to the Gestapo. Essentially, these and similar attacks are fabrications from beginning to end; devoid of any foundation and made in the full knowledge that they constitute unmitigated lies.

"In the easygoing atmosphere of the democracies, the endless repetition of abusive attacks has a devastating effect. Indeed, it is not too much to say that there are few people who, having become the target for Communist attacks, did not eventually either lose heart or become suspect themselves to world public opinion," the Senate Judiciary Committee report says.

Economic Hashish

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, May 18, 1961

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Economic Hashish," published in the Wall Street Journal of May 15, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ECONOMIC HASHISH

Sometimes the statistical theorizings of economists get so involved they're funny. But when the economic policies of the U.S. Government come to be based on woozy theories, the thing ceases to be a joke.

We have in mind the President's Council of Economic Advisers, which has propounded an elaborate theory of an "output gap" between the economy potential and its actual performance. The theory, described on this page recently by Mr. Otten, is a masterpiece of algebraic triple talk. It is designed to prove a gap, reckoned at $40 billion at the end of last year, and so it does—assuming all its assumptions and mathematics.

Having "demonstrated" the gap, the Council logically concludes that the country faces not only temporary economic problems like the recession now evaporating, but a persistent slack in production and employment, a slowdown in our rate of growth. We have, it seems, a problem of chronic slack in the economy—the growing gap between what we can produce and what we do produce. Especially since 1955, we learn, the gap has shown a distressing upward trend.

If this were all just idle chatter, no one would particularly mind. But this great and growing output gap naturally becomes part of the justification for the Federal Government to fill it—with the tremendous new domestic spending the administration has already embarked on and with the even more massive public-works spending it has in mind. And since the slack is persistent and chronic, the Government has an excuse for trying to take it up indefinitely.

Fortunately the United States still has respected economists who can recognize economic hashish when they smell it. One such is Columbia Prof. Arthur Burns, himself a former chairman of the Council of Economic Advisers. Mildly but nonetheless devastatingly Dr. Burns has taken apart the gap his successors have so painfully constructed out of thin air.

Among other things, Dr. Burns shows that the Council is not relying on sound, far-reaching historical evidence in projecting its output gap. It rests its case importantly on the fact that unemployment at the business cycle peak in 1960 was slightly higher than at the business cycle peak in 1957. The Columbia economist suggests that this "gives fragile support" to the theory that "the gap between actual and potential output has a distressing upward trend."

Moreover, Professor Burns quietly notes that it matters a good deal at what period you start drawing a curve of potential output. The Council chose mid-1955, for no more valid reason than it could have chosen the second quarter of 1957 or the second quarter of 1947—all periods of high employment. If the Council economists had chosen 1957, their own reckonings would show a gap of only $20 billion instead of $40 billion.

And, Dr. Burns goes on, "if the curve had been started in the second quarter of 1947, when we likewise had a full-employment output, the gap would have vanished. In fact, we would then have to say that actual output in 1960 exceeded potential output by more than $2 billion."

We hope the Council has the grace to say "touche" to that.

But perhaps the most significant part of the Burns analysis is not in exposing the Council's statistical juggling to prove the point it wanted to prove. There is also the attitude behind such "output gap" theorizing. It is reminiscent of the dominant economic thinking of the thirties, which was that the U.S. economy had become stagnant or mature and therefore required increasingly heavy Federal spending to keep it going.

That theory was proved resoundingly false by events, but here it is again in different form, once again an alibi for massive Federal intervention. The urge to control the private economy never dies.

Not many of us are trained in the intricacies of economic theory, but it takes only commonsense to see through the Council's unamusing fun and games. We hope the President and Congress are not bemused by the latter-day stagnation theorists. Otherwise some of these people may at last succeed in bringing about Government-managed economic stagnation.

Castro Shows True Color

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. DERWINSKI. Mr. Speaker, our attention has been naturally concentrated on the reoccurring problems with the Soviet stooge, Castro, in Cuba. On many occasions I have directed the attention of the Members to the grassroots thinking of the American public as expressed in our local newspapers throughout the country. One of the outstanding weekly newspapers in my district, the Park Forest Reporter, on Wednesday, May 3, presented an editorial entitled, "Castro Shows True Color." It is truly "Main Street, America" thinking and worthy of our serious study.

CASTRO SHOWS TRUE COLOR

Our hemisphere neighbor, Cuba, officially turned Red this week. Fidel Castro took advantage of the May Day celebration to announce that his nation has gone Socialist.

Whatever the name, it's merely a synonym for communism. Cuba is now another link in the orbit of Soviet satellites. Some of the weak and misinformed still say, "so what"?

The announced status of this Nation only 90 miles from our shores can have tremendous repercussions in this Western Hemisphere.

Other Latin American countries are vulnerable to the same type of revolutions which brought Castro to power. In the eyes of their poor and ignorant, which comprise the masses of these backward nations, Fidel has become a Spanish speaking hero. His denunciations of the United States are not beamed for our ears, mainly for theirs.

His boasts give this uneasy populace courage. The taunts that he has held the mighty Yanquis at bay, are echoed through the hills of the Andes and across the broad expanse of Central and South American lands.

Beyond any doubt, his presence is a serious handicap to the future peace of our hemisphere. By outlawing elections, which although meaningless are even held in Russia, he is carving an ignoble niche for himself among the political tyrants of all time.

Fidel's actions bear even greater scrutiny now. Our administration's attention to this problem and its aftereffects is certainly warranted at this time.

Expert Offers Moon in 2½ Years—The Development of a Superrocket

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, May 18, 1961

Mr. BENNETT. Mr. President, the U.S. defense program received a big shot in the arm early this year when the first Minuteman missile achieved complete operational success on its first firing at Cape Canaveral. This marked the first time in history that a missile had performed perfectly on its maiden flight.

Another historical first might be achieved for the United States if the administration takes action on the recommendations of Dr. Harold Ritchey, vice president of the Thiokol Chemical Corp. which produces the first stage of the Minuteman. Dr. Ritchey recently appeared before the House Science and Astronautics Committee and testified that if Congress would provide the necessary funds, the United States could have a man on the moon within 2½ years. This feat would be accomplished by clustering a number of solid-fuel rockets produced by the Thiokol Co., and which, according to Dr. Ritchey, are capable of developing up to 21 million pounds of thrust sufficient to power manned flights to the moon, or to other planets and return.

XUM

Mr. President, I have urged the administration to approve plans for development of this superrocket proposed by the Thiokol Chemical Corp. This concept apparently offers our best chance to overtake the Russians in the field of manned space flights, and can be accomplished at far less cost than several alternative plans. I sincerely hope that the administration will not delay in making a decision on this important matter because the United States has the know-how and capability to surpass the Russians in the development and use of outer space if we do not let this opportunity slip from our grasp.

Mr. Cliff Thompson, reporter on defense matters, had an excellent story in the April 16, 1961, issue of the Ogden Standard Examiner, which presents a concise review of the Thiokol proposal and an analysis of other space projects presently under development by NASA. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, the article by Mr. Thompson.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DRASTIC OVERHAUL NEEDED—EXPERT OFFERS MOON IN 2½ YEARS

(By Cliff Thompson)

There is a serious doubt in the mind of at least one of the Nation's rocket experts that the United States can overtake the Russians in space with its present program.

He is Dr. Harold W. Ritchey, Thiokol Chemical Corp. vice president, who has proposed a development program he says will give the United States rocket power to duplicate the Russian man-in-orbit feat within 9 months and put an American on the moon in 2½ years.

His program calls for a drastic overhaul and redirection of the present U.S. program for space travel and exploration. And it, naturally, is based on the use of solid fuel Thiokol used so successfully in the Minuteman program.

The spectacular success of the Minuteman missile earlier this year gives added weight to the Thiokol proposals. Thiokol engineering and production staffs produced the large first stage of the Minuteman, the largest solid propellant booster flight tested to date.

CHALKED UP "FIRST"

It was the first missile to perform perfectly on its maiden flight and also marked the first time all stages of a multistage rocket were used in an initial flight test.

Dr. Ritchey outlined details of his proposals to this reporter during an interview in the Thiokol Rocket Operations Center here from which he directs the firm's vast research program.

He began with a briefing on the current U.S. space program which he said "is not designed to do what we have to do to catch the Russians."

"We have developed the technology to leapfrog the Russians in space but we are not using it," Dr. Ritchey said. "If we started right now using all our scientific potential, the United States-Russian race to the moon would be extremely close." If the United States continues its present program, he expects the Russians to beat us to the moon by 4 or 5 years.

The U.S. space timetable has an American scheduled to arrive on the moon in 1970. Dr. Ritchey expects the Russians to have a man there before 1965.

FIRST TO MOON

And he believes the first nation to the moon probably never would be overtaken in the race deeper and deeper into the outer regions of the universe.

Dr. Ritchey says the big U.S. effort must be made in the first, or booster, stage if we are to catch the Soviets.

The first, or booster, stage along with two or three additional stages would put a vehicle into orbit or into escape velocity. In the manned space vehicle, the stages above the booster would be used to maneuver the vehicle in space and return it to earth.

In previous space shots, all stages have been used to put a payload into orbit, primarily because of the lack of a booster that can develop sufficient thrust to lift the necessary loads.

Most space authorities agree the United States is ahead of Russia in most space fields except the large boosters necessary to lift large boosters necessary to lift large payloads into orbit or escape velocity. "Possibly we also lag in our knowledge of how to keep men alive for extended periods in space," Dr. Ritchey said.

LARGE BOOSTERS

The Russian superiority in large boosters can be traced to the different approach the two nations took in overcoming the first big problem encountered in their initial space programs.

When the United States and Russia began space-missile programs at the end of the World War II, the payloads developed were too large for the rockets they were then capable of producing.

The United States refined its payloads to a size compatable with its rocket power. The Russians concentrated on building rockets powerful enough for the big payloads.

To offset the Russian lead in rocket power, the United States needs a dramatic breakthrough in its big booster program—both in size of the booster and the time it takes to get it ready for use.

Thiokol has four proposals to provide these big boosters.

The first and simplest is the one Dr. Ritchey says would give the United States the rocket power to surpass last week's Russian space flight.

CLUSTER OF SEVEN

By clustering seven slightly modified versions of the Minuteman, Dr. Ritchey says, the United States would have a booster capable of putting 25,000 pounds into orbit. This is about twice the size of the Russian payload.

Dr. Richey said Thiokol can develop this propulsion system in 9 months. He estimates its cost at about $1½ million per copy in production quantities.

Thiokol also proposes using the Minuteman principle to produce larger rockets that could be clustered in sevens to develop 21 million pounds of thrust. This system could put 300,000 pounds into orbit or 120,000 pounds into the velocity needed to send a man to the Moon.

Dr. Ritchey reports this booster can be ready for test firing in 18 months and for actual manned space flight within 30 months. The intervening 12 months, he said, would be used in working on the booster and in development of the rest of the vehicle. It is possible the 12-month period could be reduced.

PROPULSION PROBLEMS

The other Thiokol proposals are for different sized rocket boosters using the Minuteman principle.

"Of course I am talking only about the propulsion problems," Dr. Ritchey said. "There are others."

Primarily these involve the development of the vehicle and guidance controls that would take a man into space and back including the protection needed to keep a man alive in space for extended periods of time.

The producer of the propulsion system and the space vehicle would have to work together closely.

The United States is currently pinning its hopes for space travel on three programs:

The first American is expected to go into space sometime this year powered by a Redstone rocket. This plan calls for sending an astronaut some 100 miles or so into the air and back—not put him into orbit.

LIQUID FUEL

The Saturn, a cluster of eight liquid fuel rockets, is expected to be ready in about 3 years. In power and objective this booster compares to the rocket Thiokol says it can develop in 9 months.

The F-1 rocket, a single engine that would develop 1½ million pounds of thrust, expected to take 6 years to develop and test. The F-1 timetable has been delayed, however, because of severe technological problems.

The Nova project in which Dr. Werner Von Braun proposes to cluster four F-1 rockets to produce 6 million pounds of thrust. This project has not been funded and is considered too expensive to begin until after 1965.

National Aeronautics and Space Administration officials are basing their hopes for space travel primarily on the Saturn program.

ASSEMBLY IN SPACE

Dr. Von Braun proposes using six Saturn launchings to send equipment and fuel into orbit from which a space vehicle would be assembled for further travel.

Rocket authorities say this plan has two significant drawbacks—time and cost.

It would cost about $120 million just to build the six first stage booster rockets necessary to send an unassembled spaceship into orbit with the Saturn. Cost of the Thiokol proposal to develop one super rocket capable of sending a vehicle into escape velocity from earth is estimated at $12 million.

And rocket experts say the problems of assembling a ship while its pieces are floating around in space would be tremendous.

The John Birch Society—2

EXTENSION OF REMARKS

OF

HON. JOHN H. ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. ROUSSELOT. Mr. Speaker, I have had printed in the CONGRESSIONAL RECORD for today three articles of a series of five relative to the John Birch Society which have appeared in the Daily News, a widely circulated newspaper in the area of Whittier, Calif. My district includes this area. The articles are commendable for their objectivity. Under unanimous consent I include the remaining articles of the series in the Appendix of the RECORD:

[From the Whittier (Calif.) Daily News, May 2, 1961]

SOME RELUCTANT TO BE ANTI-COMMUNIST

(This is the fourth article of a five-part series on the John Birch Society written by Joseph Sullivan, V. C. Ramler, and Rave King, Whittier chapter leaders; Joseph Coffman and Augustine Cervantes, La Habra and South Whittier chapter leaders respectively.—EDITOR.)

Some democratic Americans have been trying to convince themselves "that there is something reprehensible in being a sys-

tematic anti-Communist, according to a report of the Senate Committee on the Judiciary.

Quoting from the report, made relative to the administration of the Internal Security Act and other internal security laws, the following is learned:

"The struggle against convinced anti-Communists proceeds from simple premises. The effectiveness of this struggle is due to the fact that it goes on relentlessly and in practically every key. The struggle is marked by the use of a vocabulary including such terms of abuse as "rightist," "Fascist," "negative elements," "dim wit," "police informer," "systematic anti-Communists." This last expletive is the highest form of abuse. And yet quite a few democratic Americans have been trying to convince themselves that there is something reprehensible in being a systematic anti-Communist, forgetting that they take pride in being systematically anti-Fascists.

What's more, they see nothing incongruous in the Communists being systematically antidemocratic. And it is difficult to see how a systematic evil can be fought in any other way than by systematic opposition. This simple truth has not been lost on the Communists. Indeed, one of the main tasks of Communist propaganda is to maintain an atmosphere of constant denigration and criticism of consistent anticommunism.

UNHEARD OF SITUATION

"The success achieved by the Communists in this particular field has been such that a truly unheard-of situation has come about in the Western world, in which anticommunism is often regarded as a greater evil than communism. When one of the parties in a relentless and merciless struggle discovers that it is considered bad form to fight back with the same weapons, it goes without saying that their opponents have scored a major victory in the battle of propaganda which aims at nothing less than the intellectual intimidation of those opponents.

Such intimidation, moreover, thrives on its own effects. So far as serious and enlightened circles keep silent, they leave stigmaticizing communism to reactionary extremists alone; the contention anticommunism equals reaction thus seem confirmed; and serious and enlightened circles keep more silent than ever. McCarthy cast such discredit on exposing cryptocommunism that it is now no longer possible to accuse some body of it without being called a witch hunter. Yet it is quite sure that cryptocommunism did not disappear by magic with McCarthy.

THEY MURDER THEM

When intimidation does not succeed in crushing the counterpropaganda of some particularly prominent anti-Communist, the Soviets do not shrink from crime to silence their voices. They murder them (Trotsky, Krivitsky, Nin, etc.) or kidnap them (Trushnovitch).

This is the first time the Communists have been brazen enough to publicly take on more than 50,000 dedicated, informed and deadly serious constitutional Americans. They can't slander, intimidate, kidnap or murder us all. This they must do to succeed.

By now in this article most readers can pretty well recognize that the John Birch Society is neither Fascist, Nazi or anti anything except anti-Communist. The organization while not of democratic form (for security reasons) is dedicated to the maintenance of a constitutional republican form of government in the United States forever. The society doesn't want to overthrow anybody except Communists and at the same time the society doesn't like to be labeled as conspirators because it is anti-Communist.

We are perfectly willing to be investigated by any American committee and we ask all good citizens to withhold judgment until the verdict is in. We still believe in the jury system, which is more than can be said for Russia or the satellite countries.

[From the Whittier (Calif.) Daily News, May 2, 1961]

HERE'S A TYPICAL MEETING OF CHAPTER

(Last article of a five-part series on the John Birch Society)

A typical meeting of a chapter in the John Birch Society is run by the chapter leader, usually on Roberts' Rules of Order. The meeting is always opened by the pledge of allegiance and a simple nonsectarian prayer. A verbal report is then taken from each member if he has one to offer. There is no pressure put on any member to perform any of the society's activities.

The monthly bulletin is then discussed. This bulletin is distributed from the national home office in Belmont, Mass., and is prepared by the group's founder, Robert Welch. The bulletin contains suggested activities such as new books, reports, or pamphlets to be read, letters to write and activities to perform such as checking on public libraries to determine whether or not pro-American and anti-Communist books are available to the public.

It is usual to have open discussion on topics of the day and to compare notes on experiences. Sometimes a motion picture, still slide pictures or tapes will be shown or played depicting or lecturing on Communist activities to which we should be alerted.

A FOOL OR A COMMUNIST

Only a fool or a Communist will deny that some people in every community are actively engaged in forming peace movements, urging disarmament, protesting loyalty oaths and the existence of Government investigating agencies. They are also in the churches shouting brotherly love and love for God, yet protest to the schools, the nativity scene on Christmas, saying grace at meals, and prohibit showing "Operation Abolition" in the church.

Now the John Birch Society doesn't call them Communists but society members do make it a point to see to it that these people don't have a free hand in running our community. Where good American principles require, we effectively oppose these activities. It should be recognized that where liberal groups organize for pressure tactics that conservatives have only one alternative and that is to react and if necessary to resist. These things work two ways.

FOR THE DUBIOUS

For those who may still be dubious and state that they are unconvinced that an organization like the John Birch Society is necessary, it should be pointed out that there are a number of good reports and books available which will convince even the most skeptical of individuals.

These are all well documented. They are:

1. "The Blue Book of the John Birch Society."
2. "The Naked Communist," Cleon Skousen.
3. "Masters of Deceit," J. Edgar Hoover.
4. "The Enemy at His Back," Elizabeth Churchill Brown.
5. "You Can Trust the Communists," Dr. Fred Schwartz.
6. "Retreat From Victory," Senator Joseph McCarthy.
7. "Nine Men Against America," Rosalie M. Gordon.
8. "Guide to Subversive Organizations and Publications," House Document 226, 85th Congress, 1st session.
9. "Report on the Southern California District of the Communist Party, Structure—Objectives—Leadership," House Report No. 259, 86th Congress, 1st session.
10. "Communist Illusion and Democratic Reality," J. Edgar Hoover, Federal Bureau of Investigation, Washington 25, D.C.
11. "Crusade Against Governmental Investigating Agencies," Institute for Special Research, Post Office Box 2022 D, Pasadena, Calif.
12. "The Left Swing in Education," Institute for Special Research, Post Office Box 2022 D, Pasadena, Calif.

Abraham Lincoln said, "You can fool all the people some of the time and you can fool some of the people all the time but you can't fool all the people all the time." The Communists are spending in excess of $2 billion a year to prove Abraham Lincoln wrong. It was a mighty shock to them to find that you can't fool a member of the John Birch Society any of the time. They are too well informed, a fact for which the American people should give thanks.

A Revised Democracy for United States—Need for Quick Action in Cold War Called Basis for Central Control Trend

EXTENSION OF REMARKS

OF

HON. JAMES E. BROMWELL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. BROMWELL. Mr. Speaker, on March 16 of this year the Washington Evening Star published an ominous editorial article by Mr. Constantine Brown.

Since the date of that publication I have observed with increasing apprehension a course of events which support the thesis which is stated. This course of events is summarized in substance in the extension of remarks of Congressman BRUCE ALGER, which appeared on page A3441 of the CONGRESSIONAL RECORD for May 16, 1961. All Americans who love freedom should pause to consider this matter, and consider it well.

I now submit the editorial to which I have referred.

A REVISED DEMOCRACY FOR UNITED STATES—NEED FOR QUICK ACTION IN COLD WAR CALLED BASIS FOR CENTRAL CONTROL TREND

(By Constantine Brown)

Democracies tailored after the old pattern no longer can stand the impact of social, economic and political changes wrought by two devastating world wars and an even more damaging cold war created by international communism. In the new world in which we are going to live henceforth, so contend some of the top "New Frontiersmen" of the present administration, a corrected form of democracy is needed: It must take the shape of a highly centralized government which can deal quickly with all problems, domestic and international, without waiting for the ponderous parliamentary machinery to debate and decide what is to be done.

In other words, the basic political thinking of the leaders of the new administration is to strive to convert our present form of government into what has been known for some time on other continents as managed democracy. The basic civil rights of the individual are left intact. The responsibility for their well-being, however, is placed in the hands of a highly centralized government with one man holding the power of decision:

XUM

a modern version of the famous slogan of the French King Louis XIV, "I am the state."

The intellectual explanation for this effort to change surreptitiously or overtly from the old-fashioned and time-tried American system of government is being explained in the following manner. The basic parliamentary form of government cannot protect the peoples of this country in the face of the ruthless and powerful form of dictatorship which has been established in the Soviet Union and Communist China. The consequences of the cold war have demonstrated this axiomatically. Hence, to cope with the new order in the world, a number of western leaders are concentrating all powers into their own hands as the most effective means of meeting the Red global drive.

The spectacular success of Gen. Charles de Gaulle, who has changed the face of France in less than 3 years and transformed that nearly bankrupt nation into one of the most powerful in the Western World, seems to have inspired to a certain extent the thinking of the high priests of our New Frontier theory.

There is, however, a fundamental difference between the modern French chanticleer and President Kennedy. The 70-year-old general-statesman is the actual voice of France. He has been elected to guide the destinies of La Patrie by an overwhelming vote of confidence of more than two-thirds of his fellow citizens. The individualistic French have indorsed his ideas of managed democracy with the result that the traditionally powerful French parliamentary system is reduced to a rubber stamp.

Mr. Kennedy was elected with a flimsy majority of a little over 100,000 votes out of 67 million ballots cast last November. His thinking fully harmonizes with the 10 or 12 advisers in the White House who have been dubbed "the apostles." He is Chief Executive in the full meaning of the words in as far as the people of this country are concerned, and provides a much-needed dynamism which has been so lacking in the Eisenhower administration. His philosophy is not his own, however. His political evolution is the result of the inspiration he has derived from the thinking of the theoreticians and the professors who have been advising him in the past and are now surrounding him in the White House. The thinking of "the apostles" is contained in books, magazine articles, speeches and lectures written over the last 10 years. They all have the same common denominator: welfare state at home and preparing the path for "one world."

Automation, the dramatic stride in science, and "population explosion," it is argued by the advocates of the welfare state, make our past way of life and free enterprise obsolescent. To give the masses enjoyment in the new way of life the Government must step in by regulating, planning, and assisting the peoples. In international endeavors the United States, which has assumed voluntarily the leadership of the free world, must abandon gradually its past policies of resisting with force or "containing" international communism. It must leave no stone unturned to bring about a relaxation of tension with the Red tyranny and spare no effort to achieve coexistence lest "80 million Americans" lose their lives in a nuclear conflict.

This is a firm and one may say immutable conviction on the part of "the apostles" and is being shared fully by the dynamic Chief Executive himself. Henceforth we must expect all initiative, all decisions and all policies to stem from the White House alone.

Import Competition and American Business

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. KEARNS. Mr. Speaker, I have had made a major study of the effects of imports and exports on employment of American workers. I have submitted it to the Subcommittee on the Impact of Imports and Exports on American Employment of the House Education and Labor Committee.

I am ranking minority member of the subcommittee.

The chairman of the subcommittee, Congressman JOHN H. DENT, considered this study so important that he has made copies of the study available to each member of the subcommittee which he heads.

It is being used as the basic tract of the subcommittee at this point in its own work.

The study was made by Dr. Howard Piquet, senior specialist in international economics of the Legislative Reference Service of the Library of Congress.

Dr. Piquet is well-known, and is highly thought of by Members of the Congress.

I include as part of my remarks an excerpt from this study:

IMPORT COMPETITION AND SMALL BUSINESS

(By Dr. Howard S. Piquet)

There is no question about the potential advantages of free trade from the point of view of "pure economics." If trade were free everywhere and if each country were to specialize in producing the goods in which it has the greatest comparative advantage, relative to other countries, productivity everywhere would be greater and economic resources would be utilized more effectively than they now are.

If all the goods that can be produced in a country are listed in order of descending comparative advantage the products heading the list in each instance would be those that are exported. These are the products that can be produced most efficiently relative to other countries. In the United States, where land and other natural resources are relatively abundant but where labor, normally, is relatively scarce, the list would be headed by such mass-produced goods as office machinery, many kinds of industrial equipment, certain types of electrical machinery, road-building and other construction equipment, automobiles, and agricultural machinery.

At the lower end of the list would be a relatively small number of products requiring considerable labor to produce, such as: china tableware, hand-blown glassware, certain electronic products, and hardwood plywood. Somewhere between the two extremes would be goods in the production of which comparative advantage is less clear, such as certain wood and paper products.

The advantage of the United States lies largely in the production of goods that can be produced in quantity by automatic, or near-automatic, machinery. Such goods are produced under the principle of decreasing unit cost and require large fixed overhead. These are the industries in which large size is an advantage.

The lines of production in which the United States is at a comparative disadvantage are those usually characterized as small business, many of which involve a high proportion of labor cost. These are the industries that are most hard pressed by import competition.

Around the turn of the 20th century Mr. H. O. Havemeyer, the sugar magnate, said: "The tariff is the mother of the trusts." Whether or not the tariff then facilitated monopoly, it certainly is not an important factor in this respect today. At the present time most large businesses, such as petroleum and steel, are liberal trade minded. Their operations are worldwide and they oppose interference by government. The tariff has become more significant as an instrument for protecting small business.

There can be little doubt that, if the United States were to adopt a thorough-going policy of free trade, a number of small businesses would be hard hit. Certain marginal firms, and in some cases entire industries, would not be able to withstand the resulting low-cost foreign competition. This is one of the troublesome facts that must be faced regardless of one's theoretical convictions regarding the desirability of freer international trade conducted along multilateral lines. Removal of tariff protection and the consequent stimulation of imports would have the effect of accelerating the concentration of industrial power in the United States.

INDUSTRIES THAT HAVE APPLIED FOR RELIEF UNDER THE ESCAPE CLAUSE

Congress has provided machinery for affording relief to industries that have been seriously injured by, or that are threatened by serious injury from, increased import competition resulting from concessions made in trade agreements with other countries. It seems reasonable to assume that industries that have not appealed to the Tariff Commission for relief under this provision of law, or that have failed to supply the Tariff Commission with data adequate to enable them to reach a decision as to the existence of injury, are not suffering serious injury from import competition.

Even a cursory examination of the list of industries that have applied for relief under the escape clause (sec. 7 of the Trade Agreements Extension Act of 1951, as amended) discloses that few, if any, of them could be regarded as big business. Typical of the products concerning which it is complained that imports have been seriously injurious are: women's fur-felt hats and hat bodies, garlic, tobacco pipes and bowls, screen-printed silk scarves, scissors and shears, groundfish fillets, and bicycles. Nowhere in the list does one find such typically large-scale industries as bulk chemicals, automobiles, heavy iron and steel-mill products, office machinery, or agricultural implements.

Since the escape clause was enacted, 69 industries, or segments of industries, have applied for relief from injurious import competition. Of these, the Tariff Commission found "serious injury" or "threat of serious injury" to exist in 25. In 36 industries it found no serious injury, or threat of serious injury, and in the remaining 8 it either terminated the investigation because the complaining companies failed to provide adequate factual data or dismissed the investigation at the request of the applicants.

Keeping in mind that each of the really large industries in the United States employs a veritable army of workers (the Ford Motor

Co. employs 160,000; the United States Steel Corp., 200,000; and General Motors, 55,000) it is evident that the industries that have appealed for relief from import competition under the escape clause, for the most part, are the smaller industries of the country. None of them is in the big business category. Even in those cases where the number of employees in the industry as a whole is sizable (such as lead and zinc, watches, women's fur-felt hats and stainless steel table flatware) the industry consists of a large number of units no one of which can be characterized as big business.

Table 1 lists the industries that either have been seriously injured, or threatened by serious injury, according to the findings of the Tariff Commission. Eighteen of the 25 industries listed employed slightly more than 65,000 workers. It is probable that the number of workers employed by all 25 of the industries on the list was not in excess of 90,000 workers. Although the figures are not all for the same year, ranging as they do from 1950 to 1960, there is no reason to believe that the figures for any one year would be any greater, or that the proportion of workers in the country as a whole who are seriously affected by import competition would be any greater.

TABLE 1.—*Industries which have been found by the U.S. Tariff Commission to be "seriously injured" or "threatened by serious injury" under the escape clause*

Industry	Number of workers	Year	Other indication of size
Hard-fiber cords and twines	[1]	1959	Production, 19,000,000 pounds.
Binding and baler twine	[1]	1959	Production, 100,000,000 pounds.
Cotton typewriter ribbon	2,750	1959	5 producers.
Tartaric acid	[1]	1959	2 small companies.
Clinical thermometers	316	1959	
Umbrella frames	486	1958	
Stainless steel table flatware	3,057	1958	
Spring clothespins	388	1959	
Alsike cloverseed	[1]	1955	Approximately 15,000 acres of land on 280 farms.
Groundfish fillets	2,300	1956	Crewmen and filleting operations.
Safety pins	1,200	1960	
Straight pins	282	1955	
Violins and violas	30	1956	
Toweling of flax	[1]	----	Only 1 producer; 700,000 pounds per annum.
Para-aminosalicylic acid	63	1955	
Fluorspar	736	1955	
Lighter flints (ferrocerium)	[1]	----	Only 2 producers.
Bicycles and parts	3,261	1959	
Watches:			
Pin-lever	4,012	1958	
Jeweled	4,107	1960	
Screen-printed silk scarves	403	1952	
Tobacco pipes and bowls	1,300	1952	
Dried figs	[1]	1955	45,000,000 pounds produced on 29,700 acres.
Women's fur-felt hats and hat bodies.	3,817	1950	
Lead and zinc	36,961	1954	Mines, smelters and mills.
Total (for 18 industries providing employment data).	[2] 65,469		

[1] Not available.
[2] Employment figures not given for hard-fiber cords and twines, binding and baler twine, tartaric acid, alsike clover seed, toweling of flax, lighter flints, and dried figs.

Source: Tabulated by the Legislative Reference Service from escape clause reports issued by the U.S. Tariff Commission.

Table 2 lists the industries that have appealed for relief under the escape clause but whose appeals were rejected by the Tariff Commission on the basis that no serious injury, or threat of serious injury, could be found.

TABLE 2.—*Industries whose claims of "serious injury" or "threat of serious injury" under the escape clause were rejected by the U.S. Tariff Commission*

Industry	Number of workers	Year	Other indication of size
Ultramarine blue	253	1960	
Women's and children's leather gloves.	3,400	1960	15 producers.
Barbed wire	218	1954	
Typewriters	13,000	1958	
Lamb, mutton and sheep	[1]	1960	272,000 farms on 250,000 of which fewer than 100 sheep each.
Iron ore	32,000	1960	Mining and beneficiating.
Cast-iron fittings for soil pipe	3,800	1959	
Zinc sheet	265	1959	
Hatters' fur	388	1960	
Calf and kip leather	3,300	1959	
Handmade blown glassware	3,480	1957	15 plants.
Mink skins	1,424	1958	Full-time workers.
	2,755	1958	Part-time workers.
Wilton and brussels carpets and rugs.	9,500	1959	
Axes and axheads	265	1958	
Scissors and shears	2,300	1957	17 concerns.
Hardwood plywood	14,300	1958	
Red fescue seed	[1]	1959	34,200 acres.
Garlic	[1]	1958	120 growers (10 principal ones).
Barium chloride	48	1958	Only 2 plants.
Nonwoven wool, felts	[1]	1958	11 producers.
Certain jute fabrics	203	1956	
Dressed rabbit furs	400	1955	10 producers.
Cotton pillowcases	15,444	1956	17 producers.
Animal glue	2,143	1953	
Coconuts	[1]	1954	Affects Puerto Rico.
Ground chicory	35	1953	
Pregnant mare's urine (medicinal)	[1]	1953	Output valued at $190,000.
Mustard seeds	[1]	1950	111 farms.
Chalk whiting	Under 100	1953	
Woodwind musical instruments	1,150	1951	
Cotton carding machinery	[1]	1953	Increased imports a "temporary condition."
Rosaries:			
Full time (estimated)	75	1952	
Part time in Puerto Rico	200	1952	
Metal watch bracelets	5,000	1952	
Bonito and tunafish (not in oil)	[1]	1950	Production valued at $61,000,000.
Motorcycles and parts	[1]	1951	Production $9,000,000.
Household china tableware	[2]	1950	
Total (for 26 industries providing employment data).	[3] 123,946		

[1] Not available.
[2] Estimated.
[3] Employment figures not given for lamb, mutton, and sheep; red fescue seed; garlic; nonwoven wool felts; coconuts; pregnant mare's urine; mustard seeds; cotton-carding machinery; bonito and tunafish (not in oil); and motorcycles and parts.

America's Position in the Space Race

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES

Thursday, May 18, 1961

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interview between Merwin G. Fairbanks, a veteran Salt Lake newspaperman, and Dr. Harold W. Ritchey, president of the American Rocket Society, concerning America's position in the space race.

Because Dr. Ritchey is one of the Nation's foremost experts on rockets, I believe these views are particularly noteworthy. As Dr. Ritchey emphasizes, we are not doing all we could in the space race, and we are particularly neglecting the possibility of a major breakthrough which might come with a relatively small additional expenditure in the field of solid fuel rockets.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ROCKET EXPERT OFFERS VIEWS—UNITED STATES CAN CATCH UP

(By Merwin G. Fairbanks, Deseret News staff writer)

Loss of prestige and national security require a reevaluation of America's race into space.

Even if the next man-in-space [Mercury] shoot is successful late in June, the United

States has been conceded only second-place honors in space exploration by most nations of the world.

Where, then, should the emphasis be placed to overcome our spacelag and take the spotlight from Russian success?

Some answers were provided Friday in an exclusive interview with the president of the American Rocket Society, Dr. Harold W. Ritchey. Dr. Ritchey, among other things, points out:

1. This country has not made use of all its technological knowledge in the exploration of space.

2. The military expediency of space dominance must not be overlooked.

3. A 25-percent increase in annual expenditures would soon carry the Nation to the fore in space exploration. Solid rocket fuels could play a leading part in this program.

Dr. Ritchey also is vice president and director of rocket operation for Thiokol Chemical Corp., producers of first-stage, solid-fuel rockets for the Minuteman ICBM. Thiokol also built the liquid fuel motor which propelled the X-15 to manned craft speed and altitude records.

Here are Dr. Ritchey's observations, made from his rocket operations center office in Ogden:

Question. If the U.S. space exploration program now being carried out is not intensely stepped up, will we ever catch the Russians?

Answer. Based on demonstrated capability, we are lagging seriously behind the Russians in our ability to lift large loads into space. This lag is related to our lack of high-thrust boosters for first-stage application. There are indications that we are also lagging in our knowledge of how to sustain human beings for long periods of time in the hostile environment of space. It could very well be that we are lagging both in our ability to build large boosters and in our ability to build the payloads which they would carry.

Question. Are we far enough advanced to talk in terms of space stations when we have only put a man in the fringes of space?

Answer. We should indeed talk about space stations and we should be laying firm plans for establishing manned space stations as well as laying plans for manned exploration of the moon and the adjacent planets. Our technology is at this point, nowhere near far enough advanced to accomplish many of these things. Pinpointing the problems and then taking aggressive action to solve them is the only way in which we will ever make progress.

Question. Could the Russians deceive us about orbiting a man in a space capsule?

Answer. It is possible that the Russians could deceive us about some of their space accomplishments. All past experience has indicated that they've never attempted to deceive us in any way about what they have accomplished. On the other hand, there are several indications that they have been very quiet about any failures that they might have experienced.

Question. If stress were put on development of a giant booster, what would we lift with it?

Answer. With giant first-stage boosters capable of lifting heavy loads, we would be able to launch upper stages and payloads of sufficient size to accomplish much more effective space exploration, including the use of manned vehicles. For example, landing a manned vehicle and returning it from the moon would require achieving escape velocity of a weight probably well over 100,000 pounds. This is over 10 times the load that we can now project to escape velocity. Even heavier loads may be required for deep space missions to the adjacent planets. In addition, it is highly probable that military missions will be needed in space; the nation which has the most powerful engines will be able to project the most effective combat equipment into the combat zone.

Question. Has America capitalized on all its space travel knowledge, or could we do more if we applied available skills and technical know-how?

Answer. This country has indeed not made use of all of its technological knowledge in exploration of space. Much more could be accomplished, probably without a marked increase in the percentage of current expenditures.

Question. Have we solved the problem of reentry if we were able to get a maneuverable craft into space?

Answer. We have accomplished much in solving the problem of reentry already; fortunately, it has not proved to be as difficult as originally anticipated. This problem would become correspondingly less important if we were able to lift heavy loads into space, loads which could carry an appreciable amount of rocket propulsion and rocket fuels to be used for manuvering or slowing down the space vehicle before atmospheric reentry.

Question. Could our space exploration program be accelerated if more emphasis was placed on solid fuel boosters?

Answer. Our ability to lift heavy objects would be augmented tremendously if we had the solid fuel boosters which our current technology is capable of providing.

Question. With heavy expenditure, could we regain lost ground and eventually become world leaders in this field?

Answer. I believe that a 25-percent increase in our annual expenditures, if allocated to the proper programs (including the development of large solid boosters), would soon place us in the forefront of space exploration.

Question. Will domination of space give the Russians a big military advantage?

Answer. I firmly believe that domination of space will provide a significant military advantage to the nation first achieving such domination. Suppose, for example, that today a number of hostile satellites passed over this country, each with the capability of projecting powerful bombs to the surface of the earth when in receipt of a command signal from a hostile country. Under these circumstances, there would be a much stronger motivation to develop counter measures capable of destroying such satellites.

Question. Can we afford to be second best in space travel and exploration? Other than a loss of prestige, is it important that Russia has moved so far ahead of us in manned flight?

Answer. Our loss of worldwide prestige, and perhaps to some extent our development of a national inferiority complex because of our second best seat in the space race, is indeed important. I do not believe that we can afford to be second best in the space race if for no other reason than because of our own self-respect and national pride. The military advantages of space dominance would also indicate that our national survival is at stake.

Security Cannot Be Guaranteed

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. DERWINSKI. Mr. Speaker, the RECORD, as you well know, often contains voluminous statements and reports. I am pleased to insert an editorial from the Blue Island Sun-Standard of May 4 entitled, "Security Cannot Be Guaranteed," which in a very brief but extremely effective manner comments on a vital threat to American security:

SECURITY CANNOT BE GUARANTEED

At a time when Americans have more of everything, more material possessions than ever before, they also have more self-doubt, more uneasiness. In spite of all their possessions, Americans are said to be lacking self-security. You perhaps have seen the indications of this, have sensed the general feeling that something is wrong.

May the feeling of insecurity not be due to trying too hard to guarantee security? Government has come more and more to concern itself with efforts to provide general prosperity—to fix prices for farm products—to produce so-called full "employment" by government edict—to extend old-age assistance and "free" medical care to everybody.

But the real business of a government of free people is not to strive to guarantee economic security for that people. Any government that undertakes to provide guaranteed economic security must take away freedom in exchange for that fancied security.

If we Americans have an uneasy feeling that something is wrong, we should examine our own hearts and minds to determine if we really want to save freedom and if we are really working to save freedom.

FCC Packing Plan

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith append two articles from the magazine Broadcasting, of May 8, 1961, with reference to the President's plan for reorganization of the FCC, which I believe every Member of the House would like to know about:

FCC PACKING PLAN

The plan sent to Congress by President Kennedy isn't a simple proposal to reorganize the FCC and thereby save time and money. It is a measure to pack the FCC and thus destroy its bipartisan character, contrary to the clear intent of Congress.

The plan would vest in the Chairman the power to assign commissioners and staff members as he sees fit. The Chairman—any Chairman—could pick a division or a panel of fellow commissioners who saw eye-to-eye with him on a policy matter of great significance. Newspaper ownership, or program controls, for example. It would make puppets of other commissioners.

Couple this authority with the requirement that the chairmen of all of the independent agencies report monthly direct to the President. What member of a commission interested in retaining his job would dare defy a Chairman maintaining direct and consistent liaison with the White House and armed with the authority to assign whomever he likes to whatever he wishes?

If the administration is interested in saving time and money, it could better achieve the result by actually making the FCC a one-man body. It could name a single administrator and perhaps provide for a direct appeal to an appropriate court or a judicial body specializing in communications. With legalized one-man control, Congress would know whom to hold accountable.

Admittedly there are some desirable features in the plan. The Reorganization Act of 1949, however, provides that a plan must be accepted in toto. It cannot be amended. If Congress fails to act in 60 days from April 27, the plan will become effective.

We hope that Congress will veto Reorganization Plan No. 2, covering the FCC. It might indicate the kind of reorganization it would accept which should be one minus the provision that would make Charlie McCarthys of six of the seven commissioners. Then the White House could try again.

FROWNS FOR J.F.K.'S FCC PLAN—SOME WARY OF ADDED POWERS IT GIVES CHAIRMAN—PROPOSAL DESTINED FOR HEARING ON CAPITOL HILL

President Kennedy's FCC reorganization plan (broadcasting, May 1) is headed for trouble. And the basic difficulty seems to be the added power it would give to the Commission's Chairman.

A secondary obstacle, according to those who have studied the proposals, is the vagueness of many provisions.

The executive committee of the Federal Communications Bar Association last Wednesday voted to oppose the proposals. And at least one congressional committee will provide a forum for that opposition.

The Senate Commerce Subcommittee on Communications, chaired by Senator JOHN O. PASTORE, Democrat, of Rhode Island, has announced it will hold hearings starting May 23 on the reorganization plan. The staff of the House Government Operations Committe has indicated that hearings may be held by that group also.

Many FCC Commissioners are unalterably opposed to the reorganization as spelled out by the President. Their opposition stems from the provision which would permit the FCC Chairman to assign cases to Commissioners. This derogates the role of a Commissioner, this viewpoint holds.

One Commissioner, generally favorable to the New Frontier atmosphere in Washington, said:

"If this plan means the Chairman can tell the other Commissioners what they should do, then I'm through with it."

Another Commissioner said that this particular item makes the FCC just an arm of the executive department. His reasoning goes like this: The Chairman is appointed by the President. He reports monthly to the President. If he also has the authority to assign work to the other Commissioners, the FCC in fact becomes an appendage of the White House.

LOSS OF INDEPENDENCE

A third Commissioner stressed that the reorganization threatens to destroy the basic concept of the FCC: a body of seven equal Commissioners exercising its judgment independent of either Congress or the White House.

At the White House there is no equivocation about the meaning of the proposal to give the Chairman of the FCC more power. James M. Landis, the President's adviser on the regulatory agencies and the acknowledged architect of the reorganization plan, said last week that this is exactly what the plan suggests.

"Somebody has to have this authority," he said, "and under normal circumstances it should be the Chairman."

He seems well aware of the difficulties the plan will have in getting through Congress.

Under the Reorganization Act, the President's recommendations go into effect within 60 days of issuance unless specifically vetoed by either House of Congress.

The plan was cleared, it is understood, with both Commerce Committees of Congress. The Senate hearing primarily will spell out on the record the extent of the reorganization and define in more detail the meaning of some of the provisions.

A Senate Communications Subcommittee spokesman said the hearings will be designed to produce information the parent Commerce Committee needs to formulate its position and determine what changes, if any, should be made. Parties interested in presenting their views have been invited to contact the subcommittee.

Ordinarily, reorganization proposals are handled in the Senate by the Government Operations Committee. However, Senator JOHN L. MCCLELLAN, Democrat, of Arkansas, its chairman, has asked the Commerce Committee, which has jurisdiction over the regulatory agencies, for its comments and recommendations on the FCC plan. The request was made recently in a letter to Senator WARREN G. MAGNUSON, Commerce Committee chairman.

Under the plan (Reorganization Plan No. 2), President Kennedy proposes to authorize the FCC to delegate more authority to single Commissioners, Commission or staff panels, and to examiners. He also would abolish the Office of Opinions and Review, and require Commissioners to write and sign individual opinions instead of the present practice of issuing unsigned, institutional decisions. In a major revision of current procedure, the President would take away the longstanding right of applicants to argue their cases before the FCC as a whole. Under the plan, the Commission would be given the discretion to decide whether or not to hear an appeal.

The FCBA executive committee voted unanimously to oppose the plan. It ordered its legislative committee to analyze the proposals and report back to the executive committee. The plan, according to Robert M. Booth, Jr., FCBA president, is to submit this analysis to the responsible committees of Congress and to appear in opposition if a hearing is held. Percy H. Russell is chairman of the FCBA's legislative committee.

Opposition by the lawyers who specialize in communications law is based, it is understood, on two points: The plan wipes out many sections of the Communications Act; provisions which were the subject of long study and debate, and it leaves too many unknowns that cannot be ascertained until it is put into practice.

ADMINISTRATIVE CONFERENCE

Early last week, President Kennedy named Circuit Judge E. Barrett Prettyman of the District of Columbia Circuit Court of Appeals, as Chairman of the Council of an Administrative Conference of the United States.

This Conference, begun under Judge Prettyman last year, will consider and propose changes in procedure and organization of the Federal regulatory commissions.

Among the members of the 10-man Council are Max D. Paglin, FCC General Counsel; Mr. Landis; representatives of other Federal agencies, lawyers and several law professors.

Valhalla Blazes a Trail

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to bring to the attention of my colleagues a recent editorial from one of the outstanding newspapers in my State, the Patent Trader of Mount Kisco, N.Y.

In these most trying days in our Nation's history, our philosophical, religious, and political differences over pending school legislation should not be allowed to obscure the real issue, the proper education of our Nation's youth.

In this connection, I have always been particularly proud of the public school system in Westchester County, N.Y. One of the reasons for our widely admired system of public schools has been the consistently high quality of supervision by our dedicated administrators, who have never hesitated to use their training and experience in bringing new and exciting innovations to existing methods of teaching that sometimes fail to fully reflect the needs of our times.

The editorial follows:

VALHALLA BLAZES A TRAIL

A program as logical as it is original will be initiated in Valhalla [New York] in 1962, it was reported this week by the high school principal, Donald Marquette. The new departure is a 13th grade, actually a half-year program, to follow completion of all regular high school requirements in January of the senior year. Accelerated work in previous classes from grade 6 up will free qualified seniors for a special course of electives and college-level study.

The logic in the program derives from the increasingly accelerated trend of today's schooling. Curriculums in languages, math and science have undergone extensive revision in late years, with a view toward giving more of them to the student within the same period of time. Condensation of courses formerly consuming a full year into one semester has resulted in free time for advanced study, formerly postponed of necessity until college. Many high schools in the suburban area have introduced instruction in calculus, advanced chemistry and physics, and have greatly expanded language programs for those whose early familiarity with them made this possible. As far as is known, however, offering of this advanced instruction has not extended elsewhere to a full half-year program. In this respect, Valhalla must be recognized as an innovator.

Why all this acceleration and condensation? Why bother to introduce an extra half year into the high school program, instead of letting college students include this instruction in their first year's study? A part of the motivation, certainly, must be conceded to be national necessity. Scrutiny of our high school preparation in relation to that of the rival ideology in the U.S.S.R. disclosed gaps, particularly in the fields of languages, science and math. Closing these gaps has been interpreted as a survival measure of the utmost importance.

But the fact that the drive for acceleration stems rather from competitive factors than from educational policy does not mean that the end is not intrinsically worthwhile. In retrospect, it seems likely that our educational system prior to 1950 had become so inelastic, so tailored to the capacity of the middle group, as to be somewhat stultified. The absence of challenge for students of above-average ability may have been one reason for the generally lackadaisical attitude these young people carried with them into life after college. School graduation was a matter of fulfilling requirements all too easily encompassed; there was nothing in the curriculum to encourage the bright student to stretch. And the habit of reaching a little beyond one's grasp, like other study habits, is best cultivated in early life.

The best reason, basically, for offering advanced courses to able students is that they are able to handle them. That they will start college on a higher level is advantageous but unimportant in comparison to the fact that while they are in high schools, their brains will have been used at something like capacity.

XUM

If our educational system can be revised to produce a generation of reachers and stretchers, it is probable that many of the problems associated with the teens and after will recede into insignificance.

Valhalla's program is a notable milestone along this road. It is certain that it will be watched with intense interest by school administrators in other localities.

The Impact of Imports and Exports on American Employment

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. KEARNS. Mr. Speaker, the impact of imports and exports on American employment should be the concern of every Member of the Congress.

I include as part of my remarks an excerpt from a recent study of this subject by Dr. Howard Piquet of the Library of Congress:

(By Dr. Howard Piquet)

For 26 of the 36 industries shown in table 2 employment amounted to slightly less than 124,000. It is probable that employment in the 10 industries, for which employment data were not provided, would not bring the total employment figure to more than 170,000.[1]

Thus, at the outside, the number of workers employed by the industries that have been seriously injured or are threatened by serious injury, or that think they are so threatened total not more than 260,000 workers out of total national employment of some 68 million workers.

This is not to say that this many workers would be displaced even temporarily if imports were to increase. It does not even mean that the 90,000 workers in the industries for which the Tariff Commission made a positive finding of serious injury or threat of serious injury, would all be displaced by imports, even under free trade. The usual pattern is that where injury results from import competition only certain companies are affected. One of the major conclusions that can be reached from the many cost studies made through the years by the Tariff Commission is that unit costs of production vary widely among producers within any given industry. Usually the costs of the marginal, or highest cost, producers are considerably higher than the average costs for the industry as a whole.

ESTIMATED DISPLACEMENT OF WORKERS BY IMPORT COMPETITION

Estimates made within the past 8 years of the immediate displacement effects of the increased imports that would result from across-the-board suspension of U.S. tariffs are in line with the figures just presented.

At the request of the Commission on Foreign Economic Policy (Randall Commission) in 1954 the Bureau of Labor Statistics estimated the number of workers who would be displaced by imports under such an assumption. It used its own data on interindustry relationships to analyze the employment implications of the probable increases in imports that would result from temporary overall tariff suspension.[2] The estimates represent only the number of workers producing the equivalent of the estimated increased imports. They take no account of the probable increases in U.S. consumption after tariff suspension, of new developments in U.S. products or production techniques, or of the capacity of companies concerned to shift to other lines of production. They also take no account of the rise in employment that would be required to handle the increased imports into the United States or of the increased exports that would result from the larger imports.

It had been estimated, on the basis of economic conditions prevailing in 1951 and on the further assumption that these economic conditions would continue to prevail for at least 3 to 5 years, that temporary tariff suspension by the United States would result in increased imports of between $800 million and $1.8 billion per year. Of these increased imports, from $420 to $900 million would have an immediate displacement effect on domestic producers in the United States.

Using its interindustry relationship tables, the Bureau of Labor Statistics estimated that the displacement of domestic production by increased imports would affect between 96,000 and 203,000 workers (on 60,000 to 128,000 workers the displacement effect would be direct and on 37,000 to 75,000 the effect would be indirect).

The individual industries in which there would be appreciable displacement of workers, according to the study cited, are shown in table 3. It will be observed that none of them could properly be characterized as big business. The conclusion seems clear that the tariff has the effect of maintaining in business a number of small industries that otherwise, either in whole or in part, would be forced to adjust to other lines of production. It appears, furthermore, that the number of workers who are protected in their existing jobs by the tariff is somewhere between 96,000 and 260,000.

TABLE 3.—*Industries in which there would be appreciable displacement of workers in the event of increased imports*[1]

Industry	Duty in 1951 (ad valorem equivalent)	Domestic production in 1951
	Pct.	*Thous.*
Knives with folding blades	33-184	$18,000
Scissors and shears	41-84	22,500
Leather handbags	14-25	75,000
Linen firehose	28	1,000
Fur felt hats	60	75,000
Bicycles and parts	11-15	63,400
Musical instruments	20	175,000
Embroidered linen handkerchiefs	49	8,500
Leather gloves	25-74	45,000
Earthenware and chinaware: table and artware	32-66	120,000
Coarse linen fabrics	40	3,000
Hemmed linen handkerchiefs	26	7,000
Hand-blown glassware	39	31,400
Lovers lace	32-65	30,000
Axminster rugs	28	45,000
Dental and surgical needles	18-40	1,000
Wool wearing apparel (knit or crocheted)	24-41	200,000
Rayon staple fiber	17	150,000
Motorcycles	10	9,083
Clay floor and wall tile	26-41	71,300
Woolens and worsteds	33	1,085,000
Crude barytes	35	7,828
Apparel wool	15	260,000
Cigar filler tobacco	13-18	85,000
Edible nuts, domestic types (almonds, walnuts, filberts)	35	52,200
Flower bulbs	7	(2)
Oats	5	1,112,698
Prepared pineapples	6	65,000
Fresh or frozen fillets	9	56,284
Vermouth	10	10,000

SMALL BUSINESS ALSO BENEFITS FROM IMPORTS AND EXPORTS

It does not follow from the fact that small business, rather than big business, is the principal beneficiary of tariff protection that all small businesses stand to gain from the restriction of imports.

In recent hearings before a subcommittee of the Select Committee on Small Business of the U.S. Senate,[3] Mr. Donald A. Hipkins, Deputy Administrator of the Small Business Administration, testified as follows:[4]

"Turning now from the effects of foreign imports on manufacturers, let us consider its effects on distributors of consumer goods. Approximately two-thirds of the small businesses in this country are engaged in this activity, mostly at the retail level. Some of those establishments, such as franchised dealers in automobiles and other high-priced durables, have close ties with one or a few manufacturers and are, consequently, sensitive to foreign competition. However, a majority of small retailers are less vulnerable, because they handle a wider variety of products. Obviously, the more items a distributor carries in stock, the less dependent he is upon any one of them. To take the simplest case, a proprietor of a drugstore who encounters difficulty in moving a domestic product at a profit, because competitors are underselling him with similar merchandise of foreign origin, is not confronted with a new or special problem. Losses on individual items, whatever their causes, are a normal feature of his operations. Without material injury to his business, he will discontinue the product and, if possible, replace it with the import. For these reasons, I believe that most small outlets are not endangered by foreign competition.

"To a large extent, imports, far from being injurious, are beneficial to small distributors. It is a hard fact that many foreign products, though priced well below their domestic counterparts, are of equal or superior quality. They often are fast-moving items which offer rich opportunities to discerning and energetic retailers. I have no doubt that such merchandise has contributed substantially to the success of a multitude of small stores.

"Another important factor to be considered in appraising the effects of imports is that in many industries, perhaps in too many, manufacturers favor large distributors to the detriment of the small.

"Chain organizations, mail order houses, and department stores are given volume discounts, advertising allowances, and other forms of price reduction which increase their natural advantage over small stores. Such big outlets can resell at prices substantially below the levels small dealers are required to maintain in order to show a profit.

"Needless to say, small concerns who are being squeezed out of the business of distributing domestic products will seize the opportunity to handle competitive imports. It is not surprising, therefore, to find such distributors resisting the efforts of their suppliers to impose or increase trade barriers.

"The effect, adverse or otherwise, on our domestic economy of imported foreign products is, of course, only one facet of a larger problem. Our domestic economy as we know it could not long survive without foreign trade, both imports and exports.

"I am told that of our workers every 10th is paid from export sales and every 4th is dependent on imported raw materials. Our country needs expanding new material imports to support our growth; and this need, in turn, makes necessary a balancing and offsetting export trade to pay for our imports. This is an inescapable fact of economic life."

Testimony was also given by a private Washington attorney[5] showing how imports are of great importance to the plywood, hard board, almond, mutton, and shrimp industries.

Furthermore, many small businesses have a vital interest in exports, as was pointed out in testimony by former Secretary of

Footnotes at end of speech.

Commerce Frederick H. Mueller.[1] He stated that many small business firms are selling abroad and that many more could do so. He cited a small firm in Missouri with only eight employees that has been prospering from exports. It manufactures automotive chemical tuneup oil and has been exporting lubricants for 8 years. Exports comprise over 50 percent of all its shipments, including 8 to 10 shipments monthly to South America and 51 shipments, each, to Venezuela and Canada. He also cited a small company in Oregon which manufactures front-end loaders and whose foreign sales have increased more than 30 percent in each of the past 3 years.

Although no statistics are available showing the importance of exports to small business, as such, there can be no doubt that it is considerable. Some years ago the Bureau of Labor Statistics published figures showing the private employment of wage earners and salaried workers attributed to exports from the United States in 1947. At that time 6.8 percent of all employees in nonagricultural industries were dependent on exports for their jobs.

---

[1] The industries whose requests for action under the escape clause were terminated because they failed to supply adequate data to the Tariff Commission, or whose appeals were dismissed at their own request, were: Woodscrews, cotton blouses, cotton ginghams, broadwoven silk fabrics, fine-meshed wire cloth, nails, Toyo cloth caps, and women's leather handbags. The number of workers employed in these industries is not available.

The Thin Washington Air

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. SCHERER. Mr. Speaker, every Member of Congress, in fact, every American should read the lead eidtorial in the Wall Street Journal of May 16, 1961. It would certainly help one evaluate the present leadership of the New Frontier:

THE THIN WASHINGTON AIR

Of all the characteristics of the New Frontier so far, surely one of the most striking is the superficiality of its programs and actions.

It's very odd in its way. Here is reputedly the most intellectual administration in many years—and if the often-abused term intellectual is not to be thoroughly debased, it should imply not so much academic brilliance as a capacity for serious, logical, mature thought. Yet, what we find emanating from Washington, whether the subject at hand is foreign policy or juvenile delinquency, is a thinness of thinking, sometimes to the point of pure vapor.

Consider, for just one of innumerable examples, the quality of thought behind the proposal for dealing with the problems of the cities. We are to have, if the administration has its way, a new Department of Urban Affairs. It is simply assumed that the Federal Government can provide remedies for ailments which baffle municipal specialists. More than that, there is no evidence of thought at all about the complex human factors which help make some of the problems so baffling.

Then we have all the talk about national economic growth. Nowhere is there any attempt to analyze the concept of growth itself—an undertaking ably done in the previous "antiintellectual" administration; no attempt to ascertain what economic growth actually means, much less to determine what constitutes sound growth and unsound growth.

When we turn to foreign policy, it must immediately be conceded that the President faces monstrous difficulties and deserves sympathy on that account. But it is also impossible not to recall the glib promises last fall that America's "dangerous drift" in the world would be promptly checked.

Instead of that, one must ask what kind of thinking went into the Cuban affair. Is there a policy on Cuba now? A policy on Laos or merely rhetoric about freedom? Maybe Laos is by now too far gone for a policy, but what of the rest of Southeast Asia? Sending the Vice President on a trip is hardly an answer to the Communist threat there.

In all these matters, and most especially the domestic programs, the fault is not too much intellectuality but, in the real sense, too little.

The most obvious explanation would be that many of the new men in Washington were overrated to begin with. It would seem that, rather than some kind of intellectual super-elite, we just have some shallow thinkers dominated not by any particular highmindedness but by an intense concern for the main political chance in each case.

A further explanation is that the 20th century liberal, in sharp contrast to the 19th century liberal, is apparently incapable of profound philosophical thought about the nature of man and man's institutions. Today's liberal invariably takes the path of least mental resistance, which in political terms means dumping every problem, no matter how small or local, on the Federal Government.

It would be surprising if the appeal of such thinking, if that is the word, had not faded. There was much shallow thinking and intense politicking in Franklin Roosevelt's days too. But Mr. Roosevelt at least seemed to be doing something new. He seemed to be moving the country even though its economy remained on dead center. There was a dash, a style, a quality about the New Deal that is absent in the New Frontier.

The old shibboleths of the thirties just don't evoke the old enthusiasm. And the thinness of today's Washington atmosphere plainly shows that the liberals have no other thoughts to offer.

Departments of Labor and Health, Education, and Welfare, and Related Agencies Appropriation Bill, 1962

SPEECH
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 7035) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1962, and for other purposes;

Mr. WIDNALL. Mr. Chairman, I too wish to commend the gentleman from Rhode Island [Mr. FOGARTY], chairman of the subcommittee; the gentleman from Wisconsin [Mr. LAIRD], ranking minority member; and the other members of the Appropriations Committee for the hard work that went into the molding of such a well-rounded bill as H.R. 7035, making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the year ending June 30, 1962.

Their interest, devotion, and dedication to the health field has been outstanding, and has made a great contribution to the welfare of our people.

I would like to express particular pleasure at the recognition accorded by the committee to the value of retraining workers. It is a matter of record that I offered a substitute depressed-areas bill that included more than double the amount for retraining workers that was included in the administration bill enacted into law. At the time, I was keenly disappointed by the House action, as this was an assistance feature of major import; one of direct benefit to those persons who are jobless as a result of progress—automation, technological advances, improved methods, streamlined production. As the gentleman from Wisconsin [Mr. LAIRD] so well stated—

When we considered the depressed-areas legislation early in this session of the Congress, a bill with over 95 percent of authorized funds in direct subsidies to industry, with less than 5 percent of the authorization going to this area of training individuals, it is sad but true that we enacted a piece of legislation which did not clearly meet the problems as we face the challenge of the 1960's.

House Resolution 211—Special Committee on Captive Nations

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. FLOOD. Mr. Speaker, on March 8, 1961, I introduced a measure calling for the establishment of a Special Committee on Captive Nations in the House of Representatives. This measure is now House Resolution 211. There are not sufficient words to express my profound gratitude and personal delight to the more than 20 Members of the House who joined with me in that most stimulating and very enlightening discussion which took place then on the subject of the captive nations—CONGRESSIONAL RECORD, March 8, 1961, "Russian Colonialism and the Necessity of a Special Captive Nations Committee," pages 3286–3311.

The popular response to House Resolution 211 has been so enthusiastic and impressive that I feel dutybound to disclose the thoughts and feelings of many

Americans who have taken the time to write me on this subject. These citizens are cognizant of the basic reasons underlying the necessity of the proposed committee. They understand clearly the vital contribution that such a committee could make to our national security interests. In many cases, they know that no public or private body is in existence today which is devoted to the task of studying continuously, systematically, and objectively all of the captive nations, those in Eastern Europe and Asia, including the numerous captive nations in the Soviet Union itself.

Because their thoughts and sentiments are expressive and valuable, I request that the following responses of our citizens to House Resolution 211 be printed in the Appendix of the RECORD:

WASHINGTON, D.C., *May 7, 1961.*

Hon. D. J. FLOOD,
House of Representatives, U.S. Congress, Washington, D.C.

DEAR CONGRESSMAN FLOOD: My fellow Iranians are anxiously hoping that the House Resolution 211 will receive the unanimous support of your colleagues in the U.S. Congress, and a special Committee on the Captive Nations will be established.

Because we have a several hundred mile common border with Soviet Russia, we Iranians are constantly being endangered by the aggressive Reds. Not only do we not wish to become one of the captive nations, not only will we fight to our last drops of blood to maintain our independence, but we wish to see our Azarbaijanian brothers and other captive nations freed from the yoke of Russian imperialism.

The establishment of the Committee on the Captive Nations will provide the hope for all the free peoples of the world that through the deep concern of the American people and Government the road toward freeing the captive nations will be paved.

My fellow Iranians hail you and your colleagues for your wisdom and courage. You have kindled the torch of hope in our hearts, and we shall always join you both in heart and action for furthering the cause of freedom and eradicating Russian imperialism.

History will record the Americans as teachers and protectors of freedom and great liberators.

With warmest and heartiest regards.

NADER AKRAMI.

RIVERDALE, N.Y., *May 8, 1961.*

The Honorable DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR MR. CONGRESSMAN: I was very pleased, indeed, to read in the CONGRESSIONAL RECORD of May 2, that you have introduced in the House a Resolution 211 calling for the establishment of a permanent committee dealing with the captive nations under the Red rule. Please accept my sincere congratulations for your thoughtful idea and hope that the majority of your colleagues in Congress will support your constructive action. I will write to my own Congressman, Representative PAUL A. FINO and ask his support in this regard.

At the same time, I would appreciate your sending me two copies of the Resolution 211, two reprints from the CONGRESSIONAL RECORD of March 6 (pp. 3286–3311) if any, as well as other available material on this subject.

Thank you in anticipation for your kind attention.

Very truly yours,

AL M. KADRAGIC,
Economist.

IDEL-URAL INDEPENDECNE COMMITTEE,
Ankara, Turkey, May 1, 1961.

Mr. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN: The Public Law 86–90, pertaining to the restoration of freedom and independence to the captive nations raised our morale and encouraged our efforts for the cause of liberation of our fatherland Idel-Ural from the Soviet imperialism and tyranny.

Tatar, Bahkir, Chuvash, Mordova, Mari, and Udmurt, so-called, autonomous republics, are descendants of the mighty state with three different names: 1. Bulgar Khanate, IV–XIII centuries A.D.; 2. Golden Horde, XIII–XV centuries A.D.; 3. Kazan Khanate, XV–XVI centuries A.D.

This mighty state under three different names was an independent state for 1,200 years. Kazan Khanate was captured by the Russians in 1552.

In November 17, 1917, this state regained its independence and the First National Assembly in Ufa issued the decree to call a newly formed state Idel-Ural.

We are very glad to see the name Idel-Ural in the congressional House resolution all because the name of Idel-Ural is sacred for us.

We deeply appreciate your very constructive efforts and wish great success for the liberation of the captive nations and particularly Idel-Ural.

The Idel-Ural Independence Committee had been founded by our leader, Ayas Iskhaki Idilli, in Warsaw, Poland, in 1928 and had been supported by Polish Marshal Jozef Pilsudski.

Please refer to the book "Turkism and the Soviets" by Charles Warren Hostler, colonel, U.S. Air Force, publisher George Allen & Unwin, Ltd., London, 1957, 244 pages, reference pages 34–48, 120–128, 156–160 and 213–214.

After the decease of our leader, Ayas Iskhaki Idilli, in 1954, Gen. Mecit Sakmar was elected by the committee as the president of committee, and he is residing in Istanbul.

Wishing you the greatest success in the passage of H. Res. 211,

Yours truly,

KEMAL LOKMAN,
President of Presidium.
ALI AKIS,
Secretary General of Presidium.
HAYRULLAH BATU,
Secretary of Finance of Presidium.

BYELORUSSIAN-AMERICAN
ASSOCIATION, INC.,
BRANCH OF CLEVELAND,
Cleveland, Ohio, April 28, 1961.

The Honorable DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR SIR: As the president of the Byelorussian-American Association Branch of Cleveland, I wish to extend sincere congratulations from myself and my associates on your introduction of the resolution for the establishment of a permanent Committee of Captive Nations in the House of Representatives.

The peoples of the free world now realize the goal of Soviet Union, which is the desire to dominate the free world and particularly the United States of America.

The resolution to create a Committee on the Captive Nations, which you have introduced in the House of Representatives, will serve as a source of information for the enslaved peoples behind the Iron Curtain.

The information which your committee will make available will encourage the peoples in the captive nations and serve to help the security of the United States.

My sincere best wishes for your success.

Very truly yours,

BYELORUSSIAN-AMERICAN ASSOCIATION,
GEORGE GOSCIEJEW, *President.*

NORMANDY PARKWAY,
Morristown, N.J., April 30, 1961.

The Honorable DANIEL FLOOD,
House of Representatives,
Washington, D.C.

DEAR MR. FLOOD: House Resolution 211 has come to my attention and after reading it I can say that I am wholeheartedly in favor of such a resolution and hope that it will be passed and a House committee on captive nations established.

The captive nations stand as an important bulwark within the Iron Curtain, for they are the frontline against the desires of Moscow's imperialists and an important spearhead for the advance of freedom.

I plan to write my Congressman, PETER A. FRELINGHUYSEN, requesting him to vote in favor of House Resolution 211.

Sincerely,

HUGH C. LORDON.

IDEL-URAL INDEPENDENCE COMMITTEE,
Istanbul, Turkey, May 2, 1961.

Mr. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN: I am very pleased to hear that the House of Representatives is preparing to consider H. Res. 211 pertaining to the restoration of freedom and independence of the captive nations.

I am sending this letter congratulating you and requesting your special interest in Idel-Ural in the Committee on Captive Nations.

Thanking you in advance for your kind attitude regarding our future state.

I am ready to cooperate in case you will need our help for the preparation of the special committee's work.

Wishing you the greatest success, I remain,

Yours truly,

Gen. MECIT SAKMAR,
President, of Idel-Ural Independence Committee.

DETROIT, MICH., *April 18, 1961.*

Hon. DANIEL FLOOD,
House of Representatives,
Washington, D.C.

DEAR SIR: I would like commend you for your Resolution 211 of March 8, 1961.

It is highly important that we keep before the free nations of the world the fact that there are millions of our fellow men still held captive under the tyranny of communism.

Your resolution setting up a Special Committee on the Captive Nations in Congress will be a most potent factor in focusing the attention of the world on the pitiful plight of the captive nations held under the merciless grip of Moscow.

It is my sincere hope that your resolution will be adopted by Congress.

Very truly yours,

WILLIAM A. PETZOLD III.

BUFFALO, N.Y., *May 8, 1961.*

DEAR MR. FLOOD: On March 8 past, House Resolution No. 211 was introduced by you. This resolution calls for the establishment of a permanent special committee on captive nations. The function of this committee, as introduced in the resolution would be, to conduct an inquiry into and a study of all the captive non-Russian nations, which includes those in the Soviet Union and Asia, and also of the Russian people, with particular reference to the moral and

legal status of Red totalitarian control over them, facts concerning conditions existing in these nations, and means by which the United States can assist them by peaceful processes in their present plight and in their aspirations to regain their national and individual freedoms.

I strongly support you in favor of House Resolution 211, so it can be established as law.

Very truly yours,

I. J. ARMITAGE.

UKRAINIAN CONGRESS COMMITTEE OF AMERICA, INC., HAMTRAMCK AND NORTH EASTERN DETROIT BRANCH,

Detroit, Mich., May 6, 1961.

Hon. DANIEL J. FLOOD,
New House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: The Ukrainian Congress Committee of America, Hamtramck and North Eastern Detroit Branch, wishes to extend warm congratulations for your resolution calling for the establishment of a permanent Committee on Captive Nations in the House of Representatives.

By creating such a committee the U.S. Government will be able to gather necessary information and data on various enslaved nations in the U.S.S.R., which constitute the weakness of the Communist empire. The committee will assist our Government in formulating its policies with respect to the captive nations and will inform the American people and the whole world on the state of affairs behind the Iron Curtain.

We wholeheartedly support your farsighted move about the Committee on Captive Nations and are asking various Michigan Congressmen to support your resolution.

Sincerely yours,

WALTER TUSTANIWSKY,
Chairman.

CHICAGO, ILL., *May 1, 1961.*

The Honorable DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR MR. FLOOD: It was with great pleasure that I read House Resolution 211 which you submitted on March 8, 1961. Substantively this bill is of great import in our Nation's struggle for providing truth and freedom to the world. The two Presidential proclamations designating Captive Nations Weeks were only the beginning. So as to insure that we leave no stone unturned when fighting the lies of Moscow, this committee on the captive nations must be formed and begin to function as soon as possible.

The search for truth has been going on ever since man was created. The search for freedom has also been going on ever since man was created. Now, more than ever, the world must know the whole truth about the big Red lies in order to maintain the correct perspective. The committee, when established, might do well to remember one of Democritus' golden maxims: "Speech often proves more persuasive than gold." I am completely behind your efforts in this endeavor. With best wishes for the success of this resolution I remain,

Sincerely yours,

TIMOTHY J. PATRICK RYAN.

NEW YORK, N.Y., *May 4, 1961.*

Congressman DANIEL J. FLOOD,
Washington, D.C.

DEAR CONGRESSMAN: The Moscow dictators are crying very much of necessity about the "liberation" of colonial peoples. In reality, teens of nations are suffering humiliating mistreatment by dominating Russian communism.

After the collapse of the Czar's regime in 1917, the peoples of Idel-Ural (Volga-Ural)—Tatar, Bashkir, Chuvash of Turkik origin and Udmurd, Mari, Mordowa of Finn origin—began wide movements in order to restore their national independence.

On the territory of the former Kazan and Astrakhan kingdoms occupied by Ivan the Terrible in the 16th century they managed to reestablish the Idel-Ural state in November 1917.

A parliamentary government was formed. In April 1918 Idel-Ural was reoccupied by Red Russian military forces and divided into so-called autonomous republics with puppet governments, i.e., Moscow acted by the principle "divide and rule."

Dear Congressman, House Resolution 211, which applies to the captive nations' future, encourages our Idel-Ural peoples in their struggle with the tyrannical system of Russian communism.

We heartily support you and wish you every success in your effort on this matter.

Yours faithfully,

HAMID RASCHID,
Lecturer of Columbia University
in Kazan-Turkic.

THE UNITED ANTI-COMMUNIST ACTION COMMITTEE, OF WESTERN NEW YORK,

Kenmore, N.Y., May 3, 1961.

DEAR CONGRESSMAN FLOOD: With full awareness of your constant efforts in behalf of freedom and justice, we hurry to support your resolution which we endorse.

It is House Resolution 211, the Captive Nations Committee, and it calls for the establishment of a permanent committee to keep the cause of the captive peoples alive and in our national conscience.

Our organization, representing over 100,000 in the western New York area, prayerfully support your resolution.

With every good wish.

ALBERT J. WEINERT,
Speakers Bureau.
WALTER V. CHOPYK,
Public Relations.

ST. PETER AND PAUL UKRAINIAN CHURCH,

Willimantic, Conn., April 11, 1961.

Hon. DANIEL J. FLOOD,
New House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: I, Father Boreckyj, on behalf of my parish, would like to congratulate you on your recent move in introducing the resolution calling for the establishment of a Committee on Captive Nations in the House of Representatives. Such a committee would be of great importance, not only to those in the hands of the Soviet Union, but to the entire universe. These nations in captivity, ever eager to escape Soviet Russian slavery and despotism, constitute perennial weaknesses in the Soviet Union.

It would be to our advantage to know these weaknesses, and to work to multiply them. A committee, such as you propose would serve as a reservoir of information and data on these enslaved nations.

Such information and data could be made available to the U.S. Government and its various agencies. However, its main function would be to inform the American people and the world at large on affairs behind the Iron Curtain and to assist the Government in its policies with respect to the captive nations.

We have contacted our State Congressman, Mr. Kolowski, and have asked him to support your resolution. I pray that we succeed in this effort, and may God guide you in your work.

Very truly yours,

REVEREND FATHER THEODORE BORECKYJ.

We're in the Midst of a Mess

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. BECKER. Mr. Speaker, one of the foremost writers of recent years has been George E. Sokolsky. I have read his articles consistently and feel that everyone should have the opportunity of reading, "We're in the Midst of a Mess," as published in the Long Island Press of May 15, 1961. Mr. Sokolsky points up very vividly the situation in respect to Cuba and the entire Western Hemisphere.

WE'RE IN THE MIDST OF A MESS

(By George E. Sokolsky)

For years those who have studied Marxism and its Leninist development in Russia have been calling attention to the fact that nothing less than the conquest of the entire earth would satisfy the Marxist principle. This has been as clear as day since 1847. It is referred to in Communist literature as the inevitable historic clash between a new dynamic civilization and a decaying civilization which has served its purpose and is no longer needed.

Those who are unwilling to learn have asked those who for 40 years now have been warning against the menace to refrain from exaggeration. In 1917, when the Russian Revolution occurred, there were a few who recognized the peril of the Bolshevik advance, but to most they were a fanatical band of incompetents, who would shortly fail. How incorrect this judgment was is evident today from the single fact that Soviet Russia is successfully building an enormous and incongruous empire and that only the United States has the power, if not the ability, to withstand the strength of the Soviet Universal State.

Soviet Russia is the first European country since 1861 to challenge the authority of the United States in the Western Hemisphere. The last effort was that of Napoleon III to put and keep Maximilian of Austria on the throne of Mexico.

What has happened in 1961? Soviet Russia has established a Marxist fortress in Cuba, controlled by an obvious paranoic Castro, who was actually put into power by our own State Department despite the available evidence that Fidel, his brother, Raul, and many of their associates were known to have had Communist affiliation. But Cuba is not alone. British Guiana, Venezuela, Ecuador, Panama, and possibly Brazil are being ripened for Communist revolutions.

And it is in the face of such conditions that the State Department involves this country in a quarrel with the Dominican Republic which could be needed in our defense at any moment. More mistakes of policy have been made during the past 30 years than seem possible.

Even Canada, with which we have had cordial relations since the War of 1812, has been discovering our weaknesses and has become tolerant of anti-American propaganda. In fact, Canada is strengthening Cuba by trading with Cuba, there being no visible guarantee that some of the goods sent is not of American origin. Canada is also trading with Red China in opposition to our and their interest. The relations between the United States and Canada should have been such that the two countries stand together, at least, on the Cuban issue.

XUM

The question arises as to what we shall accomplish with the Organization of American States: OAS is a substitute for the Monroe Doctrine. It places upon the Latin American nations the responsibilities which formerly the United States assumed. Among these is the obligation to keep Europe and Asia out of the American hemisphere. The question that arises now is whether Soviet Russia is establishing Cuba as part of a colonial empire or a satellite or a segment of the Soviet universal state. And must the United States accept this violation of the Monroe Doctrine?

The assumption that Cuba is today governed by Fidel Castro, as a dictator, is nonsense. Cuba is governed as East Germany is, as Hungary is; as all so-called People's Republics are, from the Kremlin. The country is full of Chinese Communists and Czechoslovakian Communists who are the effective rulers of the land. This is the technique that Soviet Russia has employed in every country that it has conquered. The so-called People's Republics are Socialist states, in transition, supervised by the Kremlin until they become Soviet republics.

Whether the OAS is capable of meeting such a situation is questionable. The OAS has thus far shown an inability to live up to the Caracas Agreement because those who govern the Latin American States are afraid of student mobs and similar mass uprisings and therefore, while supporting the United States in principle, dare do nothing about such support.

Back to Work at Missile Bases?

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. DERWINSKI. Mr. Speaker, we are faced with the sobering conclusion that the cold war with the Soviet Union and other Communist countries will continue for many years until justice and freedom finally triumph. All Americans have been shocked at the disclosure of the Senate subcommittee headed by Senator JOHN MCCLELLAN of the racketeering and profiteering at missile bases. The Chicago Sun-Times, in an editorial Saturday, May 13, discussed the latest developments in a most practical and readable fashion.

BACK TO WORK AT MISSILE BASES?

As he received the Nation's plaudits and honors on his flight into space, Comdr. Alan B. Shepard spoke for us all when he said near the end of the ceremonies that now he wanted to get back to work.

Undoubtedly, he spoke for his fellow astronauts, U.S. missile and space scientists, and many others who had a hand in the gigantic effort to send an American aloft in a rocket. No one knows better than they the spirit that must pervade America's space program, or the nature and magnitude of the job that remains to be done in the race with the Soviet Union.

But there is one group engaged in the program which the commander could not speak for: the missile base workers, whose strikes, wildcat work stoppages and slowdowns have lately been the subject of hearings before a Senate investigating subcommittee.

Testimony before the group has caused the subcommittee chairman, Senator JOHN MCCLELLAN, Democrat, of Arkansas, to denounce labor practices at the missile bases as "damnable."

Witnesses have told of the assembling, disassembling, and reassembling equipment for no other reason than to make work for greedy workers, often at topheavy overtime rates; of unneeded, duplicate jobs provided rival unions at public expense (known as shadow crews—men who stand around and do nothing); of strikes and walkouts staged to make overtime; and of unions requiring work to be done at the site that could be done at factories in a fraction of the time.

We wonder if these Americans have become so calloused that they were without a sneaking feeling of shame when they read, as we did, that Commander Shepard's extra compensation for his feat in blazing the U.S. trail into the universe was $14.38. This is the portion of his flying pay attributable to the history-making flight. Beside flying pay, allowed all military personnel who fly a required number of hours per month, the astronauts receive nothing extra for their participation in the program.

How much earlier that first U.S. astronaut could have been launched without the workers' abuses will never be known. The Nation has Chairman MCCLELLAN's word that the stoppages, featherbedding, and deliberate policy of low productivity has hurt U.S. space and missile efforts. The Senator also charged some subcontractors "tolerated" slowdowns and profited from them.

All told there have been 327 work stoppages at missile bases, of which one-third have occurred at Cape Canaveral, the all-important base from which Shepard was shot into space. It is at Canaveral, according to the testimony before the McClellan subcommittee, that some electricians have drawn as much as $670 a week, with overtime; where plumbers and pipefitters have received from $420 to $733 per week.

In an effort to curb jurisdictional disputes and end wildcat walkouts, the AFL–CIO has adopted an official no-strike policy at the bases, but this demonstrably has not been fully effective.

Legislation to outlaw strikes at missile bases has been promised by McClellan. It is also welcome news that Labor Secretary Goldberg has announced he will promptly submit to President Kennedy a comprehensive plan to end union squabbling at the installations and prevent further abuses.

Goldberg speaks of the urgency of the program, something most Americans have long recognized. Of course, it is this very urgency that has permitted the irresponsible workers to enforce their irresponsible demands, as officials of the program pressed forward toward achievement of its goal, regardless of the cost.

Through its history, the Nation has periodically been shocked by disclosures of profiteering in wartime at the expense of its efforts for survival. It now learns that it has been the victim of peacetime, cold war profiteering. There is no difference. One is as immoral as the other.

The Case for Small Business

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. KEARNS. Mr. Speaker, the Congress must actively concern itself with the urgent problems of the impact of imports and exports on small business.

I include as part of my remarks an excerpt from a recent study of this subject by Dr. Howard Piquet, senior specialist in international economics of the Library of Congress.

THE CASE FOR SMALL BUSINESS
(By Dr. Howard Piquet)

The organization of a number of smaller industries into vociferous pressure groups probably has done more harm than good to their cause. Often the spurious arguments that professional lobbyists use to present the case for their clients have tended to obscure the legitimate arguments that could be used.

Equalization of costs of production here and abroad, for example, for which the lobbyists argue eloquently would stifle all trade and would be antithetical to the national interest of the United States. That unit costs abroad frequently are considerably lower than unit costs in the United States is a fact but it does not lead necessarily to the conclusion that all competitive imports should be excluded.

Most of the arguments that give weight to the complaints of small business against import competition are not in the area of economics. From the point of view of economic efficiency alone, small businesses that cannot compete successfully against foreign competition should be allowed to die. But, is this what the United States wants to do? Are the American people interested only in economic efficiency? Do they place economic efficiency ahead of all other considerations?

Here is where our way of life differs markedly from the way of life in countries that are dominated by totalitarian dictatorship. In the Soviet Union and in Red China the overriding objective is the production of capital goods. Human freedom and individual rights are secondary, or considered not at all.

We in the United States have a different philosophy. We fought our Revolution some 180 years ago because we were opposed to dictatorial oppression. Individual liberty always has been our watchword. No matter how much importance we may appear to place on economic efficiency it is always, and everywhere, subordinate to respect for human rights and the dignity of the individual. Ours is a government of law, not of men. We refuse to place dictatorial powers in the hands of anyone, even in the economic field. To our way of thinking, man is not merely a function in a mathematical formula as many modern economists make him appear.

The heart of the problem of small business in all of its ramifications, including import competition, is the basic question: Do we want to preserve small enterprise, as such, because of its beneficial values to American civilization? Economic efficiency is only one aspect of the problem. Some of our most brilliant thinkers, such as the late Justice Louis Brandeis, have questioned the desirability of bigness in both government and business. The impersonality of the super giant store in contrast to the friendliness of small neighborhood shops is not a matter of brute economic efficiency. It has an important bearing to our way of life. There are many Americans who believe that the small neighborhood store and the small business enterprise have virtues that are so important that they should not be allowed to be trampled under the onward sweep of bigness. The preservation of small business enterprise may be poor economics but it may be good sociology and an important force for preserving democracy.

The opportunity for a person to enjoy the fruits of his own labor, imagination and ingenuity is something that we Americans ought to want to preserve. The days of the covered wagon had their hardships, but they also offered opportunity. A man could feel that he was the master of his own destiny and king in his own castle. What he pro-

duced he could keep and what he produced depended on his own ability and ambition.

These are the considerations that facilitate the existence of an all-important middle class. Nations have perished when their middle classes have disappeared. The opportunity for a person to own his own business is important from the point of view of both the science and art of government. This is not to say that big business inevitably leads to annihilation of the middle class, but it does narrow its opportunities considerably.

There are also cultural considerations that should not be overlooked. If our small businesses collapse, there collapse with them many opportunities for creative production. Hand-blown glassware and pottery are cases in point. Here, where artistic skills are necessary, we lose something important to our civilization when the machines take over. Again, perhaps, it is bad economics but it is good for our civilization for persons with artistic talents to be able to find outlets for those talents in their daily work. The acient Romans were genieses at government, but the art and culture of ancient Greece contributed more to subsequent civilization than did the arts of Roman conquest and governmental administration.

WHAT IS EFFICIENCY?

It does not follow, however, that imports should be excluded for the sake of protecting all small business. Some small businesses are inefficiently managed and need competition—both foreign and domestic—to keep them on their toes. Nevertheless, many small businesses that are efficiently managed cannot stand up competitively against either big business or against import competition for reasons beyond their own control.

The question that confronts us is: "Which imports should be encouraged and which should be discouraged?" The answer depends on our conception of the kind of economy that we want here in the United States. Do we want an economy in which business units are becoming ever larger, one in which the little fellow cannot stand up competitively and in which there is decreasing room for small enterprise, either old or new? It is imperative that the American people decide the kind of economy that they want and then take the necessary steps to bring it into being. This could be done, even within the framework of present foreign policy, if we were to adopt a program of stimulating selected imports. Such a policy would stimulate the importation of goods that we want, while restricting those that we do not want. Also, it would emphasize the importance of diversification. Instead of encouraging the importation of cotton textiles, chinaware, and similar goods which compete with the weaker segments of the U.S. economy, it would encourage imports that compete with those American industries that are relatively strong, such as automobiles, business machines, and agricultural implements. The recent spurt in imports of small European automobiles did not damage the U.S. automobile industry or the U.S. economy as a whole. On the contrary, it awakened the industry to the fact that Americans were becoming tired of being pushed around and really wanted smaller, more reasonably priced automobiles.

Before much headway can be made in solving the problem of import competition with respect to small business, it is necessary to distinguish between efficiently operated and inefficiently operated enterprises. Although it would be incorrect to hold that all small business is inefficiently operated, it is probably true that there is a greater proportion of inefficient management among small, than among large, businesses.

Yet, it cannot be denied that many of the smaller firms that are hardest pressed by import competition are exceedingly well managed. It is essential that a distinction be made between internal managerial efficiency and the external suitability of the type of operation in question to the American environment. An example will make the distinction clear.

Some of our china tableware factories in the Ohio River Valley are very well managed. To the extent that it is feasible to do so, the latest mechanical devices have been introduced. The management is efficient and the products that are turned out, by all the managerial yardsticks that can be conceived of, are produced efficiently. The same company—in fact, the entire industry—operates at a decided disadvantage, however, relative to much less efficiently managed plants in Japan. Since over three-fourths of the cost of producing the product is labor, the superior managerial efficiency and man-hour productivity of the American concerns are more than counterbalanced by the low wages paid in Japan. Externally, the industry is ill-adapted to the American environment.

This suitability to environment might well be called the external efficiency of an industry, as opposed to the internal efficiency of its management of men, materials, resources and production, and sales methods.

It would make little sense to protect companies that are inefficiently managed internally. The very essence of our free enterprise system is that the efficient should drive the inefficient out of business. To prohibit imports for the sake of perpetuating inefficient management would be inconsistent with this philosophy.

However, there is something to be said for limiting the degree of competition from imports that hurt domestic establishments that are efficiently managed internally but which are at an external disadvantage. Here is the area in which consideration needs to be given of the extent to which limitations should be placed on competitive imports. This is particularly the case where it is deemed desirable to keep such concerns in business in the national interest because of considerations of culture, art, special skills, economic diversification, and national security.

The near-insoluble problem is how to establish yardsticks for measuring internal efficiency. Establishment of boards or commissions to make such determinations would smack too much of dictatorial methods. Yet, it would be circular reasoning to judge efficiency on the basis of profit and loss statements, since they reflect both internal and external efficiency.

POSSIBLE APPROACH TO A YARDSTICK OF EFFICIENCY

By the nature of the case there is no objective measure of internal, or managerial, efficiency. As a substitute for an objective yardstick, something along the following lines would appear to be equitable and practicable.

1. Instead of concentrating so exclusively on solving the problems of an industry that is being hard hit by import competition (the U.S. Tariff Commission has encountered tremendous difficulty in defining industry) the Tariff Commission should be instructed to pay greater attention to the range of unit costs among the individual firms producing a given product.

2. Establish the principle that a small business is one in which no company has more than 500 workers. Then reach a decision as to whether it is desirable, in the national interest (taking into account clearly specified noneconomic, as well as economic, considerations) to keep the industry in business.

3. If the answer is in the affirmative, establish the further principle that domestic producers of the product in question are entitled to 50 percent (or some other proportion) of the domestic market.

4. It seems reasonable to assume that firms persistently producing at unit costs substantially lower than the unit costs of the marginal producers are internally efficient.

5. Impose a tariff equalizing the marginal cost of the most efficiently produced half of the total domestic output. Equalize this marginal cost with the cost of production abroad, as indicated by invoice value plus transportation.

6. Invoke as import adjustment assistance program along the lines proposed by President Kennedy (when he was a Senator), Senator HARRISON WILLIAMS and Senator JACOB JAVITS, to assist producers, whose costs are so high that they cannot compete against imports.

These "adjustments" bills provide that in instances where imports threaten injury to domestic producers the President can utilize the powers of the Federal Government to assist producers who are adversely affected to adjust to other, more efficient lines of production. This objective would be accomplished by special low-interest bearing loans, by providing retraining for younger workers (following the philosophy of the GI bill of rights), by accelerating the retirement of older workers, by increasing unemployment compensation benefits, and by enlarging the powers and scope of the U.S. Employment Service. Some of the distressed area proposals now under consideration make specific reference to the problem of displacement of workers by import competition.

7. This approach would have the advantage of eliminating internally inefficient firms by spreading the cost of transferring their labor and capital to more efficient lines of production over the entire country, while keeping in business establishments that are internally efficient (at least according to this rough yardstick) but which are at a disadvantage, externally, relative to low-cost foreign production.

8. Although this approach does not provide a precise means for measuring internal efficiency of production it does provide a yardstick that appears to be just and workable. The plan could vary as to detail. Instead of allowing domestic producers one-half of the domestic market, it could allow them two-thirds, or production up to what used to be called (by the late Prof. Frank W. Taussig, of Harvard, who was the first Chairman of the U.S. Tariff Commission back in 1916) the bulk-line cost, or distance O–X in the diagram (not printed in RECORD). The bulk-line cost is the point beyond which the average unit cost of production shoots upward abruptly. Beyond the bulk-line the firms can be said to be marginal.

CONCLUSION

Expanding foreign trade—both exports and imports—is essential for the welfare of the United States in these days of worldwide political bipolarity. The least intelligent way to solve the present balance-of-payments deficit problem of the United States would be to curtail imports. International trade is so essential to free world solidarity that we must do everything in our power to enable it to expand. Although the United States probably could get along tolerably well with far smaller foreign trade than it now has, other countries could not. To some of them, particularly those specializing in the production of a few raw materials, exports can mean the difference between economic life and economic death. The self-interest of the United States demands that we think of the economic strength of our friends and neighbors as well as of our own national strength.

With production costs as low as they are in certain foreign countries, particularly Japan, a highly industrialized country, it would not make sense to open our doors wide to all imports without taking care of the domestic producers who are injured.

This consideration lies at the very heart of the small industry problem.

The plan outlined in this memorandum provides a formula that seems to satisfy the requirements of the problem. It would not cut off all import competition, but it would provide for the transfer by the less-efficiently managed U.S. firms of their manpower and capital to other, more efficient lines of production. At the same time it would protect the more efficiently managed small companies against displacement by import competition.

No longer can we afford to drift in foreign trade policy, proclaiming a liberal, multilateral foreign trade policy while avoiding all serious injury from import competition, regardless of productive efficiency. We need to protect those American producers who are reasonably efficient, but it would be a disservice to perpetuate inefficiency be excluding all competitive imports.

Armed Services Recruitment Programs

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. HERLONG. Mr. Speaker, under leave to revise and extend my remarks, I submit the very meritorious suggestions of Dr. Joseph A. Shelley, of St. Augustine, Fla.:

ST. AUGUSTINE, FLA., *May 9, 1961.*

Hon. A. SYD HERLONG,
Member of Congress,
House Office Building,
Washington, D.C.

DEAR MR. HERLONG: I have been most disappointed and disagreebly impressed with the public relations of our various military services in their recruitment programs. Only last night while watching a U.S. Air Force recruitment program on television the entire appeal was made to the young man's desire for: (1) security, (2) chance for advancement, (3) technical education, (4) opportunity to travel and see the world, (5) 30 days vacation with pay during the year, (6) free hospitalization, (7) insurance program, (8) PX and housing benefits, and (9) retirement.

It seems to me that our military services would do far better if we appeal to our young men using such terms as: Services to country, patriotism, fidelity, loyalty, preservation of our way of life, protection of our families, and protection of all of our freedoms which the Constitution has given to us. None of these things are mentioned. I would say that if our young men would not respond to their country in its hour of need then we are indeed in a sad plight. It has been my privilege to belong to our Reserve Forces, both Reserve and National Guard, for some 22 years. It is my hope to continue serving in these units until I have at least 30 years service behind me. I do not consider it an imposition on me or my time for whatever I have given. I spent 3 years in the Army during World War II, of which almost that entire time was overseas. I was in combat with the infantry for 13 months. I do not feel that my country asked anything of me it was not entitled to.

Since World War II there has been a continuous and steady trend in this country to materialistic thinking; to security from the cradle to the grave and away from personal integrity and personal independence. If this appeal to the materialistic side of our young people is the only one which will bring young men and women into the service of our country then we have no hope whatsoever of surviving the coming years in the battle against our enemies. I would like to urge both the military committees of the Senate and House of Representatives to investigate this matter of public relations and of recruitment programs by all of our various services. I think it is disgusting and an insult to a good American to appeal to him through the methods which they are using today.

There is just a chance that a soldier might be called on to fight. God help us if our safety rests in the hands of soldiers and sailors whose only reasons for being in service are the nine I have listed above. I sincerely hope that my suggestions will not fall on deaf ears.

Sincerely yours,

JOSEPH A. SHELLEY, MD.

Statement on Loan Made by Small Business Administration to CAN-DO of Hazleton, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. FLOOD. Mr. Speaker, at this time I would like to make a formal statement for the RECORD regarding a $60,000 loan made by the Small Business Administration to Hazleton's CAN-DO.

The statement follows:

STATEMENT REGARDING HAZLETON LOAN BY SMALL BUSINESS ADMINISTRATION

I am urging my colleagues in the House who are interested in industrial expansion in their districts, particularly in small towns and rural areas, to take a good hard look at the provisions of section 502 of the Small Business Investment Act of 1958, as amended, which is administered by the Small Business Administration, and which is now permanent legislation.

A $60,000 loan for a tunnel and conveyor has been approved by this Administration for Hazleton, Pa., under the provisions of this act in participation with the Northeastern Bank & Trust Co., Hazleton, Pa. This is my district and it is in the heart of the anthracite coal region, a truly labor-distressed area.

The Small Business Administration loan is going to the Community-Area New Development Organization, Inc. The initials of the organization very properly spell out CAN-DO. This development company has raised $1½ million in capital funds from some 4,500 donors in the locality over the past 5 years. After CAN-DO had exhausted all available local funds for further industrial projects, it came to me in desperation seeking additional funds for the construction of the tunnel. I turned to SBA for assistance, and within 17 working days after an application was filed, a $60,000 loan was approved.

The tunnel and conveyor which CAN-DO is constructing with the proceeds of this loan will make nine industrial facilities CAN-DO has provided for lease or sale to business concerns within the Hazleton area. This tunnel will be leased to and used by General Foam Corp., a company engaged in the manufacture and sale of urethane foam and foam rubber products. The tunnel will connect two buildings located approximately 250 feet apart and which are owned by CAN-DO and leased to General Foam Corp. Through the use of a conveyor in the tunnel, the transportation and handling costs of materials between the two buildings will be greatly reduced from the present costs incurred by transporting materials by truck.

This loan was approved by SBA as a part of its established program to assist in the economic development of particular local communities by lending to a State or local development company which, in turn, provides facilities for specific small business concerns located in either urban or rural areas. It therefore seems particularly appropriate that the Secretary of Commerce, in delegating the authority under the Flood-Douglas sponsored Redevelopment Act, should delegate the authority to handle all commercial and industrial loans to the Small Business Administration. SBA already has 55 field offices established in key cities throughout the Nation, a staff of technical, managerial and production specialists who provide services to the small businessman in SBA's various programs.

Under the Area Redevelopment Act, before aid can be granted, financial assistance must be unavailable on reasonable terms from other sources, including Federal agencies such as SBA.

Accordingly, business concerns will be obligated to seek assistance from SBA before they will be eligible for assistance under the Area Redevelopment Act. Thus, SBA will have reviewed the concern's application for financial conditions and the availability of SBA financing, so that only SBA can effectuate the lending under section 6 of the Area Redevelopment Act without duplicating the work of other Federal agencies. As a matter of cold fact, section 24 of the Area Redevelopment Act specifically provides that the Secretary of Commerce shall use the available services and facilities of other agencies and instrumentalities of the Federal Government, so as to avoid duplication of existing staffs and activities. I believe the section is crystal clear—therefore SBA is now actively making commercial and industrial loans in areas of substantial labor surplus as well as those in areas of substantial and persistent surplus. They, of course, also make loans in areas not classified as distressed areas.

SBA is approving loans every day to small business firms and local and State development companies such as the loan to CAN-DO in Hazleton, Pa. They should continue to perform this valuable and much needed financial assistance under the Area Redevelopment Act. All the Secretary of Commerce needs to do is to delegate to SBA the responsibility, and I feel certain and confident that SBA will do the job with utmost dispatch.

Aid for Negro College

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, May 18, 1961

Mr. JAVITS. Mr. President, I am pleased to call attention to the desegregation of United Negro College Fund Week as proclaimed by Gov. Nelson A. Rockefeller.

I ask unanimous consent that the proclamation be printed in the Appendix of the RECORD.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

PROCLAMATION BY GOVERNOR ROCKEFELLER, OF NEW YORK

Many of America's Negro leaders have attained their positions and influence through training they received at institutions of higher learning supported by United Negro College Fund. There are colleges and universities of excellent standards. More than 170,000 alumni are respected and valuable citizens of the communities in which they live, people of distinction in the learned professions, the sciences and the arts, as well as in business.

The United Negro College Fund assists 32 member colleges, including such well-known institutions as Fisk, Hampton, Tuskegee, and Atlanta University. Forty percent of the students at these colleges receive scholarships.

While most of the students are native Americans, some 200 students from Africa are presently studying in American Negro colleges. Graduates of these institutions are holding responsible posts in various countries of Africa, some in Government, others as teachers and agricultural experts.

These institutions merit our respect and appreciation not only for what they are doing now, but what they are doing to meet the challenges of tomorrow.

Now, therefore, I, Nelson A. Rockefeller, Governor of the State of New York, do hereby proclaim May 15–21, 1961, as United Negro College Fund Week in New York State and I commend it to the sympathetic interest of all people.

Given under my hand and the privy seal of the State at the capitol in the city of Albany this 24th day of April 1961.

[SEAL] NELSON A. ROCKEFELLER.

By the Governor:

WILLIAM J. RONAN,
Secretary to the Governor.

The U.S. Savings Bond Program

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. WALLHAUSER. Mr. Speaker, under leave to extend my remarks, I call attention to the following editorial which appeared in the Caldwell Progress, an outstanding weekly newspaper published in my congressional district, on May 11, 1961.

In brief form, the Progress relates the history and success of the U.S. savings bond program, and I respectfully ask my colleagues to note the last paragraph of the editorial. There they will find a well-founded conclusion that thrift is not an outmoded word or practice.

The editorial is as follows:

A 20TH ANNIVERSARY

Twenty years ago the President of the United States handed the Secretary of the Treasury a small check, received in return a government certificate, and the U.S. savings bond program was born. Two billion bond sales have followed that first one. By the middle of this year, total series E bond sales will have reached the $100 billion mark.

The war boomed bond sales, and street rallies where millions of dollars' worth were sold became a common occurrence. With the end of the war, however, came gloomy predictions that bonds valued in the billions would be quickly cashed in, leading to serious inflation.

The predictions were wrong. Many bonds, of course, were redeemed, and their yield went into new homes, automobiles, educations, and war-scarce consumer goods. But in 1946, $30 billion worth of series E bonds were still held by the public.

Bonds are still being held by American citizens in record numbers, and purchases have steadily continued. More than 8 million workers, employed by 45,000 business firms, are a part of the payroll savings plan. Purchases of bonds on an installment basis, sometimes for as little as $1.25 a week, account for 40 percent of the annual dollar volume on series E and H bond sales. Most other sales take place through 20,000 banks and other issuing agents.

Series E bonds pay 3¾ percent interest when held to maturity. Investors can find higher interest-paying sources for investment, but the security offered by Government bonds is hard to match. Today bonds valued at $43½ billion are held by Americans. Sales are up, and redemptions are down.

"Thrift" is sometimes considered an old-fashioned word, but it is obvious that millions of citizens still understand its meaning.

The Shelter Gap

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. RODINO. Mr. Speaker, the lag in a positive, coordinated approach to the problems of civil defense is perhaps better known and appreciated in our large metropolitan areas. The heavy concentration of people, working and living there, keeps fresh in the mind the pictures of European cities ravaged from the air in World War II.

Yesterday, on its editorial page, the Newark Star-Ledger set forth some sound observations on the subject of "Civil Defense," which I want to bring to the attention of my distinguished colleagues:

THE SHELTER GAP

According to testimony before a congressional committee, there is a serious gap between the United States and the Soviet Union in the construction of fallout shelters. The Soviet Union has embarked on an extensive program of building shelters, Frank B. Ellis, Director of the Office of Civil and Defense Mobilization, testified. By contrast, we are doing practically nothing.

Fallout shelters adequate to offer protection to substantial numbers of people certainly could be a deterrent to a nuclear attack.

An adequate shelter program, however, is a tremendous undertaking. It is particularly tremendous if it is undertaken independently of other building programs.

During World War II the London subway provided an effective bomb shelter. If the subway had not served this purpose, perhaps the outcome of the war would have been different.

Whether the New York subway system could serve as a fallout shelter, and what could be done to make it serve this double purpose, might well be explored.

And it is possible that rapid transit developments in New Jersey could be dovetailed with civil defense so that tunnels could serve as fallout shelters.

Discussions on depressing superhighways also have called attention to the possibility of a construction which might be suitable for use as a shelter in time of emergency.

If the needs of civil defense were considered along with many other projects, the shelter gap might not be so wide.

Chelsea Naval Hospital Aids Servicemen, Families, for Over 125 Years

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the Chelsea Record, Chelsea, Mass., issue of May 11, 1961:

NAVAL HOSPITAL AIDS SERVICEMEN, FAMILIES, FOR OVER 125 YEARS

The Naval Hospital, Chelsea's oldest hospital and the oldest naval hospital continuously in commission, has been a tremendous asset for the entire Nation throughout the 125 years of its existence.

From a 4-story granite building that was able to serve 100 patients, it has grown to a teaching hospital of almost 100 buildings with a 975-bed capacity.

The present hospital grounds mark the site of the first home built in Winnisimmet colony, the residence of Samuel Maverick, the first white settler. It was located near the former main entrance to the hospital on Broadway near the old Charlestown drawbridge.

The old marine hospital was erected in 1798. The small building still stands and is now used as a storeroom for hospital equipment and supplies.

A second hospital was built on a 10-acre parcel of land, a few blocks from the present hospital.

In 1823 the U.S. Commissioners (the Secretaries of Navy, Treasurer, and War) purchased 115 acres of land from Anthony Dexter, a Boston physician, for the Naval Hospital's grounds and facilities.

The first naval hospital building has since been modernized and made fireproof and is now used as quarters for the nursing personnel.

The second marine hospital building was sold to the city in 1860 for use as a school. It was later destroyed in the Palm Sunday conflagration in 1908.

The third marine hospital was built in 1860, occupying about 11 acres of land. The structure, four stories high in addition to a basement, is now used as quarters for Waves of the First Naval District.

The Naval Hospital and its personnel gained national acclaim after both World Wars and the Korean conflict for the excellent job it did in saving the lives of hundreds of Americans and Allied servicemen.

Many of them, near death, were nursed back to perfect health after undergoing surgery. They were later given occupational and physical therapy, neuro-psychiatric treatment wherever needed and through the efforts of the hospital's readjustment center were restored to normal civilian lives.

XUM

Many Government and naval leaders from this country and abroad have been treated here. Most prominent among these is President Kennedy, who was brought to the Naval Hospital following the heroic PT-boat episode in the South Pacific during World War II.

It was during this stay, he says, that he made the fateful decision to make politics and public service his profession.

Following the Korean war, over 500 casualties were brought to the Naval Hospital for treatment. These were largely orthopedic, neuro-surgical, and frostbite cases that have since been corrected and the servicemen restored to normalcy.

In 1958, a new blood laboratory was dedicated by the U.S. Navy and Protein Foundation Inc., devoted to studying methods of preserving and storing human blood. The discoveries which have since been made here have been widely acclaimed as momentous advances in the field of medicine.

In the same year the hospital doctors were also hailed for having saved the life of little Judy White, the young sailor's daughter who was given little chance of living after about 80 percent of her body was seriously burned. But after many months of hospitalization, a number of operations and several skin graftings she was able to return home completely recovered.

Principal credit for the publicity given the near miracle belongs to film star Gregory Peck, who visited the youngster while she was a patient at the hospital and then discussed it on the Ed Sullivan television program.

ACCREDITED FOR TRAINING

In peacetime, in addition to caring for servicemen and their dependents, the hospital is frequently called upon to handle emergency cases which are flown there from naval installations and vessels in various parts of the world and other boats on the high seas.

Today the hospital, with approximately 1,000 civilians and Navy personnel, is approved by the American Medical Association for 4-year training in medicine, surgery, obstetrics and gynecology, X-ray, pediatrics, psychiatry, and dentistry.

The Government institution today has a staff of 80 Navy doctors in addition to a consultant staff of some 60 Boston physicians selected from Greater Boston medical school faculties and hospital staffs.

The hospital has been able to accomplish its tremendous success in treating servicemen and their families and restoring them to perfect health because of its many facilities which are not to be found at private institutions and many Government medical centers.

On full-time duty are two resident chaplains, a Catholic and a Protestant. Jewish patients are serviced by rabbis from nearby synagogues and temples. Permanent chapels have been erected on the hospital grounds where regular religious services are held.

The American Red Cross Club, staffed by full-time ARC personnel, includes recreation facilities, a library and writing materials, musical instruments and recordings. Here are presented much of the entertainment and other programs sponsored by outside organizations. Grey Ladies furnish services to the bed patients.

The recreation buildings, erected in 1944, also provides recreational and physical education facilities, educational services, and other similar equipment to aid the patient in his complete recovery.

The Hospital Corpsmen's Club, erected and equipped by the Knights of Columbus during the First World War, houses a gym, comfortable lounges for rest and relaxation, and a swimming pool.

The 120-bed hospital of the dependents' unit houses modern X-ray rooms, scientific laboratories, a library of medical photography and a nursery in addition to beds for adults.

The hospital also has a complete telephone center and telecart service by which the telephones are brought to patients unable to leave their beds in order that they, too, may make or receive telephone calls.

The naval hospital during the 125 years of its existence has provided work for dozens of Chelsea residents. In addition, hundreds of local families have benefited from the outstanding care and medical and surgical services available there.

Though primarily for servicemen, the naval hospital has played an outstanding role in the life, health, and welfare of Chelsea and other nearby communities.

Facts of Communism

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. WILLIS. Mr. Speaker, under leave to extend my remarks, I would like to place in the RECORD a commendatory review of the latest "Facts of Communism" volume issued by the Committee on Un-American Activities. The review appeared in the Freeman magazine of May 1961 and is written by our able coordinator of information for the House of Representatives, Mr. Lawrence Sullivan.

Those of use who serve on the committee have been gratified by a mounting demand from educators for copies of its "Facts on Communism" publications for use as a teaching aid. Reviews such as this which appeared in the Freeman will undoubtedly increase the utilization of these scholarly committee publications in the all-important and growing movement to inform our youth on the realities of Communist totalitarianism:

FACTS OF COMMUNISM: THE SOVIET UNION FROM LENIN TO KHRUSHCHEV

(Reviewed by Lawrence Sullivan)

A new paperback published by the House Committee on Un-American Activities, the second of a projected three-volume series, presents for the lay reader a complete and authoritative history of international communism and the devil's disciples who set it up.

From the mountainous records of the committee, accumulated through 22 years of hearings, and other sources, Dr. David J. Dallin, a world authority on the history and techniques of communism, has compiled a smooth-running 400-page narrative tracing the inspirations, motives, and methods of Lenin, Trotsky, Stalin, and Khrushchev.

Communism has advanced by conquest and terror, but it has also made headway because so many people have been led to believe that it is but the economic extension of parliamentary liberalism. In truth, communism is the sworn enemy of every form of representative government, and an economic failure besides. Lenin's basic philosophy, as expressed by a coconspirator was that "the masses are only the obedient tool of a group of revolutionists, the conscious minority, the bearers of the truth * * *." Acting on this principle, an elite of brutality become the determined authors of chaos, trying, by means of political and military conquest, to escape the consequences of their economic mistakes.

Tribute to George W. Norris

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Thursday, May 18, 1961

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Clyde T. Ellis, general manager of the National Rural Electric Cooperative Association at the George W. Norris Centennial Conference, in Washington, D.C., on May 16, 1961.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE NORRIS MISSION: KEY TO THE WESTERN WORLD

(Remarks of Clyde T. Ellis, general manager, National Rural Electric Cooperative Association, before the George W. Norris Centennial Conference, Washington, D.C., May 16, 1961)

On behalf of the committee of sponsors, and the sponsoring organizations, welcome to the George W. Norris Centennial Conference.

We meet to honor both the memory and the continuing ideals of one of the greatest statesmen ever produced by this Nation.

In the course of this conference, you will hear many distinguished leaders discuss the unique contributions of Senator George Norris to specific areas of American life. As you listen, you'll wonder, I'm sure, how one man could have accomplished so much—how one mind could have been so intimately concerned with such diverse human needs and aspirations.

I have been asked to make some opening remarks about that intense human being who was George W. Norris—and to try to relate his great work to the needs of the world of 1961. This is a challenging, and, for me, a proud assignment.

A challenge because we meet in a time of danger to the whole free world—a time in which we must make practical application of the vision and dreams of Norris if our economy is to meet the onslaught of a totalitarian system. Some of the Norris concepts have been adopted, and have added immeasurably to the strength of our country—but too many others, equally feasible, equally essential, exist today only in the yellowing pages of old copies of the CONGRESSIONAL RECORD, or in the minds of the few who have dared to follow in the Norris tradition.

This is a proud assignment because I am proud to have been a friend of George Norris. This is a pride which I know many of you enjoy, too.

I first met him in 1939, upon coming to Washington as a freshman Congressman from the hill country of northwest Arkansas. Prior to then, I had known him only through correspondence. As a member of the Arkansas Legislature, I had fought for rural electrification—and this great Senator some-

how found the time to respond to my letters and to offer advice and encouragement.

By a stroke of good fortune, my family and I found living quarters in Washington in the apartment house where the Senator and Mrs. Norris lived. Sometimes in good weather we would sit outside the Methodist Building on Capitol Hill in the evening, and, with a little encouragement, the Senator would talk of his great battles—of dragons slain and causes won and lost.

This was the aging Norris—nearing the end of his time on earth. But even then his mind was keen and full of things he still wanted to accomplish. When he spoke of coming battles his voice would firm and his eyes would glow with the fire of a champion.

I thought he was curiously unmarked and undaunted by the merciless beatings he had taken at intervals throughout a long and hectic career. Even near the end, his face held the qualities of a young idealist; and sometimes in his enthusiasm he still displayed the beam of youth.

It was so, for instance, when he made the major address at the first annual meeting of the National Rural Electric Cooperative Association in St. Louis in 1943. I had the honor to introduce him and to sit behind him and watch him, speaking without a note, deliver his last great speech. But it was a speech filled more with the dream of youth than with realization of an approaching end. For instance, note the simple conservation philosophy contained in this one paragraph from that speech:

"It is hard to bring happiness and comfort and joy to the human race, as the art has only in comparatively recent years been at all understood. And every day of every year that passes some bright mind, dreaming of better things for humanity, invents something new that electricity does. We know it is created by falling water. There never should be a drop of water come from the heavens and fall upon the earth beneath unless it does some good to man."

It was easy to forget then, as it is now, that Norris was one of the most controversial men ever to sit in the U.S. Congress—in both the House and the Senate. For the same uncompromising dedication to principle which achieved the great programs we represent also led him to battle for other convictions some of which were at the time extremely unpopular. Such was his one-man battle, extending over years, to break the dictatorial rule of Speaker Joe Cannon in the House of Representatives. He barely won that one—and I wonder what a different world it might have been today had he lost that one: no TVA, no Grand Coulee, no 50,000 airplanes a year in World War II, to mention just a few.

Throughout most of his career, Norris was considered an isolationist. This reputation was largely the result of his Senate votes against the Armed Ship Bill, our entry in World War I and the League of Nations. But by the time of World War II he had come to the realization that armed conflict is sometimes necessary and unavoidable—and he supported the war effort. Indeed his accomplishments, including the rural electric systems, supported it immeasurably.

I mention these things because they were essential facets of the Norris being—just as they are lingering elements of the Norris legend. To the end, he stoutly believed his stands, even his minority stands, were in the national interest. No amount of public indignation or ridicule could sway him from a conviction.

And for the sake of his monumental accomplishments in public power, in rural electrification, in labor, in farm legislation, all of the people whom we in this room represent can thank God he had the strength of his convictions.

He always believed the people would ultimately appreciate and approve his personal honesty and perseverence. I think he was right, because the one symbol that has become synonymous with his name is the word "integrity." No man in public life could ever hope for a finer epitaph.

This integrity, this courage, this indomitable will and selflessness are needed today as never before to carry out the domestic programs Norris envisioned. Norris is gone. Pinchot is gone. Le Olds is gone. Morris Cooke is gone. If you know where the new ones are, tell me, for I want to meet them, and I don't know them.

And I know we must have them.

The 1860's produced Norris. The 1960's must produce a new Norris, a new resources realist, not just for this Nation, but for this hemisphere. For all mankind.

Khrushchev says he will bury us. Nobody laughs when he says that, or, if one does, it's a nervous little laugh. We're awakening to the realization that the Communist totalitarianism can amass its whole economic system behind the achievement of a single objective. We've seen the result dramatically demonstrated in the missile and space races.

And the Russian capability in the industrial fields will sharply increase in the immediate future. The key is the mighty power generation and transmission pool which some of us have seen under construction and already in partial operation. Gigantic dams, high voltage interconnections and transmission grids, larger than anything in the Western World. Giant power. And a giant sized technical achievement.

And now we learn of Russian plans to cooperate with Finland and Norway in the development of the water power of their common borders—and in interconnecting their systems. Does this mean Russia will eventually interconnect with the power pool already in existence in Western Europe? The European democracies, you know, have long since interconected their power systems in an efficient international grid system. They had to do it to compete.

And on the other side of its enormous land mass Russia is cooperating with China in power development. We're told that China, with almost ruthless determination, is pushing construction of 250 dams, including one several times larger than any we can ever build, and has plans for a huge power pool of its own. Does anyone doubt that the Russian and Chinese power pools will eventually be tied together?

Generations of Americans have squabbled over development of the Passamaquoddy tidal project in Maine. Now we learn the Russians are interested in harnessing the power potential of the Bearing Strait between Siberia and Alaska. Does anyone in this room have a serious doubt as to which would be completed first if Russia owned both sides of the Strait?

What has happened to the imagination of America? Of the Western Hemisphere? Oh, yes, our Government has lately joined with Mexico in the building of two relatively small dams on the Rio Grande. And we finally got around to joining with Canada—long after Canada was ready—in developing the Niagara-St. Lawrence projects, and we have just concluded a treaty with Canada to divide up the Columbia River sometime.

What about our so-called private power companies? How interested are they in providing our country with the enormous advantages of efficient interconnections? Well, they've set an example. Rather the Detroit Edison Co. has. It operates near the Canadian border, and has an interconnection with a Canadian supplier.

But Detroit Edison will not in turn interconnect with American companies across the Michigan State line lest it become subject to the accounting regulations of the Federal Power Commission. Detroit Edison even got a special law passed to allow it to hook up with the publicly owned Ontario hydro without coming under the FPC. This is the brilliant achievement of the investor-owned companies in the field of international cooperation.

In many respects, Canada has been more farsighted than have we in resources development. We quibbled for years about Niagara and St. Lawrence and we can thank constant pressure from Canada for our participation in these projects.

And Canada managed to pass the benefits of these projects on to its people and industries. Our Government and the State of New York have managed to thwart the preference clause and let the power companies grab most of the benefits.

George Norris, Pinchot, Olds, Cooke, and Franklin Roosevelt were talking giant power in America before the Russians had a single major hydro project or one major interconnection. I suppose other Americans were talking of space travel long before the Russians had any capability at all in this field. Now, in both fields, they lead and we follow. How long is this to go on?

We talk about building a giant power grid in this country to interconnect our present hodge-podge of suppliers to provide the efficiencies that are possible only with true pooling of our generating capacity. At last we've found some public officials who will say this would be a good thing. Already the power companies are fighting it like death and simultaneously planning to build enough of it themselves to thwart any Government effort.

And as tragically funny as it seems, they may win. We may have no giant power at all in this country ever. Nobody even dares think about a trans-American power grid that would interconnect the capacities of our country, Canada, Mexico, and the rest of Latin America. It that fantastic? Is that something we should not even mention because we might be ridiculed?

Well, how fantastic is it that we now have a Communist dictatorship, Moscow controlled, sitting 90 miles from Florida? How fantastic is it that we may get other Castros in Latin America, and with them get hydrogen war-head missiles pointing at every American city?

It can happen and it will happen unless we offer something more than words to the millions south of our border. We must prove that our system offers more hope than communism—realistic hope.

Imagine, if you will, what would happen if overnight an efficient inter-American power pool could be started in earnest, including cooperatives and power districts, to carry electricity in abundance at low cost for homes and industries.

What would happen? It would trigger the biggest boon for both democracy and American industry in our lifetime. Unemployment would drop sharply. It would offer hope in countries where people have no hope.

Fantastic? Maybe it is. Maybe it's as fantastic as the notion that TVA could be built or that all the rural people in the United States could have electricity at a price they could afford to pay. As fantastic as Grand Coulee and the jackrabbits. Maybe it's as fantastic as the idea that workingmen could have something to say about their contracts or could have any contract at all. Or some of the other "wild" things George Norris used to talk about.

How we need a new Norris today. Among other things, we need his voice and his courage to prod this administration. Many people, I think, believed the New Frontier would come into power speaking and acting boldly

XUM

in the field of resource development and giant power.

It seems to me that the speech was a little bolder before the election than the acts have been since. We're getting some talk—good talk—and we're told some studies are being made—but where is the forceful, dynamic leadership we were told to expect? The old "no new starts" policy of a prior administration has been discarded, we are told. But where are the new starts?

You find them in the proposals made to date and let me know. Find the clues to the bold new forward thrust we were promised and have been expecting. The days are slipping past—fast.

This is not intended as criticism, but as a fact about which we must help do something while there is yet time.

In other areas in which we are interested the administration is making great strides. The area-redevelopment program has been set in motion—the rural electrics of the country have just finished a meeting here in Washington, attended by over 700 of their leaders—to study the rural aspects of this program. We hope it will be administered largely by REA.

And REA, we think, has achieved a significant new breakthrough in electric generation and another one in rural cooperative telephone loan policies.

But here the administration is building on, and improving on, the past. What we must also have today are new ideas, new visions, new solutions to the old problems. And spokesmen with the courage, vision and heart of George Norris, both in Congress and in the administration, to set new programs in motion.

Some official spokesmen must be the Moses who leads America into the promised land of giant power, a land where high-voltage transmission grids interconnect all major power sources, a land where we develop all our remaining hydro capacity, a land where we build steam plants larger and more efficient than any in existence in America today.

The benefits would be enormous. In the Missouri Valley alone, the simple interconnection of existing generating capacity would result in the addition of 1 million kilowatts of firm power. This is half as much power as is generated by Grand Coulee Dam, more power than is generated by any but a handful of dams in this country.

The combination of efficient pooling throughout the United States and the elimination of other unnecessary waste could cut in half the power cost to many Americans.

Will we ever have it? We will if we can find the men with the will and courage to follow in the tradition of George Norris. For, in his 40-year career, this farm boy from the Middle West became the symbol and leader of progressive legislation in America. On many issues, he was far ahead of his time. Some of the things decried as "radical" in his day are now accepted almost universally as responsible and essential national institutions.

Many of his dreams were never realized, and the fight goes on. In 1920, for example, Senator Norris was fighting for development of the Potomac River. Finally, in frustration, he cried out: "It is a moral sin that within the shadow of the dome of the Capitol one of the greatest waterpower possibilities is being wasted while we investigate and investigate." Thirty years later, we're still fighting the battle of the Potomac, and it's still being investigated.

But there is one difference. In Norris' day there were no rural electric cooperatives in Virginia, Maryland, and Pennsylvania crying out for this lower cost power of the Potomac, that would pay for the high dam completely—and so the tragedy today is multiplied.

The fight goes on, too, even to protect as well as to advance the accomplishments of Norris. The fight for comprehensive development of our great river basins, the fight to prevent the destruction of the Norris-sponsored rural electrification program, the fight for the right of the people to own their own power facilities if they desire to do so, the fight for the small farmer, the fight for the rights of little people generally.

We in this room are heirs to the great Norris tradition. Upon us, and upon the people we represent, has descended the responsibility for carrying on his magnificent battle for the people.

Upon us, too, lies the responsibility of finding, developing, and supporting the Norrises of tomorrow.

In his autobiography, "Fighting Liberal," the great economic liberator said this:

"I am sure that, from among America's fighting men and others, warriors will appear to fight the unending battle for good government. I am sure that, so long as there are men, there will be knights to lift their swords and press their shields against the enemies, corruption and evil.

"Liberalism will not die. It is as indispensable to life as the pure air all around about. It is deathless—it marches forward—and it will continue to march long after those who have carried its standards in past struggles are gone from this earth."

This was George W. Norris. Whence comes another?

J. Edgar Hoover Day, May 10

EXTENSION OF REMARKS
OF
HON. SAMUEL L. DEVINE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. DEVINE. Mr. Speaker, under leave to extend my remarks, I am happy to include in the Appendix of the RECORD an editorial that appeared in the Butler County American on May 6, 1961, commemorating the 37th year of J. Edgar Hoover as Director of the Federal Bureau of Investigation.

As you know, I had the honor of being an associate of Mr. Hoover a number of years ago and am happy to join my many colleagues in congratulating this great American for his continued fine public service.

The editorial follows:

J. EDGAR HOOVER DAY, MAY 10—HONOR HIM

May 10 has been designated as J. Edgar Hoover Day in honor of the FBI Chief's 37th year as Director of the Federal Bureau of Investigation.

This paper has said much in recent issues in praise of the FBI Director. We—nor you, or any other American—can ever say enough because he is all for which the American flag stands. He has protected that for which Old Glory waves and has not only caught Communists who would burn and trample it, but has carried on an educational campaign to inform citizens as to the danger of the Communist conspiracy with a thousand faces of deceit, designed to destroy the United States.

Negro citizens owe Mr. Hoover a special debt. For, without his successful work to keep this Nation free from Communist control, they would be lost in efforts to work for a place in the sun in cooperation with descendants of those who fought and died in the Civil War.

All gains made by a race, all progress made by industry or labor, all physical progress of schools or increased pay for teachers, all fine churches we build, or legislation passed to aid the aged and distressed areas, or any good done on the domestic front will be like pouring water down the drain if communism takes over. None today, or yesterday knows this better than J. Edgar Hoover.

And so, this paper calls upon Americans regardless of race, color, or creed to pause May 10 and speak out loud in honor of our No. 1 symbol—in the flesh—of our free system of government.

Flood Damage in the Wabash River Basin

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. MACK. Mr. Speaker, floods again have washed away tons of topsoil and ruined thousands of acres of crops in the fertile Wabash River Basin of Illinois and Indiana.

This is almost an annual occurrence in the Wabash Valley. Newspaper headlines for the past week have told a familiar story of National Guardsmen working with local sandbag crews along the levees, of families driven from their homes and of emergency assistance being offered to the stricken areas by the Federal and State Governments.

But helpful as the emergency measures are they are mere palliatives. What is needed is a coordinated attack on the basic problem of harnessing the Wabash and its tributary streams. They must be converted from a destructive to a constructive force.

I have, therefore, today reintroduced my bill to authorize the establishment of a Wabash Interagency Water Resources Commission. The commission would have the following duties:

First. To coordinate Federal, State, and local plans for development of water and related resources in the Wabash Basin.

Second. Prepare and keep up to date a comprehensive, integrated, joint plan for water and related water resources development.

Third. Recommended a long-range schedule of priorities for the collection and analysis of basic data, for investigation and project planning, and for construction of projects.

Fourth. Foster and undertake studies of water resources problems in the basin.

The Commission would be composed of members appointed by the President from the various Federal departments or agencies having a substantial interest in the work to be undertaken and one or more members, as the President deems appropriate, from each of the States of Illinois and Indiana, as well as one member from each interstate compact commission which has jurisdiction over any of the waters of the Wabash Basin. The President also would appoint the Chair-

man of the Commission. The Governors of the two States would be authorized to nominate the members from the States of Illinois and Indiana.

Comprehensive water resources development plans have been prepared in the past for certain areas, including the New York-New England region and the Arkansas-White-Red River Basin. Such plans have been of great value in developing projects for construction.

I am of the opinion that only through such an integrated program can we realize the full potential of the Wabash and its tributaries for bringing prosperity to this area and enriching the lives of its citizens.

Allison Lumber Co. Furnishes Lumber for Extension of the Nation's Capitol

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article from the Choctaw Advocate of Butler, Ala., appearing in their May 11, 1961, edition and titled "Allison Lumber Co. Furnishes Lumber for Extension of the Nation's Capitol." Naturally all of us in south Alabama are quite proud of the Allison Lumber Co. and to know that this company participated in the recent extension of the east front of the Capitol in furnishing clear-heart yellow pine lumber for parts of the construction. You will note that this type lumber which was never abundant is quite scarce and that more than 25 manufacturers of pine lumber were contacted before the Allison people informed the contractor that their company could fill the order. The very interesting article follows:

ALLISON LUMBER CO. FURNISHES LUMBER FOR EXTENSION OF THE NATION'S CAPITOL

An Alabama lumber company proudly participated in the recent extension of the east front of our Nation's Capitol in Washington, D.C.

Allison Lumber Co., Bellamy, Ala., learned that the Assistant Architect in charge of this historical project desired clear-heart yellow pine for parts of the construction.

This Assistant Architect, formerly associated with the famed restoration of Colonial Williamsburg in Virginia, strove to match as perfectly as possible the new structure and the existing structure. And he wanted yellow pine to construct outer parts of window frames to duplicate the appearance and structure of the originals.

John O. Batson, general manager of Allison Lumber Co., was told that the replaced frames after the fire of 1814 were thought to be made of pine native to the general Washington, D.C., area. Subsequent exploring populations in the East and Southeast and resulting suburban development have long since made this species—never abundant in that particular part of the country—scarce.

The Washington Woodworking Co., Inc., firm employed to produce materials for fabrication of the frames of the extended east front, contacted more than 25 manufacturers of pine lumber before its efforts led to the company in Bellamy, Ala. Batson told the firm that his company could fill the order.

While waiting for specifications Batson learned further that there apparently is no way to know how many frames survived the damage inflicted by the invading British during the War of 1812 when the Capitol and other Federal buildings were set afire.

(It was at this time, incidentally, that the Executive Mansion—as it was then called—burned. When it was rebuilt of wood and other material and painted white it became known to succeeding generations simply as the White House. The infamous attack in Washington came a few months after Francis Scott Key got his inspiration for our national anthem.)

Project workmen observed that some of the replaced window frames, dating back at least to 1814, were in excellent condition except for excessive coats of paint and surface mars inflicted through the years by visitors and normal wear. Aside from the desire for exact reproduction this endurance was another reason for wanting yellow pine in the construction.

When Batson received his specifications he called in his staff and went to work. Both Batson and his woodlands manager—Roger I. Bruce—are graduates of Yale University's School of Forestry.

Heartwood, as specified in the Capitol order, is developed in a tree's center through many years of mature growth. Its color varies from a rich yellow to a dark auburn and its natural preservative qualities—almost as effective as creosote—comes from the natural resins in its structure.

When this country was young there were great quantities of mature trees with thick heart centers. Today's young and vigorous stands—insuring abundance for the future as a result of modern tree culture and intelligent management—do not have as much of this heartwood. Excellent preservative methods and materials provided by modern science have virtually eliminated demands for heartwood.

Anyone who has resided in Alabama for most of his life would know that actually finding such timber was no great problem on this woodland, so beautifuly managed and carefully developed since 1914. The 110-foot fire tower of Allison Lumber Co. erected in 1924 by conservation-minded Col. E. F. Allison was the first in the State and today is a landmark for the entire area. This fire tower is now Allison Lumber Co.'s trade mark and has been registered with the U.S. Patent Office. Last year the company became part of the Marathon Division of American Can Co.

When the U.S. Capitol order was ready for shipment, it was loaded under close supervision on trucks, each end of each board clearly stenciled "Allison Southern Pine"—and sent on its way to 912 Fourth Street, NW., Washington, D.C. There Mr. Herbert P. Hall of Washington Woodworking Company brought out his approved shop drawings and workers set immediately to the task of building the window frames. A great amount of work was involved in these drawings, primarily because none of the existing frames could be removed from the walls for use as samples.

When complete, the frames were taken by truck to Capitol Hill and installed. In a matter of weeks close cooperation and attention to detail had brought trees from some of Alabama's most prolific forests to become a part of the Nation's most important building.

The cornerstone for the original Capitol building was laid by George Washington 26 years before Alabama was admitted to the Union. One hundred and sixty-seven years later this Alabama firm is proud to have participated—even in small way—in such a carefully planned historical restoration.

Misinformation on Aircraft Nuclear Propulsion

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. PRICE. Mr. Speaker, I trust my colleagues in the House will take the time to read the interesting editorial written by Mr. Robert Hotz and which appeared in Aviation Week, May 8, 1961, in regards to the tragic decision to cancel our country's aircraft nuclear propulsion program.

With the exception of several technical errors I vouch for the accuracy in Mr. Holtz's summary of the fate of our atomic powered plane program. These several points, however, in no way effect the soundness of the writer's argument that the fatal decision on the part of the Department of Defense was based on misinformation. Mr. Hotz is exactly correct.

From time to time I shall take the opportunity to inform my colleagues concerning the facts of the ANP story.

I commend Aviation Week and Mr. Hotz for this effort to inform the public on this most important national defense project.

The Aviation Week editorial follows:

MR. MCNAMARA'S MISINFORMATION ON AIRCRAFT NUCLEAR PROPULSION

(By Robert Hotz)

It is difficult to make sound decisions on the basis of bad information. Therefore, it is not surprising that Defense Secretary Robert McNamara has made a monumentally unsound decision in wiping out the aircraft nuclear propulsion program, because it was based on inaccurate and obsolete information spiced by a dash of deliberate distortion.

In fairness to Mr. McNamara, it must be noted that in his extremely short tenure in the Pentagon it is impossible for him to have developed expertise on all aspects of his multifaceted job. He must, of course, rely on the validity of information submitted to him by subordinates. It is easily demonstrated that the information submitted to him for his decision on the ANP program was grossly inaccurate, technically out of date and deliberately distorted.

Some may question Mr. McNamara's executive judgment in making such a momentous decision on such a technically and militarily complex subject after such brief exposure to it. We think the case of the ANP program will provide an interesting yardstick by which to measure Mr. McNamara's intellectual integrity and his capacity for penetrating the blanket of foggy misinformation that inevitably surrounds every newly appointed civilian executive in the Pentagon's upper levels.

If Mr. McNamara fails to penetrate this fog, refuses to make the effort to get his facts first hand from the responsible technicians, and only conducts a routine bureaucratic defense of his hastily reached decisions, it will bode ill not only for ANP but for the future defense of this country.

Let us examine for accuracy the public statements of Mr. McNamara in which he says he based his decision to wipe out the aircraft nuclear propulsion program.

1. He says that the Joint Chiefs of Staff have stated repeatedly since 1959 that there is no specific military requirement for a nu-

clear-powered aircraft. This statement is true as far as it goes, but it omits the rest of the JCS statement which said that eventual military potential of this program appeared so promising that it should be continued as a development effort aimed at early achievement of this capability. This latter point does not appear in Mr. McNamara's most recent justification of his decision, leaving the clear, if erroneous, impression that the Joint Chiefs have washed their hands of the ANP program. Actually, there has been a wide variety of specific military applications, both Navy and Air Force, for a nuclear-powered aircraft. But all of them hinged on the successful technical development of a complete nuclear-powered flying vehicle, which Mr. McNamara has now cut off.

2. He says that neither the General Electric direct cycle design nor the Pratt & Whitney indirect cycle appears to permit flight at altitudes in excess of 35,000 feet or above subsonic speeds. This altitude figure, along with the frequently quoted mach 0.8 speed barrier, were never meant to be technical limitations on the nuclear powerplant. They are simply the performing specifications laid down by Herbert York, former Defense director of research and engineering, to be met by the initial nuclear-powered aircraft. Both GE and P. & W. have actually designed supersonic applications of their respective nuclear cycles, and no responsible technician in this field would support Mr. McNamara's performance limitation figures. He can, if he is so inclined, easily trace their correct genealogy.

3. He says that the GE direct cycle engine would exhaust fission products into the atmosphere during takeoff, landing and normal flight making, it unlikely that the aircraft could operate from normal commercial or military airfields. The problem of fissionable exhaust products from the direct cycle engine can be eliminated both through operational procedures (i.e., using conventional jet fuel for landing and takeoff) and by technical solutions already determined feasible (i.e., treatment of the fission products before they exhaust into the atmosphere). Even without these methods, however, the fission products exhausting from the direct cycle engine were calculated to be so negligible that more than 50 such aircraft could operate from a single field without creating radiation hazards exceeding the Atomic Energy Commission permissible standards.

4. He says that the P. & W. indirect cycle has 15 miles of tubing carrying molten metal at temperatures up to 2,000° F. and uses 29,000 welded joints, so that a leak would constitute a severe hazard. These figures are about 4 years old and no longer accurate. But the important point is that Mr. McNamara apparently does not understand that both USAF and the commercial airlines are operating B–52 and 707 type aircraft safely every day with many miles of tubing carrying fuel, oil, hydraulic fluid and electricity—a leak in any one of which could be and has been hazardous to the aircraft and its occupants. Actually, the problem of countering the hazard of leaks in the indirect cycle system has been solved technically, as Mr. McNamara could easily determine by talking with the men who have done it.

5. He says that the GE-proposed B–52 flying test bed rigged with two nuclear-powered direct cycle engines could not be flown on nuclear power alone; that it has no technical value in the development program, and that it is simply a stunt. This will shock every engineer and military man who has been even remotely familiar with aircraft powerplant development for the past two decades. First, the statement is inaccurate because even one of the two nuclear-powered engines proposed would sustain the B–52 in flight at medium altitude, and both could certainly fly it with ease. This is hardly the point of a flying test bed rig for a new powerplant, as any propulsion engineer can readily testify.

Mr. McNamara indicates he completely misses the point that, far from being a stunt, this flying test bed is a vital step in the technical development process of any new powerplant and has been a standard technique in jet engine development for 20 years. We suggest he consult some of the senior naval aviators and Westinghouse and McDonnell engineers on the first and last time they attempted to mate a new jet engine with a new airframe without prior flying test bed time on the new engine. Like his Pentagon predecessor from Detroit, Charles Wilson, who ridiculed the 1952 proposal for a B–36 test bed for nuclear powerplants as a "shitepoke," Mr. McNamara simply does not understand the technique or significance of a flying test bed in new engine development cycles.

6. He says that cancelation of the ANP program does not mean discontinuance of research on high performance reactors because this work will continue under AEC. Actually, the AEC work authorized in this area under the fiscal 1962 budget has no specific orientation toward a useful aircraft application. It will operate at a small fraction of the previous program level and will mean the dissipation beyond any hope of future recovery of the several thousand engineers and technicians who, until Mr. McNamara's decision, represented the sole U.S. resource in this vital field.

A more detailed annotation of Mr. McNamara's public statements on ANP than is possible in this space would produce even more basic errors of fact. But even worse than this inaccurate information now being dispensed as gospel is the basically fallacious concept of the aircraft nuclear propulsion program, which Mr. McNamara apparently believes, as 15 years of wasted effort producing nothing but a billion dollar drain of taxpayers' money. Even a moderate amount of historical study on this subject would destroy this dangerous myth, which is a gross libel on the technical capabilities of the engineers and technicians who worked in this field.

The first 5 of these postwar years were spent in feasibility studies under the NEPA and Lexington projects. By 1951, both groups of learned gentlemen involved reached the same conclusion—that nuclear propulsion could be successfully used in aircraft and a program toward achieving this goal should be organized.

The technical development of ANP hardware got underway in 1952. For the next 8 years, it developed into a classic case of how political and executive incompetence can frustrate technical progress. Three times in this period the entire ANP program was canceled, and four times it was completely reoriented and aimed in widely divergent directions. With this sort of topside management and direction, it would not be surprising if little technical progress resulted.

The fact is, however, that despite this incredible vacillation, fund chopping and lack of clearly defined technical goals, the engineers and scientists working in the ANP field made truly remarkable progress—particularly in the past 2 years when the program achieved the type of technical momentum that usually heralds eventual success.

The ANP effort advanced reactor technique far beyond its previous frontiers and produced developments that will have wide application in many areas outside the aircraft field, such as remote power stations and marine reactors. It solved the basic problems of packaging reactors in small enough units to be employed in aircraft, of adequately shielding aircraft crew and equipment, and of operating the other subsystems required in a flying vehicle in the environment of radiation. It achieved potential engine life of 1,000 hours continuous operation at full power with endurance of from 5,000 to 10,000 hours continuous operation at normal cruising power. And it flattened the annoying nuclear power variation curve to a mere 6 percent from the previous standard of about 30 percent.

In all the 8 years of active work on ANP hardware, the prospects for successfully developing a militarily useful nuclear-powered aircraft were never so technically bright as just before the decision was made by Mr. McNamara to wash its achievements down the drain.

Perhaps the basic management mistake was requiring development of a vehicle to meet specific military requirements before basic engineering and operational feasibility of a full scale flying system was achieved. As each new technical milestone was reached additional military requirements were loaded onto the program—enough to make it founder from this cause alone.

Some of the Pentagon experts who kicked the ANP program around had a philosophy that would have demanded that the Wright brothers be required to solve the problems of supersonic flight before they should be allowed to launch their machine at Kitty Hawk. None of these people are now publicly visible in the ANP debacle, and it is Mr. McNamara who will take the credit or blame for this decision in the pages of history.

It is interesting to note that none of the Pentagon technical experts who are undoubtedly the source of Mr. McNamara's misinformation were available to testify recently before the Joint Congressional Committee on Atomic Energy when it tried to probe into the ANP cancellation. The underling witness who was finally sent from the Pentagon to this hearing convinced his congressional listeners only of his incompetence to discuss the subject at issue.

Cancellation of the ANP program will cut far deeper than the immediate effects on the three contractors involved in the two engine programs and the NX–2 airframe development. This decision arbitrarily shuts the door on a basic new source of power for aerial vehicles of many types, including some completely unforeseen now, and it falsely proclaims to the world that we have failed technically in another field where the Soviet Union is certain to publicly demonstrate its success soon.

But the most tragic aspect of the ANP cancellation is the amount of basically inaccurate and erroneous data on which it was based and the demonstration that there is apparently no opportunity for technical facts to be pumped into the Government's highest decisionmaking levels.

The epitaph now being carved on the tombstone of the ANP program may well be the same as that engraved on our tombstone as a nation if we fail to develop a better system of technical management in our Government that will permit the full potential of our technical and industrial resources to be marshaled to meet the challenge of our times.

Resolution of the Maryland State Federation of Young Republicans

EXTENSION OF REMARKS

OF

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. MATHIAS. Mr. Speaker, the Maryland State Federation of Young

Republicans met in convention on May 13, 1961, in Hagerstown, Md. The convention took formal action in commending two Members of the Congress of the United States for their leadership in public affairs. I take pleasure in appending the copy of the resolution of the convention stating its approval for the patriotic service of Senator EVERETT MCKINLEY DIRKSEN and Representative CHARLES A. HALLECK:

Whereas the Honorable EVERETT MCKINLEY DIRKSEN, Senator from Illinois, and the Honorable CHARLES A. HALLECK, Representative from Indiana, have been elected by unanimous vote of their colleagues in the U.S. Senate and the House of Representatives, to serve as the Republican leaders of their respective House of Congress; and

Whereas during 27 years in the Congress of the United States they have demonstrated their qualities of leadership and full devotion to the principles of the Constitution of the United States, and to those of the Republican Party; and

Whereas Senator DIRKSEN and Representative HALLECK have been commended for their service as Republican leaders of the Congress by the Honorable Dwight D. Eisenhower, former President of the United States; and by many other of the leaders of the Republican Party: Be it therefore

Resolved, That the Convention of the Young Republican Federation of Maryland expresses its support for Senator DIRKSEN and Representative HALLECK, in their capacities of Republican leaders of the Senate and House, respectively; and further, that said convention publicly states its approval of the continuation by the Republican leaders in Congress of their efforts to inform the people of America of the Republican viewpoint in the Congress, and of the Republican policy on issues facing America today; be it further

Resolved, That copies of this resolution be transmitted to Senator DIRKSEN and Representative HALLECK at the U.S. Capitol in Washington, D.C.

Consolidated Badger Cooperative Resolutions

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. LAIRD. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD resolutions adopted by the Consolidated Badger Cooperative at their annual meeting on May 2, 1961. The resolutions are as follows:

RESOLUTION—FREE FLOW OF MILK

Whereas over 80 percent of Wisconsin's milk is used and consumed outside our boundaries; and

Whereas it is beneficial to the economic interests of Wisconsin agriculture to encourage easy access of Wisconsin milk into other areas: Now, therefore, be it

Resolved, That the membership of Consolidated Badger Cooperative support the free flow of milk principle and opposes barriers designed to thwart this movement of milk in interstate commerce.

RESOLUTION—INCOME TAX

Resolved, That the members of Consolidated Badger Cooperative, in annual meeting assembled this 2d day of May 1961, take the following stand regarding income tax treatment of cooperatives.

1. The present income tax treatment of cooperatives (including the exemptions granted qualified farmers' cooperatives) is fully justified and necessary and should be continued.

2. The net margins of cooperatives which are distributed to patrons and members, including dividends on capital stock, should be included in the gross income of patrons for the year in which received by the patrons regardless of the form in which the distributions are made.

3. Proposed efforts to limit the time during which net proceeds may be retained by a cooperative for capital purposes, without being subjected to corporate taxation, would destroy cooperative financing methods and should be opposed.

Italy's Economic Renaissance

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. RODINO. Mr. Speaker, amid the current news stories of internal disintegration and foreign strife in every corner of the world, there are occasional stories about social and economic progress in some countries. Such a story appears in today's Washington Post and Times Herald, written by A. N. Spanel, chairman of the International Latex Corp.

Because it does present such an encouraging report on a country whose national vitality is so important to our own and all of the free world, I am sure my distinguished colleagues will find it of interest:

Visitors to Italy are deeply impressed by palpable evidences not only of a new prosperity but of a new spirit. For those who have personal memories of the country's virtual collapse only 15 years ago, this rebirth of a great nation has a touch of the miraculous. And they have, too, the special satisfaction of knowing that the miracle was wrought by freedom.

The cold statistics, and reports by longtime American observers on the Italian scene, confirms the visitor's impressions.

The Rome correspondent of the Christian Science Monitor, Walter Lucas, writes in the New Leader about "Italy's continuing economic miracle." Our former Ambassador to Rome, James D. Zellerbach, writing in the Saturday Review, attests that "Italy is not only emerging as an industrial nation of the first rank; it is also enjoying a major cultural renaissance whose impact extends far beyond its frontiers." The Fortune correspondent reports that in Italy "good times have arrived and may have come to stay for the next decade."

To grasp the magnitude of this victory, it should be recalled that in the short span of three decades—1914 to 1945—Italy was embroiled in two disastrous World Wars. For 23 years it was held in the paralyzing straitjacket of fascism. In the second of the wars it was caught in the strangling pincers of the Mussolini-Hitler alliance.

The end of these tribulations saw the nation's economy in a shambles, its currency virtually valueless, its spirit at low ebb. Deep social conflicts were impelling the country toward civil war. Exploiting idle hands and empty bellies with zealous skill were the Communists, who dominated the internal liberation forces. Small wonder that the experts sadly prophesied doom.

But today, though the country is still beset by economic and political problems, there is no doubt that the prophets were wrong. The Communists, true, are still the second largest political party; but, in the words of Mr. Zellerbach, they "now try to present themselves as the advocates of mild reform rather than of violent revolution."

The fact is that Italy today is busy, booming, optimistic. Even in relation to its most desperate problems—excessive population, unemployment, the underdeveloped Mezzogiorno or Italian south—the old defeatism is evaporating. The creative energies of a wonderfully gifted and industrious people are again in full eruption.

The national economy, initially pump-primed by generous American dollar aid, has been growing by 6 percent a year; the trade balance is favorable; the lira is stable. According to official figures, 1960 scored, as against 1959, an 18-percent rise in industrial investment, a 10-percent rise in employment, 6 percent more consumption.

The providential discovery of oil and gas in North Italy and Sicily helped trigger the economic upsurge. Italians entered the international market and became outstanding merchants in the petroleum world. By now it is the automotive industry that paces the new prosperity, with an almost fourfold expansion since 1950. Steel production tripled in the same decade. Smaller yet striking growth has been registered in rubber, synthetic fibers, chemicals.

The rise in living standards is visible to the naked eye. Italians are spending more than ever before not only for necessities but for luxuries. Once a land of bicycles, Italy has become a land of motor vehicles, its roads and streets jammed by everything from motor scooters and Italian-made automobiles to big foreign cars. Television antennas have become commonplace even in remote mountain villages.

In this economic renaissance, American investors and industrialists are playing a large and wholesome part. Already over 300 U.S. firms operate in Italy—usually in partnership with local capital—and their numbers keep growing. More and more of them, attracted by favorable tax and other incentives, find this land ideal for branch factories.

Most significant, as one surveys the Italian social scene, is a deep awareness among the people that the miracle of rebirth has been made possible by the climate of freedom and cooperation with the great democracies. The country plays an important role in the European Common Market. Undemonstratively and without histrionics, it stands resolute in devotion to the free world coalition. Italy has proved itself consistently as a loyal ally. Her people, old in civilization, are ever aware that nations, like human beings, are endowed with strengths and weaknesses, and they knowingly accept us as we are, with all our strengths and all our weaknesses.

Italy has risen from the depths of defeat and defeatism to become master of its own destiny. Forewarned by a hairbreadth escape from the clutches of communism, the Italians appear determined to preserve human freedom. In this resolve they merit the understanding and unstinting cooperation of all their allies, and America especially.

It is altogether desirable that Italy's leaders and its special genius be given ever bigger roles in all free world alliances and enterprises. They have won this right by magnificent performance under the most adverse conditions.

The Italian people are the custodians of a glorious heritage of history and culture. Their contributions are in the marrow and

at the heart of our Western civilization. It is cause for profound satisfaction, therefore, that their new renaissance is enabling Italy to contribute measurably once again to the world we cherish.

Why Talk to Khrushchev?

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. LIPSCOMB. Mr. Speaker, in view of the current speculation as to the possibility of a meeting between President Kennedy and Premier Khrushchev next month, I believe a column on this subject authored by Mr. Robert T. Hartmann, Los Angeles Times Washington bureau chief, is especially timely and noteworthy.

The column is entitled, "Why Talk to Khrushchev?" and appeared in the May 17, 1961, issue of the Los Angeles Times.

Mr. Hartmann discusses Premier Khrushchev's aims, purposes, and past performances, and, in effect, poses the question of what could possibly be gained through a Kennedy-Khrushchev meeting at this time. I agree with his observations.

Under leave to extend my remarks I submit this item for inclusion in the RECORD:

WHY TALK TO KHRUSHCHEV?
(By Robert T. Hartmann)

The prospect of another tete-a-tete between the President of the United States and the Premier of the Soviet Union, perhaps in some quite little coffeehouse in Vienna, causes me to cry for my beloved country.

What can we possibly gain by it? One can easily imagine a dozen ways Mr. Khrushchev will capitalize on Mr. Kennedy's apparent capitulation to the summit idea, but how can the United States emerge from such a meeting one whit better off than we are now?

Certainly, in the 5 years since he emerged as the chief of the Soviet state Mr. Khrushchev has given us ample opportunity to see him in all his unwhimsical moods; keeping an eye on front man, Bulganin, at the first Geneva summit, tippling a touch in Belgrade, stomping the Hungarian freedom fighters, trading belly blows with Vice President Nixon in Moscow, flinging untranslatable proverbs at Hollywood's hospitality, lecturing Iowans on growing corn, patting the heads of President Eisenhower's helpless granchildren, screaming abuse in Paris at his erstwhile host, hugging Fidel Castro, and banging his shoe at the United Nations.

All these performances were, in my opinion, as carefully postured as any television newcaster's. They were designed to accomplish Mr. Khrushchev's purpose of the moment and not a single thing he has ever said or done since posthumously denouncing Stalin, the man who made him, has advanced the interests of the United States by so much as 1 millimeter.

Nor, on the record, can it be shown that Mr. Khrushchev has contributed in any way whatsoever to the consolidation of peace—a phrase he often uses, or to the general welfare or happiness of the human race.

On the contrary it can be shown over and over again that it is completely impossible to influence Mr. Khrushchev in any way he does not intend to be influenced, and that his statements, whether uttered face to face or by long distance diatribe, are utterly meaningless as a basis for agreement.

Then why should the President of the United States talk to him?

Mr. Nixon, whose never-a-dull-moment mission to Moscow and Siberia I covered in 1959, has been publicly proposing such a Kennedy-Khrushchev get-together. He says it would persuade Khrushchev he is up against a tough opponent, which nobody should know better than Mr. Nixon. But the former Vice President should also know that debating doesn't count much in Communist campaigning.

Perhaps Mr. Nixon is doing President Kennedy a little favor by trying to allay domestic criticism of the plan in advance, though I have no notion why he should undertake such a chore. During their presidential race, when the Republican nominee vowed he would go to Warsaw if elected, Senator Kennedy tartly replied that he would go to Washington—where the President of the United States belongs.

I concur.

When President Eisenhower, with some misgivings, invited Mr. Khrushchev to the United States, Senator Kennedy wrote to angry constituents that he sympathized with their moral indignation, but on balance supported the President's decision.

Mr. Eisenhower explained his course by saying that, after all, there was only one man in the Soviet Union with the power to negotiate meaningful agreements, which made normal diplomatic talks rather useless.

But after Mr. Khrushchev came to Washington, Senator Kennedy for one spotted the flaw in this reasoning. Khrushchev is indeed the only Soviet official worth dealing with—but he won't deal.

"The Khrushchev I met," Senator Kennedy reported in October 1959, "was a tough-minded, articulate, hard-reasoning spokesman for a system in which he thoroughly believes. He was not putting on any act when he talked about the inevitable triumph of the Communist system. I think it is well that the American people saw and heard this kind of man and this kind of talk. I think it is important that we realize what we are up against."

As one who followed Khrushchev on his free-swinging tour of the United States, I concur again. But Senator Kennedy might ask President Kennedy now, why see and hear this kind of man again?

Appointments to Our Service Academies

EXTENSION OF REMARKS
OF
HON. CLARK MacGREGOR
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. MACGREGOR. Mr. Speaker, all of us are vitally interested in the process of selection of young men for appointment to our Service Academies. All of us are seeking to find boys with the highest degree of motivation to serve their country in its military forces. The problem of retention of top-grade people in the services is a serious one.

The following letter which I have received from a young man in Minnesota's Third Congressional District, which I am privileged to represent, typifies the fine attitude which we all hope to find in appointees to our academies:

MAY 13, 1961.

Hon. CLARK MACGREGOR,
Old House Office Building,
Washington, D.C.

DEAR MR. MACGREGOR: I was extremely elated and thrilled to receive your telegram announcing my appointment to the United States Air Force Academy in Colorado.

I want to thank you for making this possible. Needless to say that, while I am very happy about my appointment, I am also conscious of the responsibility it carries. Responsibility to you, my Congressman, and to the Government of the United States.

I hope I can live up to this trust that has been invested in me. I shall do my very best to make sure that I don't let anyone down.

Once again, thank you very much for this wonderful opportunity.

Sincerely,

ROBERT ALAN LARSEN.

The Un-American Activities Has a Problem

EXTENSION OF REMARKS
OF
HON. HENRY C. SCHADEBERG
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. SCHADEBERG. Mr. Speaker, as a freshman Member of Congress, I was proud to receive as one of my first assignments membership on the Committee on Un-American Activities. As a newcomer to this august body, I refrained from any public comment on what immediately struck me as the almost intolerable physical working conditions of the committee staff.

There has come to my attention a graphic description of the office conditions which the committee staff uncomplainingly endures. Since the story is in public circulation as a supplement to Women for America Review, I feel I need now have no hesitation in calling the situation to the attention of my fellow colleagues by inserting the article in the Appendix to the RECORD. The author of the article is Maurice Ries, well-known Hollywood writer, who has succeeded in depicting the offices of the committee in a very few, well written words. His article follows:

THE UN-AMERICAN ACTIVITIES COMMITTEE HAS A PROBLEM
(By Maurice Ries)

You have seen the Committee on Un-American Activities of the U.S. House of Representatives, or pictures of it, conducting its hearings, wrestling with its enemies—with your enemies, that is. But what goes on behind the scenes? What of the committee at work: of its offices, its equipment, its staff?

Naturally, you understand that the committee is an arm of the U.S. Congress. You know the Congress is a majestic body and that its committee is cloaked with the dignity of the Government of which Congress and committee are parts. You are aware that the committee is the stanchest (and almost the last remaining) rampart in the Nation's languid efforts to hold off the we will bury you onslaught of world communism.

You may even know that the committee's offices are on the second floor of the sprawl-

ing, grey-granite Old House Office Building, across the street from the Nation's Capitol. But what about quarters? Under what kind of physical conditions must it operate, as it carries on the invaluable routine that occupies so much more committee time than hearings and other outwardly visible activities?

To put it bluntly, the conditions aren't good. The House Committee on Un-American Activities lives like Cinderella before the invention of glass slippers.

The staff numbers upward of 50 men and women (several of whom have worked for the committee, continuously, for more than 16 years). It is packed into 10 rooms—2 of them, however, not even connected with each other, or with the rest. One is on another floor.

Ten rooms—only two are of standard size for the building. For the most part, the remaining eight have been created by subdividing.

Half filling the director's office, because of a lack of space elsewhere, is a massive table topped with green felt. Here meet the nine members of the House of Representatives who comprise the actual committee.

Five of the committee's little squad of investigators have their desks and certain file cabinets and a table or so packed into a room where two desks should be. Several additional investigators are having to do their chores elsewhere, jammed in among other staff members. Incidentally, the House Committee on Un-American Activities gets along with only about eight investigators in all. In the Senate, that McClellan-Jack Kennedy-Bobby Kennedy committee which probed labor's misdeeds employed more than 80 investigators: 10 times as many.

The eight investigators, together with file clerks, typists, secretaries, two attorneys, a librarian, researchers, editors, proofreaders, indexers, a switchboard operator, an information officer, publications shippers, a fiscal officer, a staff director, an administrative assistant—these carry on the committee's day-by-day staff operations in Washington.

The room, in many ways the most important, is, unfortunately, the worst. This is the long, narrow crypt presided over by the committee's librarian, a pleasant lady long a part of the staff. Once upon a time this was simply the end of a main corridor. Someone walled it off, to create a sort of tunnel to nowhere. It is a room of many purposes. Here the librarian and her assistant have their desks, chairs, tables. Here are banks of card file cabinets—and this is the very heart of the committee's operations. In those cabinets are the names and records of several million Americans with subversive affiliations. The committee has been building up these files for 23 years. Today they form a fantastically comprehensive source consulted by all security agencies in the Government. As a result, the files ultimately affect just about every sensitive job in the Nation: in defense plants, in the military, in intelligence work, in Federal employment, and in a dozen additional areas.

By repeated Presidential order, these and other committee files (for example, the scores and scores of file drawers filled with pamphlets, organizational letterheads, clippings, photographs, copies of speeches, magazine articles, and countless other types of source material) must be checked by Federal investigative agencies, including the military, before an investigation can be considered to be complete. Probably the most important user of this material is the FBI.

As a matter of fact, certain of the agencies keep researchers in this office of the Committee on Un-American Activities on a full-time basis.

But the accommodations which the Committee on Un-American Activities is able to provide for visiting investigators are downright heartrending. At one end of the clutter are various battered old tables, covered with brown wrapping paper, accompanied by a clutch of orphaned chairs. On the tables are gooseneck lights guaranteed to keep Methusaleh's name alive. Unfortunately security men from proud and properly equipped agencies must toil at those tables in semigloom, elbows bumping elbows and chairs bumping chairs.

Add sets of shelves, books, stools, wastebaskets, telephones, photocopy machines—one of them as bulky as an upright piano—and you realize that here is a room bulging at the seams. Then crowd in a number of busy people, and—but why go on?

Que será será. If the committee cannot obtain more space for its work, it must work in the space it has. The work is the thing. For it is work which vitally affects every American alive, and uncountable numbers yet unborn.

The Committee on Un-American Activities has to perform its large miracles on short rations. A larger appropriation would help.

Take a look at the punctuation mark terminating this sentence. Then look at the entire page. The committee's $331,000 budget for 1961 is about the size of that dot, when compared with the horrifying sums of your money (and mine) that the U.S. Government is pouring into Communist Tito's pocket alone. Think what this committee, against communism and for America, could do with a budget the size of even three little dots instead of one.

Anyone for the House of Representatives giving its Committee on Un-American Activities a modest million a year?

Leaping Socialism

EXTENSION OF REMARKS

OF

HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, May 18, 1961

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from Barron's for March 13, 1961, entitled "Leaping Socialism: Public Power May Run Riot in the Kennedy Administration."

The article accurately sets forth the obvious commitment of the Kennedy administration toward a massive public power program. Except for the paragraph dealing with the so-called no new starts policy, which is partially incorrect, I think it is an excellent article and deserves the attention of the Members of Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LEAPING SOCIALISM—PUBLIC POWER MAY RUN RIOT IN THE KENNEDY ADMINISTRATION

(By Shirley Scheibla)

WASHINGTON.—If the Kennedy administration can win congressional approval, the New Frontier may see the development of public power on a scale unprecedented even in the palmiest days of the New Deal. In the process, President Eisenhower's partnership policy for joint Government-private utility projects will take a back seat. In the words of Stewart Udall, Secretary of the Interior: "We are not running out searching for ways—as seemed to be the case in the Eisenhower administration—to let private industry have access to major hydroelectric sites or to falling water at some of the dams built with Federal funds."

Moreover, in their efforts to justify the high costs of several of the projects, administration officials are engaging in some unorthodox bookkeeping. For example, in their preliminary cost estimates they propose to include sizable outlays for fish, wildlife and recreation. The higher spending, in turn, would be justified by the intangible benefits involved. At the same time, power from such projects may be sold at unrealistically cheap prices by stretching out the cost-benefit period, upon which rates are based, from the present 50 years to a full century.

Actually, despite the recent vast expansion of investor-owned utilities, public power for the past generation, has grown at an even faster pace. Interestingly, while the major inroads by the Government were made under Presidents Roosevelt and Truman, the momentum carried over into the first few years of the Republican administration. As a result, during Mr. Eisenhower's first term, the annual rate of increase in Government-owned plants rose to an alltime peak of 14 percent. By contrast, the private utilities boosted their capacity by only 9 percent.

True, the high rate between 1952 and 1956 is somewhat deceptive. For one thing, the groundwork for most of the Federal projects completed during this period had been laid previously. Significantly, during President Eisenhower's second term the percentage dropped to 8 percent—the lowest since 1920. Then, too, the partnership policy played a significant role in the rapid growth of the public utility districts (PUD's) in the Pacific Northwest, much of which, in effect, was for the benefit of private utilities. Thus, in the 1956–60 period PUD and State power capacity rose 20 percent, Federal projects only 5 percent.

After fighting the PUD's for years, the private companies teamed up with them in developing hydro projects, to their mutual advantage. Since the former can issue tax-free bonds, they can arrange cheaper financing; in addition, they usually find it easier to secure Government licenses for damsites. The private utilities, for their part, contract for substantial amounts of electricity, guaranteeing the PUD's a steady market. Similarly, Bonneville Power Administration built transmission lines for the Northwest Power Pool, composed of both PUD's and private utilities. Both publicly and privately generated power goes into the pool for delivery to all types of users.

In general, the Eisenhower administration held to the policy of "no new starts" as far as big projects were concerned. However, it did take an interest in those designed to harness the Colorado River, notably the $325 million Glen Canyon Dam in Arizona, which upon completion in 1964 will generate some 900,000 kilowatts. Another $435 million will be spent on other projects on the upper Colorado River, under authorizations passed by Congress in 1956.

President Eisenhower apparently took no active part in the long and hotly contested fight over Hells Canyon. The issue was whether Idaho Power Co. should be allowed to build three dams on the Snake River or whether the Government should build one high dam, which would be much more expensive. Idaho Power finally won out in 1955, when the Supreme Court upheld the license which had been granted earlier by the FPC.

A few months later, the company began building the 450,000-kilowatt Brownlee Dam, and completed it late in 1958, at a total cost of $63 million. Preliminary work then began on the Oxbow Dam; scheduled for completion next fall, it will generate 218,000

kilowatts. Under the FPC license, construction of the third dam, Hells Canyon, was to have gotten underway by August 1961. However, since operating capacities of the other two substantially exceed original estimates, Idaho Power may request an extension.

President Eisenhower also seems to have adopted a hands-off policy in the famous Dixon-Yates case. This, it will be recalled, involved a fight between the public power bloc and two private utilities—Southern Co. and Middle South Utilities—over supplying power to the Atomic Energy Commission. On the other hand, his influence probably helped check the expansion of the TVA under Federal legislation passed last summer. Except for certain towns in Kentucky, the agency was permitted to push back the boundary of its service territory by only 5 miles.

While Kentucky Utilities was affected adversely, Southern Co. apparently escaped with nothing worse than minor TVA encroachment; Middle South, and other adjacent utilities, were not affected. Even more important, the measure provided that the TVA must raise capital in the open market rather than draw upon the U.S. Treasury (Barron's, Nov. 21, 1960).

However, the legislation by no means spells a complete halt in the expansion of TVA's generating capacity, particularly from steamplants. For example, the agency currently has plans for a huge 800,000 kilowatt unit near a coal mine in Kentucky—300,000 kilowatts bigger than the largest unit so far put in service by a private utility. Moreover, President Kennedy's appointment of several public power proponents to key positions in Washington may lead to new proposals for expansion by the TVA.

Meanwhile, the administration is blueprinting a huge program of costly projects for hydroelectric power and flood control. However, in presenting their recommendations to Congress, officials realize that they somehow must justify the heavy spending by commensurate benefits. To this end, President Kennedy recently directed the Budget Bureau to "reevaluate current standards for appraising the feasibility of water resource projects."

Currently, the bureau is taking a new look at its Directive A–47, which Interior Department officials consider too restrictive in determining "benefits" in a Federal power project. Their main objection is its prohibition against calculating "indirect" benefits and the specification that those allowed for recreation, fish and wildlife must not be greater than the actual cost. (Up to now, very little has been spent for such purposes.) At the same time, as noted, Interior officials are discussing the possibility of figuring benefits over a 100-year period rather than the present 50 years.

The Burns Creek project, which Interior Secretary Udall is expected to push particularly hard on Capitol Hill, lends itself especially well to such calculations. It involves an outlay of $45.4 million for a dam, generator and reservoir on the Snake River near Idaho Falls. Operation of the Burns Creek facilities would be integrated with the existing Palisades project about 30 miles downstream. In addition, the new dam would have a storage capacity for 100,000 acre-feet of irrigation water.

As now written, the Burns Creek "feasibility" report shows recreational benefits based on only the actual construction of minimum facilities; no indirect benefits are calculated. However, Interior officials say that they can work these out, and if the Budget Bureau approves, they would like to include them in an addendum to the report.

The Department also wants to start charging off sizable amounts of the cost of power projects to the development of recreational facilities and fish and wildlife. Officials believe that such bookkeeping will keep kilowatt rates low. Currenlty, costs are computed on the basis of installation, maintenance and operation, plus interest of 2½ to 3 percent, to be returned to the U.S. Treasury. Part of these costs are charged off to flood control (nonreimbursable) and irrigation (repayable but without interest). Rates then are set high enough to enable the system to operate without a loss over the 50-year repayment period.

By using instead a 100-year basis, the Burns Creek project would show benefits exceeding costs by a ratio of 1.48 to 1, instead of only 1.27 to 1. The same kind of figuring could be applied to two other big power proposals now before Congress: the $170 million Frying Pan project in Arkansas and Colorado, and the Crater-Long Lakes division of the Snettisham project, near Juneau, Alaska, costing approximately $38.4 million. The latter first was submitted to Congress by President Eisenhower in September 1960. At that time, the Budget Bureau suggested that further efforts be made to encourage State or local governmental agencies or business interests to finance and construct the project. However, the Kennedy administration obviously wants it to be a Federal undertaking.

By the end of this session of Congress, the Interior Department expects to recommend a dozen projects for development of water resources, in addition to 10 already pending.

Two would be mainly for power—the Auburn-Folsom south unit of the Central Valley project in California and Devil Canyon in Alaska. Cost is estimated at $181 million for the former, including a 515-foot high dam on the north fork of the American River, about 30 miles northeast of Sacramento. This dam would form a 1 million acre-foot reservoir and provide waterpower for a 155,000 kilowatt plant.

Principal feature of the Folsom South plan is a 67½-mile main canal to bring water from the American River to the project lands east of Sacramento and Stockton, and south of the river. On the basis of a 100-year analysis of benefits for the Auburn part of the project, the Interior Department has come up with a benefit-cost ratio of 2.24 to 1.

The Devils Canyon hydroelectric project would supply power to the area served by the railroads from Seward to Fairbanks and would cost a mammoth $498.9 million. The fact that this project would be solely for power underscores a significant phase of administration policy. Power no longer will be, as in the past, just an adjunct of flood control and irrigation. Indeed, in many cases besides Devils Canyon, it will be the primary purpose. Thus, power from Devils Canyon is designed to spur the economic growth of Alaska. In defending the project, officials say that private utilities are not interested, since there is no ready market for power at a price at which they could make a profit.

The administration has even more ambitious plans. For example, it wants to interconnect all existing public power projects. The idea is to start with the Bonneville Power Administration and the Central Valley System of California and connect them with the Colorado River power grid in Arizona. The next link would be with the Missouri Basin System and thence back to Bonneville in Montana. From this point it would not be difficult to join the Southwestern Power System in Oklahoma, Kansas, and Arkansas. The latter already is connected with the TVA.

These interconnections would be the administration's answer to the complaint that some Federal power systems are losing millions of dollars annually. The General Accounting Office reports, for example, that the Southwestern Power System and related activities went into the red by $5.7 million in fiscal 1959. Similarly, the Columbia River Power System had a net loss of $10.7 million from commercial power operations for the year ended June 30, 1960. In addition, a GAO report due out in 3 or 4 months is expected to show a loss for the Southwestern Power System.

According to administration spokesmen, better marketing through interconnections, rather than higher rates, will put these projects into the black. As an example, they cite the Missouri Basin system. While it boasts a generating capacity of 2 million kilowatts, the system actually produces only 1 million. Greater use of the capacity obviously would mean increased operating efficiency. Officials believe they could accomplish this objective by tying together areas which have peak operating loads in the summer with others having winter peaks. Nebraska, for instance, has high summer consumption, owing to the use of air-conditioning equipment. Farther north, however, peak usage occurs in the winter, largely from electric heating.

As yet, Interior Department lawyers have not decided whether the interconnections would require specific authorization from Congress. At any rate, however, this body would have ultimate control, since it holds the purse strings. When asked about the complete cost of the project, one administration official leaned back, looked up, as if searching for some astronomical answer and then said, "It's impossible to come up with a figure on the whole thing this early. We're just getting started, but you can bet it won't be cheap."

The strategy will be to go to Congress for financing one leg of the interconnections at a time. Officials want to get started on the project this year, but to date have not arrived at what they consider a reliable estimate of costs. However, they have made a rough calculation for a stretch of 250 miles on the first leg, which would run roughly 1,000 miles from Fidels, Oreg., to Los Angeles. This sample was selected because the Government already has the right-of-way, as well as alinement and footage information. Interior Department officials calculate that a 500,000-kilovolt line for this 250 miles would cost $38 million. On this basis, the whole 1,000-mile leg would run to $152 million. However, officials emphasize that this is a very rough calculation, not an actual estimate.

Another method of figuring costs low enough to keep power rates cheap would be the use of "basin accounts." The principle here is that no matter where power is generated, the account pools it and analyzes the expenditure on the basis of the whole basin, instead of one project. Last month, Commissioner of Reclamation Floyd E. Dominy suggested to the House Interior and Insular Affairs Subcommittee on Irrigation and Reclamation that the principle of basin accounts be extended to all 17 Western States. So far, Congress has authorized such bookkeeping for the Central Valley of California, the Missouri Basin and the Colorado storage project; legislation is pending for one for the Pacific Northwest.

In recommending whether a new project should be public or private, administration spokesmen say that a key consideration will be the rate cost to consumers. The Government, it should be noted, enjoys a significant advantage in this respect, since in addition to the proposed new bookkeeping methods it not only pays virtually no taxes but also enjoys below-cost interest rates.

Finally, the Kennedy administration is preparing to ask for additional funds to investigate new projects. Thus Commissioner Dominy told the House subcommittee that the administration is reviewing the Eisenhower budget and "it is not unlikely that additional funds may be requested by the President."

Undoubtedly part of these funds would be used to study the development by 1970 of comprehensive river basin plans in cooperation with individual States. This project was recommended by the Senate Select Committee on National Water Resources in a report at the end of January. In his highly publicized resources statement last month, President Kennedy endorsed the idea wholeheartedly. He added: "I urge the Congress to authorize the establishment of planning commissions for all major river basins where adequate coordinated plans are not already in existence."

How much of this vast and costly program is launched naturally depends upon Congress. However, public power proponents are more optimistic than they have been in years. Not only do the usually sympathetic Democrats control both Houses of Congress, but now a friend also sits in the White House.

Public versus private power

Administration	Period	Number of years	Rise in kilowatt capacity [1]	
			Investor-owned utilities	Government-owned utilities
			Percent	*Percent*
Harding-Coolidge-Hoover	1920–32	12	9	11
Roosevelt:				
Prewar	1932–40	8	1	10
Wartime	1940–45	5	3	12
Truman (2 terms)	1945–52	7	7	9
Eisenhower:				
1st term	1952–56	4	9	14
2d term	1956–60	4	9	8

[1] Average rate of increase, compounded annually.

A Global War for Survival

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1961

Mr. RAY. Mr. Speaker, this morning's mail brought a valuable and timely editor's report entitled "A Global War for Survival," by William Randolph Hearst, Jr., editor in chief of the Hearst Newspapers. The report follows:

A GLOBAL WAR FOR SURVIVAL

The news this past week again spelled out the message so clearly that, at the risk of sounding like a stuck needle on a record player, I must repeat an alert which has been sounded often before in this column:

We are in a global all-fronts war for survival despite the absence of major shooting.

The North Atlantic Treaty Organization (NATO), via a communique of its Ministers' Council meeting in Oslo, made an important contribution to understanding this widened Communist threat to all free nations. NATO took itself out of the regional class expressed by its name and announced that from now on it considered its defense mission to be worldwide.

In so many words, even regional defense pacts seem a form of isolationism when facing a Red assault in practically every area of human activity, in practically every area of the world.

But this facing up to the harsh facts of life in the 1960s—so obvious to NATO—seems still beyond the comprehension of some of our closest neighbors in Latin America.

A self-imposed blindfold labeled "nonintervention" makes them unable to see the threat to their liberty on their doorstep. This was shockingly (although not altogether unexpectedly) demonstrated in the past few days by Brazil.

Janio Quadros, the new President of Brazil, issued a diplomatic note making it clear that he opposes any hemispheric action against the Communist puppet regime of Fidel Castro in Cuba.

This southpaw fling of a monkey wrench into the works of hemispheric solidarity might be expected from Mr. Quadros, whose background is lefty. Since taking office he has set the wheels in motion for Brazil's resuming diplomatic relations with the entire Communist bloc of nations.

Apologists for Latin American statesmen who flirt with the Reds always remind us that they need to appease the backward and underprivileged masses of their people who have been influenced by Communist propaganda.

In the light of the experience of democratic nations in the past 2 decades, that argument makes no sense. It has only been a matter of time for the Communists to enslave any country which played ball with them.

Readers of this column know of my warm friendship for our southern neighbor nations. But it seems to me that Castro's recent avowal of his affiliation to the Red camp has made it possible to separate the sheep from the goats among the Latin Americans.

From now on we should recognize that any Latin American regime which takes a "hands-off Castro" stand in really favorable to his Red beachhead.

There is no longer the excuse of ignorance. Of course, as President Kennedy has warned, the United States will have to act firmly in our own interest if it becomes clear that nonintervention merely masks nonaction against communism in the Americas.

That's a bridge still to be crossed. But there is another bridge closer to hand. I am referring to the hundreds of millions of dollars appropriated and earmarked for U.S. aid to Latin American Nations, with more still to come.

Just as charity begins at home, help begins with friends. U.S. aid should never be considered a means of buying friendship—for a nation which can be bought can be bought back.

The American people are going to take a dim view of helping a Brazil headed by a Castro camp follower.

Let's help nations who are friendly to us. Let's not throw away the U.S. taxpayer's hard-earned bucks on nations asking to be bought as friends.

In contrast to the politically expedient nearsightedness of Mr. Quadros, encouraging news comes from another sector of the global contest—South Vietnam.

Vice President LYNDON JOHNSON combined forceful sincerity with easygoing Texan charm to give a lift to anti-Communist morale, which I think will be felt throughout southeast Asia.

And morale is badly in need of a lift. Our fumbling ineffectiveness in landlocked Laos, logistically one of the worst places in the world for military support, has provoked neutralist sentiment in Thailand, a member of SEATO.

It has dismayed our stanch Filipino friends.

In South Vietnam itself, Communist guerilla raids and terror tactics have increased in strength and audacity.

It is gravely evident that unless we are prepared to see southeast Asia fall piece by piece into Communist control, we must say to the Communists: So far and no farther.

South Vietnam is far better suited than Laos as a place to say that for two reasons: (1) geographically it is easier to supply and support, and (2) President Ngo Dinh Diem is a strong, purposeful, nonvacillating ally.

He is of the same stamp as our good Arab friend, President Habib Bourguiba of Tunisia (who has been our more-than-welcome guest these past days), or the late and great President Ramon Magsaysay of the Philippines.

We couldn't have a better envoy than Vice President JOHNSON to carry the administration's assurance of large-scale support to President Diem.

LYNDON told the National Assembly we are ready immediately to help increase its 150,000-man regular army; to equip and train its civil guard and build up the village militia, including adding to our group of military advisers.

Nowhere was it indicated that we would be asked to commit fighting troops to South Vietnam. Such a commitment was opposed in this column last week as unnecessary. Since Vice President JOHNSON and President Diem reached "complete agreement," obviously Mr. Diem doesn't consider them necessary either.

Because we are in a global war—mostly cold but peripherally hot—the question of censorship inevitably has come up in Washington.

This past week the question troubled Defense Secretary McNamara and Senator RUSSELL, chairman of the Armed Services Committee, to the extent that they made page 1. They were concerned over disclosure of military information "of benefit to our potential enemies" although Mr. McNamara conceded it had been cleared for release by Pentagon security officers.

Secretary McNamara proceeded to damage his case by appearing to suggest that newspapers ought to avoid printing unpleasant facts, and instead should bear down on assertions like "we have the most perfect antimissile system," etc.

What he seemed to be saying was that our newspapers ought to be accessories of misinformation.

One of the most pertinent remarks was made by James S. Pope, executive editor of the Louisville Courier-Journal, who has served three terms as chairman of the Freedom of Information Committee of the American Society of Newspaper Editors.

"Those editors who have fought for freedom of public information have always excepted secret military data," Jim Pope observed.

He need point only to World War II, where voluntary censorship by the press was magnificently observed.

It is a delicate subject. Human nature being what it is, imposed censorship can be—and has been—used to cover up mistakes.

No responsible newspaper would knowingly publish confidential information of value to an enemy. Nor should it knowingly close its eyes to bureaucratic blundering, swept under a security rug.

The administration and the Pentagon must appreciate that a free press is as important to the survival of our way of life as ICBMs.

WILLIAM RANDOLPH HEARST, Jr.

Debt Management: A Treasury End Run?

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. BYRNES of Wisconsin. Mr. Speaker, the able business and financial

writer, Mr. J. A. Livingston, in his column "Business Outlook" appearing in the Washington Post for Wednesday, May 17, 1961, reports a willingness on the part of the Kennedy administration Treasury officialdom to circumvent the statutory interest limitation and use an end-run expedient in its debt management operations.

It will be recalled that the Eisenhower administration recommended to the 86th Congress that legislation be enacted repealing archaic 4¼-percent interest rate ceiling on marketable bonds. The Democratic majority in the previous Congress refused to take favorable action on that recommendation.

At that time the distinguished Secretary of the Treasury, the Honorable Robert B. Anderson, declined to risk issuing bonds at a discount unless Congress was willing to assure the legality of such an action by clarifying an ambiguous uncertainty in present law. The Congress declined to even clarify the status of present law.

Now it has come to light that the Kennedy administration is willing to rely on an Attorney General memorandum in the imporant debt management area and risk taking what the courts may hold to be an illegal action involving the sale of U.S. marketable bonds at less than face value so that their yield will be above 4¼ percent.

Mr. Speaker, there is no need for the Kennedy administration to run this dangerous risk. The New Frontier Treasury officials should come before the Congress and ask for legislation repealing the interest rate ceiling. In this way we could deal with the problem of debt management forthrightly and with integrity. It has been conclusively established and proved that the interest rate ceiling does not keep the cost of Government borrowing down and may even tend to increase that cost.

I have introduced legislation which would give to the administration the statutory authority that it needs to obtain a proper balance between long-term and short-term funding of the debt. The legislation, H.R. 1997, has been pending before the Congress since January 6, 1961, and reports have been requested from the executive departments since January 31, 1961, but no reports have been received to date.

There is no question in my mind that wholehearted Republican support would be given to any responsible administration request for legislation on this subject. Mr. Speaker, when we are dealing with something as important as debt management, we should proceed in the way of certain legality rather than risk the danger of possible illegality and resulting disaster.

As a part of my remarks I will include in the record at this point the column by Mr. Livingston and a press statement that I made in regard to its contents:

[From the Washington Post, May 17, 1961]

END RUN AROUND FEDERAL INTEREST BARRIER

(By J. A. Livingston)

At the minute, it's purely academic, but it's also pretty sly.

President Kennedy's Secretary of the Treasury Douglas Dillon, who was drawn from the ranks of Republicans, is prepared to do what his Republican predecessor, Robert B. Anderson, was too forthright to do.

Robert V. Roosa, Under Secretary for Monetary Affairs, has let it be known that he will not hesitate to sell long-term Treasury bonds yielding 4½ or 4¾ or even 5 percent. He won't tag them 4½, or 4¾, or 5 percent. He'll label them 4¼ percent.

For flexibility in financing, Dillon and Roosa are prepared to sell a 30-year 4¼ percent bond at 95 cents on the dollar. The return to maturity would be 4.9 percent, or 0.65 percent above the ceiling.

Dillon and Roosa have a letter from U.S. Attorney General Robert F. Kennedy saying that the Public Debt Act of 1942 supersedes the Second Liberty Bond Act of 1917.

The 1942 act authorizes the Secretary of the Treasury to issue bonds "on an interest-bearing basis, on a discount basis, or on a combination interest-bearing and discount basis, at such price or prices and with interest computed in such manner and payable at such times as he may prescribe and his decision with respect to such issue shall be final."

Secretary Anderson had a ruling from his general counsel to this same effect. He hesitated to use it because of an ambiguity. The 1942 law was an emergency measure. Congress did not say "at any interest rate." Why had it retained the 4¼ ceiling if complete freedom were intended?

Moreover, Anderson was not willing to rule out the chance that bonds sold at an effective interest rate above 4¼ percent would be open for legal challenge.

CONSULTED HILL LEADERS

Anderson consulted congressional leaders: Would they pass a resolution saying that the law permitted sale of discount bonds? Or would they repeal the ceiling and give the Treasury authority to issue long-term bonds at any interest rate? The House Ways and Means Committee refused to report out a bill. Debates on the floor of the Senate indicated great opposition.

Consequently, Secretary Anderson was forced to sell short-term issues exclusively, including the so-called magic 5's—a 4-year-10-month Treasury note with a 5-percent coupon. That is the absurdity of the ceiling. The Treasury can put a 5-percent rate on a bill, a certificate, or a note—anything less than 5 years. Beyond 5 years, no.

At the moment, Secretary Dillon and Under Secretary Roosa are in a position, because of the drop in interest rates (influenced in part by the Federal Reserve System's nudge policy), to sell long-term bonds at or below 4¼-percent interest. The ceiling is irrelevant.

But if we have an industrial boom, if credit becomes scarce (at it usually does during periods of high business activity), then effective rates might rise above 4¼ percent.

LET'S END CEILING

Dillon and Roosa are making an end run around recent legislative (or, rather, nonlegislative) history, relying on the Attorney General's statement that selling discount bonds yielding more than 4¼ percent does not circumvent any congressional prohibition. If it doesn't, why did the last Congress refuse to grant it?

There's no doubt that the 4¼-percent ceiling on interest rates is an anachronism. Secretary Dillon deserves the flexibility Anderson couldn't get. But his way of going about getting it isn't exactly true blue, honor bright, or sparkly eyed.

A government that demands honesty in business has to be honest, forthright, and direct, itself. Let's get rid of the ceiling—all the way—not by sleight of hand, but by an act of Congress. What the last Congress wouldn't do for a Republican President, it probably will do for a Democrat.

If the Democrats dodge the issue in Congress, the least the Republicans can do is bring it up. It's good politics and good ethics.

Nineteenth Century Suburb—Luxury Apartments Are Changing the Face of Yorkville, but European Aura Still Prevails

---

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. SANTANGELO. Mr. Speaker, I have the privilege of representing the 18th Congressional District of New York, which comprises the Yorkville and East Harlem sections of New York City, wherein the economically poor and the well to do abide peacefully and public housing and poor housing contrast with the luxury apartments which are sprouting throughout the Yorkville section. The Duke of York never realized when he supplanted the Dutch in New Amsterdam that his fame would endure because of the name New York City and Yorkville, which means the city of York. The history of Yorkville is the history of change. Ethnic groups have come and gone but Yorkville remains the same, the garden spot of the city of New York.

A new local newspaper, Manhattan East has captured the spirit of Yorkville, has traced some of the background of this section of the greatest city in the world, and has made come alive a community which maintains its identity in a melting pot of America. I believe the readers will sense the heartthrob of this section and will understand the development of my area by reading this article published in Manhattan East on Thursday, May 11, 1961.

The article follows:

NINETEENTH CENTURY SUBURB—LUXURY APARTMENTS ARE CHANGING THE FACE OF YORKVILLE, BUT EUROPEAN AURA STILL PREVAILS

A bit of Mitteleuropa in the midst of an American metropolis, Yorkville has been one of the city's most renowned melting pots since its establishment in 1790. When the area was a thriving village of woodlands and country estates in the 19th century, it was inhabited almost exclusively by German immigrants and their descendants who gave it the distinctive atmosphere which has survived up to the present day.

Since the turn of the century Czechs, Hungarians, Slovaks, and Irish families have lent a variegated air to Yorkville; one can hear a melange of native tongues and view their manifestations—local newspapers, pastry shops, night clubs, and community halls.

Named, naturally, after the Duke of York, old Yorkville was bounded by Lexington Avenue and the East River, from 52d to 54th Street. Before the American Revolution it consisted of open countryside and a few scattered homesteads, but the migration of several German pioneers marked its beginnings as a town just before the start of the 19th century. Much of it became farm-

land, and a large tract was owned by the Schermehorn family.

In the early part of the 1800's Yorkville became the choice spot for well-to-do businessmen's summer homes. Its main street was the Boston Post Road, built in 1673 to facilitate the transportation of mail to New England. As the city's cobblestone pavement did not yet extend beyond 28th Street, inns along the road were resting places for travelers wearied by the hilly coach route. Among these was the Hazzard House, located on 84th Street and 3d Avenue, a roomy tavern and the first stop on the Danbury post coach line which connected Harlem and New York.

The east eighties along the river are dominated by Carl Schurz Park, named for the German revolutionary who became leader of the Republican Party after his arrival in the United States in 1856. An adviser to President Lincoln during the Civil War, Schurz was also the editor of the New York Evening Post. Gracie Mansion, located on a hill in the park, was built in 1779 by Archibald Gracie, a shipping entrepreneur, and restored in 1927.

The lower nineties between Park and Third Avenues contained the Ruppert, Ehret and Ringling estates; soon the area was populated by residents employed in the brewing industry and today the Ruppert brewing plant stands as a Yorkville landmark.

East of the hamlet itself in the river section known as Hell Gate, Commodore Isaac Chauncey built his palatial villa while John Jacob Astor received many illustrious guests at the family residence on the south side of 88th Street. Washington Irving, a frequent visitor at the Astor mansion, described the area at that time in glowing phrases: "I cannot tell you how sweet and delightful I found this retreat; pure air, agreeable scenery, profound quiet."

COMMUTER LINES

Not long after, however, the section's peaceful air was disturbed by the clatter of railroads and several other coach lines. Yorkville might have remained a small town, but competition among the transportation companies incited a price war; the low fares and pleasant appearance of the area increased travel and settlement in the upper portion of the city.

As the growing metropolis expanded its boundaries northward, Yorkville gradually assumed an urban facade. A number of brownstones sprung up in the 1880's and were quickly occupied by German exurbanites from "Little Germany" in Tompkins Square. The turn of the century witnessed a building and business boom as rows of middle class tenements crowded the private homes.

The German language, which had prevailed for more than 100 years yielded ground to English; European residents were starting to adopt American culture. After the First World War, however, a wave of immigration, spurred by adverse conditions in Germany and other countries, restored the European atmosphere once more.

Meanwhile, Slovaks were establishing a Little Bohemia in the lower 70's east of 2d Avenue. This quarter was settled after Czechoslovakia gained its independence in 1918. The neighboring nationalities combined many of their interests, although the Czechs founded their own "sokols" where children learned their families' native language and culture. These schools have been maintained throughout the years.

Perhaps the best known of Yorkville's sons was Robert F. Wagner, Sr., who came to this country from Nastatten, Germany, in 1877, and worked his way up from a newsboy to U.S. Senator. A graduate of City College and New York Law School, Mr. Wagner served in the New York Legislature as assemblyman from 1905–08 and as senator from 1909–18. He was elected to Congress four times, beginning in 1926, where he sponsored a host of New Deal acts including the Social Security Act, the National Labor Relations Act, the U.S. Housing Act, and the National Industrial Recovery Act.

YORKVILLE IN THE THIRTIES

As the third reich ascended to world-wide prominence in the 1930's, Yorkville found itself the center of agitation, both pro and anti-Nazi. A minority of residents embraced Hitler's cause, organizing a Nazi German-American Bund which imported storm trooper uniforms for its officers and paraded through the streets. In 1938 a fight exploded at the Yorkville Casino, 210 East 86th Street, between German sympathizers and members of the American Legion.

Nevertheless, groups opposed to the Nazis were greatly in evidence. Several groups carried on anti-Nazi activities, while books banned by Hitler were stocked by a number of Yorkville bookstores. Many young men from the community enlisted in the U.S. Armed Forces. Both groups circulated newspapers promoting their causes in the area.

Since the end of the war these activities have died out as Yorkville continues to prosper in peace. Today the section houses other nationalities although Germans are still in the majority. Statues of national heroes dot the area and parades celebrating European holidays bring back memories of "the old country."

Hungarian Independence Day, March 15, is commemorated by festivities and a march to the statue of Louis Kossuth, hero of the 1848 revolution, on Riverside Drive.

Yorkville today is pressed by the development of public housing and its largely Puerto Rican tenants on the north, and luxury co-ops and apartments moving up from the south. It is interesting to note, however, that the Yorkville Chamber of Commerce, 249 East 86th Street, has a German descendant, Hellmut Vollmer, as its president, while the entire site is permeated by German delicatessens, travel agencies, import houses and conditorei, as well as shops featuring the goods of other nationalities.

It is not surprising that, despite Americanization and urbanity, Yorkville is still a favorite of tourists and city dwellers who want a taste of European cosmopolitanism on this side of the Atlantic.

Russia's Economic Mythmaking

EXTENSION OF REMARKS

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. LIPSCOMB. Mr. Speaker, an editorial entitled "Russia's Economic Mythmaking," which appeared in the May 15, 1961, Los Angeles Times, contains an informative discussion of the difficulties encountered in obtaining a true picture of the economy of the U.S.S.R.

As the editorial explains, because the U.S.S.R. maintains a closed society we have to rely very heavily on statistics furnished by the Soviet Government concerning Soviet economic growth and concerning developments in various segments of its economy.

The editorial discusses many of the pitfalls involved in relying on the figures and statistics the Soviets present, which are often distorted or are not based on standard methods of making economic assessments or evaluations. These pitfalls must, of course, be kept constantly in mind in any comparison made between the United States and the U.S.S.R., and also, for example, in regard to Soviet statistics on its aid activities to other countries, or other economic activities.

Under leave to extend my remarks I submit the editorial for inclusion in the RECORD:

RUSSIA'S ECONOMIC MYTHMAKING

"Another year of economic competition between the two social systems has passed, a good one for the Soviet economy. Industrial output grew by almost 10 percent * * * in 1960 the gross grain harvest was 445 million poods (about 267 million bushels) higher than in 1959. Soviet industrial output in 1964 will exceed the 1958 level in the United States by 4 percent."

CONSIDER THE SOURCE

These are some of the economic claims which the Soviet Union is presenting to the world. They are being spread through the Division of Economic Competition of the Two Systems, a state bureau dedicated to propagandizing Khrushchev's pet theme that communism will peacefully triumph in the economic field. Figures such as these are quoted in official journals and U.N. publications, for in the closed Soviet society almost the only economic statistics are those provided by the Government.

The free world has long realized the importance of getting a true picture of the Russian economy. Yet the difficulties involved in gathering material for accurate assessments are immense. Official secrecy and obvious distortion of economic information are the biggest blocks. But Western economists also find that the standard tools of their trade frequently cannot be used to measure the Soviet system.

The matter of currency convertibility is a simple example. What, in terms of dollars, does the claimed gross national product of Russia amount to?

WORTH OF THE RUBLE

The official rate of exchange of rubles to dollars differs greatly from the rate of exchange allowed tourists. The black market rate differs even more. What, then, is the actual value of the ruble in comparison to the dollar? Since all Soviet claims are made in terms of rubles, their dollar value cannot be measured with great accuracy.

Certain basic economic rules, which exist independent of Soviet claims, can be applied to any system. One is that newly industrialized nations, such as the U.S.S.R., can achieve spectacular initial growth, since they are building from virtually nothing. The United States, prior to 1890, achieved such a growth. In the postwar years, Germany and Japan have both shown extraordinary growth, since their economies were being rebuilt for a fresh start.

No one denies that the Soviet rate of growth is statistically large, although the official Russian figures cannot be accepted as true. It is of major importance to ask how this growth is being brought about. When this is done Soviet claims look somewhat less impressive.

It is known, for example, that the Soviet growth rate is partially achieved by reinvesting high proportions of the national product in capital goods, for further industrial expansion. The emphasis in Russia is on development of heavy industry and military material. This development, obviously, can only be achieved at the expense of the consumer.

If the Soviets were to provide more goods and services for personal consumption, the overall rate of economic growth would fall sharply. The best information is that personal consumption in the United States

comes to about two-thirds of the gross national product. In Russian less than one-half of the GNP goes for personal consumption.

THE USE OF PRICES

Prices are also of first consideration in measuring the health and growth rate of an economy. In the United States prices are for the most part set by free markets. In the U.S.S.R., however, prices are established by government fiat. "Prices," in the words of economist Francis P. Hoeber, "are instruments of policy." Thus the Soviet government can pay Russian producers whatever it wishes for goods and services. It can then sell commodities on the world market at prices lower than those of its competitors. The volume of its sales adds to the Soviet rate of growth, but neither producers nor consumers in Russia benefit.

Asking how growth is achieved is one way of exploding the Soviet myth of a superior system. Demanding proof of claims is another. Can it be true that the Russian grain harvest was up 267 million bushels? Not when the Soviets admit they had long spells of poor weather last year, not when Khrushchev fires hundreds of agricultural managers, not when China has to buy $500 million worth of Canada and Australia.

A FALSE COMPARISON

Will Russian industrial output pass the 1958 U.S. level by 1964? It may (though this is doubtful), but even then it won't prove much. Khrushchev, in making this claim, used the technique of measuring U.S. output at the low point of the 1958 recession. This is a little like measuring the flow of freeway traffic at 3 a.m., and assuming it is average for the whole day.

American economists admit that there is still more not known about the Soviet economy than there is known. The lacking information is necessary if a true picture of Soviet capabilities and intentions is to be formed. Meanwhile, the Soviet propaganda mill continues to impress the uninformed with myths and inflated statistics. Puncturing these false claims is a major cold war task for the United States.

Pride in Patriotism

EXTENSION OF REMARKS

OF

HON. THOMAS E. MORGAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. MORGAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include an address made by Brig. Gen. Louis H. Renfrow, retired, at Uniontown, Pa., on May 1, on the occasion of the 28th annual Americanism Day celebration held by Lafayette Post No. 51, the American Legion. The address follows:

PRIDE IN PATRIOTISM

(Address by Brig. Gen. Louis H. Renfrow (retired), 28th annual Americanism Day celebration, Lafayette Post No. 51, Uniontown, Pa., May 1, 1961)

Mr. Commander, Mr. Toastmaster, fellow legionnaires, friends, to be asked to speak to this fine patriotic group on such an important subject as "Pride in Patriotism" is indeed a great honor.

The American Legion, and its Auxiliary, exemplify the purpose of millions of Americans who have demonstrated their pride, and patriotic willingness by offering their very lives in the Nation's military engagements, and by their own sacrifices have instilled patriotism in the breast of everyone who have touched our shores.

In the early days of our Nation the men and women, coming from other lands were deeply stirred by the fact that freedom was gained when they pledged their devotion, and their lives, to the precepts of democracy.

We are thrilled by the many deeds of valor that these newly made Americans, men and women, exhibited during the days of the Revolutionary War. A war to throw off despotic rule, and to strengthen the desire to be patriotic Americans, and to be free.

The Tea Party in Boston; the lights in the church tower; the ride of Paul Revere; the winter at Valley Forge; Washington and Braddock at Fort Necessity; the Battle of Trenton; the surrender at Yorktown; all clearly demonstrated the unswerving loyalty to a concept of government that is unique among governments, and under which we are enjoying this day of renewance of our pledge for its continuance.

After the victorious occasion of bringing into being the Constitution of the United States; and the charter of freedom; the Declaration of Independence, the last sentence of which is: "And for the support of this declaration, with a firm reliance on the protection of divine providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor," our Nation began to build on this foundation of liberty, the superstructure of democracy.

Through the time from the Revolutionary War to the days of 1812, America made great strides numerically, economically, militarily, and patriotically.

Then when this occasion of the War of 1812 arose to test the metal of these newfound patriots it made every American again fully realize that the fruits of liberty, and the joys of patriotic living are dearly won and dearly kept.

Until 1861 America again moved forward in strengthening the fabric of self-government, and in the development of an even greater appreciation of the benefits that come to those who are unswerving in their loyalty.

In the War Between the States the torch of patriotism was never lost, for being loyal to a cause, be it north or south, only tempered the concepts, understandings, and realization of what price loyalty exacts from men and women, and which these patriotic Americans, on both sides, were willing, yes, eager to pay.

The bond of understanding of our Nation's insoluble greatness was forged so tightly and so firmly that throughout, and during, this terrible conflict, the concept of patriotism was clearly demonstrated by the unity of this Nation after the war.

During the Spanish-American War; the Mexican border conflict; World War I; World War II, and the Korean engagement; all Americans stood shoulder to shoulder in the defense of their rights, privileges, and responsibilities.

What an inspiring occasion is being exhibited today here in Uniontown, Pa., the congressional district of the Honorable THOMAS E. MORGAN, with whom I have had a fine relationship, and the State so ably represented by Senators CLARK and SCOTT, when veterans, their families, and friends stand in salute of our flag, and our national anthem.

Is there a man or woman so callous, so devoid of patriotic zeal, that they would neglect the development in their own personality of the passion for patriotic understanding of what our Nation, its Government and people mean, not only to this hemisphere; this continent; this Nation, but to all peoples around the world.

America stands as a beacon light to all men and women who love freedom and who want, and need, the way of life that Americans have had throughout our existence, and to which they have given their very lives.

It is so important that veterans carry this message to the youth of our Nation, that they may understand pride of service, as well as pride of patriotism.

Each American man and woman have great pride in their branch of service; their division, ship or wing; their regiment; squadron; or fleet assignment, but that pride is transcended by their patriotic pride in their Nation and its flag.

All youth must understand this fundamental concept of this pride in order to carry it on to the coming generations as this generation, and those that have preceded them have done.

America will only stand preeminent in the family of nations just so long as the spark of patriotism is kept burning.

When Americans cease to thrill, at the sight of the flag of our Nation; our Government; our people; our churches; our schools; our business establishments; our homes, our play grounds, and all the other blessings of our great country, they will have lost the pride of patriotism and their future is behind them, their gains will be losses, their joys will be turned to sorrows.

On the horizon of our daily lives there has been a constant threat to our modern developments by those despots who are determined to turn the clock back to the absolute control of men's minds, activities, and beliefs.

It is this ever-present threat to our way of life that has caused our Nation to invest in perfect instruments of defense—the atom and hydrogen devices.

If greedy, selfish, and destructive man loose in the world today, could be stopped in their aggressiveness and destruction, these new discoveries can, and will, be diverted and converted from destructive to constructive activities that will open great and wonderful vistas of unlimited possibilities and happiness.

It is my own conviction that time is running out with alarming speed, when decisions must be made, and actions necessary to support those decisions.

We know that we have an implacable, determined and self-avowed enemy—the Communist conspiracy—whose leaders have seized power over so vast an area of the world and who have enslaved, by their police systems, one-third of the human race.

They know they are insecure by virtue of the sudden deaths of their top men.

They must rule by hiding the truth from their people.

They have real security by destroying the sources of truth.

The fateful issue of peace or war is balanced on the knife-edge of enemy decision from day to day.

Our recent President, Gen. Dwight D. Eisenhower, said in his state of the Union message to Congress:

"It is not a struggle merely of economic theories, or of forms of government, or of military power. At issue is the true nature of man.

"Either man is the creature whom the Psalmist described as a 'little lower than the angels' crowned with glory and honor, holding dominion over the works of his Creator, or man is a soulless, animated machine to be enslaved, used, and consumed by the state for its own glorification."

May we as Americans, and as veterans, never lose our pride in patriotism but keep it alive and readily discernible to those who falter, or who have never had such pride, or having had it have lost it in the maize of false doctrines, and spurious concepts of what patriotism means to a free people.

With the speed of missiles and airplanes being what they are today, we have no more idea of how far away the enemy is than the

early colonists did of how far away were the Indians.

The distances are somewhat greater today, but so are the speeds of vehicles and devices.

If we are to survive this atomic-hydrogen age, we must have an awakening of the average citizen to the fact that support of our Government, under God, is paramount to any other responsibility.

We must imbue our youth with the knowledge of the richness of the heritage they are now enjoying.

If youth is reluctant to serve this Nation, we must increase our efforts to bring to them the reasons and importance of their service.

A free society is not possible and has never been possible without men willing to gain it, and having gained it ready and willing to sacrifice to protect and keep it.

When we sing our National Anthem, or as you and I stand at salute as our flag is lowered at sundown, every American in this atomic-hydrogen age, and particularly, every one of the 22 million living veterans of our great Nation, know that the ramparts we now watch are those farflung places that have moved our horizons from the borders of our Nation to areas beyond the sea.

This is as true today as when we gained our independence.

So my loyal American friends, I can only arrive at one conclusion, that in every community we must have patriotic demonstrations such as we are seeing here today, of true Americanism paraded before all of our citizens to strengthen their faith and recharge their loyalty, and to install a renewed concept of patriotism into the minds and hearts of the generations to follow.

We must keep ever before us that stirring statement of our President John F. Kennedy in his inaugural address on January 20, 1961, when he said:

"And so my fellow Americans, ask not what America will do for you, but ask what you can do for your country.

"My fellow citizens of the world, ask not what America will do for you, but what together we can do for the freedom of mankind."

May God in His infinite wisdom guide you in your efforts to keep alive the spirit of patriotism, and enrich those who, accepting this responsibility, and who are willing to carry it forward to even greater distances and greater heights, do so with a clear understanding that the fruits of liberty are only enjoyed by those who believe in them, and are willing to defend them.

I know three things must always be
To keep a nation strong and free;
One is a hearthstone bright and dear
With busy, happy loved ones near;

One is a ready, cordial hand
To love and serve and keep the land;
One is a worn and beaten way
To where the people go to pray;

So long as these are kept alive;
Nation and people will survive
God keep them always, everywhere
The hearth, the flag, the place of prayer.

Dedication of the Jackson Lock and Dam, Alabama

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. BOYKIN. Mr. Speaker, on April 7, 1961, a fine group of representative citizens, including Mrs. Lewis Pick, widow of General Pick, formerly Chief of the Army Engineers; Brig. Gen. H. A. Morris, Corp of Engineers, Divisional Engineer in Atlanta; Congressman Armistead Selden; Col. R. W. Love, the district engineer of Mobile, and many hundreds of others, joined in the dedication of the new lock and dam just above Jackson, Ala., on the Tombigbee River. At this dedication our district engineer at Mobile, Col. Robert W. Love, made a most interesting talk and discussed particularly the damage wrought by the serious floods in the Tombigbee-Warrior Basin. Under leave to extend my remarks, I include Colonel Love's informative address. Also included are his welcoming remarks:

WELCOMING REMARKS OF COL. ROBERT W. LOVE, DISTRICT ENGINEER, U.S. ARMY ENGINEER DISTRICT, MOBILE DEDICATION OF JACKSON LOCK AND DAM SITE, APRIL 7, 1961

As the present head of the engineer district including this area, it gives me very great pleasure to add the greetings of the U.S. Army Corps of Engineers to those of the State of Alabama expressed by Governor Patterson and to welcome you to this Federal reservation.

As you know, the Engineer District organization I represent is responsible for building and operating the locks and dams and dredging the channels of this great waterway. We have been working with the people of Alabama and their devoted congressional representatives for nearly 100 years on the continued development of this river. The fine new lock and dam here is the latest fruit of this long cooperation. Its completion, together with the consequent improvement of the waterway, brings us as much satisfaction as it does you.

You may be assured of the continued cooperation of the Corps of Engineers in further improving this magnificent waterway as an asset to the State, the region, and the Nation.

REMARKS OF COL. ROBERT W. LOVE FOR THE WARRIOR-TOMBIGBEE DEVELOPMENT ASSOCIATION MEETING AT JACKSON, ALA., ON APRIL 7, 1961

I have been asked primarily to report on the recent flood which wrought so much damage in the five major drainage basins of the Mobile district. In the Tombigbee-Warrior Basin, considerable damage occurred all along the main stream with points of highest damage in the Birmingham and Tuscaloosa-Northport areas.

The storm period which caused all of the trouble lasted for about 6 days between February 18 and 23. Although all information has not been compiled yet, a study of the records that are available indicates that total precipitations of 10 to 16.5 inches occurred during this 6-day period. There was a total of 16.5 inches at Bessemer, 14.2 inches at the Birmingham airport, 14.7 inches at Oliver Lock and Dam and 14.6 inches at Jackson Lock and Dam. The runoff from this rain which was distributed in daily amounts of 0.5 to 6.5 inches caused flooding along the tributaries and soon filled the main river system. This storm came across the Pearl River and the Pascagoula River systems in Mississippi, then the Tombigbee and Warrior and finally moved on over the Coosa and Alabama to the Chattahoochee. All major cities and many smaller ones experienced some damage or inconvenience. I can only give you this general idea of the magnitude of the area affected at this time. Actually, it will take some months before all of the data necessary for a complete analysis will be available. The U.S. Weather Bureau has the responsibility of collecting and compiling the records of a large number of rainfall gage stations and river stage gages on all watersheds. The U.S. Geological Survey has the responsibility of developing the records of flow at many river stage and discharge stations. The Corps coordinates its efforts with those of these agencies in order to secure all useful information. Flood areas will be delineated and measured from all available serial photographs flown at the time and an appraisal will also be made of the damages. Reports will finally be prepared giving all of this information for the use of those who may have a need for it. Completion of these reports, of course, will depend upon available manpower and the allotment of funds.

In connection with the activities of these agencies during floods, I would like to stress the point that the U.S. Weather Bureau has been given the responsibility by Congress of making river stage predictions. It is essential that one agency do this otherwise there will be conflicting information put out which can only lead to confusion. All data that is obtained at corps facilities along the river are furnished the Bureau for its use in making these forecasts. Assistance is then given to disseminate this information to the local interests desiring it. If information is desired at some point other than at official river gages, arrangements should be made beforehand with the Bureau so that stage relationships can be developed to meet your needs. The corps is always willing to cooperate with the Bureau during critical times to give out helpful information.

Measures which can be used for the prevention of flooding consist of storage reservoirs, levees and floodwalls, and channel rectification.

Reservoirs for the temporary retention of floodwater must be located where there are suitable damsites and topography. This generally occurs in the upper reaches of tributaries and in the headwaters. The effectiveness of a reservoir in reducing stages will depend upon the proportion of drainage area and storage volume above the dam and the distance to a specific downstream point. A reservoir controlling 50 percent of the drainage area above a point will be much more effective than one controlling only 25 percent. A reservoir can in no way control the flow that enters the stream from the area below a dam. If the center of a storm passes below a dam with little rainfall occurring above the dam, the reservoir will not be able to reduce stages.

Levees and floodwalls with appurtenant drainage structures will provide complete protection for limited areas along a stream. This is the most effective means of protection where there is a concentration of urban development. Channel rectification which includes cutoffs, bank clearing, snagging, and the widening and deepening of channels usually helps to reduce minor floods which reach stages a few feet above bankfull in the reaches where work is undertaken. It is more effective on the smaller tributary streams than on the larger main streams. Levees and channel work are considered to be local in nature and therefore by law certain conditions of cooperation such as providing all lands, holding the Federal Government free from damages, assuming maintenance and operation, performing some features of relocation work, and contributing some cash for construction are required of a legally constituted agency representing local interests. Reservoirs, if they provide benefits only to a specific area, could also be included in this class. Generally, they provide more widespread benefits and it is not practical to obtain satisfactory agreement on local cooperation.

The Chief of Engineers on May 3, 1956, submitted a report on the Warrior River which is contained in House Document No. 414, 84th Congress, 2d session. This report which covered only the headwater tributaries of the Warrior River recommended an ultimate plan of development for flood control hydroelectric power, flow regulation for navigation and other purposes. A reservoir on each of the three forks named New Hope, Dorsey Creek and Smith's Ford would have provided a total flood storage of 1,609,000 acre-feet. The dams would regulate the flow from 2,100 square miles which is about 44 percent of the area above Tuscaloosa. These dams would be about 100 miles above this city. As a result of this regulation, most flood stages would be reduced by about 3 feet at Tuscaloosa. The effects, however, would vary depending on where the storm center passed across the basin.

These projects, although recommended, were not authorized by Congress in order to permit the development of power by private interests under the Federal Power Act. The Alabama Power Co. is now about to complete the Lewis Smith Dam on the Sipsey Fork a few miles upstream from the corps proposed New Hope site. During the past flood, the power company was able to store at this project the runoff from about 20 percent of the area above Tuscaloosa. When the reservoir is filled to full power pool level, a volume of about 285,000 acre-feet will be reserved for flood storage to be used in accordance with plans which will be prepared in the Mobile district office.

The Warrior River Electric Cooperative obtained a license from the Federal Power Commission to develop power by constructing 2 dams on the Locust Fork. One of these projects was to be constructed so that a flood storage of 233,000 acre-feet could be added later by the Federal Government when authorized by Congress. I do not know at this time when the cooperative will initiate construction of these projects. The cooperative also obtained in January 1956, a permit to study a site on the Mulberry Fork at approximately the corps' proposed site. I understand that this permit has now expired. A project developed at this site would also have to provide about 230,000 acre-feet of storage initially or be constructed so that it could be modified later by the Federal Government. The flood storage portion of all these projects would be operated to give the maximum stage reductions possible downstream.

The existing Corps of Engineers project on the Warrior-Tombigbee Rivers authorized only for navigation does not provide any flood control. It consists of locks and dams designed to meet the needs of navigation. With the exception of the uppermost John Hollis Bankhead Lock and Dam, all projects are drowned out during the extreme flood periods. The gates on this uppermost project were added in 1937 to provide the necessary depths for navigation. They were designed to pass all of the flow coming into the reservoir beneath the gate without any material variation in pool level.

In view of the developments in the basin since our last report was submitted and the experience with the recent flood, a restudy should be made of specific damaged areas to determine suitable protective measures. These studies which will require time and funds must be made before I could make any recommendations for further improvements. Congress, of course, must then authorize and appropriate the necessary funds using the same procedures followed in the development of the navigation project.

Speech of Hon. A. Paul Kitchin, of North Carolina, Jefferson-Jackson Day Dinner, May 13, 1961, Charlottesville, Va.

EXTENSION OF REMARKS

OF

HON. HOWARD W. SMITH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. SMITH of Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert a very excellent speech of my colelague, Representative A. PAUL KITCHIN, delivered at the Jefferson-Jackson Day dinner of the Eighth Virginia Congressional District at Charlottesville, Va., on May 13.

The sound principles of constitutional law and States rights are worthy of careful attention of all Americans who harbor a proper respect for the system of government devised by our forefathers:

SPEECH OF CONGRESSMAN A. PAUL KITCHIN, OF NORTH CAROLINA, JEFFERSON-JACKSON DAY DINNER, MAY 13, 1961, CHARLOTTESVILLE, VA.

Mr. Chairman, Congressman Smith, and fellow Democrats, I am flattered and highly honored to be here tonight and to be presented by my good friend and colleague, Judge SMITH, your able Congressman and one of the greatest American statesmen of all time. While the history of your great State is filled with the names and accomplishments of her great sons, I concede to none of them more sincerity of purpose, more love of country, more loyalty to constitutional government, and more patriotic zeal for the welfare of his Nation and its people than HOWARD SMITH. I congratulate the constituency of this district for your wisdom in the selection of your Congressman and in sincerity must say that your district is the best represented district in the House of Representatives. May the good Lord and the voters of the Eighth continue to allow him to serve his country for many, many years to come.

I also congratulate the people of Virginia for the selection of the other great Democrats of your delegation without whom the voice of Jeffersonian democracy in the Halls of Congress would be weak indeed.

The Commonwealth of Virginia, the birth and growth of our Nation, and the creation and meaning of the Democratic Party are synonymous. No State in this great Union has contributed more to the foundation and progress of our Nation than has your great Commonwealth. All freedom-loving Americans should press an humble knee upon your sacred soil and give thanks to Almighty God that from the pangs of birth, the agonies of youth, the trials of adolescense, and the present anxious and uncertain moments of the maturity of our Nation, we have always had Virginia.

We are gathered here tonight to pay tribute to Jefferson and Jackson, the founders and the guiding influence of our Democratic Party. I sometimes wonder if they or either of them would, if they were here with us tonight, discern any resemblance between their creation and the present trend of our national Democratic Party.

"Strong centralized government" is the motto of the day and does nothing but violence to the creed of Jefferson who believed and asserted that "the least governed are the best governed." The Democratic Party was firmly established by Jefferson and Jackson as the party of the people. The party that believes that people are capable of governing themselves. When this belief inculcated into the minds of people by Jefferson and Jackson has been put into action we have always had good government—a government that honored the rights of States and individual freedom. A government that sponsored a sound currency, a balanced budget, and an adherence to the principles of the Constitution of the United States. A government that decried centralized bureaucracy and stark Federal power. When we as Democrats turned our back on Jeffersonian philosophy we not only caused a split in our party but have digressed from the great principles that made us great. Selfish interest and political expediency have replaced fundamental ideals of our party and we find ourselves divided in our own ranks—there are those of us who still believe in the tenets of Jeffersonian democracy and there are others who have no confidence in the ability of the people to govern themselves at local and State levels and who advocate every measure which will further regiment our people and destroy the rights of State and local governments.

Yes; of late there appears to be a new order of things—a new approach to government by both major parties. Now big government must take over and run everything from bureaucratic Washington. This is the trend of the times but the responsibility for this trend must be placed where it belongs—upon the shoulders of the people of this country. The best people on earth but a confused, mixed-up people who believe they want constitutional government but who eagerly grasp for the personal benefits of any proposed welfare and privilege legislation. A people that have some confused idea that what the U.S. Government does for them is free, that it does not cost them anything, that if the cost of government must be shaved off a little, don't stop my benefits, stop the benefits of the other fellow. If someone has to be taxed to pay for all this, don't tax me. That's unfair. Tax the other guy. A people that have the confused idea that as long as taxes are not raised to affect their personal pocketbooks, it's all right to give billions of dollars in foreign aid and go deeper and deeper in debt whether it buys any friends or not. If it proves later to be a mistake it won't cost us anything. Charge it to posterity. Let those generations, yet unborn, bear the burden of paying this enormous obligation. A people who have the confused idea that good, benevolent Uncle Sam in the many grant-in-aid programs and matching fund programs is being very nice to our State and saves us taxes and lets us spend the money as we see fit without any Federal control.

A people who have the confused idea that the only dangers we face are those in Laos, Cuba, the Congo, Berlin, and other far away areas of the world. A people who have the confused idea international communism is just a ghost story to frighten us into conformity. A people who have the confused idea that our internal government is not changing and that those of us who are old-fashioned enough to believe in constitutional government are just reactionary and preachers of doom and gloom—just close your eyes and ears and it will all go away.

There are some of us who seriously wonder whether our constitutional government can and will survive the avarice, greed, and selfishness of a confused citizenry. There are some of us who seriously wonder if about all

of the Constitution they want now are the first three articles under which to organize, the welfare clause under which to legislate, and the fifth amendment behind which to hide. There are some of us who seriously wonder whether our democracy can survive the misuse of the Constitution by enemies of our society who, under the guise of rights and privileges, hide behind it; who, under the guise of freedom of speech, press, and assembly, castigate and vilify it; and who, under the guise of humanitarianism and the welfare clause, would legislate its destruction.

The people of this Nation must stabilize themselves, inform themselves as to what's happening and then decide what they want in Government. Do we want a welfare state, socialism, x-ism, call it what you please, or do we want a return to constitutional government as decreed by our forefathers, tested for over a century by its political enemies, and survived and prospered over the years guided and sustained by a great and freedom-loving people.

Norman Thomas gave up years ago joyously and victoriously stating that it was no longer necessary for the Socialist Party to exist because the two major parties had already accomplished its aims. Much more implementation has been made since then by legislation and Supreme Court decisions. Decisions not based upon stare decises but upon changing times and the changing of our social order; by legislation which bypasses the concept of jurisdiction between Federal and State but ostensibly bottomed upon the so-called welfare clause; by laws that tend to relegate our States to mere vassals of a Federal bureaucratic regime; by pseudolegal violence to the constitutions of our States in actions to dictate the control of State funds and the State's right to spend these funds for the continuation and preservation of State institutions; to dictate changes in voting qualifications; to dictate intrastate wages and hours; to dictate whom you must employ before you are eligible to bid on a contract with your own Government; and many other usurpations of States rights too numerous to mention.

If this is what the people want let them make a thoughtful and final decision. Final because once made to accept socialism there is no return. The choice must be between loyalty to our selfish interest and loyalty to our individual freedom—loyalty to social and political expediency and loyalty to principles and ideals—loyalty to a materialistic abundance and loyalty to a fiscally sound economy. The chosing of one's expression of loyalty is but to exercise the genius of democracy which still remains the type of government which men who are less than men seek to avoid. It is the most demanding system that has ever been created. It is not something created for soft man but a society and a way of life which our forefathers worked, fought, bled, and died for and can be maintained only with courage, work, sacrifice, and determination—courage of our convictions; work to acquire knowledge to nurture our convictions; sacrifice of selfish desires for patriotic citizenship, and determination to keep our Nation safe for a God-fearing and freedom-loving people.

The era in which we now live is fraught between two camps—democracy as we know it—and communism and other isms. These are probably more a political expression than a philosophy and the real intellectual war that is being waged within our world society is whether we can evaluate the true nature of man and history—whether man is free to create history or whether history will shackle man to the status of a soul-less creature dominated by the state.

We the people must awaken from our opiates of self-indulgence and regain our perspective. "What is America?" not the academic concept of geographical and material existence but—what makes it tick—why a declaration of independence. Why a Constitution. Why a Bill of Rights. These profound questions can only be answered by an intelligent, courageous, and patriotic people after a soul-searching admission that what they stand for cannot survive on apathy, ignorance, and irresponsibility. We must never take our freedoms and liberties for granted. I wish every native-born citizen could look upon the face of the foreign-born when he finally becomes a naturalized citizen of these United States; could see the tears of joy—could sense the great soul-filled pride of those who know what it is to be deprived of the rights we enjoy and take for granted. If we could regain from some of them the real value of American citizenship what a great lesson we could teach in our everyday lives.

We the people must determine the kind of America we want for the future.

I think I can speak with a unanimous voice for Americans when I say that we want an America for the future that lifts its head high in the world, not because of its military might, or its material achievements, but because we are morally right and sound, and because America is a living symbol of the rights and dignity of man. We want an America so constant to its principles, and so resolute in honoring its responsibilities to the free world that our friends all over the globe will never have reason to regret the trust that they have placed in us. We want an America ever prepared to meet any challenge or any competing ideology with great breadth of courage, and great depth of purpose.

Can this be done? Of course it can. The pattern was drawn with the first sketching of the framework of America in the Declaration of Independence. We need only reawaken to the challenge. This America of the future will demand citizens who recognize that the true greatness of our Nation does not lie in its high standard of living, but rather in its high standard of life. We shall need citizens who realize that the security of our Nation is the responsibility of each individual citizen. We must prove that a free people, through voluntary, cooperative effort, can achieve a better standard of life than can be gained in the regimented society of the Soviet Union. Communism and socialism require people who can be told what to do, who can be managed, democracy demands people who have self-control, who can manage themselves.

Yes; we can have this America of the future, but only if every citizen of the United States accepts his responsibility and fulfills his role in the spirit of self-discipline. You cannot say, "Let George do it."

Democratic government is a shared responsibility. It implies that every citizen, as well as every public official, make a career of citizenship. Only in this way can democracy be strong. Its strength rests wholesouled on the fact that we have on this soil the incredible phenomenon of 180 million people who are ruled by themselves. It is the people who tell the Government where it gets on, and where it gets off. It is the people who hire and fire the Government, through our system of elections. This is an immense responsibility that rests upon you and me and every individual American citizen. In a nation as large and complex as ours, only an intelligent, perceptive citizenry could accomplish this task without the machinery of democracy simply falling apart.

We can no longer escape the fact that our personal destinies are deeply involved with the actions of the Federal Government. If we fail to assume our individual responsibilities. We shall have surrendered our integrity as American citizens, and we shall have no cause for complaint. But if we are ever aware that government is a shared responsibility, and if we maintain an alert, unselfish, and participating citizenry, then our institutions will be safe and our freedom secure.

I would encourage each of you to look to the America that you want for the future, and to remember that there is no distinction between what is good for your future, and what is good for the future of the country. I would encourage you to exercise every act that is within your power to enrich and preserve the heritage that is ours, and to prove to the world that constitutional democracy is not a dying society, but a vibrant and rewarding way of life that holds the dignity of the individual on the highest pedestal. This task will require the effort and dedication of every single one of us.

Last, but not least, don't be ashamed to be patriotic, don't hide your face if a tear of pride comes in your eye when Old Glory is unfurled and the national anthem is played. Raise your head high and look at America—listen, and you'll hear her say to you: "I'm just what you make me, no more or no less."

The Cuba Fiasco

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. MICHEL. Mr. Speaker, I wish to include the following editorial from the May 10 issue of the Indianapolis News, by Morrie Ryskind:

WHY EXEMPT INTELLECTUALS FROM BLAME?

(By Morrie Ryskind)

By any standards, James Reston—agree with him or not—is one of the ablest and saltiest reporters of the American scene. Though he quite obviously favored Kennedy in the presidential campaign, his is no blind loyalty, and he has not hesitated to point out some of the errors of this administration.

In a recent column, for example, he places no small portion of the blame for the Cuban fiasco on some of the professors the President lured way from the colleges. But he concludes with a solemn warning that the academicians must not be attacked too vigorously, lest the country develop a spasm of anti-intellectualism.

Reston readers are entitled to better than that, for it is surely one of the moldiest cliches in the liberal lexicon. Every time a professor utters a bunch of balderdash—and many of them do, even as the rest of us—any criticism of it meets an immediate countercharge of anti-intellectualism. Do you disagree with some of the conclusions of Galbraith, the younger Schlesinger or Linus Pauling? Well, then, you probably know what you are: A dirty anti-intellectual and a know-nothing to boot.

This is a curious notion in a country where you are free to criticize your baseball manager, your policemen, your legislators, your President and, on rare occasions, your wife's cooking.

What, in heaven's name, makes an intellectual, anyhow? The self-anointing? What gives the group that peculiar aura of sanctity that robs the rest of us of the right to call attention to the plain fact that some of their ideas have no clothes on? If they have come directly from Sinai or Olympus, we are at least entitled to see their passports and not accept their mere say-so.

The mere fact that a man is an authority in a given field does not, regrettably but undeniably, make him an authority in all

branches of knowledge. Henry Ford was, beyond doubt, an authentic genius who changed the face of America, and no one questions Einstein's place in higher mathematics.

Once they stepped outside their ken and discussed politics, however, neither had the faintest idea about what he was talking.

Neither my best friends nor my worst enemies have ever ranked me with the scholarly elite, but I have occasionally managed to be on the fringe. It happens that I know and admire greatly Max Eastman and William F. Buckley, Jr., both of whom pass for intellectuals in conservative circles. But once they get out of their own fields, they, too, like Ford and Einstein, are mere babes in the wood.

I have been to the races with both of them and am prepared to testify, under oath, that their tips are worthless. I'm not certain that either knows just mow many legs a horse has, and they have absolutely no notion of how many furlongs there are in a mile.

And, if this is anti-intellectualism, let Reston make the most of it.

Prospective Revolt in Red China

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 18, 1961

Mr. PROXMIRE. Mr. President, Columnist Joseph Alsop is raising a lot of eyebrows by persisting in arguing that Red China may revolt. He is not contending that it will. He argues that it may. The Alsop point is that the kind of oppression the Chinese people are suffering under Dictator Mao is far crueler and more terrible than has been generally recognized. The task of communizing China is infinitely more troublesome than the Lenin-Stalin task in Russia.

Alsop shows that evidence has been mounting that there must be millions of Chinese who would just as soon die—end a miserable existence—as subsist in the starvation and torment that is their present lot. Of course, this could result in simply a passive sitdown strike. Or it could provide the spark for revolution.

In any event, it underlines the wisdom of our continuing our frequently derided and denounced policy of providing aid and assistance to the Nationalist Chinese Government on Formosa. There freedom enjoys an exceedingly tough and well trained armed force of Chinese with excellent morale and a burning desire to free their homeland. Here, too, is the source of leadership that could give a Chinese revolt shape, direction, and reality.

A successful Chinese revolution against communism could gloriously turn the tide for freedom and against communism. Regardless of the remoteness of its achievement or the obvious difficulties that stand in its way, American policy should do everything possible to keep this hope alive.

Mr. President, I ask unanimous consent that the article by Joseph Alsop, entitled "Can China Explode?" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAN CHINA EXPLODE?
(By Joseph Alsop)

HONG KONG.—Among all the experiments made by governments of men, the experiment now being conducted by the Chinese Communist government is certainly the most ruthless and perhaps also the most interesting that has been attempted in modern times.

To be sure, it is not a novel experiment. As already pointed out in this series of reports, Mao Tse-tung is clearly following Josef Stalin's book in the most literal fashion. Beginning with the first 5-year plan, Stalin made the Russian peasantry pay for the forced industrialization of Russia. Mao is now trying to do precisely the same thing in China.

For this purpose, however, Stalin had to organize the countryside in a quasi-military manner. In order to free resources for his investment program, he also had to force down the standard of life of the Russian masses, by one half. And in the end, he had to condemn no less than 18 million of his people to death. Five million died in a single year in the fearful Ukraine famine, and 13 million more succumbed to hunger, or expired under the lash of the police, or were quite simply shot before the second Soviet 5-year-plan ended in 1939.

In these respects, too, Mao is imitating Stalin. The Chinese communes, like the Soviet agricultural collectives, were started in order to take the countryside in an iron grip. The drop in the standard of life of the Chinese masses after the communes were started was at least as grave as the drop of the Russian masses' living standard after the collectives were set up.

But right here we encounter the factor which makes it necessary to ask whether China may not explode as a result of this ruthless experiment. For the Russian masses were living not too badly when Stalin launched his program of forced industrialization; whereas the Chinese masses were only eking out the barest subsistence when their government decided to double its exactions. Cold calculation suggests, therefore, that Mao's forced industrialization may quite possibly reduce the population of his much poorer, far more crowded country by as much as 150 million.

This need to be so much more ruthless than Stalin, and more ruthless, too, over a longer period of time, clearly makes Mao's experiment more risky than Stalin's experiment. When any Government has embarked upon a course that appears to require tens of millions of human sacrifices per annum, one must surely consider the possibility of failure. And in this reporter's opinion, which is still admittedly a minority opinion, the creeping famine in China is already beginning to cause very massive annual population losses.

A government edict has been published threatening punishment of any party cadre in which commune the death rate rises much above normal. A leading Peking planner has also promised recently that in 10 years the individual ration will be raised to no less than 1,500 calories per day—or less than Western nutritionists regard as absolutely needful for any working man or woman. This, after a full decade of further toil and hunger. After two bad crop years, grain is being imported to maintain the rations of the army and the showcase cities. But there is no discernible sign that the Government intends to mitigate its harsh policy.

Here in Hong Kong, there are those who say that the agony of the Chinese masses will come to an end if there is a good crop this year. But in the first place, it is very doubtful whether a really good crop is possible, even if nature is kind, when more than 20 percent of the farmers in the fields are showing the first symptoms of beriberi. And in the second place, unless the policy is changed, the Government's exactions to pay for forced industrialization will continue as before.

To this blood-chilling résumé one must also add the point made in the last article in this series. A mass of recent eyewitness testimony from the Chinese mainland points to a serious breakdown of discipline, both a breakdown of the strict discipline of the party cadres, and a breakdown of the public discipline of the drilled, intimidated people.

The breakdown of discipline must mean that the conditions are beginning to exist in which a small spark can light a gigantic fire, as has happened before in China in comparable circumstances. Thus the question whether China can explode boils down to the question whether China's army will always be ready to put out the fires that chance sparks may light. It is an interesting question.

On the other hand, this is a peasant army drawn from the very class that is suffering most sorely. And the wives and families of the officers and noncommissioned officers were sent back to live in the peasant villages at almost the very moment when the worst ordeal of the villagers began. On the other hand, political control and police surveillance of the army are both intensely strong. And the army is recruited, not from conscripts, but from young men specially selected for military duty by the party cadres in the communes. The duty is a privilege because of the soldiers' higher rations.

Thus one can only say that even if the agony of the masses is prolonged and the breakdown of discipline is progressive, the army may well remain dependable. But the other result is far from unimaginable.

One can also say that the chance for an explosion in China will be immeasurably increased if the Government attempts a foreign military operation in the present state of the countryside. And this is an immediately significant point, in view of the present situation in southeast Asia.

Proposal for Congressional Action

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statements of the Small Business Association of New England, at a meeting today with the Members of Congress from New England on their proposal for congressional action:

SMALLER BUSINESS ASSOCIATION OF NEW ENGLAND PROPOSALS FOR CONGRESSIONAL ACTION, 1961

Gentlemen, we speak for small business, a segment of the economy which produces approximately one-third of the gross national product. Since the economic well-being of small business is essential to the welfare of our Nation and its citizens, we have an obligation to provide recommendations for congressional action.

As we see it, solutions to the major problems which we face today are dependent on these three interrelated needs:

1. We must expand employment opportunities.

2. We must increase the ability of the United States to compete with its friendly, and unfriendly, rivals overseas.

3. We must sustain the rate of economic growth which has earned for us the highest standard of living in the world.

Let's talk about employment. An acceptable unemployment level seems to be approximately 4 percent. At present, the figure is in the neighborhood of 7 percent. Reduction of this figure to 4 percent is difficult enough, but when we look into the future we are faced with an additional problem of staggering proportions.

According to the Department of Labor, by 1965, only 4 years from now, our labor force will increase to 80 million. By 1970, it will number 85 to 86 million.

We do not have to look that far ahead, however. To reduce unemployment to 4 percent by mid-1962, only 1 year from now, we would have to create 4 to 5 million new jobs.

Who is going to create these millions of new jobs? Business, of course. And here is where small business can play a vital role in the Nation's economy. At the risk of oversimplifying the situation, let us suppose that every one of the 4.5 million small enterprises could add one person to its work force in the next year. The result would be 4.5 million new jobs, enough to fill the gap.

It would not work out this simply, of course, because some of us only employ 1 or 2 persons now. But the average is not unattainable.

Small business can do it, but it needs help. There must be dramatic increases in investments in new plants and equipment, and in modernization. Armies of workers will be absorbed in the building, and later in the operation, of these new and modernized plants which will meet the ever-increasing needs of our expanding population.

We are here today to present our proposals for congressional action. These proposals cover the following areas: Taxation, presented by Henry J. Griswold, of Boston; labor, presented by Leo Brynes, of Providence; procurement, presented by Robert S. Goodyear, of Framingham, Mass., and finance, presented by S. Abbott Smith, of Chelsea, Mass.

Here is our program for taxation. We are not looking for tax "handouts." We are asking for recognition of the fact that our present tax laws, as they apply to economic expansion, are obsolete. We have created a massive roadblock to economic growth. Action in the following areas is urgently needed to encourage the accelerated growth which is essential to our national welfare.

TAX DEDUCTIONS FOR REINVESTED EARNINGS

Small business must have more capital funds to reinvest for expansion and modernization. "Plowback" of additional earnings will generate additional taxable income, creating more revenue for the Treasury. Experience has demonstrated that, for each 1 percent of economic gowth, the Federal Government gains a billion dollars in additional revenue.

"Plowback" is currently applied to foreign investments by American corporations. In these situations, earnings of a foreign subsidiary are liable to taxation by the Federal Government only if the earnings are returned to the United States. No tax is levied on earnings which are retained overseas for reinvestment in the subsidiary. In simple justice, our domestic small enterprises deserve the same opportunity for growth.

Tax exemptions to provide incentives for more invested capital in small businesses are needed now. The proposals recently made by the President are a long stride in the right direction, but as Secretary Dillon promised the House Ways and Means Committee, these proposals should not stand in the way of reforms of the basic tax laws.

We believe that deductions from earnings before taxes should be allowed, if such earnings are used to increase investments in depreciable assets, accounts receivable, and inventories. As a minimum proposal, we urge legislation permitting deductions for capital invested in depreciable assets, because they are vitally needed now for expansion and modernization.

Such deductions will not reduce revenue to the Treasury. Instead, they will generate additional taxable income. The money must be spent in advance; it will be at work producing more goods, employing more people, and generating additional taxable income, months before the tax bill becomes due.

Furthermore, such deductions would be equitable; they would be available to all businesses, large and small. And they would provide capital funds, which are not available from other sources, to the 80 percent segment of small business that operates as unincorporated enterprise.

MORE FLEXIBLE DEPRECIATION RATES

Our present standard of living has been achieved by incorporating technological advances into our industrial economy. We have outproduced other nations because our industrial plant has been considerably more efficient.

This is no longer true. Today, the industrial efficiency of Western Europe and Japan is approaching our own, while their wage rates are a fraction of those which we pay. Our present system of depreciation allowances is hampering improvement of our industrial efficiency. The United States is the only major industrial country which has failed to modernize tax laws relating to depreciation. Canada with rates twice as fast as ours, Great Britain with 30 percent in the first year, West Germany with high rates in the early years and a maximum in 10, Denmark allowing 50 percent in the first 5 years, France with an inflation adjustment; Belgium, Italy, Sweden, Argentina, Chile, and Japan—all have modernized their depreciation allowances, either to allow for replacement costs, or to provide rapid depreciation, or both. As a result of our unrealistic depreciation policies all businesses are hard-pressed merely to replace wornout equipment, let alone to expand and modernize their plant facilities; the smaller the company, the more acute the problem.

Inflation alone has made our depreciation allowances inadequate. According to the First National Bank of Boston, prices of capital goods have advanced nearly 60 percent since 1947. With depreciation charges based upon original cost, and all replacements priced continually higher, many firms are unable to sustain a healthy rate of investment.

Here is another factor which is retarding investments in new plants and equipment. Because businesses are unable to charge adequate depreciation to costs, earnings are overstated. For example, if the useful life of a machine is 5 years, and the owner must depreciate it over 10 years, only half of the machine's cost is applied to the items it produces. As a result, earnings are inflated, and these "phantom" profits are taxed away.

Funds for capital investment come primarily from three sources: retained earnings, creation of debt, and depreciation. According to Accountant Joel Barlow, as reported in the November 1959 issue of the Tool Engineer, in the period 1947–59, depreciation provided twice as much capital as either of the other two sources. If our economy is going to grow, and its growth is essential to our Nation's survival, this primary source of investment capital must be expanded.

Whereas our current depreciation allowances are based on the amount of time estimated for a machine to wear out, today, obsolescence is a more important factor than wear and tear. A recent study by Johns Hopkins University revealed that a modern machine tool has an obsolescence cycle of 5 to 10 years, yet our present depreciation policies require companies to take 15 to 20 years to write off such equipment. According to a McGraw-Hill survey made in 1958, out of a total of $300 billion in U.S. capital assets, $95 billion of plant equipment was considered obsolete, and depreciation allowances are lagging $4 to $6 billion annually behind replacement needs. The results of a 1959 survey of 240 metal working manufacturers conducted by Iron Age, as shown in this chart, reveals that a distressing large percentage of production equipment has been in use for more than 10 years.

Fifty-four percent of the manufacturers reported that 20 to 50 percent of their equipment was over 10 years old, and 38 percent reported that more than 50 percent of their equipment was over 10 years old.

Technological obsolescence is the result of research; the greater the research, the faster the obsolescence. Consequently, fixed rates of depreciation are no longer practical. We believe that the rate at which an investment in equipment is written off should be left to the discretion of the company involved, rather than being dictated by the Government by law.

A completely flexible depreciation policy, in which a business would be allowed to write off its investment at the pace it chooses, would offer these advantages:

1. It is easy to apply, reducing to a minimum accounting and tax audit procedures.
2. It can be spelled out clearly in legislation.
3. It is fair and equitable.
4. Its effect is universal.

We urge that the same policy be extended to newly acquired used equipment. The primary source of technological advancement for many small businesses is the rebuilt machine which was turned in by a large company for a new model. Extension of depreciation allowances for used equipment will not only help the small company to expand and modernize its operations; it will also provide a larger market for the machinery rebuilder, thereby creating more jobs in that industry. In turn, large companies will be encouraged to purchase new equipment because their used machinery will have a higher trade-in value.

CARRYBACK AND FORWARD OF UNUSED SURTAX CREDITS

Many small businesses whose earnings vary widely from year to year are being penalized by our income tax structure. On earnings up to $25,000, corporations are taxed at a rate of 30 percent. When earnings exceed $25,000, the surtax becomes effective, resulting in a rate of 52 percent. It is apparent that small corporations whose earnings fluctuate above and below $25,000 are subject to serious variations in taxes from year to year.

For example, and this happens all too often, one corporation may earn $50,000 one year and nothing the next year. For the 2 years, it pays a tax of $20,500 (all on the first year's earnings). Another corporation, with earnings of $25,000 in each of 2 successive years, pays a total of only $15,000 on the same 2-year total earnings.

Such inequities can be easily eliminated by allowing corporations to carryback or forward any unused portion of their $25,000 surtax allowance. We urge that the Internal Revenue Code be amended so that unused credits against the surtax allowance may be averaged, by permitting a carryback for 3 years, and a carry forward for 5 years.

TAX EXEMPTIONS FOR VOLUNTARY RETIREMENT PLANS

Millions of Americans are now covered by company retirement plans and more are being enrolled every year. Tax deductions are allowed for funds set aside for this purpose. Yet, professional men, and other who are self-employed, cannot make any tax deduc-

tions for amounts which they set aside for their retirement. In the interest of basic fair play, we urge legislation to correct this situation. Such legislation, which would permit tax deductions within reasonable limits for funds invested in qualified plans, would not be for "special interests." Instead, it would amend a law which currently discriminates against a valuable and productive segment of our economy.

Every business has two partners. One is Government, which receives a major share of the business' earnings through taxation. The second partner is labor. Sometimes, however, it seems that labor fails to recognize that it is a partner and acts as if it were a competitor.

Unfortunately for small business, much labor is "big," bound together in national and international unions which set their sights on big business. These unions overlook the fact that the small enterprise does not have the ability to absorb the high wages and consequent increased costs which the big business has.

When the employees of a small business are represented by an industrywide union, neither the employees nor their employer have much to say about the terms of their agreement, which are dictated by national union policy. The small businessman is at a disadvantage at the bargaining table because he cannot match the skill and experience of the professional union negotiators. Labor and management go through the motions of bargaining, but the negotiations are often meaningless. Union monopoly power is thereby exerting a squeeze on smaller businesses, since it is breeding a situation wherein the big corporations and unions sit down together and negotiate, while no one else has much to say.

REGULATE MONOPOLISTIC PRACTICES OF BIG UNIONS

At the end of the 19th century, the Government took steps to curb the squeeze by big business, through the antitrust laws. We submit that similar legislation, which will curb the squeeze by big unions, is long overdue.

RESTRICTIONS ON COMPULSORY UNIONISM

The source of union monopoly power is control of its members. Complete control is provided by compulsory unionism, as practiced in the union shop, wherein a worker must join the union to keep his job. Once he is in the union, he is under pressure to follow the union line, whether or not he believes that it is contrary to his own best interests. We endorse the right of workers to join unions voluntarily for collective bargaining, but we believe that compulsory unionism runs counter to American concepts and traditions of freedom. We urge the adoption of restrictions on the union shop and compulsory unionism in any form.

BAN USE OF UNION FUNDS FOR POLITICAL PURPOSES

We recognize the legitimacy of several of the weapons which labor uses for collective bargaining and to influence public opinion. However, we cannot see how any union can justify the use of its funds for political purposes, since this practice forces many union members to lend their financial support to candidates whom they personally oppose.

We recognize the validity of the existing restrictions on the political activity of business, and we urge the extension of these restrictions to unions.

RESTORATION OF INJUNCTIVE POWERS TO FEDERAL COURTS

All too frequently, we see examples of strikes which get out of hand, resulting in intimidation and violence, because of a breakdown in local police powers. In these instances, injunctive procedures are needed to supplement local law enforcement. Yet, in these situations, it is almost impossible for an employer to obtain an injunction from the Federal courts.

Roadblocks should be removed from the path to injunctions in situations where they are clearly indicated. A complete ban on all forms of picketing would eliminate instances of intimidation and violence, but if this is not feasible, at least the present immunity of unions to injunctive procedures should be lifted.

CONTINUE THE BAND ON SECONDARY BOYCOTTS

Moves are currently being made to legalize secondary boycotts, as contemplated in the so-called "situs picketing" amendments to the Landrum-Griffin Act. We urge that all such attempts to weaken the act be rejected, since we believe that restrictions on this particularly vicious form of blackmail should be tightened rather than relaxed.

In the area of Government procurement, we wish to commend you for your awareness of the growing problem of small business. Small business has much to offer the Government, including know-how, flexibility, imagination, and economy; yet, our share of Government procurement is falling instead of rising.

We are encouraged to see the administration taking steps to provide a greater share of Government contracts for small business. If the administration and Congress work together to implement the President's directive, perhaps we can reverse the downward trend.

As President Kennedy pointed out in his March 15 press conference, small business' share of defense contracts in 1960 was $3.4 billion, or 16 percent. In 1954, its percentage was 25.3 percent. A glance at the Department of Defense yearly figures since then shows the gradual downward trend.

This trend is understandable when Department of Defense figures reveal that 73.4 percent of all defense procurement was awarded to 100 large companies. Furthermore, 50 percent was awarded to 25 corporations, and 5 firms were awarded 25 percent of the contracts.

We realize that the production of space age weapons requires enormously complex technology, and that large corporations are best equipped to handle their overall production. Nevertheless, small business can still play an important role in defense production as subcontractors and as suppliers of smaller hardware items, but it needs your help.

STRENGTHEN SET-ASIDE PROGRAM

SBA set-asides have increased slightly in effectiveness over the past few years. Yet they account for only 3.6 percent of defense spending. SBA's authority in this area should be strengthened so that more opportunities can be provided for small manufacturers and construction firms. Certainly more than 3.6 percent of our defense spending can be set-aside for qualified small businesses.

For example, in New England, we are excited about the possibilities of the missile-site program. Each base consists of several subsites, all identical and covering an area of many square miles. If construction of all of the subsites is awarded as a single $70 to $75 million contract, the small contractor is frozen out. Yet, if each subsite were let out as a separate $10 million contract, each job would be well within the capabilities of a smaller contractor. Since the subsites are identical, each contractor could work from the same specifications, producing identical results. It would not cost the Government any more to set aside such subsite contracts. As a matter of fact, competition produced by a greatly expanded list of bidders would probably reduce the cost. In New England, we place a high value on the personal interest and pride of workmanship of the small contractor, as well as on the efficiency of a small work force which is accustomed to working as a team. Although they cannot always be measured in dollars and cents, these are valuable assets, when compared to the impersonal nature of the huge contracting firm which recruits hundreds of temporary workers to handle a big contract.

EFFECTIVE REPRESENTATION OF SBA IN PROCUREMENT AGENCIES

We recognize that small business' greatest potential is in subcontracting. For this reason, we urge that SBA be more effectively represented in procurement agencies to make sure that small business receives a fair share of subcontracts.

Mr. Spencer M. Smith, Jr., of the University of Maryland, while testifying recently before a subcommittee of the Senate Banking and Currency Committee, made a cogent observation. It was his opinion that, among other reasons, the inability of small firms to obtain prime and subcontracts, and the lack of an agency of sufficient power to consider Government procurement to this end, were preventing small business from participating in any overall economic expansion. To this we say, "Amen."

We believe that SBA is the agency to do this job, but it needs sufficient authorization to perform it properly. An incentive should be offered to prime contractors to encourage more subcontracting. Also, Government renegotiators should not penalize prime contractors who subcontract much of their work, as they are inclined to do, as compared to those who keep all of the work "in house."

SBA APPROVAL OF FACILITIES CONTRACTS

One of the major detriments to small business subcontracting is the issuance of "facilities contracts" to major prime contractors without sufficient review of the available capabilities of small subcontractors in the same area. In many instances, the Government is providing capital funds to prime contractors for purchase and construction of facilities which are already available in competent small shops. If the prime contractor subcontracted some of his work to these small firms, such capital investments would be reduced. As a result, not only would small business be strengthened, but the contract could be completed at lower cost to the Government.

SBA maintains lists of willing and able small shops for all kinds of work. We urge that SBA be authorized to review all "facilities contracts" to make sure the Government is not spending funds for facilities which are available from a small subcontractor.

GREATER USE OF ADVERTISED BIDDING

We wholeheartedly support the trend toward greater use of advertised bidding. We are aware of many small companies which are capable of performing at lower cost, contracts which are not even open to them for bidding.

IMPROVE THE SMALL BUSINESS INVESTMENT PROGRAM

We are pleased by the rapid progress which is now being made by the small business investment program. Although it is in need of some improvements, it is becoming an excellent source of long-term and equity capital, and we are watching its progress with interest and pride. We urge continuance beyond June 30, 1961, of the present policies permitting SBA to make loans to SBIC's and to State and local development companies. We are also supporting those amendments which are currently before Congress which will improve the Small Business Investment Act.

RENEWAL OF THE SMALL BUSINESS RESEARCH GRANT PROGRAM

We urge renewal and continuance of SBA's small business research grant program which began in 1959 and was later discontinued. The $2 million annual cost

of this program is possibly the most fruitful investment which SBA can make. Studies which have been produced in the past, and potential studies which can be made in the future, are effective aids to small business, since they probe areas that otherwise might not be investigated at all. Small business needs this management research program.

AID TO DEPRESSED AREAS

Now that the depressed areas bill has been enacted into law, we hope that small business will be given an opportunity to participate to the full extent of its ability to make an effective contribution to the program.

SUMMARY

Give small business the tools and it will do the job. These tools can be classified in three broad areas:

1. Stimulus to increased investment. Capital creation through plowback allowances and liberalized depreciation is a vital factor.

2. Improvement of the labor climate. Since management will be investing capital in new equipment, the people who operate it must assume the responsibility of full partners.

3. Increase our share of the business which the Government generates. Small business can make a vital contribution to our defense posture. It is not asking for special privileges, but it does ask for equal opportunity for all businesses, regardless of size.

SBANE appreciates the consideration you have shown to small business in the past, and we offer our sincere thanks for the time and attention which you have given us today. May we look forward to continuing cooperation between our association and the Congress of the United States. Thank you.

Quality Medical Care for the Aged: A General Practitioner's View

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. CURTIS of Missouri. Mr. Speaker, in the May 23 issue of Look magazine, Dr. Joseph R. Mallory, a general practitioner from Mattoon, Ill., expresses his feelings on the current proposal to put medical care for the aged under the social security system. Dr. Mallory stresses, in his statement, the quality of American medical care under our present free system and notes that the imposition of a compulsory health care program under social security would result in a lowering of this quality care.

I would like, at this point, to place Dr. Mallory's article in the RECORD:

A FAMILY DOCTOR'S FIGHT AGAINST SOCIALIZED MEDICINE

(By Joseph R. Mallory, M.D.)

(Joseph Ross Mallory, 46, is a physician who practices general medicine at Mattoon, Ill. (population 19,088). Civic-minded as well as a good doctor, he has become one of Mattoon's best-known and best-liked citizens. Within the past few months Dr. Mallory has been one of hundreds of physicians who have been speaking at the request of county medical societies concerning medical-care problems of the aged. He warns of the threat of socialized medicine at gatherings such as PTA meetings and business club luncheons. As a solution, he favors the recently enacted Kerr-Mills law, which authorizes the use of general tax funds of the Federal and State governments; its provisions are to be locally administered and call for aid only to those aged who qualify. He disapproves of the Kennedy administration's plan to pay for limited aid to all the aged under social security. Here, in question-and-answer form, Dr. Mallory gives his reasons.)

Do you feel that medical care for the aged is a serious national problem?

I will have to give that question a qualified yes. I think we must assume there is a problem, although I'm inclined to the opinion that it has been exaggerated. Nevertheless, we must recognize that it is impossible for all families to take care of their aged members and impossible for some of the elderly to take care of themselves adequately. Many of them must have help beyond themselves and their families.

The question, then, is how we are going to provide the financial assistance these people require?

That is the heart of the problem, right there.

The administration has proposed that health care for the aged be financed through the social security system. Why are you opposed to this approach?

I can think of many good reasons. To begin with, the administration proposal—the King bill now before Congress—is based on a double error. It assumes that most of the aged are in poor health and that most of them need help to meet the costs of medical care. This just isn't true. Some of our elderly are in poor health, and some do have financial troubles. But most are healthy and in reasonably good shape financially. A number of surveys back this up.

Does this hold true in your community?

Yes, and I suspect it holds true in most communities.

You said you think the problem is exaggerated. In what way?

Well, just look around for yourself. Some older people are millionaires. Some are comfortably well off. Millions have some form of health insurance and private pension programs. Some, of course, are poor—just as some young or middle-aged people are poor. I truly believe that anyone who really needs medical care in this country can get it regardless of his financial status.

What about the health of the aged? Don't they require medical care more often than young people?

Some do; some don't. I don't think the problem can be standardized to that extent. Some 70-year-olds play 18 holes of golf regularly; others are spry enough, but prefer checkers, and still others are bedridden. Many of the ailments of the elderly would disappear if society stopped looking at them as castoffs, if these older people felt they were wanted and had a mission in life. Older folks are individuals, and their problems have to be solved on an individual basis. You can't answer all of their problems with a single solution.

You obviously feel very keenly about this controversy over medical care. Why do you feel so strongly about it?

For a number of reasons. Most important, I think, is that I sincerely believe that the free practice of medicine, which has given our people the best medical care in the world, is in jeopardy. A physician's first concern is for his patients, and that concern goes beyond the aches and pains of the people he treats. I'm convinced, along with most of my colleagues, that, unless the people really understand what's going on, we're liable to awaken some morning and find we've got socialized medicine.

A number of countries have socialized medicine in one form or another. Why do you feel it would be bad here?

There isn't any question in my mind that socialized medicine would endanger the high quality of medical care we have been able to give our people in this country. If you want socialism, you've got to sacrifice much of your freedom. Government always exercises some kind of control any time it pays the bill. I think it is obvious the people's health would suffer under a system of political medicine. The greatest strides in medical science in recent years have been made in the United States, where the profession has been free to pursue its goals of better and better medical care for our people. In my opinion, we physicians owe an obligation to the American people to try to keep it that way. It's part of our duty as doctors.

You see a threat of socialized medicine in the King bill. Sponsors of this administration proposal deny that it is. How do you back up the charge?

You have to understand what the King bill would do. The Federal Government, among other things, would make direct payments to hospitals for services to eligible patents, those over 65 on social security. But first, hospitals would have to agree to abide by rules and regulations established by the Secretary of Health, Education, and Welfare. And the Secretary would have the power to set reasonable compensation that hospitals would receive. It seems clear to me that when the Government forces every wage earner to pay into the scheme, when Government makes the rules for operating hospitals, sets the compensation and pays the bills, you've got socialized medicine for everybody who gets the service.

Former Representative Aime Forand saw his bill for social security medicine as "a foot in the door." He said "We can expand the program after that." The Socialist Party has said that the social security approach for medical care is socialistic, and they're for it. They're for it because it could be expanded easily into full-scale socialized medicine for everyone.

Sponsors of the King bill have said it would guarantee free choice of physician and hospital. Do you disagree with that too?

Yes, and I'll use my own community as an example to explain why. We have one hospital in Mattoon. Suppose, for some reason, any reason, the Secretary of Health, Educatoin, and Welfare refused to approve our hospital. This would mean that everyone in Mattoon on social security who needed hospitalization would have to go to some other city to get it if he wanted the Government to foot the bill. Wouldn't that be a denial of free choice of hospital? And if the family doctor of one of these patients wasn't on the staff of the other hospital, wouldn't that deny the patient free choice of his physician? There are many one-hospital towns in this country that would be affected in the same way.

Why are doctors opposed to the King bill, when its sponsors say they are not included in it?

My answer is that physicians are included, specifically pathologists, radiologists, physiatrists and anethesiologists working in the hospitals, along with interns and residents and those doctors serving the hospitals' outpatient clinics. We realize that it would only be a short time until the program would be expanded to include all physicians and compel every man, woman, and child, regardless of age, to come under the system.

You agree there is a problem in financing medical care for the aged. If you object to the social security approach, how do you propose to meet the problem?

We already have a better solution, the Kerr-Mills law for medical aid to the aged, passed by Congress last year. The medical profession supported this measure in Congress, and doctors are doing everything they can to get it into full swing in all the States.

How does the Kerr-Mills law work?

Federal funds are made available to the States to pool with their own money to

provide medical care to everyone over 65 who needs financial asistance. Each State, working with local communities, decides who needs help. I figure we know more about our own problems in Mattoon than some Government employee way off in Washington, D.C. The people who need our help are our neighbors. Their problems are our community's problems.

What benefits are available under the Kerr-Mills law?

They are practically unlimited. It depends on what each State legislature wants to provide. Benefits can include physicians' services in the hospital, clinic, office or at home; hospital services; nursing-home care; physical therapy; laboratory, diagnostic and X-ray services; drugs prescribed by a physician; home nursing, and a variety of other things, such as glasses, dentures and prosthetic devices.

Why do you say the Kerr-Mills law is better than the administration's social security approach to the problem of medical care for the aged?

Kerr-Mills offers a full range of medical benefits to the needy and near needy over 65 under a program administered by those best able to judge the needs of the elderly—the people back home. It would be cheaper and would do a better job of protecting tax money.

The administration-sponsored King bill, on the other hand, would set up long-distance control in Washington. Tax money of the working people would be used for the benefit of the rich as well as the poor. The bill would be discriminatory, because benefits would be available only to those on social security and denied to several million Americans who are not eligible for social security and never will be. The Kerr-Mills law, properly implemented by the States, would take care of everyone over 65 who really needed financial help.

What would the King bill cover?

Benefits would be limited to hospitalization, nursing-home care, home nursing and outpatient diagnostic services. It is important to note also that those eligible for hospitalization would be required to pay $10 a day for the first 9 days in the hospital, a total of $90. That, along with other costs the patient would have to pay, would be a serious drain on the financial resources of many on social security. I think it should be clear that the King bill is not only inadequate, but unnecessary. Kerr-Mills will do the job if given a chance. Already, 15 of the 50 States have passed enabling legislation to participate in Kerr-Mills funds.

You say benefits would be available under the Kerr-Mills legislation to anyone over 65 who needed financial help to meet his medical bills. How would need be decided?

Well, some of the legislation sets standards of eligibility based on income and liquid assets. Some people would be completely covered, and others would be able to get part of their medical expenses.

Eligibility would be based on a means test, then?

Certainly. The idea is to help people who need help—not to waste the taxpayers' money paying medical bills for those who can afford to pay their own way. And millions of older people in this country can afford to do so, including a great many drawing social security benefits.

What is your answer to the charge that the Kerr-Mills law would force the older people to pauperize themselves before they could get help?

I feel the charge is totally groundless. If anyone cares to study the plans already adopted by several States, he will find that there is protection of the assets of the people.

The means test has been called an affront to dignity, degrading to the individual. How do you feel about this charge?

I imagine I feel the same way as any other American who gives the matter a little thought. To call the means test "degrading" is sheer nonsense. It has been an important part of the American economic and government system for a long, long time.

What examples of the means test in government and the economy do you have in mind?

Public housing, for one. It is available only to those whose incomes are below a certain amount. Veterans must prove need before they can get free care in VA hospitals for non-service-connected disabilities. The social security system for everyone under 72 links benefits to income. The means test in government is designed to protect against waste of tax money. You will find the means test in our private affairs too. Many labor unions base strike benefits on need. College scholarship applicants must demonstrate need. Our entire system of credit in this country is grounded on a means test, as it should be. Credit is limited by the ability to pay.

The means test is neither degrading nor undignified. It is a wise protection for business, government, and the individual.

In reference to the social security approach, don't you feel there is some merit in the argument that social security provides an insurance system enabling working people in their productive years to save for their old age?

Sure, if it were true—but it isn't. It misrepresents the true nature of social security, suggesting that it is a program of prepayment of insurance costs, which it is not.

How do you back up that statement?

Well, in the first place, the U.S. Supreme Court, among other agencies of the Federal Government, has said social security is not a prepayment plan. It is clearly a pay-as-you-go program. It is distinctly different from voluntary private insurance, where reserves and income have to match benefit obligations.

Can you explore this subject a bit further?

Gladly. I think it's extremely important for the American people to understand what social security really is and how it works. The fact is that the taxes taken from workers and their employers don't pay the workers' own benefits; they pay the benefits of the people now getting social security.

In other words, my generation will collect from our children and grandchildren, and they will collect from theirs. It's important that we realize that if the social security program were ended today and Congress said, "We'll pay off just what we owe to everyone who has paid into social security up to today," it would still cost more than $300 billion to pay off the debt. If that happened, men and women not even born yet would be taxed to help pay the bill, and they wouldn't be getting a nickel themselves. Does that sound like an insurance program?

What are you doing to get your message to your friends and neighbors in Mattoon?

Well, I've talked to 20 or 30 different groups in the area, trying to impress on them the fact that any system of medical care financed through social security will inevitably lead to complete socialization of medicine in this country. And can there be any doubt in anybody's mind that once medicine is socialized, socialism will spread to every other aspect of American life? This is the insidious fact that must be brought home to every American. It is the reason I, along with hundreds of other physicians, am volunteering to speak out against this danger to our way of life.

Prayer Before a Red Firing Squad

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. HALEY. Mr. Speaker, at this time, I would like to place in the RECORD, an article which appeared in the Auburndale Star, Auburndale, Fla. The article appeared in the editorial column "An Editor's Notebook" and was written by my friend, John Lopp. It is entitled "Prayer Before a Red Firing Squad."

Mr. Lopp warns us that unless we are stirred from our complacency, our lethargy, we may awaken to find that we have lost our heritage and our freedoms. Our national spirit has weakened. Unless it is revitalized, unless we awaken to our strong faith in the philosophy of government which has made us a great Nation, we may find that it is too late to save America.

I commend to your reading the editorial which follows:

PRAYER BEFORE A RED FIRING SQUAD

(By John D. Lopp)

DEAR LORD: With the rattle of firing squads roaring in our ears, we come to you for the last time to ask your forgiveness—not so much for that which we have done as for that which we did not do.

As we sit here awaiting our summons to the bullet-pocked wall where we shall breathe our last breath and look for the last time upward into the blue that only yesterday canopied a free, a strong and a vibrant Nation, we think of that bulwark of freedom that we once enjoyed and we ponder.

What have we done to permit such a thing as is now happening to happen?

And then, in the same breath, we answer our own query.

We let America fall because we, and millions like us, were too busy, too selfish and too unconcerned.

"It can't happen here," we told ourselves as free nation after free nation vanished behind the swelling tide of a godless philosophy of enslavement and degradation and annihilation

But it has happened at last to us, just as it happened to the peoples of China and Poland and Korea and to the Hungarians and to those of Laos and as it happened in Cuba.

It happened because we, and all too many Americans like us, refused to see, because we closed our eyes to the sure and certain pattern of deceit and of betrayal, because we listened, hopefully, and each time with believing, as the same old lies were propounded and repeated, time after time, while new victims vanished behind that curtain that marks an end to all things that a free people hold more precious than life itself.

We hoped, we temporized, we whistled in the dark.

We cringed before world opinion—an opinion made articulate and blatant by the voices of those who served the forces that sought, and have now accomplished, our destruction.

We cringed, also, from voices from within, many, perhaps, mislead, but others serving those who plotted our enslavement and planned it all too well.

We ignored our glorious heritage, we forgot those who dared defy a despotic monarch

to risk and, by that risking, to create a shrine of freedom along the fringe of coastline of a new and unexplored continent.

We forgot the men that followed, those who pushed westward with long rifle and powder horn to span the Mississippi and the mountains and the plains and the deserts.

We forgot the ringing phrases that inspired a budding nation. We forgot "Don't Give Up the Ship," and "Millions for Defense But Not One Cent for Tribute."

We forgot Nathan Hale and his regret that he had but one life to give for his country. We forgot the squint-eyed musketmen crouched behind crude barricades at Lexington and Bunker Hill. We forgot the suffering at Valley Forge.

We ignored the heroism of those who again fought the British in 1812 to guarantee our independence. We forgot that they too faced tribulations and despairs—that they saw their cities bombarded and their capitol burned.

We forgot that they did not falter any more than did those of both the Blue and the Gray when called upon to defend those things, those principles, that they held dear.

And we forget the *Maine* and that charge up a sun-baked hill. We forgot those that fought in the mud and muck of the trenches in World War I, just as we forgot those who followed the Stars and Stripes to every corner of the globe in another world conflict against the tyranny and the lust and the hate that we as a Nation could not countenance or permit to blossom unchecked and uncontrolled.

We forgot all those glorious sacrifices that earned our Nation the respect, the admiration, and the envy of all less fortunate people.

We forgot—for many reasons.

We forgot because we became apologetic for our wealth, our power, and our concept of freedom. We listened to those who scoffed at America, those who belittled us, made fun of us as money grubbers, as a nation grown soft with luxury.

We believed those who told us that we would fail as a leader of nations unless we raised all people to our standards and in almost the same voice ridiculed our way of life, our patriotism, our once-deep-rooted conviction that our land was divinely guided and divinely inspired.

We listened to those who scoffed at our concepts of morality, at our respect for, and confidence in, the sanctity of the home and of marriage. We followed those who corrupted our literature with sex and hate and ugliness.

We shouted down those who attempted to awaken us—we ridiculed, or at least permitted others to ridicule—and often silenced the voices of those whose warnings we blithely ignored.

Partly, we ignored the voices of those who dared to speak because we were too busy with horse opera and sick comics and installment payments to pay attention—but largely we ignored them because we were afraid.

We were afraid of a new and powerful force that might well annihilate a nation in a handful of seconds. We trembled at thoughts of our cities in ruins and farmlands devastated and contaminated, our civilization destroyed in the twinkling of an eye.

But mostly, we quaked at fears for our own safety, for our own full bellies, and for our auotmatic washing machines and chrome-plated automobiles.

Like so many ostriches we buried our heads in the sands of obliquity hoping that if we ignored the ever expanding menace of the rising Red tide it would go away.

We vacillated—we temporized—we voiced high-sounding but meaningless phrases in the world councils, as the Red tidal wave ripped through once-free lands, engulfing state after state and nation after nation while we prattled of peace.

Even after the crimson avalanche pushed across oceans to our very doorstep we vacillated, debated, feared the clamor of world opinion which echoed only the Judas-babble of those who would betray us.

And then, at last, it was too late.

No nuclear blasts wiped out the freedom won by Washington and John Paul Jones and Daniel Boone and Admiral Dewey and "Black Jack" Pershing and "Bull" Halsey and "Blood and Guts" Patton and all the others who led, or were lead, as America grew and became omnipotent.

Our Nation fell because we stopped believing in our destiny—because we apologized for being rich and powerful among all nations.

And, because we were afraid, we refused to read the all-too-plain handwriting on the wailing wall of inevitability.

We, who were once strong, permitted ourselves to become weak with timidity. We who were once daring became over-cautious with doubts of our divinely ordained mission. We, who were once boisterously loud in shouting the praises of our system of free enterprise and freemen, became mute and hushed as we apologized for that which our sacrifices and our labors, and the sacrifices and labors of those who had gone before us, had made possible.

For that, Oh Lord, we ask your forgiveness as the tramp of the executioners pounds up the corridor to our cell door.

Forgive us, and the tens of millions like us, who could have raised our voices when there was yet time to be heard—but who, instead, remained mute until it was too late—until it was far, far too late.

The Buffalo Art Festival

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. DULSKI. Mr. Speaker, on May 14, 1961, the first United States-Canadian Art Exhibition was opened in Buffalo, N.Y., by representatives of the Fine Arts League of Buffalo and the Ontario Institute of Painters. The opening marked the beginning of National Art Week, and is part of the Art Festival in which 70 downtown Buffalo businesses are participating.

Mr. Laszlo Szabo, president of the Fine Arts League, and Mr. Adrain Dingle, president of the Ontario Institute of Painters, both expressed various views with respect to art and painting. Mr. Harlan J. Swift and Mr. Maurice Austin, as well as myself, participated in the opening ceremony.

The principal address was delivered by Mr. W. K. Warrender, minister of municipal affairs, Province of Ontario, who represented Ontario Premier Leslie M. Frost. Under leave to extend my remarks, his address follows:

Mr. Szabo, ladies and gentlemen, it is indeed a great pleasure to be here today and to participate in the formal opening of this exhibition sponsored jointly by the Fine Arts League of Buffalo and the Ontario Institute of Painters.

Premier Frost, having had experience in international cooperation as Ontario's Premier when the gigantic St. Lawrence Seaway was constructed, was quick to see the international aspects of this current exhibition.

He has charged me to convey to you his very best wishes for the success of this exhibition, and to congratulate both art organizations on their enterprise in joining forces to make it possible.

It used to be thought that if all the world's peoples spoke the same language, then they could always understand one another and would live in peace. The invention of Esperanto was one manifestation of this idea.

Unfortunately although speedy translation service results in an almost instantaneous communication, it is now apparent that this does not result in people understanding each other. In fact it often happens that persons brought up in the same household, all speaking the same tongue since babyhood, cannot understand each other's ideas.

Is there then, any universal medium of communication?

There may not be, but down through the ages art has provided the nearest approach to it.

While art could not be expected to give you a lesson in calculus, it could and did evoke feelings of love and adoration, of delight, of sympathy, of strength, and in fact almost the whole gamut of human emotions. A person did not even need to speak any language at all to feel the spell of the old Italian masters or of the later schools. Some schools tended to emphasize certain aspects of a situation, even to the point of caricature, but their pictures were basically understandable even as they varied in handling. The painter and his audience were still in communication.

Then there arose a situation which I am sure the older painters could never have conceived in their wildest moments. There arose a condition where a viewer would approach a picture and after a period of bewilderment would gasp, "It doesn't mean anything to me." And this often happened even when the so-called painting was hanging the right way.

But more surprising still, through ingenious publicity, the idea grew up that a picture need not, indeed should not, represent anything recognizable.

While there are undoubtedly many sincere nonobjective artists, still the trend has encouraged a flood of painters who have little or no ability and few ideas, who rely on pure accident for whatever effects they are able to achieve. Worst of all their performance tends to destroy all artistic standards and to enthrone ugliness in their place.

But everyone with any spirit must express his own feelings. Expression means life and joy; suppression means frustration and death.

And so we have a group of painters in Ontario and a group of painters in Buffalo district whose very instinct impels them to study nature and to express its moods in terms that the common man can understand, not in the sense of preserving something in the past, but of expressing today's and tomorrow's ideas in such a way that the viewer may feel himself as part of the picture.

It is in this spirit, then, and with this determination, that members of these two art organizations have combined their efforts to present for your attention, a collection of paintings which, it is believed, not only reflect the canons of artistic excellence carried down through the centuries, but also the spirit of our world today.

Harper Lee's Novel Wins Pulitzer Prize

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article from the Mobile Register dated May 2, 1961, with reference to Miss Harper Lee entitled "Harper Lee's Novel Wins Pulitzer Prize." Naturally, all of us in the First Congressional District of Alabama, of which Monroeville is a part, are quite proud of Miss Lee for winning this much desired prize on her first novel.

MAY 8, 1961.

Miss HARPER LEE,
Monroeville, Ala.

MY DEAR MISS LEE: All of us down in Alabama are quite proud of our Monroeville girl, who made good and who won the 1961 Pulitzer Prize for fiction.

I know that your father and your sisters and all the rest of your family are happy indeed that you have scored such a success on the first work that you ever published. Your experiences prove that patience and perseverance remove mountains.

May God continue to bless you in your efforts. With kind regards, I am,

Sincerely yours,

FRANK W. BOYKIN,
Member of Congress.

[From the Mobile (Ala.) Register, May 2, 1961]

ALABAMIAN GETS TOP FICTION AWARD—HARPER LEE'S NOVEL WINS PULITZER PRIZE—MONROEVILLE WRITER SCORES BIG SUCCESS WITH FIRST BOOK

Harper Lee's novel "To Kill a Mockingbird," has won the 1961 Pulitzer Prize for fiction.

The 35-year-old Pulitzer winner hails from Monroeville, Ala., and is a frequent visitor to Mobile.

Her first novel, "To Kill a Mockingbird," concerning a small southern town and its people is both a Reader's Digest book-of-the-month selection and a Literary Guild choice.

Motion picture rights for the novel have been acquired by a producer-director team, Alan Pakula and Robert Mulligan. They plan to visit Miss Lee in Monroeville where they will finish negotiations with a major company for a release and are expected to start filming this year.

The candid and unassuming author is the daughter of A. C. Lee, Monroeville attorney and former publisher of the Monroe Journal.

The announcement of the award came in an Associated Press dispatch from New York.

Miss Lee's family, in Monroeville, expressed delight at the selection.

Her sister, Alice Lee, said, "It's the most amazing news we could imagine. It is absolutely amazing, especially since it is her first novel."

A. C. Lee, 81, her father, and Alice operate their own law firm in Monroeville. They are partners.

"The whole town is excited over the announcement," said Miss Lee. "I can't do anything but answer the telephone. It's been ringing all afternoon. It just won't stop ringing.

"You see, this is a small town and everybody knew Harper and the whole family.

"I talked with her other sister, Mrs. H. Conner of Eufaula (Ala.), a little while ago. She is just as excited as we are.

"And I've already talked with Harper twice from New York. She can't believe it either."

Monroeville, in south Alabama, has a population of about 3,000. It is a rural community, and many claim it was the setting for Miss Lee's novel, about the social problems of a small town.

"That's something for a first novel," said Alice Lee. "We know she would like to write another one, but this one has been so successful she simply hasn't had time to start another one."

"ALL THE WAY HOME" PULITZER WINNER FOR DRAMA—"MOCKINGBIRD" HONORED

NEW YORK, May 2.—"All the Way Home," a play which almost closed the week it opened on Broadway, is the 1961 winner of the Pulitzer Prize for Drama.

The play represented the first stage effort of Tad Mosel, 39, of New York, hitherto a television writer. It was based on the late James Agee's Pulitzer Prize novel of 1958, "A Death in the Family."

Winner of the Pulitzer Prize for fiction is Harper Lee's "To Kill a Mockingbird," a novel depicting a small Southern town's struggles to solve its social problems.

As in the case of Mr. Mosel and several others among the 15 Pulitzer recipients announced yesterday, it was a first for the 35-year-old Miss Lee, a native of Monroeville, Ala.

Although she had been writing things since she was 7, the novel was the first work she had ever published and emerged from a long and hopeless period of writing over and over again.

TEXAS PAPER WINS AWARD

The Pulitzer Prize gold medal for public service was awarded to the Amarillo Globe-Times, the first Texas paper to ever win the award.

The medal, the top newspaper award of the year, was for the newspaper's successful campaign to erase corruption in local government. Touched off by Editor Thomas Hazzard Thompson, the effort resulted in a law enforcement shakeup and election of a reform slate of officials.

Lynn Heinzerling, 54, of the Associated Press won the prize for international reporting. Mr. Heinzerling, a native of Birmingham, Ohio, who has been in foreign service since 1938, was honored for his coverage of Africa, including pioneer reporting during the early days of the Congo crisis.

The prize for national reporting went to Edward R. Cony, 38, news editor of the Wall Street Journal, for his "analysis of a timber transaction which drew the attention of the public to problems of business ethics." The transaction involved the Georgia-Pacific Corp., the Nation's No. 1 plywood producer.

PRIZE FOR PHOTOGRAPHY

Yasushi Nagao, 30, of Tokyo, became the first foreigner in the 45-year history of the prizes to win the award for photography. Only two foreigners ever won Pulitzer Prizes before—the first in history in 1917, and the other in correspondence in 1934.

Mr. Nagao, of the Tokyo newspaper Mainichi, was cited for his dramatic picture of the assassination last October 12 of Japanese socialist Inejiro Asanuma. It was distributed in this country by United Press International, thus making Mr. Nagao eligible for the prize.

The editorial writing award went to William J. Dorvillier, 53, editor and publisher of the San Juan (Puerto Rico) Star, founded a little more than a year ago and owned by Cowles Magazine, Inc.

Mr. Dorvillier, a native of North Adams, Mass., and a newspaperman for 26 years, won the prize for editorials criticizing the Catholic bishops of Puerto Rico for a pastoral letter forbidding Catholics to vote for the Popular Democratic Party of Gov. Luis Munoz Marin. Mr. Dorvillier, a Roman Catholic, wrote 20 editorials. Mr. Munoz Marin's party won the election.

Sanche de Gramont, 29 of the New York Herald Tribune, won the prize for local reporting under pressure of edition time. A native of Switzerland, now assigned to Paris by his newspaper, he was selected for his story of the death of Baritone Leonard Warren on the stage of the Metropolitan Opera House, March 4, 1960.

The prize for local reporting where deadline pressure was not a factor was won by Edgar May of the Buffalo (N.Y.) Evening News, also a native of Switzerland. Mr. May, 31, conducted a six-month study of the cost and other problems of administering public welfare. He spent three months as a caseworker for the Erie County Department of Social Welfare. The series was entitled "Our Costly Dilemma."

The cartoon award went to Carey Orr, 71, a cartoonist for the Chicago Tribune since 1917. The award was for the Ada, Ohio, native's long and distinguished service in his field as exemplified by a cartoon last October 8 captioned "The Kindly Tiger." It showed a tiger representing communism licking its lips over the figure of Africa emerging to freedom.

Except for the gold medal award—which carries no cash—all journalistic citations carried prizes of $1,000. Those in arts and letters were worth $500 each.

SET UP BY JOSEPH PULITZER

The Pulitzer Prizes, set up by the late newspaper publisher Joseph Pulitzer in a bequest to Columbia University, are awarded annually by the trustees of the university on recommendation of an advisory board made up mainly of newspaper executives.

Besides fiction and drama, awards in the field of arts and letters were made in the areas of history, biography, poetry and music.

Herbert Feis, 68, of York, Maine, won the prize for history for "Between War and Peace: The Potsdam Conference." It was the latest in a long series of published works by the New York city native, going back to 1930.

David Donald, 41, of Princeton, N.J., won the award for biography for his "Charles Sumner and the Coming of the Civil War," a study of one of the foremost anti-slavery voices in the North.

The prize for poetry went to Phyllis McGinley, 56, of Larchmont, N.Y., for "Times Three: Selected Verse From Three Decades."

Walter Piston's "Symphony No. 7" brought him the prize for music. The symphony was commissioned by the Philadelphia Orchestra Association and was first performed by that group last February 10. Mr. Piston, 67, of Belmont, Mass., also won the Pulitzer Music Award in 1948, for his "Symphony No. 3."

A special citation was bestowed by the Columbia trustees on "The American Heritage Picture History of the Civil War," which covers the war's history in pictures, maps, sketches and text.

The mammoth volume was prepared by the book division of the American Heritage Publishing Co., Inc., with narrative by Bruce Catton, a 1954 Pulitzer Prize winner in history. Eight researchers, writers and artists provided background for the book.

The Agriculture Bill

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. MICHEL. Mr. Speaker, as a member of the Agriculture Subcommittee of the Appropriations Committee, I wish to call the following article from the May 10 issue of the Chicago Tribune by Wal-

ter Trohan to the attention of my colleagues:

WASHINGTON REPORT

WASHINGTON, May 9.—The House Agriculture Committee is holding hearings on an overall farm bill, a most complicated measure with far-reaching implications because it would supposedly let farmers write their own tickets but actually puts final power in the hands of Secretary of Agriculture Orville Freeman.

The bill, by which the administration hopes to discharge its campaign promises to solve the farm problem, is a 79-page affair which covers the soil front. Charles B. Shuman, president of the American Farm Bureau Federation, says it will give Freeman absolute control over agriculture.

There is something for every farmer in the measure, from a low interest program to build farmhouses and irrigation ditches to crops themselves. The home and irrigation loans would be paid over a 40-year period with the interest rate no higher than 5 percent.

The measure would expand the power of farm cooperatives, which many businessmen consider too big at present. There is a program for setting up food reserves in so-called underdeveloped countries and much more. Of course, the costs will fall, where they always come to rest, on the American taxpayer.

PLAN REVIVAL OF PAYROLLER VOTE FORCE

Plans are to revive the field committee set up to administer many items of the bill. This spells a return to a program that will replace approximately 50,000 field committeemen on the Federal payroll, where they can be expected to constitute the potent political force they were back in the days of such Democratic Agriculture Secretaries as Henry Wallace, Claude Wickard, and Charles Brannan. The boost in administrative costs would be about $250 million a year.

Whether or not this will be approved by Congress, it is evident Freeman wants to dictate farm production and prices. His chief economic adviser is Willard Cochrane, of the University of Minnesota, who was Kennedy's farm adviser during the campaign and who proposed the concept of parity income which would be even higher than parity price for farmers.

During the campaign, farm economists in the Department of Agriculture said the Cochrane formula would mean a 10-cents-a-pound jump in the price of hogs, a 17-cents-a-pound increase for chickens, and a 19-cent-hoist in eggs, with other food prices jumping in proportion. The Department said the plan would raise food costs for consumers by almost 25 percent.

The first major piece of farm legislation under the New Frontier was the feed grain bill, which gave the Department authority to control production and price of corn and grain sorghums. If the overall farm bill now under consideration goes through, Freeman will undoubtedly try to promote the farm parity income concept.

VOTE TO RAISE CHICAGO FOOD PRICES

To win, Freeman is counting on the support of many big city Congressmen, who know nothing about the farm problem, but vote regularly for more and more Government domination over farmers, even though the domination means higher food prices for their constituents and less and less free enterprise.

The margin for passage on the feed grain bill last March 9 was furnished by Chicago's Democratic Congressmen. Led by the dean of the city's delegation, THOMAS J. O'BRIEN, Democrat, of Illinois, all 10 Chicago Democrats went down the line for the measure which passed the House by a vote of 209 to 202. Had the Chicago Democrats voted against the measure, it would have lost 212 to 199.

Undoubtedly, House leaders are counting on Chicago's Democrats, as well as those of other large cities, to go down the line again when the big farm bill comes up for a vote. In view of the prospective higher food prices, interference with the operations of merchants and traders of Chicago, and damage to the free-trade system generally, it seems strange that Chicago Democrats are so loyal to the ideas of Professor Cochrane and Secretary Freeman.

Each Retreat Under New Isolationist-Pacifist Pressure Increases Danger of War and Defeat

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by William S. White from the Washington Star of May 17, 1961:

NEW ISOLATIONIST-PACIFIST GROUP PERILING NATION IN DELUSION THAT ALL FORCE, EVEN FOR RIGHT IS EVIL

(By William S. White)

American foreign policy stands at the most fateful crossroads since the old isolationists and pacifists narrowly failed two decades ago to prevent this country from joining in the resistance to the Nazis and Fascists.

This movement honestly believed itself dedicated to "peace" and to America First. But had it had its way America would have finished not first but rather third—the third victim, after Britain and France, of an anti-human force centered in Adolf Hitler.

Now there has arisen to frightening influence a new American isolationism, a new American pacifism, which may well destroy the capacity of the United States to resist the equally antihuman force of international communism.

In one way, indeed, the danger is greater now than then. For the old isolationists, the old pacifists, at least did not deny their isolationism, their pacifism. But the new isolationism will not acknowledge itself for what it is. The new pacifism will not admit, even to itself, that the inevitable end of its reasoning is the surrender of one anti-Communist position after another until there will be at last no place left for the West to turn and stand its ground.

Instead, the neo-isolationists, the neo-pacifists, put the plain meaning of their policies under a bland, superior cloud of self-deluding talky-talk. They do not simply say flatly that we should take no risk in this world—not in Cuba, not in Laos, not anywhere—and let it go at that.

With that kind of candor, the issues could at any rate be met headon. Rather, they argue, for example, simply that Cuba is not really a threat to the United States, in spite of the public alliance with the Soviet bloc publicly proclaimed by Fidel Castro. Cuba is only peripheral, though Cuba lies 90 miles from the American shoreline and though for the first time in our nationhood an aggressive international power has an undeniable lodgment of this hemisphere.

So it is with Laos. Loas is not really worth any risk, either. We are held to be interfering there in local politics, or something or the other.

Again, the preconditions for fair debate are denied for lack of candor among the new isolationists, the new pacifists. For nearly all those who now declare that Castro offers no great danger to us were in the forefront of those who built up the dictator, Castro, with almost hysterical hosannas, in the first place. He is in part their own creation. This truth they cannot admit without admitting their share of responsibility. So what is a truth becomes, to them, no truth at all.

The new isolationists, the new pacifists, have honorable motives. But at the very bottom they are also men caught by a dangerous and shallow myth exploded way back in Hitler's time for all mankind to see. This is the delusion that all force is always evil (and all generals always stupid) even when only force is left to defend right and justice. It is the delusion that only diplomacy and negotiation are acceptable weapons.

So we fail in Cuba, because we dare not risk direct action and thus the censure of the neoisolationists, the neopacifists, in this and other countries. So our Secretary of State refuses one day to sit down at Geneva with Communist gunmen and next day agrees to sit down with them, under pressure of the neopacifists in England, in France, and here.

It is easy to laugh aside those who object to these surrenders. It is only necessary to suggest that we are simply naive, excitable men, flag wavers and warmongers. But just as Hitler tragically fooled the old isolationists and pacifists, Khrushchev is tragically fooling this new lot.

So President Kennedy faces a great imperative of history. He must soon free himself of every shadow of the influence of this new lot, or this country is going down the drain—and so is his administration in the long book of that history.

We Must Intervene in Cuba

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. DORN. Mr. Speaker, the committee on Pan American Policy, headed by Harold Lord Varney, is making every effort to awaken American people to the danger of a Communist Cuba. The following news release was issued by this Committee on May 2:

WE MUST INTERVENE IN CUBA

The Nation is stunned by the events in Cuba. It is not enough to recognize that we have suffered a shattering prestige defeat. What is important is that we must not accept the defeat as irretrievable.

There is no mystery about why we lost.

We have failed in Cuba, just as we failed in Korea, because we did not fight to win. With all the ace cards in our hand, we did not choose to play them. We resorted to the subterfuge of an exile's invasion instead of facing the situation squarely ourselves. And in consequence, we have given the contemptible Castro an opportunity to claim victory over the United States, when we could have crushed h[illegible] like a cockroach.

Why did we do this senseless thing?

The reason can be found in the hangman's noose of treaties, commitments, and renunciations which we have put ourselves into in

Latin America during the last two decades, in an effort to win friendship. In a practical situation, like that of Cuba, these commitments fetter us hand and foot.

Let us face the bitter truth. The whole OAS apparatus, into which we marched so hopefully in 1952, has become a millstone about the neck of the United States. It cannot act promptly and decisively when we need it. It stops us from acting alone.

Moreover, it provides an easy alibi to irresolute men in Washington to shirk hard decisions. To every realistic proposal, they have the ready answer that we must not offend our Latin American allies. And so we flirt with catastrophe rather than hurt Latin American feelings.

President Kennedy is not to blame for the Cuban debacle. He inherited the whole fantastic spider web of treaties and self-imposed restraints from his predecessors.

But now that he knows that he cannot win battles hog-tied to the OAS, he has no other practical choice but to go it alone. To do nothing, to allow the virus of Castroism to continue to spread in this hemisphere, would be the most craven form of defeatism. President Kennedy must act, and he must be prepared to act alone.

Cutting through all the moldy phrases of the ideologues, the logic of the situation is plain.

Notwithstanding his statement of April 12, President Kennedy must intervene in Cuba with American forces. If we stop to haggle over legalities, we are lost. If our Latin American allies will intervene with us, we will welcome them. If they will not, we must act alone. Above all, we cannot wait for a decision in the OAS, for it will never come.

We must intervene in the full knowledge that our action will be denounced and abused by the whole professional anti-Yankee wolfpack in Latin America. But if we lose to communism—which we certainly will if we do not immediately clean up Castroism—we will be abused even more venomously, and despised to boot. At least we can now have the compensation of victory.

President Kennedy can place his name in the illustrious roll of Presidents who were not afraid to act in a crisis. He has the opportunity in Cuba.

Income Tax Relief

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. HOLTZMAN. Mr. Speaker, I am today introducing in the House of Representatives two bills which, in my opinion, will do much to provide some small measure of relief to the American taxpayer.

The first bill provides that an exemption from income tax in the case of retirement annuities and pensions, up to the amount of $2,500, would be granted. This legislation is introduced with the thought in mind that our elder citizens must be given a helping hand in meeting the current high cost of living. Many of them have been endeavoring to live on fixed incomes for a number of years, and with the continued upward spiral of living costs, this has made their situation a desperate one. Many of them have been forced to seek work to supplement their annuities or pensions, and with the unemployment situation as critical as it has been in the last several years, finding a suitable position has not always been possible or easy.

The second bill would increase the present personal income tax exemption of a taxpayer from $600 to $1,000, including the exemptions for a spouse, a dependent, and for old-age and blindness. The present $600 exemption is absolutely outdated and totally unrealistic today, having been put into effect a number of years ago when living expenses were considerably lower.

The tax laws have placed a heavy and onerous burden on our taxpayers, particularly those in the lower- and middle-income brackets, and I believe that a liberalization of these laws is long overdue. To increase the present exemptions will place more money in the hands of the consumer, and in turn will stimulate our economy.

A Salute to the Memory of Senator George W. Norris

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, May 18, 1961

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by J. L. Robertson, member of the Board of Governors of the Federal Reserve System, at the George W. Norris National Centennial Conference, in Washington, D.C., on May 16, 1961.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A SALUTE TO THE MEMORY OF SENATOR GEORGE W. NORRIS

(By J. L. Robertson, Member of the Board of Governors of the Federal Reserve System at the George W. Norris National Centennial Conference, Willard Hotel, Washington, D.C., May 16, 1961)

This is that unusual occasion when one can use a hackneyed phrase with genuine meaning and sincerity, as I do in saying I am very glad of the opportunity to join with the rest of you in paying tribute to a great man—a man who on a number of occasions was singled out by that knowledgeable group, the Washington press correspondents, as the Nation's most effective U.S. Senator.

I am glad to be a part of a gathering of people who seek to honor this man and at the same time recall to all Americans the character, the foresight, imagination and wisdom, the courage, integrity, and tenacity that were his, in the hope that more people will be inspired to follow the example he set for us.

Senator Norris is known chiefly for his efforts in the fields of conservation and development of natural resources, his tireless work in behalf of the "common man," his powerful espousal of the cause of labor in days when it was downtrodden and fighting for greater recognition and greater participation in the fruits of productivity, and his valiant and never faltering battle for good government.

Everyone then on the scene remembers his famous spider-web speech, in which he traced the interlocking ties of large institutions and the resulting concentration of power in the hands of a relatively small number of persons, his efforts in support of the antitrust laws, his ferocious castigation of Government officials who flirted with conflicting interests, and his long and bitter fight to prevent Muscle Shoals from being turned over to private interests for private gain, which culminated in the establishment of the Tennessee Valley Authority.

Everyone knows of the role played by Senator Norris in conenction with the TVA, the REA, the Norris-La Guardia Act, Teapot Dome, the impeachment of Judge Robert W. Archbold, the lame-duck amendment to the Constitution, which was designed to prevent Members of Congress from legislating after others had been elected to replace them, and the unicameral legislature of the State of Nebraska.

Everyone knows of all these landmarks of his career, and not one of them is especially associated with banking. Hence, you may wonder how a governor of the Federal Reserve System fits into the picture.

Certainly I am not here because of the fact that my hometown, Broken Bow, Nebr., was, I regret to say, also the home of an obscure grocer with the same name as Senator Norris, who was persuaded by unscrupulous politicians to try to run for office against the Senator and thus confuse the voters enough to bring about the election of a third man. Fortunately for the country, that effort failed and the other George W. Norris went to jail.

I knew Senator Norris better than most of you because of an interlocking relationship between the Norris and Robertson families. During the most formative years of my life, I had the privilege of listening to him tell of the experiences of his life that left on him the greatest imprint, as well as those things that concerned him most: the spelling bees in the country school, the rural debating societies in which he developed his forensic abilities, the difficulties (and pleasures) of working his way toward a legal education, the roughness of his teaching experience in the far northwest, the hardships involved in eking out a bare living as a young lawyer, and his trials and tribulations on the bench and in Congress.

I often wish I had a tape recording of his tales of the infighting that accompanied his efforts to curb concentrations of power and to save for the Nation its vast reservoir of natural resources. I can still hear him telling about the way he was chastised by his party when he bucked and defeated the machine that had, until then, enabled Uncle Joe Cannon to rule the House of Representatives like a czar. And I never will forget his description of the pressures brought to bear to dissuade him from crossing party lines and supporting the nomination of Louis Brandeis to the Supreme Court. Later, of course, everyone came to understand that Senator Norris was not amenable to pressures.

The stories he told of his childhood, his early law practice, his years as a judge and as a legislator, were entrancing. They were more than that. They inspired one and left him with the conviction that public service is one of the highest forms of human endeavor—frustrating at times, but highly rewarding. This is perhaps the real reason why I feel fortunate to have been able to serve the people of our country for 34 years; why I feel sure that if I could relive my life I would again try to follow in his footsteps by using whatever abilities I possess in the interests of efficient public service.

Senator Norris was one of the noblest men ever produced in this country, certainly the greatest Senator to come from Nebraska, and one of the Nation's greatest. In his day, he

was the conscience of the Senate and, in a very real sense, the conscience of all his fellow Americans. He was a truly inspiring example of the highest type of public servant.

He was one of those rare public figures whose stand on controversial questions was never in doubt. He never hid behind equivocation or doubletalk, sham or pretense. One familiar with his record could almost always forecast his position, yet whenever he rose to speak in the Senate chamber on an important question of public policy, it was astonishing to see how both the floor and the galleries would fill up with people anxious to hear the clear, plain way he would present his views—views that his hearers knew were based on conviction. He had great presence, as many of you will recall, and he spoke in a deep arresting voice. His speeches were never ghosted. Ideas he might obtain from others, although he had plenty of his own, but his manner of expressing them was always original and always bore his own stamp.

This personal relationship explains in part why I am here today. But I would feel remiss if I did not call attention to a little-known chapter of Senator Norris' legislative record.

Today we have Federal insurance of bank deposits, which has become one of the accepted facts of life. Today the common man deposits his money, with calm reliance on this fact, in any of the country's 13,000 insured banks. He no longer goes to bed with the awful fear that tomorrow his bank may be closed and his life savings gone—a fear experienced by many Americans before the law was enacted in 1933. Few people know that more than a quarter century earlier—in 1907—Senator NORRIS was sponsoring in the House of Representatives a proposal to provide just such insurance for deposits in national banks. If enough other legislators had possessed his wisdom and foresight, it is probable that we would have avoided the banking collapse of a generation ago and all the misery and suffering it entailed.

Furthermore, not many people are aware of the fact that Senator NORRIS was one of only three Republican Senators who broke party ranks on December 23, 1913, and joined with a majority of Democrats to pass the Federal Reserve Act, which is the key pillar of our country's monetary structure. He was joined by fellow Republicans Wesley Jones of Washington and John W. Weeks of Massachusetts and one Progressive, Miles Poindexter of Washington. In voting for the Federal Reserve Act, the Senator not only had to follow a different course from that pursued by his party, he also had to stand against those with whom he had even stronger ties, his usual allies, liberals like La Follette of Wisconsin and Borah of Idaho. Thus the beginning of the institution with which I am associated.

I salute the memory of Senator NORRIS and express the wish that he could know of the many times I have sought his assistance—assistance which has always been forthcoming. On the mantle in my office stands his autographed picture. Time and again, when I have been faced with a difficult problem, I have found myself looking at him and in a way seeking his advice. Usually he will look down and counsel me this way:

"First, be sure you have the facts. Second, decide what you think is right, fair, and best for the welfare of all the people—not just those whose special interests are at stake. And then, after your decision is made, stand up for it, even if alone, and let the chips fall where they may."

Could there be a better standard for public service—or for life itself?

Alcohol on Airlines

EXTENSION OF REMARKS
OF
HON. RALPH R. HARDING
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. HARDING. Mr. Speaker, on May 1 I introduced a bill to prevent the serving or consumption of hard liquor aboard commercial passenger aircraft. For several years I have been concerned with this problem, not only because of the inconvenience that a drunk causes to the stewardesses and to his fellow passengers, but mainly because of the potential danger that an inebriated passenger may create in a high altitude, fast flying commercial jet aircraft.

As I have traveled back and forth across our Nation by way of commercial airlines, I have questioned the stewardesses about their attitude on this subject. Without a single exception these stewardesses have told me—and I wish to emphasize that these girls are products of our jet age and are fine examples of typical American womanhood; they certainly are not prudish, narrowminded nor old fashioned—that they are opposed to the serving of alcoholic beverages on airlines in which they are flying as stewardesses.

I feel that this bill is worthy of consideration and enactment into law.

I would like at this point to include in the RECORD a column entitled "High Altitude Liquor" from the Christian Science Monitor of May 12, 1961:

HIGH ALTITUDE LIQUOR

(By Godfrey Sperling, Jr.)

CHICAGO.—It is possible now to provide a progress—or lack of progress—report on the problem of drinking aloft as affected by the jet age and a year-old rule of the Federal Aviation Agency.

One small hope has emerged for the passenger who desires a liquor-free flight: A growing trend to the scheduling of short-haul, piston-powered, economy trips in which liquor is not served.

A passenger who is willing to pass up the speed of jet service can—in the more highly populated areas of the United States—assure himself of a trip in which he does not encounter the drinking that he would find in the faster, plusher air service.

This is for trips of no more than 100 or 200 miles, of course. Between, say, Detroit and Cleveland, or Toledo and Chicago. But if a passenger would be willing to take a number of landings enroute, he probably could pick his way across the country (in the Eastern United States) in a series of liquor-free flights.

Otherwise, the prospects for those who would avoid the service of liquor aboard their flight are bleaker than they have ever been in the history of commercial airline service in this country.

All the major airlines now make liquor available on their jet runs. Delta was the last to hold out, but now Delta has capitulated—giving in to what it terms the competition from the other airlines.

It was National and Northwest Airlines that started the serving of liquor aloft, some years ago. One by one the other airlines followed, some (notably United and Delta) asserting that they would prefer that liquor not be served.

Opposition to the serving of liquor aloft is still expressed by airline pilots and the stewards and stewardesses. But their voice is not as strong as it was a few years ago.

Rowland K. Quinn, Jr., president of the Airline Stewards & Stewardesses Association, says that once again this year there will be bills in Congress which propose the outlawing of drinking aloft. But he now says:

"I don't think we are going to get any relief through legislation in the possible future."

Protests still come in from the hostesses, who find the jet age no better than the piston age—in terms of their liquor problems.

Reports one stewardess, "This liquor problem is getting real terrible * * * We aren't getting cooperation. * * * Yet if we don't try and control it, we get burned. * * *"

Mr. Quinn says that the so-called liquor code is unenforceable. "We are told that our stewardesses are not to serve any passenger more than two drinks; yet in planes that have upward to 125 passengers, it is impossible for our girls to keep track of drinks.

"Furthermore, those who are drinking heavily use all sorts of artifices to get more drinks—getting someone else to get them a drink, etc."

Of these difficulties a stewardess reports:

"A number of incidents where passengers tried to get a third drink by devious means took place on this flight.

"One man who was sleeping during our cocktail service before dinner awakened to order a martini as we were starting dinner.

"Miss D. brought him the drink, and upon her return discovered the passenger next to him drinking the martini. He had already had two drinks. Another couple whom she had served two drinks stopped me for another. I asked if they had one or two, and they said 'One.' I discovered the mistake too late.

"This is nothing new."

Another stewardess reports an incident in which she came to blows with an intoxicated and obnoxious passenger.

What of the "feeder" lines that bring passengers short distances to and from the jet service? One stewardess from a feeder line says: "They say we don't have liquor on our planes. That's funny. I get all the drunks that come in from United and American and Braniff."

Yet, in all this Mr. Quinn sees one ray of hope. "Speed of arrival in these jets," he says, "gives these passengers less time to get drunk."

Thus, it may well be that the swift jets of the future will whisk the passengers across the country so fast that they will hardly have time to take off their hat and coat, let alone have their drinks.

A big problem that remains, even with faster service, is the passenger who already has been drinking before he gets aboard.

Mr. Quinn says that the airlines let drunks or near drunks on the planes on not infrequent occasions. And he says that his stewardesses cannot be expected to handle the problems these passengers present.

Addressing itself to passenger drinking, an airline letter to flight attendants says: "There is no need to be dictatorial, offensive, or irritated. * * * We have no desire, nor necessity, to make enemies out of our friends—even our difficul friends."

So it is left pretty much up to the stewardesses to be the policemen on these planes. At the same time, these efficient women are expected to keep these drinking passengers friendly to the airlines.

The stewardess of today must walk a thin line as she moves up and down her jet compartment. She must get the bottle away from any passenger who has brought a bottle

aboard. She must count drinks. And, at the same time, she must keep the passengers seated during heavy weather. And serve meals. And care for her passengers' many needs.

And, oh, yes, she must be very friendly to even the most obnoxious of those passengers who are drinking too much.

This, it seems, is where the jet age and preflight or airborne drinking has taken us.

This Is Rumania Today

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article, the second in a series from Rumania, written by Gaston Coblentz. It appeared in the New York Herald Tribune on May 7, 1961:

THIS IS RUMANIA TODAY: PRICES SOAR, BUT GIRLS KISS AND CHILDREN PLAY

(By Gaston Coblentz)

SINAIA, RUMANIA.—The 250-mile stretch of vivid Rumanian countryside from the university town of Cluj to the former royal residence of Sinaia provides a kaleidoscope of Rumanian life 14 years after the abdication of King Michael.

In the streets of Cluj, the taxis are exclusively Soviet Volgas, fairly comfortable vehicles which form the backbone of Eastern Europe's expanding new taxicab fleets. In Cluj they are painted green, beige, or red, with a checkered pattern along the doors in New York style.

The windows of the town's college bookstores display solely Communist literature, mainly by Soviet writers, above all full sets of Lenin in Rumanian and Russian. No non-Communist works are on view.

Two red pumps at a gas station on the outskirts of town furnish low-octane gasoline and diesel oil, the only fuels in regular demand on Rumanian roads. For the few cars that require it, high [90] octane gas is hand pumped directly out of barrels on the ground at the back of the station. It costs about $1.20 a gallon, roughly twice the price of the lower [70] octane fuel.

ROAD WELL MAINTAINED

The road southward from Cluj into the heart of Rumania begins along Frederic Joliot-Curie Street, where a crowd of men were waiting at a small shop to buy weekly tickets in the national lottery and sports pools. The highway is a carefully maintained asphalt road that runs the entire distance across the country to the capital, Bucharest.

At Turda, 20 miles south, a small, shabby grocery store in the outskirts supplies a large variety of food at the high prices that currently prevail in Rumania. Coffee, characteristically, is $4.20 a pound. Nearby, in a schoolyard, laughing children race back indoors after a midmorning play break.

In the center of Turda, a crowd inspects a brand new West German Opel Kapitan model, driven by a Communist official. On the other side of town, a large cement factory is receiving a fresh coat of paint.

Along this route, as throughout Rumania, police are stationed outside practically every town to control the large flow of truck traffic. The truck drivers are asked where they come from, where they are going, what their load is, and who their passengers are. However, starting some 100 miles inland from the Rumanian-Hungarian frontier, foreign cars are ignored by the control posts.

At Aiud, 40 small new private dwellings are under construction on the outskirts. Virtually every town and village along the highway has private home construction underway—one-story, one-family brick houses. This type of construction is unexpectedly extensive.

In front of the Aiud army barracks, a pretty girl rests her head on the shoulder of a neatly uniformed officer near the barracks gate. South of Aiud, long rows of young poplars line the highway. Thousands of these stripling poplars have been planted in this manner along previously bare roads. In 30 or 40 years, they will give Rumania a network of handsome, tree-fringed highways in the French style.

At Alba Julia, a new housing construction on the outskirts has so far failed to alter the town's sleepy Balkan look. Here still stands the remarkable Cathedral of St. Michel, built in the 12th century and ravaged by the Tartars in the 13th.

SICK WOMEN HELPED

North of Sebes, a battered ambulance and two official cars wait in a field near the road. An antique monoplane circles overhead and lands on the field. A woman patient is removed on a stretcher. According to officials, she is dangerously ill and has been flown from Cluj to a Sebes hospital.

Along the highway, there is an interminable array of Communist propaganda billboard posters every few hundred yards. It is propaganda to the saturation point. The posters continue all the way to Bucharest. In this area some of the signs are written in German for the large Volksdeutsch (racial Germans) minority—400,000 persons.

Here and there, gypsies are encamped near the roads, their lives in many cases virtually untouched by Communist rule.

The Inflation of Summit Hopes

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks I submit for inclusion in the RECORD an editorial which appeared in the May 17, 1961, Los Angeles Times entitled "The Inflation of Summit Hopes."

This editorial presents some very pertinent observations in regard to the proposal for a President Kennedy-Premier Khrushchev meeting next month which I believe will be of interest to the Members of the House:

THE INFLATION OF SUMMIT HOPES

The pressure for a sort of semisummit conference continues, fed by vague yearnings and hopeful expectations. If the administration has not fully committed itself to the questionable idea of a Kennedy-Khrushchev meeting next month, it will find it increasingly difficult to resist whatever overtures have been made from Moscow.

The international setting could hardly be less propitious for any sort of fruitful exchange between the two leaders. Yet, despite United States setbacks in Laos, Cuba, and Geneva—or because of them—the President apparently is disposed to meet with the premier.

Initiative for the conference understandably came from Moscow. For although Mr. Khrushchev is probably not deceived as to the realities of U.S. power following events in the Caribbean and southeast Asia, he would certainly enter the meeting in a much stronger bargaining position than in 1959 or 1960.

President Kennedy has made it clear in the past that he felt that any formal summit conference must be preceded by definite progress on the ministerial and ambassadorial levels. The proposed session next month, it is understood, would be only an informal exchange of views, a private chat with Chairman Khrushchev in some neutral capital after Mr. Kennedy has met with President de Gaulle.

The danger, of course, is that while the President might regard his trip as only a limited excursion in personal diplomacy, the rest of the world would attach far greater significance to the meeting. Desperate optimism would make of it something it is not, and the advantage would go to our adversary.

There would again be the cruel illusion that the mere getting together of the two world leaders is in itself a tangible step toward ending world tension. If, as has been suggested, Mr. Khrushchev misunderstands the present position of the United States, Mr. Kennedy is not likely to be able to talk him out of it in a few hours.

A year ago, after the collapse of the Paris Big Four meeting, the Soviet Premier arrogantly offered a new summit conference as a prize to the winner of the American presidential election. It is an award that we need be in no hurry to claim.

Circumvention on the New Frontier: The 4¼-Percent Interest Ceiling

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. CURTIS of Missouri. Mr. Speaker, in the last Congress one of the truly important but seemingly little understood issues was that of eliminating the interest ceiling on long-term Government securities. A great deal of misinformation was generated about this matter, and in an unwise political appeal on form and not substance the majority voted to retain the 4¼-percent interest ceiling which hampered the sale of these securities and forced the Government into the even higher short-term security market to finance the national debt.

J. A. Livingston, noted business writer, in his column, "Business Outlook," on May 17 of this year, noted the circumvention of this limitation. Because of the importance of this matter, Mr. Speaker, I am inserting Mr. Livingston's column in the RECORD, under unanimous consent granted me to do so:

END RUN AROUND FEDERAL INTEREST BARRIER

(By J. A. Livingston)

At the minute it's purely academic, but it's also pretty sly.

President Kennedy's Secretary of the Treasury, Douglas Dillon, who was drawn from the ranks of Republicans, is prepared to do what his Republican predecessor, Robert B. Anderson, was too forthright to do.

Robert V. Roosa, Under Secretary for Monetary Affairs, has let it be known that he will not hesitate to sell long-term Treasury bonds yielding 4½ or 4¾ or even 5 percent. He won't tag them 4½ or 4¾ or 5 percent. He'll label them 4¼ percent.

For flexibility in financing, Dillon and Roosa are prepared to sell a 30-year 4¼-percent bond at 95 cents on the dollar. The return to maturity would be 4.9 percent, or 0.65 percent above the ceiling.

Dillon and Roosa have a letter from U.S. Attorney General Robert F. Kennedy saying that the Public Debt Act of 1942 supercedes the Second Liberty Bond Act of 1917.

The 1942 act authorizes the Secretary of the Treasury to issue bonds "on an interest-bearing basis, on a discount basis, or on a combination interest-bearing and discount basis, at such price or prices and with interest computed in such manner and payable at such times as he may prescribe * * * and his decision with respect to such issue shall be final."

Secretary Anderson had a ruling from his General Counsel to this same effect. He hesitated to use it because of an ambiguity. The 1942 law was an emergency measure. Congress did not say "at any interest rate." Why had it retained the 4¼ ceiling if complete freedom were intended?

Moreover, Anderson was not willing to rule out the chance that bonds sold at an effective interest rate above 4¼ percent would be open for legal challenge.

CONSULTED HILL LEADERS

Anderson consulted congressional leaders: Would they pass a resolution saying that the law permitted sale of discount bonds? Or would they repeal the ceiling and give the Treasury authority to issue long-term bonds at any interest rate? The House Ways and Means Committee refused to report out a bill. Debates on the floor of the Senate indicated great opposition.

Consequently, Secretary Anderson was forced to sell short-term issues exclusively, including the so-called magic 5's—a 4-year-10-month Treasury note with a 5-percent coupon. That is the absurdity of the ceiling. The Treasury can put a 5-percent rate on a bill, a certificate, or a note—anything less than 5 years. Beyond 5 years, no.

At the moment, Secretary Dillon and Under Secretary Roosa are in a position, because of the drop in interest rates (influenced in part by the Federal Reserve System's nudge policy), to sell long-term bonds at or below 4¼ percent interest. The ceiling is irrelevant.

But if we have an industrial boom, if credit becomes scarce (as it usually does during periods of high business activity), then effective rates might rise above 4¼ percent.

LET'S END CEILING

Dillon and Roosa are making an end run around recent legislative (or, rather, nonlegislative) history, relying on the Attorney General's statement that selling discount bonds yielding more than 4¼ percent does not circumvent any congressional prohibition. If it doesn't, why did the last Congress refuse to grant it?

There's no doubt that the 4¼-percent ceiling on interest rates is an anachronism. Secretary Dillon deserves the flexibility Anderson couldn't get. But his way of going about getting it is isn't exactly true blue, honor bright, or sparkly eyed.

A government that demands honesty in business has to be honest, forthright, and direct, itself. Let's get rid of the ceiling—all the way—not by sleight of hand, but by an act of Congress. What the last Congress wouldn't do for a Republican President, it probably will do for a Democrat.

If the Democrats dodge the issue in Congress, the least the Republicans can do is bring it up. It's good politics and good ethics.

Justice Michael Musmanno, Nemesis of Nazis, and a Man of the People

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. SANTANGELO. Mr. Speaker, causes make great men and some men inspire great causes. The plight of the underprivileged, the misery of the laborer, the evil of government oppression, the bestiality of humanity, influenced and molded the character of Michael Musmanno. On the other hand, Michael Musmanno has inspired men to noble deeds, to fight for equality, to protect the dignity of man.

Years ago, in 1939, when I commenced the practice of law, I listened enthralled to the mellifluous voice of a great speaker with leonine mane and heart of gold. His reputation as a dissenter and as an orator passed down to me by an older brother, now Justice Robert V. Santangelo, who barnstormed the country with Michael Musmanno, fighting for great causes, was confirmed by the stirring words I heard uttered on that occasion.

Recently on April 29, 1961, in Philadelphia, I was the guest speaker at a national convention of UNICO, a national organization of Americans of Italian origin. One the prior date, UNICO had granted the Rizzuto Award to Justice Michael Musmanno for outstanding activity and performance in the United States.

During my speech I had occasion to say of Michael Musmanno the following words:

> One of the great tragedies of the past 30 years is the failure of our past four Presidents to recognize Judge Michael Musmanno as a Justice of the Supreme Court of the United States. Anything he obtained in life he had to fight for. His story has been the story of the Italian in America.

A great New York paper, the Daily Mirror, under the byline of feature writers, Ara Piastro and Harry Altshuler, on May 12, 1961, reported the activities of persons of Italian heritage who are outstanding in America. This article as well as a series of eight others were inspired by the desire of the New York Mirror to offset the ignorance and the prejudice generated by television programs such as "The Untouchables," newspapers and other media of communication which characterize in an unfavorable light persons of Italian origin.

Justice Musmanno is one of the great Americans with an Italian background who was selected by the New York Mirror as one of the characters to be portrayed in its columns. The New York Times on Tuesday, May 16, 1961, also wrote up the "Nemesis of Nazis, Michael A. Musmanno" and set forth the background of this fighter for humanity and the contributions he has made not only to the law, but also to his Nation and to his people. I believe the readers would enjoy reading the article in the Daily Mirror and also the article in the New York Times concerning Michael Musmanno.

The articles follow:

[From the New York Daily Mirror, May 12, 1961]

FROM THE MINES TO PENNSYLVANIA SUPREME COURT

(By Ara Piastro and Harry Altshuler)

It was a poignant moment one day last summer for Justice Michael Angelo Musmanno of the Supreme Court of Pennsylvania. On the tiny island of San Salvador in the Bahamas, this son of Italian immigrants planted an American flag and the flag of his native Pittsburgh in th spot where tradition holds Columbus first set foot on the New World.

This act of homage was the fulfillment of a longtime dream. Columbus was his boyhood idol. It was a tribute to the discoverer, so badly treated in his own lifetime, from one of the new continent's children, one who has been richly heaped with deserved honors.

Musmanno's life has been full of high dramatic moments. Officers who served with him in World War II stil chuckle about this one:

As a naval aide to Gen. Mark Clark, with the rank of captain, Musmanno was in Italy when, during the last days of the war, a British general attempted to take over the villa occupied by famed anti-Fascist philosopher, Benedetto Croce.

Musmanno refused to oust the aged philosopher. The British general stormed in, attempting to take the house by force—and was met at the door by Musmanno, with a .45 strapped to his belt. "Sir, if you will look at the ribbon on my shirt, you will see that I am an expert pistol shot," murmured Musmanno.

"Well, I'll be a blanketyblank," the shocked general exclaimed.

"I wouldn't know about that, sir," Musmanno said gently—as the general beat a strategic retreat.

Musmanno was wounded twice during that war; had a ship sink under him, directed the evacuation of a town that had become a battle zone, shared front-line hardships with soldiers, and served as military governor of the Sorrentine peninsula.

It wasn't his first war, at that. In World War I, though he was only 17, he enlisted in the Naval militia.

He was one of eight children of an immigrant couple who settled in Pittsburgh. If young Michael wanted an education, he had to earn it himself. A 5-foot-8-inch, 160-pound dynamo with a deceptively cherubic face, he labored as a coal miner and steelworker to gather the funds—then kept going to school until he had earned seven degrees from five universities, from Bachelor of Arts to Doctor of Jurisprudence.

Musmanno first emerged in the public eye when, as a young lawyer in the 1920s, he volunteered to serve as unpaid defense counsel at the sensational Sacco-Vanzetti trial. He still believes the guilty verdict was a "monumental miscarriage of justice."

Among the 10 books he has written, one of them, "After Twelve Years," was a study of this case. Another of his books, "Black Fury," based on his work in the mines, became a powerful movie starring Paul Muni.

Still another book, "Ten Days to Die," told the story of Hitler's last grim days, which he had researched exhaustively while in Germany presiding over the war crimes trial at Nuremberg. President Truman had appointed him presiding judge.

He had entered public life in 1929 as a State legislator; anyone who now enjoys a Sunday movie or baseball game in Pennsylvania has him to thank for the bill that re-

pealed the old blue laws. In 1931 he was elected a county judge, the youngest in his State; in 1933 he was elected again with a phenomenal 320,000 out of 370,000 votes; in 1952 the people of the State elected him to a 21-year term on their Supreme Court, the first American of Italian descent to sit on this bench.

Currently he is in Jerusalem at the invitation of the Israeli Government, to be one of the principal witnesses at the Adolf Eichmann trial. He presided over the trials of many of Eichmann's underlings in Nuremberg, and later wrote a book, "The Eichmann Kommandos," about their twisted psychology.

In fact, the doctrine he laid down at Nuremberg, that anyone found guilty of mass murder may not escape with the plea he was "only obeying orders"—is an important element of the Eichmann trial.

His is a voice from America, listened to with eager respect around the world.

[From the New York Times, May 16, 1961]

NEMESIS OF NAZIS: MICHAEL A. MUSMANNO

Fifteen years ago, Justice Michael A. Musmanna of the Pennsylvania Supreme Court, who testified yesterday for the prosecution in the Adolf Eichmann trial, proposed that a world court be set up to try "international criminals" responsible for "crimes against humanity."

Had Justice Musmanno's proposal been adopted, the Israelis might not have felt compelled to bring Eichmann to trial in Israel for his role in the execution of 6 million Jews.

Justice Musmanno made his suggestion in 1946, shortly after presiding over the war crimes trial in Nuremberg of 21 members of the Nazi Einsatzgruppen. The defendants were charged with responsibility for murdering 2 million Jews during the early years of World War II before the opening of mass annihilation camps.

During the proceedings Justice Musmanno interrupted a witness who testified that the defendants were acting solely under military orders and therefore were guiltless.

"If you received an order to shoot your own parents," Justice Musmanno asked, "would you do it?"

WITNESS CONSIDERS ANSWER

The witness hesitated. He was given 24 hours to consider his answer.

The next day the witness returned to the stand and answered, "No, I wouldn't shoot my parents."

The Justice continued: "Would you shoot somebody else's parents if ordered to do so?"

The answer was "No."

"Now suppose you received an order to shoot a young Jewish couple who had never done anything wrong and who might some day become parents?" Justice Musmanno asked.

The witness could find no answer. He left the stand bewildered.

At the end of the trial, which Justice Musmanno called "the biggest murder trial in history," 14 of the 21 defendants were sentenced to be hanged.

CAREER OFTEN CONTROVERSIAL

For Justice Musmanno, the Nuremberg trial was but one highlight in a celebrated and often controversial career. Described once as "his own best press agent," the Pennsylvanian has, among other things, sentenced himself to 3 days in prison "to see what it's like," defended Nicola Sacco and Bartolomeo Vanzetti in the famous Massachusetts murder trial that ended in their execution and written 10 books, including "Ten Days to Die," about the Nuremberg trials.

He has been suspended from the bench for sentencing drunken drivers to 6-month prison terms. He once cited a witness for contempt of court for having referred to his mother as "no lady."

Justice Musmanno, sitting on the bench of the court of common appeals, justified his ruling on the ground that "Not only is such a remark a violation of the fifth commandment of God, but it violates every principle of decency and justice on which law is founded."

He was born of Italian immigrant parents in the milltown of McKees Rocks, near Pittsburgh, but he has never divulged the date of his birth.

Friends guess that he is in his early 60's. Because of his youthful appearance and incessant energy, he could be taken for at least 10 years younger.

Educated at Georgetown, George Washington University and the University of Rome, Mr. Musmanno has received degrees of bachelor of arts, bachelor of laws, master of patent law, and doctor of juristic science. To earn his education he sold newspapers and worked at night.

A man who has always espoused the cause of the underprivileged, the Pennsylvanian first achieved national publicity in his second term in the Pennsylvania Legislature. He championed a bill to abolish coal and iron company policemen who were hired to break strikes.

GOVERNOR VETOES BILL

The bill was vetoed by the Governor, but Mr. Musmanno wrote a story based on the murder of a striker by company policemen. After the book, "Jan Volkanik," was published, he persuaded Paul Muni to take the leading role in the screen version, "Black Fury."

A bachelor, Justice Musmanno arrives at his chambers in Pittsburgh at 8 a.m., lunches on soup or tea and cookies, and returns home for supper. Frequently he returns to the office for more work until about midnight.

During World War II he served in the submarine service and was twice wounded in combat. He was promoted to captain and served as naval aide to Gen. Mark W. Clark.

After the Nuremberg trials, the jurist ran unsuccessfully as the Democratic nominee for Lieutenant Governor in 1950. Two years later he was elected to a 20-year term on the Pennsylvania Supreme Court.

During the early 1950's, Justice Musmanno became known as a relentless foe of communism. He urged that anyone found guilty of being affiliated with the Communist Party be sentenced to 20 years in prison.

A few months ago me made a trip to Israel, talked with the three judges chosen to hear the Eichmann case and publicly expressed his opinion that Eichmann would receive a fair trial.

Justice Musmanno's 10th book, "The Eichmann Kommandos," was being published at that time. The book is an account of the trial of German war criminals.

* * * * *

Justice Musmanno's testimony struck directly at the defense's argument that Eichmann merely followed orders from above and had no power of decision.

Dr. Servatius, in his first real opportunity to demonstrate his ability as a cross-examiner, hammered at the witness.

He asked whether all those high Nazi officials, in their interviews with Justice Musmanno had not been trying to palm off their responsibility on a small official. He quoted documents to include that the major decisions to annihilate European Jews were taken at a much higher level than Eichmann's modest rank of lieutenant colonel.

"Yes," cried Justice Musmanno with heat, "but the instrumentality was Adolph Eichmann. It was Eichmann who decided in what order, in what countries the Jews were to die."

MANY NAZIS INTERVIEWED

Mr. Musmanno, apparently irked by Dr. Servatius description of him as "a publicist," explained that he had interviewed more than 100 Nazis immediately after the war when he was assigned by the United States Navy to investigate whether Hitler was really dead.

He said he had questioned all the intimates of Hitler who had survived, including admirals, generals, aides, and orderlies down to Hitelr's secretary, barber, butler, and cook.

He also served at three of the Nuremberg war crimes trials, presiding over the case of 21 leaders of the Einsatzgruppen, the Nazi operational groups that allegedly worked closely with Eichmann in the slaughter of Jews in German-occupied areas of Eastern Europe.

A surprising number of these people mentioned Eichmann, according to Mr. Musmanno.

With a trace of irony, Dr. Servatius asked whether Justice Musmanno, in his judgement on the Einsatzgruppen trial at Nuremberg, had mentioned Eichmann as an alleged instigator of the shootings of hundreds of thousands of Jews.

Mr. Musmanno replied: "I didn't mention Eichmann in the judgment. There was no necessity of doing so. He was not on trial."

Dr. Servatius said he had understood the witness to say that former Foreign Minister von Ribbentrop had told him that Eichmann had pressed him (von Ribbentrop) to implement the "final solution" of the Jewish problem—that is, annihilation.

"Ribbentrop told me Eichmann influenced Hitler," Mr. Musmanno replied. "I did not accept this. I couldn't conceive of anybody influencing Hitler—it would have been like influencing an erupting volcano."

The defense counsel also attacked Mr. Musmanno's contention that some of those he interviewed had refused to take part in atrocities, and yet had escaped retaliation by the Nazis. Part of Eichmann's defense rests on his contention that he would have been shot had he not carried out orders for the deportation of Jews.

Dr. Servatius read part of a Nuremberg judgment declaring that in the Nazi military machine subordinates had no "freedom of choice" and that refusal to obey orders led to drastic punishment.

But that was "a general statement" by the International Military Tribunal, Mr. Musmanno replied.

He said he could give case histories of men who "refused to kill in cold blood" and were simply transferred to some other duty.

Mr. Musmanno testified that Goering had told him in an interview that Eichmann was "all-powerful in extermination of the Jews, that von Ribbentrop 'resented' very much Eichmann's intereference in his Ministry of Foreign Affairs" and that Walter Schellenberg, the Nazi intelligence chief, had disclosed to him that an elite guard court in Berlin once attempted to arraign Eichmann on a charge of "cruelty and corruption."

This attempt to jail Eichmann for "excesses" was frustrated when Kaltenbrunner informed the court it had no jurisdiction because Eichmann was "fulfilling a special mission for the Fuehrer," Mr. Musmanno asserted.

The prosecution submitted a copy of the warrant for Eichmann's arrest.

Dr. Servatius was hampered in his cross-examination by the fact that his questions to the witness had to be translated from German into Hebrew and then from Hebrew into English. This took time and gave Mr. Musmanno, who occasionally looked flustered and excitable, opportunity to regain his poise.

Not having read Mr. Musmanno's book on Hitler's last days, Dr. Servatius refrained from asking the question that was in the mind of many spectators as the afternoon drew to a close.

Finally, Judge Landau gently inquired: "Did you mention Eichmann in your book?"

"Oh, no, no," cried the witness, "because at that time I wasn't interested in Eichmann—he didn't mean a thing to me then.

"In the first place, everybody said he was dead and he didn't interest me. Then later on, of course, he seemed important."

Irony of Success

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. BATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Peterborough Transcript, of Peterborough, N.H. It is timely and contains food for thought in these serious days:

IRONY OF SUCCESS

Commander Shepard's magnificent space flight Friday morning has been praised and extolled in so many ways—also his superb public appearance in Washington on Monday—that there are no superlatives left to describe the man or his achievement. In Navy terms, the training leading up to the flight, the flight itself, and the events since were "well done."

There have been the inevitable crackpots—of which New Hampshire, unfortunately, has more than its share—who have tried to climb into the Mercury capsule with the Derry hero, but through it all he has maintained an amazing composure and self-assurance. NASA's rejection of a ticker-tape parade in New York City no doubt reflected the attitude of Commander Shepard himself that the sooner the excitement over his flight subsided, the sooner all people associated with the national space program could get back to the biggest job of all, a man in orbit.

It has been ironic that while attention has focussed on the exploits of Commander Shepard, and his handsome family, at the same time in Washington there has been going on a congressional investigation over strikes and other labor abuses which have harassed the missile program, and set back Friday's space flight by at least 6 months.

Witness after witness has charged that most of the walkouts were for trivial excuses, to throw projects behind schedule so workers could collect overtime wages at two to four times the usual rate.

At least one strike allegedly was called because a man was fired for sleeping on the job.

Senator JOHN L. MCCLELLAN, Democrat, of Arkansas, presiding at the hearings before his Senate investigations subcommittee, called it a revolting situation.

Of the 30 labor unions involved, all but 1 have disowned responsibility for the strikes, labeling them "wildcat" or unauthorized walkouts.

The figures are not disputed—327 strikes at 22 missile bases, 109 of them at Cape Canaveral alone.

Also undisputed is the total overall loss of time, figured at 162,872 man-days in 4½ years.

Joseph W. Morgan, a general organizer for the Teamsters, invoked the fifth amendment in refusing to answer questions about Teamster labor troubles at missile sites.

Jerome Adlerman and Robert E. Dunne, subcommittee aids, were investigating at Canaveral when one of the strikes was called without warning last December. They testified it paralyzed the base for a week.

They said it took them and Canaveral officials nearly a day to learn who called the strike and to locate union officials with whom to negotiate for a settlement.

Col. Robert M. Vreech, chief of Canaveral's test site operations, swore many strikes were called to force payment of overtime that swelled wages of plumbers and electricians to as high as $800 a week.

B. G. MacNabb, operations chief of Canaveral for Convair in producing the Atlas missile, testified the whole space flight-missile program is 6 months behind. He blamed strikes, low production by the workers and slow decisionmaking by the Government and industry for this.

Atlas is the missile scheduled to place the first U.S. astronaut in orbit, and Convair fabricates it.

MacNabb said greed for "the almighty dollar," but not subversion, caused the strikes and work slowdowns.

He said production rates at Canaveral are only about 40 percent of what private industry gets from its men on non-Government contracts.

Douglas V. Dorman of the Martin Co., producing Titan intercontinental missiles, testified that labor troubles and arbitrary rules by unions refusing to allow factory prefabrication of much missile equipment, would add hundreds of millions to the overall cost of the program.

Euell H. Hodge, who said he resigned in frustration as a missile contract supervising officer at Vandenberg Air Force Base in California, charged that union labor collected double time and triple time wages there while idly "blessing" missile equipment.

He said the plumbers union arbitrarily insisted that factory prefabricated manifolds for missiles must be torn apart and rebuilt by members of their union before it is installed.

In view of the foregoing, it's even more of a miracle how Commander Shepard ever got off the ground Friday morning. But American courage and determination, with which all the astronauts abound, came to the fore and restored the United States to a position of respect in the world space race. All honor belongs to those who made the flight a success. Those who have hindered its progress are due only shame.

Tribute to Secretary Udall

EXTENSION OF REMARKS
OF
HON. RALPH R. HARDING
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. HARDING. Mr. Speaker, of all of President Kennedy's Cabinet appointments—and I wish to say that I feel they are all outstanding and without a doubt a group of the finest public servants ever assembled—the one of which we in the West are most proud is Stewart L. Udall, the Secretary of Interior.

We like Stewart Udall not only because he is a practical, hard-working, and intelligent westerner, but also because of his fighting spirit. We pray that Stew Udall will always have the power to fight for the right, and that he will continue to have the courage he has so capably demonstrated these past 4 months to protect the interests of the people and to preserve for future generations the natural resources that we as Americans enjoy today.

A Secretary of the Interior who does his job will never win any popularity contests but he will certainly win the unending thanks of a grateful Nation.

I include at this point in the RECORD an article from the Deseret News of Salt Lake City, Utah, published on May 15, 1961:

STEWART LEE UDALL, THE "YOUNG CURMUDGEON": MAN IN A HURRY WHO LOVES HIS WORK

(By Louis Cassels)

WASHINGTON.—Stewart Lee Udall, the "young curmudgeon" of the Kennedy administration, has at least four notable accomplishments to his credit since he took office as Secretary of the Interior.

Serving in what is normally a rather obscure post, the 41-year-old ex-Congressman from Arizona has reaped more newspaper headlines than any other member of the Kennedy cabinet.

He has demonstrated an unusual ability to draw howls of rage from Republicans—and sometimes from his fellow Democrats—in Congress.

He has shocked this blase capital by saying out loud what is widely believed but seldom acknowledged—that "there are times when you have to be ruthless in politics."

Finally, along the way, he has attracted public attention to the urgent and often-neglected problem of conserving America's natural resources, particularly its disappearing wilderness areas.

The Washington judgment on Udall is that he is likely to be the most controversial Secretary of Interior since the late Harold L. Ickes, the self-styled "old curmudgeon" of the Franklin D. Roosevelt Cabinet.

At times, the 41-year-old Udall appears to be consciously emulating the "old curmudgeon." Ickes once created a national sensation by inviting Negro soprano Marian Anderson to sing from the steps of the Lincoln Memorial after she had been barred from giving a concert in the DAR's Constitution Hall. Udall has stirred up a similar storm by serving notice on the Washington Redskins pro football team that it will have to hire some Negro players if it expects to use the new stadium being built on Government land here.

Ickes' truculent spirit pervades the very room in which Udall works. The Interior Department building was erected while Ickes was feuding with Postmaster General James A. Farley. Ickes gave the architects explicit orders to make his office bigger than Farley's. As a result, every Secretary of the Interior since Ickes has worked in a mammoth paneled room which is almost as big as a basketball court.

Udall submitted, more or less restively, to an interview in this cavernous chamber. He is chronically late for appointments, and in an effort to keep up with his schedule, he sometimes tries to carry on conversations with visitors while sneaking in a few quick glances at correspondence or reports lying on his desk.

Udall is not given to small talk or levity, especially when he is in a hurry, which apparently he nearly always is. He may break into a hearty guffaw over a political joke, but his face is usually fixed in a fairly grim expression. He has dark, crew-cut hair, a hawk nose, and the athletic build (5 feet 11 inches, 180 pounds) of a prizefighter.

But if you steer him onto his favorite subject—the outdoors—he begins to sound more like a poet. He grew up in the wide open spaces of Arizona, and he has retained an almost mystical passion for nature in its unspoiled State.

His greatest concern is that Americans will do too little, too late, to preserve their fast-

dwindling heritage of majestic streams and forests.

"This is the most urgent problem in the whole field of natural resources," he said with conviction. "The glory of America has always been its green face * * * its spaciousness. The whole character of the American people has been shaped by living on a virgin continent where men could test themselves against the wilderness.

"But our land is changing before our eyes. The bulldozers are eating away the last remaining wild areas in the east, and even in the west rapid population growth is exerting pressure on the open spaces."

Udall considers it disgraceful that only 92,000 acres of land were added to the national parks system under President's Truman and Eisenhower. He wants President Kennedy to go into the history books as the greatest conservationist since Woodrow Wilson, who added 5.5 million acres to the park system. He is particularly anxious to acquire more parklands in the east, where most of the Nation's people live. The vast majority of present parks are in the west, far from centers of population.

As a starter, he is pressing for congressional action on long-stalled legislation to preserve 3 of the 8 or 10 U.S. shorelines which have not yet been taken over by commercial resort developers. The proposed national seashores are located at Cape Cod, Mass., Padre Island, Tex., and Oregon Dunes, Oreg.

Another project dear to his heart is development of the Delaware River Basin to create a vast manmade lake in the Catskill Mountains, within 2 hours' driving time of New York and Philadelphia.

"We have got to move fast" on these projects, he said earnestly. "It will never get any cheaper. In many areas, land prices are doubling every 10 years."

Udall's Department is possible the least understood in the Government, partly because its name—Interior—means nothing to the average citizen. It might more accurately be described as "The Department of Natural Resources."

Its major functions include managing about 500 million acres of land, mostly in the West, which are still in the public domain; providing irrigation for nearly 8 million acres of reclaimed land, also in the West; building and operating hydroelectric systems which now generate 6 million kilowatts of power; fostering the economic health of mineral extraction industries, including such chronic invalids as coal, lead and zinc; promoting mine safety; protecting fish and wildlife; conducting geological surveys; operating a railroad in Alaska; and looking out for the welfare of 400,000 American Indians and Eskimos who are wards of the Federal Government.

Nearly one-fourth of the Nation's Indians live within the Arizona Congressional District which Udall formerly represented, and he is a militant champion of their interests. He thinks it is a national scandal that the living standards on many Indian reservations are as low as those of any nation in Asia or Africa, and that it is past time for the United States to launch a sort of domestic point 4 program for economic development of Indian reservations.

Udall's forebears were rugged Mormon pioneers who settled in Arizona before the Civil War.

He was born January 31, 1920, in St. Johns, Ariz., a town founded by his grandfather. There are almost as many Udalls as Indians in Arizona, and most of them are prominent in the business and political life of the State. His father was Levi S. Udall, Chief Justice of the Arizona Supreme Court.

Washington is getting another Udall—Stewart's brother, Morris, who won the Arizona election last week to replace the Interior Secretary in the House.

Udall's love for the outdoors goes back to his boyhood, when "you could stand on the front steps of my home and shoot ducks."

After graduating from high school, he went to Pennsylvania to put in the 2 years of volunteer service as a missionary which is performed by many young men in the Mormon church.

When the United States entered World War II, he signed up for bombardier training in the Air Force, but washed out of cadet school, and became an enlisted gunner. As a technical sergeant, he made 50 missions over Western Europe in B–24 Liberators.

After the war, he went to the University of Arizona, where he played guard on a basketball team which was good enough to make the National Invitational Tournament in Madison Square Garden.

He still likes basketball. During a recent mine inspection tour of West Virginia, he spotted a group of kids playing basketball on a crude homemade court. He ordered his driver to stop, leaped out of the car, and sank three baskets in a row.

He graduated from the university in 1948 with a law degree and a wife, a blonde coed named Ermalee Webb, whom he married during his senior year. After a few years of private law practice with a family firm, he was elected to Congress in 1954.

He was known in Congress as an able member of the western liberal bloc. He served on the House Interior Committee, where he got a thorough grounding in the problems of the Department he now heads, and also on the Labor Committee, where he had the opportunity of working closely with Senator John F. Kennedy on passage of a moderate union reform bill.

His relationship with Mr. Kennedy was cemented during the 1960 campaign for the Democratic presidential nomination, when Udall swung to Kennedy the 17 Arizona convention votes which were supposed to be in LYNDON B. JOHNSON'S bag.

Udall clearly enjoys the power and responsibility of his new job, but he does not seem to be greatly interested in the status symbols and personal prerequisites of Cabinet office. His private life has undergone little change since his days of Congress, and he still is more at home driving his own station wagon than sitting in the back seat of a chauffeur-driven limousine.

He lives with his wife, six children, two dogs and a badly outnumbered cat in a modest house in suburban Virginia. The whole family is outdoors-minded. Udall sometimes packs the entire menage, including dogs and cat, into the family station wagon for a drive across the continent to the open spaces of Arizona.

He keeps in trim for this and other challenges by doing a lot of hiking and playing paddle ball in the congressional gymnasium several times a week. He does not smoke.

Like President Kennedy and nearly everyone else in the New Frontier, he is an omnivorous reader, and especially likes the poetry of Robert Frost.

After a recent visit to Capitol Hill to testify on a pending park bill, Udall strode down a corridor, his right hand clutching the yellow memo pad on which he jots down ideas and things to do as they occur to him, and a pack of harried Interior Department underlings at his heels. He looked like a young man in a hurry, and the spectacle caused an old Washington hand to muse aloud:

"That fellow is either going to make a mark for himself—or get a bloody nose." He might, like honest Harold Ickes, do both.

Resolution by Americans of Polish Descent

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. LESINSKI. Mr. Speaker, I should like to submit for the RECORD the resolution adopted by Polonia, by which is meant Americans of Polish descent, on May 7, 1961, during ceremonies commemorating the 170th anniversary of Polish Constitution Day. The resolution follows:

RESOLUTION ADOPTED BY POLONIA ON SUNDAY, MAY 7, 1961, ON BELLE ISLE, DETROIT, MICH., DURING A MANIFESTATION COMMEMORATING THE 170TH ANNIVERSARY OF THE POLISH CONSTITUTION OF MAY 3, 1791

Assembled at this solemn manifestation commemorating the 170th anniversary of the Polish Constitution of May 3, 1791, we honor the authors of that memorable document and hereby firmly resolve:

1. To convey to our brothers in Poland assurances of our spiritual unity, emanating from our mutual ties, and at the same time to express our great admiration for the heroic stand of the Polish Nation against the forces of godless communism.

2. To the Polish clergy in the land of our forefathers, including the indomitable Polish primate, Cardinal Stefan Wyszynski, we express our deep respect for their unchangeable stand against the determined attempts of communism to dominate the souls of the Polish people.

3. In the spirit of the momentous constitution of May 3, we urge our clergy and all of Polonia to encourage the study of the Polish language, thus not only serving America by promoting the study of languages, but enabling new generations to gain a fuller knowledge and understanding of the rich Polish culture.

4. We firmly brand as hypocritical the attitude of the Gomulka regime toward the friendly policies of the United States which, by its actions including the grant of economic aid, demonstrated its good will toward the Polish Nation. The offensive remarks of Gomulka and other dignitaries of the Warsaw regime concerning our representatives in Warsaw, and the insidious Communist infiltration of Polonia's ranks, compel us to revise our own attitude toward the present Warsaw regime which, contrary to its claims, represents and advances the interests of Moscow and not those of the Polish Nation. We warn all of Polonia against the secret and open emissaries of communism who, under the guise of extended cultural cooperation, are actually carrying out Communist directives for effective dissemination of communistic ideologies.

5. We call attention of our Government officials to the fact that intensified German revisionary propaganda concerning Polish western lands in the Oder-Neisse Line area, arouses great indignation of the part of Polonia in America which strongly stands by these historic Polish lands, stolen by German enemies whose warring actions plunged the world, within a few short years, into two great world wars. Memories of German crematoriums and of the slaughter of 7 million Polish citizens have not yet been eradicated from the minds of the Polish people.

6. We impress upon the entire world the fact that our Polonia will never acquiesce in the theft of Poland's eastern lands, stolen by Soviet Russia, and that it is unable to ever forget the monstrous Katyn murders and the horrible concentration camps in which millions of Poles perished. The Soviet murderer not only remains unpunished to this day but claims a seat as an equal partner in the United Nations.

7. We express our great pride in the accomplishments of Commander Shepard, eyewitnessed by the entire world, which demonstrated the superiority of American astronautic achievement over obscured performances of the Soviets.

With a dedicated loyalty to the Government of the United States we are gathered under its star-spangled banner to pledge vigilance in promoting the growth of our country's strength and in defending it against the threats of communism, its greatest enemy.

Long live the United States.

Long live the heroic Polish nation.

White House Jitters

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. MICHEL. Mr. Speaker, Walter Trohan, in the following article from the May 13 issue of the Chicago Tribune, points out what happens when a boy is sent to do a man's job:

WASHINGTON REPORT

WASHINGTON, May 12.—President Kennedy, who has been jolted by the tremendous loss of prestige the United States has suffered over Cuba and Laos, is taking his second Florida vacation in 111 days and obviously needs it.

Those who see the President regularly and those who see him only occasionally agree in describing him as "shook." This is a picturesque slang term used to pinpoint one who approaches the dazed condition of a person coming out of shock.

Kennedy was dull almost to the point of listlessness in announcing the success of the American astronaut's flight. When he decorated the Navy flyer, he dropped the medal and then forgot to pin it on until he was reminded to do so by Mrs. Kennedy. He struggled to recover and did so by remarking the medal was "from the ground up."

Democratic leaders and others who have been granted White House audiences report the Chief Executive appears to be lost in thought. A Democratic Congressman said that during his visit Kennedy never looked at him but stared intently at the floor.

WANTS CHANCE TO THINK WITHOUT INTERFERENCE

This doesn't mean that the President is ailing in any way. The mental jarring has been physically trying, but there is no health problem. The President wants to get away to think. He wants as little interference as he can get. The White House tried to discourage reporters from accompanying him to West Palm Beach, but without success.

There hasn't been as much public evidence of a change in the Chief Executive in appearance as in action. It is true his jauntiness and cocksureness are gone, but the big change is private, in his attitude and his approach toward his office.

In his first weeks in the White House Kennedy held news conferences weekly. He appeared to relish the fencing with newspapermen. Since March 23 he has held only three news conferences, so that postponements are becoming familiar as they were under President Eisenhower.

The President expressed dislike for the staff system created by Eisenhower. He was especially cool toward the National Security Council, which he intimated was little more than another committee. He held only two Council sessions in his first 2 months, but since the Cuban fiasco he has had no fewer than seven sessions with the experts on American security.

Kennedy came into office believing that professors had the answers to world problems, much as they had the answers to student questions in their classrooms. Now he is shying away from the intellectuals and seeking out men of experience. He has demonstrated a sense of history by going to his predecessors, especially those in the Republican Party, such as Eisenhower and former President Herbert Hoover.

WONDERS IF HE COULD HAVE AVOIDED TROUBLE

In his first weeks in office, Kennedy tackled mountains of paper. He read almost any report sent to him, followed a great deal of mail, studied newspapers and magazines, and read almost any volume on current history and policy problems.

Now he has begun wondering whether he might have avoided the failure in Cuba and avoided putting himself out on a limb from which he is trying to withdraw in Laos if he had concentrated on major issues and let the minor ones go to staff members, as Eisenhower did.

All in all, the Presidency is unfolding for Kennedy like the petals of a rose, but it is not the beautiful perfumed flower he expected it to be when he was blaming and promising during the election campaign.

Advertising Responsibilities of the Federal Trade Commission and Business

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a well-prepared and well-delivered address by Daniel J. Murphy, Assistant Director, Bureau of Litigation of the Federal Trade Commission in Washington, before the conference on advertising at the Babson Institute, Babson Park, Mass., on May 17, 1961.

Attorney Murphy has been one of our outstanding career officials in the Federal Trade Commission for many years and has had varied experience in the different divisions and departments of that governmental agency. Well qualified by these assignments, Mr. Murphy is considered one of the top specialists in this field.

The address follows:

ADVERTISING RESPONSIBILITIES OF THE FEDERAL TRADE COMMISSION AND BUSINESS

(By Daniel J. Murphy, Assistant Director, Bureau of Litigation, before Conference on Advertising, Babson Institute, Babson Park, Mass., on May 17, 1961)

I

May I at the outset express to you my sincere appreciation for your kind invitation to participate in this advertising conference.[1]

The Federal Trade Commission is vitally interested in advertising, as you well know. The Commission has the widest jurisdiction of all Federal regulatory bodies over advertising. Other Federal agencies have restricted jurisdictions over advertising—limited to single commodities or particular media. The jurisdiction of the Federal Trade Commission, by contrast, is general—extending to all media and with few exceptions to all commodities.

It is the only governmental agency fortified by statute, equipped by personnel, and strengthened by years of experience, with adequate procedures and techniques, to perform this most vital responsibility.

II

Apropos to the theme of this conference—"Advertising and the Shape of Things To Come"—let us take a look at the past for an indication of the future. What is past is prologue.

Advertising, both in quantity and caliber, has made tremendous strides in recent years. At the turn of the century, false advertising was running rampant, especially in the patent medicine field. Turner's book, "The Shocking History of Advertising," and Holbrook's, "The Golden Age of Quackery," are quite revealing. Magazines and newspapers were filled with advertisements claiming cures for almost every disease known to man. The advertisements contained testimonials from prominent persons in high places. One testimonial, embossed with seal and signature, purported to be a Presidential proclamation endorsing a certain whisky as a beverage and for medicinal use.

Because of these advertised incredible and baseless claims for patent medicines and healing devices, a campaign began for ethical standards in advertising. An aroused, public-spirited citizenry composed of courageous journalists, medical societies and advertisers—all concerned with the future of advertising—contributed to the exposure and condemnation of the untruthful and extravagant claims in this age of quackery.

Collier's magazine in 1906 ran its famed series on patent medicine. In 1911 the American Medical Association published its first volume entitled, "Nostrums Versus Quackery." In 1911 Printer's Ink launched the movement for a model State statute prohibiting false advertising. The fight was waged by advertising men throughout the Nation. In 1911, the Associated Advertising Clubs of the World, at their convention held in Boston, Mass., adopted the motto, "Truth in Advertising." The Associated Advertising Clubs, and later the Better Business Bureaus, fought for the model State statute. This epic battle resulted subsequently in the passage of false advertising statutes in 44 States.

The printer's ink statute was passed without substantial change in 27 States, providing that any person who disseminates false advertising shall be guilty of a misdemeanor.

The Federal Government was active at that time in this area. It passed the Pure Food and Drugs Act in 1906, designed as a truth-in-labeling statute. It passed the Federal Trade Commission Act in 1914.

Ever since the Federal Trade Commission was organized in 1914, it has engaged in a campaign to eliminate deceptive advertising. Fortified with a congressional broad power to proscribe "unfair methods of competition," the Commission, in its early days, determined that deceptive advertising, because of its ability to injure competition, was an unfair method of competition.

One of the first Commission orders to reach the courts involved false advertising.[2] The Supreme Court approved an order to

Footnotes at end of speech.

cease and desist from false and misleading advertising as early as 1922.[3]

It has been estimated that as early as 1925 orders directed against false and misleading advertising constituted the vast majority of the total numbers of orders issued by the Commission annually.

III

Until 1931, one important question remained unresolved: Whether the Commission could prohibit false advertising that misled the public where there was no showing of competitive injury?

This basic question was resolved adversely to the Commission by the Supreme Court in the famous 1931 case, *F.T.C.* v. *Raladam Company* (283 U.S. 643). The Court held that the Commission lacked jurisdiction to proceed against false advertising where no substantial competition, present or potential, was shown to have been injured or clearly threatened with substantial injury by the advertising sought to be prohibited.

This decision was a severe setback to the Commission's enforcement against false advertising. Agitation soon developed for congressional action to broaden the Commission's power in order that it might protect the consuming public as well as honest competitors.

These efforts resulted in the passage of the Wheeler-Lea Amendment to the Federal Trade Commission Act in 1938. The basic prohibition of section 5 now reads:

"Unfair methods of competition in commerce, and unfair or deceptive acts or practices in commerce, are hereby declared unlawful."

The primary purpose of the amendment to section 5 of the act was to counteract the Raladam decision, but the Wheeler-Lea amendment went further. The 1938 amendments also added section 12 to the Federal Trade Commission Act, declaring certain advertisements of foods, drugs, devices, and cosmetics unfair or deceptive acts and practices in commerce within the meaning of section 5, and armed the Commission with additional procedural weapons against false advertising of these products.

IV

Since 1938, then, the Federal Trade Commission has been armed with a variety of potential weapons in its never-ending war against false advertising and other unfair trade parctices.

Unfair methods of competition and unfair and deceptive acts and practices in commerce are not defined by statute. As a matter of fact, it would be impossible to frame definitions which would embrace all unfair business practices. There is no limit to human inventiveness in this area. Unfair practices are to be determined by inclusion and exclusion in consideration of the experiences and progress of business. There are now 54 bound volumes of F.T.C. decisions since its inception on business practices found to be unfair or deceptive. One of the most important categories in this field is false and misleading advertising: 70 percent of these decisions deal with advertising.

V

This look at the past warrants the observation that the Commission, armed with this power and responsibility, early in its history and throughout its existence, has recognized its obligations in this area. Under new leadership it will become more active and vigilant in protecting the consumers and competitors from unfair and false impressions created by misleading advertising. It is expected that the Commission will conduct a vigorous and speedy law-enforcement program against those responsible for false and misleading advertising.

Footnotes at end of speech.

Chairman Paul Rand Dixon recently gave a speech before the Association of National Advertisers, Inc., entitled "False Advertising Is No Minor Matter." The chairman spoke of false advertising swinging two clubs—one on consumers and the other on reputable and law-abiding advertisers—and he concluded, "False advertising becomes a monopolistic weapon as vicious as any other. Either way you look at it—from the standpoint of unfair competition or as an unfair and deceptive practice—false advertising will not only continue to be a major target of the Commission, but heavier, faster firing guns will be brought to bear on it."

The chairman also emphasized a speedup in our processes. He stoutly predicted, "We are going to serve injured business and consumers with a squad car, instead of a hearse." He is confident that the vast and honorable majority of advertisers will applaud this determination.

There will be a determined effort to compact the schedule of hearings on any case and to provide for continuous hearings on both sides until the entire case is completed.

A further change in procedure, presently contemplated, is to give and fix responsibility to one man for the development, trial, and forward progress of each case.

It has been suggested that the Commission be given the power to issue temporary restraining orders to stop grossly misleading advertising pending a trial of the issues. If the Commission had this power, it is quite probable that we would be confronted with a minimum of delaying tactics.

The Chairman has gone on record for the effectiveness and fairness of bringing simultaneous action against industrywide, or at least areawide, false advertising whenever it is feasible.

The Chairman has authorized me to further state that voluntary compliance with the law, undertaken in good faith, should continue a major objective of the Commission. We will do our utmost to encourage it and lend enthusiastic support to any private effort to correct illegal practices.

VI

When I refer to powers and responsibilities of the Commission in this area, let me briefly refer to responsibilities of business also, as represented by this audience, in this same area.

We spoke of the turn of the century. At that time only approximately $100 million were spent in advertising. In 1960, approximately $12 billion were spent by business on advertising in the various media. This advertising appeal is thrust directly at the consumers. This tremendous and powerful force—whether in the form of the spoken word on radio, or the pictorial presentation on television, or the written word of the newspapers, or various other methods of communication—constitutes an absorbing and continuing appeal, many times dramatic and emotional, exhorting and urging the defenseless and many times gullible consumers to buy and use the abundant goods produced by our complex economy. Thus, many luxuries of yesterday become the necessities of today.

This great advertising appeal is very definitely the first and most intimate contact which the average consumer has with the American economy. Surely he has more contact with this phase of our economy than with any other. Just think of the numbers and kinds of advertisements the average person is exposed to during a given period: The written word, the spoken word, the pictorial presentation. This tremendous power of advertising suggests a tremendous responsibility of the advertiser to comply with the law. The consumer forms his impressions and expectations of our system when he reads and hears and sees—the creations of this vast advertising octopus. He is subjected in one form or another to millions of avdertising techniques during the course of the year. Thus, advertising becomes a major source of most impressions which the interested consumer has of our system of economy.

Business and the advertising fraternities must universally recognize their responsibilities of properly and honestly informing the consumers of the qualities and values of their products, without the use of false and misleading statements about their products and disparaging observations of competitive products.

Everyone, from time immemorial, has adopted the slogan "truth in advertising." It is a safe and sane adoption. It should not be an empty slogan that permits and encourages the emphasis on the gray areas between the true and false word.

It should be a meaningful, dynamic expression and execution of busines policy. To merely adopt this slogan is not enough. There must be a sincere, wholehearted and genuine effort by business and its advertising organizations to advertise truthfully.

We start off with the simple premise that it is unlawful to put false ideas into others' heads by direct statements, innuendos or otherwise. Ask yourself the questions, "What will the reader, the viewer or the listener think about this product? Is what he will think the truth? Is there anything else that he ought to know?"

The matters covered by advertising are matters within the peculiar knowledge of the advertiser. Who is in a better position than he for the making of an honest appraisal of his product or the framing of advertisements that honestly represent it?

This does not mean that the advertiser must be entirely objective and impartial. As a matter of commercial interest, it is expected by the consumer that the advertiser will be biased and prejudiced in favor of his own merchandise. He has the right to "puff" his own wares, but he has no right to misrepresent them.

Just where the line is drawn between puffing and misleading representations in advertising is often difficult to determine. Puffing generally refers to a subjective expression of opinion and is not made as a representation of fact. The Supreme Court [4] has distinguished between legitimate puffing, that is, mere exaggeration of qualities the merchandise has, and misleading representations, that is, assigning to merchandise qualities it does not have.

VII

The Commission, under its new leadership, is expected to continue and increase its activities relative to television commercials and demonstrations.

Several complaints issued in the past year alleged that television advertising was deceptive because it leads the public to believe that a demonstration shown therein proves something when, in fact, it does not. Even though the quality of the product is not directly in issue, purchasers may be induced to buy a certain product because they have been led to believe that it has undergone a valid test or demonstration.

These cases hold that apart from any determination of the merits of their product, a commercial may be considered illegally deceptive if purchasers may be induced thereby to purchase a product because they have been led to believe they have seen a valid test or demonstration of it.

Action was taken against the use of the "White Coat" on television. Although no determination was made of the merits of the product, the collateral visual suggestion that the product had been recommended by the medical profession was held to be misleading.[5]

In a recent book entitled "Reality in Advertising," the author discusses "unique

selling propositions" and refers to them as "USP." As an example of an effective USP, the author cites the Colgate television advertising of its toothpaste in which the invisible shield was used. This television demonstration was the subject of a complaint by the Commission which complaint was contested. The Commission found that this advertisement was deceptive. The Commission stated, "In our opinion, respondent's television commercials and print advertisements clearly and directly represent that Colgate dental cream with Gardol affords users complete protection against tooth decay and against the development of cavities. Such representations as to the degree or extent of the protection afforded users of respondent's dentifrice are deceptive."

Another formal complaint challenged the accuracy of television demonstrations which purported to demonstrate the perceptible disparity between the optical distortion of automobile safety plate glass and auto safety sheet glass under ordinary conditions of use. The complaint charged that photographic techniques or devices used in the making of such pictures were designed to exaggerate the distortion inherent in auto safety sheet glass and minimize the distortion inherent in auto safety plate glass. This matter is presently in litigation.[6]

Other cases in which the Commission challenged purported television demonstrations included a demonstration of a filter cigarette;[7] demonstration of aluminum household foil;[8] the capacity of one toothpaste to remove tobacco stain;[9] the presence of moisture drops or "flavor gems" on margarine as evidence that it tastes like butter;[10] a "sandpaper test" to prove the moistening properties of shaving cream;[11] a demonstration of the danger in actual use of competitive so-called "round head razor";[12] a depiction showing what is represented as a comparison between competing shaving creams as to their being "moist and creamy";[13] and still another involving a demonstration as to the superiority of an aerosol having cream over competitive brands.

In a number of these cases, some of the Nation's largest advertising agents were named as respondents. In our opinion, the advertising agent who creates and develops these demonstrations and profits thereby is equally responsible with the advertiser.

VIII

May I conclude with this observation. This audience is composed largely of men and women engaged in advertising and promotional activities—advertising managers, vice presidents in charge of advertising, advertising agency representatives, media representatives, and others—you and those represented by you—play a great part in the control of national advertising. Therefore, you all have a tremendous interest in the efficiency of the Federal Trade Commission in its perpetual effort to police false advertising. We have seen what happened to advertising in the age of quackery when there were no controls or policing. The same thing could happen today if controls and policing were eliminated or weakened. You might find yourself in a free-for-all battle of claims and counterclaims—of falsehoods and disparagements. You could, for a time, steel yourself against such an atmosphere and be determined to advertise with integrity but eventually you would weaken by the force of survival—fire will be met by fire in a hot, competitive battle. Public confidence in the believability of advertising would be at the lowest ebb.

We are all interested to guard against such an eventuality. Nay, it is our solemn responsibility if a free society is to endure.

There is plenty of educational help available. The Federal Trade Commission, with its formal and informal proceedings, the advertising fraternity with its new revised codes, the cooperative contributions of the great national associations of your industry—the four A's, the AFA, the ANA, and the Association of Better Business Bureaus.

We are confident of our success, confident that the Federal Trade Commission and business will meet their advertising responsibilities in the protection of the consumer and the honest advertiser; that the appreciation of the value of truly informative advertising of the American economy will grow stronger; that free men in a free society will triumph; that private enterprise will survive.

Killing Our Money

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mrs. ST. GEORGE. Mr. Speaker, we are on the verge of what may well prove to be an abyss from which we may not recover until we have gone through the very painful wringer of runaway inflation. Perhaps we humans can never learn from history and the experience of others. We must learn the hard way even if it destroys us.

The following article by Mr. George Sokolsky appeared in the Washington Post of yesterday. Mr. Sokolsky explains very clearly what the proposal in a bill shortly to be introduced in the House of Representatives will do to the American dollar.

The people of our country should be alerted. Woe to us all if the American dollar becomes another scrap of paper.

The article follows:

[From the Washington Post, May 17, 1961]

KILLING OUR MONEY

(By George E. Sokolsky)

When the House of Morgan abdicated its leadership of the American financial world in 1929, no other leadership appeared. J. P. Morgan, the elder, was essentially a patriot and therefore his first concern was the maintenance of the status of the American dollar throughout the world. No banker in this country has succeeded to his position of leadership. We may have been regarded as not too bright by British and German bankers, but our money was sound because it was secured by gold.

Today, all sorts of fantistic ideas come out of the banking world—ideas which one might expect from someone who is taking economics I from a Keynesian professor at Harvard. These ideas have culminated in the inflationary bill which is now being proposed in Congress that would take all the gold coverage off the American dollar and leave it nothing more than a scrap of paper.

The proposal of Secretary of the Treasury Douglas Dillon to change the gold law is an easy way out of our gold problem. We lack gold; therefore abolish gold. This is an easy solution to the shift in the balance of international settlements, and as this subject is not romantic and not easy to understand, the great minds who turn corners on two wheels believe that they can solve a difficult problem by running away from it.

What they seek to do is to remove all metallic security of the dollar, to leave it a scrap of paper as valuable as the faith in trade, commerce, economic stability may at any time be. It is often said that fiat money is based upon confidence in the country which issues it. This is economic bushwah, because fiat money is based not on love of country but on the economics of the moment.

Congressman ABRAHAM J. MULTER, of Brooklyn, has introduced a measure in Congress which, it is said, has Secretary Dillon's support. It would shift our currency from having a 25-percent gold support to being fiat money; that is, money with no gold or silver support whatsoever.

The reason that for three decades, a world in revolution has accepted the American dollar as the most valuable currency is that it had a gold protection while other moneys were just printed paper. Now that Great Britain, West Germany, France and Soviet Russia have obtained enough gold to set up reserves, along comes this proposal to knock down the value and respectability of the American dollar.

It is expected that the removal of the gold reserve will strengthen the dollar, when actually it will destroy confidence in the dollar which has steadily been losing confidence.

The Multer bill was not prepared by Congressman MULTER, who, while a fine man, is not an economist and has never claimed to be one. The bill was prepared by bankers and Keynesian economists. They ought to come out in the open so that we might know who seeks to kill our money.

Threat of Communists

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. WIDNALL. Mr. Speaker, apparently certain individuals and groups within the two major areas of our economy have not yet learned of the absolute dedication of the Communists to overthrow the Government of the United States—and, indeed, the governments of the entire free world. Apparently many within the ranks of both labor and management do not take seriously the threat of the Communists to "bury the United States." That there can exist such disbelief in the unswerving intentions and all-out effort of the Communists to communize—to enslave—the world is incredible. Yet, this is the fact—the dangerous fact.

A most timely warning against such apathy is sounded by Edward J. Rear-

don, Washington correspondent of the Herald-News of Passaic, N.J., in an article in the May 6 edition of that newspaper. Mr. Reardon's article follows:

PRICE FIXING, EXORBITANT WAGES HELPING KHRUSHCHEV "BURY" US

(By Edward J. Reardon)

WASHINGTON.—If you wonder about Soviet Premier Nikita Khrushchev's confidence in the ability of communism to eventually "bury the United States," two congressional investigations now in progress on Capitol Hill may furnish a key to the answer.

The first is a probe of price fixing on Government contracts by the electrical industry.

The second is an inquiry into the high wages and low production record of missile-base workers at Cape Canaveral.

Each day the hearings continue adds further evidence that American management and labor are doing their darndest to aid Khrushchev in making good his boast.

When the people of any nation become so obsessed by greed that they subordinate patriotism to profit, then they are indeed sewing the shroud for their own burial. And there is ample proof that we in the United States are getting perilously close to the danger line.

Testimony at the hearing delving into conditions at Cape Canaveral, for instance, has led Senate investigators to charge that missile-base workers make so much money it "borders almost on the subversive."

It is at Canaveral that this country is making its desperate last-ditch fight to uphold its waning prestige before the world. The stakes in the space race are high. What we once considered a friendly cooperative effort in the interest of new scientific discoveries has turned into a deadly duel between the Soviets and the United States, with world prestige as the prize.

But the rules of the game are not the same for both contestants.

Senate investigators learned last week that a $3.50-an-hour electrician at Canaveral made $647 one week. This was $127 more than Defense Secretary Robert S. McNamara, who is responsible for the operation, earns.

Henry Gable, president of a Dallas electric service company which has six contracts at the cape, testified he has no doubt there was a deliberate slowdown by electricians so that they could make overtime pay.

Further testimony convinced the probers that union workers deliberately staged strikes to force overtime pay; that high wages were caused by test explosions and emergencies or by strikes and work stoppages that sometimes caused workweeks' of more than 100 hours.

Robert Palmer, business agent for local 756, International Brotherhood of Electrical Workers, conceded his union had staged a walkout last summer—closing down all missile work at the base for 8 days—when the Air Force tried to cut down overtime for its members.

The investigators developed testimony that despite the high wages, productivity of electricians and other building trades workers at Canaveral was the lowest ever encountered.

Tom O'Malley, former Passaicite now with Convair in Texas, testified this country's man-in-space program was delayed for months by the failure of Canaveral workers to deliver a full day's work.

In the Soviet Union there is no quibbling about overtime pay, no work slowdowns or stoppages. In Communist countries you are assigned to your job, you are told what is expected of you. And you do it, or else.

The Communists have an intolerable set of rules, judged by American standards. What they earn and how well they live depend on what they contribute to the progress of their country. Americans are shocked when Khrushchev says we will one day be living under his set of rules.

But it might be sobering to remember that under these rules the Soviet Union put the first satellite into space, produced the first moon shot and placed the first man into orbit, among other achievements.

America's industrial leaders who greedily consort with each other to rig prices on Government contracts and thus eliminate competition which is the keystone of the capitalistic system, might reflect on their chances under a communistic government.

Khrushchev says capitalism is doomed and the hour is growing late. The vultures of communism are already circling low in the sky—over Laos, Vietnam, Cuba, Africa, Latin America. Only a strong America—steeped not in greed but in patriotism—can fight them off. But we find the management and labor chiefs, on whom this Nation depends most to furnish that strength, concerned more with their own selfish interests than with the welfare of their country and the free world.

In Moscow shortly, Soviet officials will present Cuba's bewhiskered Fidel Castro with the Lenin Medal for his contribution to communism.

They are giving the medal to the wrong man.

College Basketball Corruption

EXTENSION OF REMARKS

OF

HON. BASIL L. WHITENER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. WHITENER. Mr. Speaker, the people of our Nation have recently been shocked by the revelations of corruption in collegiate basketball competition. Unfortunately it has been revealed that some of our college athletes in North Carolina have been involved in this type of misconduct.

An editorial comment by Jesse Helms, vice president of WRAL–TV, an outstanding television station in Raleigh, N.C., has recently been brought to my attention. In this editorial I think that Mr. Helms relates the moral questions involved in collegiate basketball misconduct to other types of conduct to be found in this country. This editorial has impressed me as one which carries a message which all Americans might well ponder.

I therefore include the editorial that I have referred to be as a part of the Appendix of today's RECORD:

VIEWPOINT

The shame and the shock of the college basketball scandals continue to spread, like a gnawing, consuming cancer. But somehow sadness is the prevailing emotion in the backwash of disclosures that three State College basketball stars yielded to the temptation to sell their loyalty and integrity and decency.

And there is justification for the sadness, for the disclosures are merely symbols of a society that, despite its pious pretenses, has taught its younger generation that expediency is more important than principles, that personal responsibility has no place in the modern collectivist philosophy, and that there is somehow a comfortable middle ground between right and wrong.

There is no such middle ground except for those who would hear the cock crow thrice in proclaiming the betrayal of freedom. And this is the sadness of the basketball scandals. The young athletes whose weaknesses have been exposed are hardly more than a measuring stick of the Nation's morality. And though they may have dashed their own reputations and futures on the rocks of deceit, they have done more than that: They have reminded us that America is sick because we are refusing to act like Americans.

This, then, is what the basketball scandals are really all about And this is the warning that we must heed, unless our loss of national sanity—not to mention integrity—is to be complete. And most of all, in this incident, all of us—businessmen, politicians, educators, parents, clergymen, employers, employees—must stand back and let him without sin throw the first stone at the kids in the searing spotlight of shame.

It is impossible to draw a distinction between a basketball player who throws a game for pay and a politician who goes against his principles for votes. There is no difference between Anton Muehlbauer and a Senator who supports a socialistic measure because he fears defeat it he doesn't. Terry Litchfield's shame is no greater than the businessman who refuses to defend and protect the free enterprise system because he will avoid embarrassment and make money if he goes along with the crowd. Stan Niewierowski's weakness is no greater than that of the clergyman who makes a forgery of the word of God by transforming the pulpit into a forum for doctrinaire politics and philosophies.

All of these are contributing to the destruction of things that have a right to survive. And yet they claim to be a part of the dynamic 20th century. Is it not time to be honest with ourselves and recognize that if this generation stakes its claim to immortality on our deeds and our existing attitudes, then history will record us as the architects of the destruction of a great heritage?

In simple truth, what this generation is seeking is comfort and popularity. What it seeks to avoid is sacrifice. But where is the contribution to mankind? Is it to be found in the fear and weakness of a nation that once proudly stood for the right and defended it without hesitancy? Is it to be found in the tax burden being piled on generations yet unborn, to finance our comforts and pleasures of the moment? Is it to be found in the whittling of the freedom of men under the guise of progress?

We are a nation of crowd pleasers. Pontius Pilate was such. He pleased his crowd—and let them slay their best friend. He held the governorship, but his immortality is that he failed to do what he knew was right.

How much longer will we as individuals, as a society, as a nation, continue to fail to do what we know is right? How much longer will we bribe the people into believing that personal responsibility and hard work have somehow been eliminated as prerequisites to success—or even survival?

Mankind's struggle upward has been a constant grasp for the technological, the scientific—and the moral. Technology and science are factual—and so is morality. Each is what it is; and to twist any one of them out of shape for convenience or expedience is to destroy its truth and its effectiveness.

And so it should be with sadness that we view the three State college boys who have been caught in the dragnet of deceit. Their punishment is already upon them. They deserve it. But how about the society for which they serve as a mirror? Will it throw the first stone, or will it remember Emerson and his great essay on self-reliance, in which he bade every man speak his own thoughts, do his own duty, and do his best to avoid temptations? There is an importan lesson for all of us.

Germany Teaches the United States

EXTENSION OF REMARKS
OF
HON. F. BRADFORD MORSE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. MORSE. Mr. Speaker, the Washington Daily News recently carried an excellent editorial, which I think worthy of the attention of my colleagues in the Congress. Under leave to extend my remarks, it follows:

[From the Washington Daily News, May 17, 1961]

GERMANY TEACHES THE UNITED STATES

U.S. economic advisers increasingly are embarrassed by contrasts between America and West Germany—persistent unemployment here as against a labor shortage there.

Scripps-Howard writer Roger Stuart has dug up a long-secret report which helps explain the embarrassment.

The report was made by a team of U.S. economists and submitted to the West German Government September 24, 1951. On the U.S. team was Prof. Walter Heller, now Chairman of President Kennedy's Council of Economic Advisers.

Some of the recommendations:

West Germany was told it couldn't achieve the necessary rate of industrial expansion if it kept on worrying about inflation. The Government was chided for an "excessive concern for price stability."

However, Dr. Ludwig Erhard, West German Finance Minister, knew something about inflation. He had seen his parents' life savings lost when the mark went to pot. He rejected this advice.

Dr. Erhard also was told by the U.S. advisers that "a rate of interest high enough to stimulate any large volume of personal savings would seriously curtail investment." But German interest rates were left to find their own high level and so were savings and investment. Today West Germany is investing up to a quarter of its national output annually in the most modern industrial plant in the world.

Dr. Erhard was cautioned against liberal depreciation policies and advised instead to adopt a "compulsory investment program." But liberal depreciation policies helped the German economy grow last year at the rate of 10.8 percent. The U.S. rate was less than 3 percent.

Just 15 years ago West Germany was a defeated and demoralized nation, its resources squandered by Hitler, its factories and homes flattened by bombs. Since then it has taken in more than 12 million refugees. It has imported nearly half a million more and still has a labor shortage.

Average wages have doubled in 10 years and still are climbing. And increases mostly are in true values because of effective measures against inflation.

West Germany last year lost fewer than 40,000 man-days through strikes. We lost twice that many on missile bases alone. German wage raises have come out of increased productivity—eight percent last year. German prices have been kept competitive in world markets, thus rapidly expanding foreign commerce.

The Germans, in short, have followed the historic principles of free enterprise—despite the advice they got from the United States. Even the West German Socialist Party has repudiated socialism.

The general theories of the 1951 report, rejected by the Germans, are the general theories now being urged on America by Professor Heller and other administration economists: big spending and even budget-busting tax cuts, which breed inflation; artificial restraints on interest rates, which discourage saving and encourage Americans to export jobs by investing abroad; gimmicks in the form of tax "incentives," instead of adequate depreciation allowances

Somewhere in all this may be found a clue to our "creeping rate of growth," so roundly deplored in the campaign. Now Professor Heller wants us to follow some more of our own bad advice.

Address by Mrs. Wallace I. Kargman

EXTENSION OF REMARKS
OF
HON. EDWARD R. FINNEGAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1961

Mr. FINNEGAN. Mr. Speaker, under leave to extend my remarks, I commend to my colleagues a speech in honor of Marian Anderson, recently given by Mrs. Wallace I. Kargman, one of my constituents, and a close personal friend. This address by Mrs. Kargman was a Chicago tribute to Marian Anderson sponsored by the Chicago Women's Division, American Friends of the Hebrew University.

Miss Anderson was selected as Woman of the Year by the National Women's Division of the American Friends of the Hebrew University in recognition of her cultural and humanistic achievements:

ADDRESS GIVEN BY MRS. WALLACE I. KARGMAN AT CHICAGO TRIBUTE TO MARIAN ANDERSON SPONSORED BY THE CHICAGO WOMEN'S DIVISION, AMERICAN FRIENDS OF THE HEBREW UNIVERSITY—FEBRUARY 20, 1961, SHERATON BLACKSTONE HOTEL

Miss Anderson, reverend clergy, Mayor Daley, Madam President, distinguished dais guests, friends of Marian Anderson, and the Hebrew University, I am very happy to welcome you here this morning. We are assembled here to pay tribute to a great and gracious lady, whose life has been dedicated to the highest principles of mankind. Miss Anderson was selected by the National Women's Division of the American Friends of the Hebrew University as Woman of the Year because her deeds are symbolic of the cultural ideals espoused by the Hebrew University of Jerusalem.

Our honored guest is no stranger to Chicago. For many years she has enriched our cultural life. We honor her today for the great beauty of soul and spirit which has, through the years, made her a tireless ambassador of America, creating new bonds of friendship and understanding for our country among the peoples and rulers of the world. She is a woman whose extraordinary accomplishments, nobility of spirit and dignity of person, symbolize the rising attainment of human aspirations in a fast changing world society. Our guest of honor is a great American, a citizen of the world, whose magnificent voice has become a medium of communication, her achievements a symbol of peaceful progress among all the people of the world. We meet also in the presence of the distinguished representatives of other nations which have honored Miss Anderson.

We, the Chicago Division of the American Friends of the Hebrew University, reflect in the honors that are yours, Miss Anderson, for it is written in "bringing honor to oneself, one brings honor to all mankind." We, the Women's Division, and its acquired arm, the Mary Zimmerman Scholarship Club, though young in years, is fast emerging as a vital force in a community replete with many areas of endeavor. It is very stirring to be part of so vital a group, that is dedicated to the building of a great house of learning on the sacred soil of Israel—a bridge that knows no barriers—that can surmount the greatest obstacles, for individuals who are trained to think—act independently and understand the words of Torah can only contribute the achievements of the good life and serve on the highest level. Education knows no past—no present—no future—it bridges all times and forever. What greater joy can one have than to advance human dignity and learning. The Women's Division recognizing that the nerve center of a university is its library, has undertaken to build the central library of the Hebrew University. We know that the library will play a vital and unique role in the university's continuing educational program. It serves as the central library of the university, the library of the Jewish people all over the world, and the National Library of the State of Israel. It has become a center for students and faculty unparallelled in the Middle East. As the university takes on an increasingly important role in providing the technical experts and instructors needed by the newly emerging states in Africa and Asia, the library must assume new responsibilities. Students from many lands receive training at the university.

In a message addressed to Senator Herbert H. Lehman, chairman of the National Council of the American Friends, President Kennedy praised the American Friends of the Hebrew University—and I quote: "All members of American Friends of the Hebrew University have cause for satisfaction, for these are true monuments toward peace and understanding—I commend your efforts in support of the growth of this institution as a constructive force in the Middle East and for the educational assistance to the new nations of Africa and Asia."

One of the new study halls now in process of completion will be the United Nations documents reading room—an undertaking which we take particular pride in providing. It is most appropriate that the Women's Division has elected to honor Miss Anderson—now—and for future generations by dedicating the United Nations reading room in her name.

I know that Miss Anderson will take away with her today a deeper awareness of what she has given to us, and that she shares with us the pleasure in seeing so many people who have joined together to express their regard and affection for her and in the name of a great center of learning.

America's Inferiority Complex

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. DORN. Mr. Speaker, in a "Greater Interest in Government" essay contest for initiates of Tau Beta Pi Association, national engineering honor society, the paper written by Clemson College senior Thomas C. Welch III, member of Alpha Chapter at Clemson, was judged the best among entries submitted from 81 chapters throughout the United States.

Mr. Speaker, I highly commend Mr. Welch's essay to the Congress and to the entire country:

AMERICA'S INFERIORITY COMPLEX

(By Thomas C. Welch III)

The United States has progressed a long way in many ways since we gained our independence from England. We have become the symbol of wealth, well-being, and good times. We have, and still do, lead the world in many fields, such as medicine and high living standards. True, we have lagged behind in other areas—for instance, rocket production.

However, in my opinion, our most tragic shortcoming may be classified as our failure to nurture and develop the spirit of self-respect, self-confidence, and fundamental belief in God that really made the United States what it is.

This country has developed an inferiority complex of alarming proportions. We have become obsessed with the fear that other nations around us will be able to find fault with the conditions that exist here. We let other nations, Russia in particular, back us into a corner every time the question of the Negroes' rights is raised, even though the whole world knows that the atrocities Russia committed in Hungary vastly overshadow any injustices Negroes have been subjected to in the United States. We quake at criticisms that our grandfathers would have refused to consider.

The visit of Nikita Khrushchev to this country some 2 years ago exposed many pitiful conditions. Our people and our beliefs were insulted time and again by the so-called statesman from the Kremlin, yet Henry Cabot Lodge was admonished by the State Department when he attempted to speak out in his country's behalf. It was too risky to offend the honored Mr. Khrushchev—he might revert to his small-boy tactics and threaten to go home if the game didn't go like he wanted it to. Eventually Khrushchev did just this; in threatening to end his "good will" tour he affected his audience so badly that reporters have described the fear that existed in the hall as a tangible and present thing. And even more pathetic was the relief evident in the audience when Khrushchev relaxed his belligerent attitude. The fawning behavior that characterized our leaders when they were confronted with this situation is a vivid example of our loss of self-respect.

Another prime example of our loss of self-respect is the foreign aid program we operate. Each year fantastic amounts are given to countries in an attempt to create a buffer zone between the United States and Russia. Actually, the majority of these countries are available to the highest bidder—we are buying their friendship. It is very hard to imagine our forefathers, who issued such statements as "millions for defense but not 1 cent for tribute," subscribing to such action.

Taken as a whole, the United States is in the best military condition in its history; it should be, in view of the billions of dollars spent annually for defense purposes. And yet we live in fear that the Russians may be developing weapons more powerful than our own. We cannot be content to do our best and leave the rest to Providence. We believe every rumor that comes along concerning Russia's potency and our impotency. Self-confidence is a thing of the past.

America is supposedly a God-fearing nation; we have churches of all denominations where our citizens may worship as they please. But just how deeply do we believe? How often do we admit that it is "God that has made us and not we ourselves"?

The religious fervor of a nation, as well as its other qualities, should be reflected by its leaders. We certainly gave Khrushchev a fine insight into the shallowness of our faith during his tour; not once, at any meal that he attended, was the food blessed. We were ashamed to be seen giving thanks.

At one time Khrushchev said that our grandchildren would be under Communist rule. Now he says it will be our great-grandchildren. Progress is being made—one generation has been saved. What is going to be done to save the next generation?

This is a question I cannot begin to answer. I doubt that anyone else can either, for in the end the answer will not come from a politician, a statesman, or a citizen; it must come from beyond.

How About Cuba?

EXTENSION OF REMARKS
OF
HON. CARLETON J. KING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. KING of New York. Mr. Speaker, I thought my colleagues would be interested in the following letter which I received from one of my constituents, Mr. Edward Freeman, Porter Corners, Saratoga County, N.Y.:

MAY 16, 1961.

Hon. CARLETON J. KING,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE KING: Daily reports give the impression Laos is more deserving of solution than Cuba, 90 miles away. As a recent Member of Congress I trust you will be more susceptable to a reexamination of some puzzling aspects of a neglected policy toward communism.

Doesn't it occur to anyone in Washington that our policy and leadership toward the Communist internal anarchy around the globe is, either by intent or weakness, a failure? That the recent failure of the Cuban patriots follows a chain of events indicated in the enclosed article, and is a second Hungary?

How can anyone justify sending our soldiers to Laos, and not Cuba? The encouragement given the return of the Cuban patriots, and then deliberately letting them down, is the same consistent lack of integrity that has characterized our policy since 1933.

Dean Rusk, Chester Bowles, and Adlai Stevenson are cited by a writer in the May 1 New York Herald-Tribune as having argued the President out of adequate military air support of the Cuban patriots. This is the same advice that defeated Chiang Kai-shek, and prevented our success in North Korea. And the only way to rectify such misguidance is to fire these men who should not have been selected in the first place.

One conclusion is obvious—we just haven't got the men in office with sufficient integrity and policy to measure up to the Communist international subversion. Add up the inhuman practices, deceit, civilized demoralization practiced by the Communists since the Soviets seized power—only a morally deficient and patriotically negligent man can support collaboration with them. The continued diplomatic relations with this organized debauchery, and their degenerate leaders, is beyond normal comprehension. Our continued relations is a first principle indictment, and one might say is designed to support Quislings.

A complete assessment of the Cuban situation, and failure to deal with the facts is made in a recent book by Nathaniel Weyl, "Red Star Over Cuba." And our policy failure is analyzed by Dr. Strausz-Hupe, director of the Foreign Policy Research Institute, University of Pennsylvania, with other associates in their book, "The Protracted Conflict."

Yours truly,

EDWARD FREEMAN.

Castro's Justifications

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. SANTANGELO. Mr. Speaker, several constituents have communicated with me urging that the United States not intervene in the internal affairs of Cuba. From the tenor of their notes, one would infer that the United States has instigated action against Castro and that Castro is blameless. Many of these notes have been inspired by an advertisement carried in the New York Times of May 10 and signed by a number of American citizens.

Arthur Krock, well-informed writer of the New York Times, analyzes the pro-Castro advertisement and demolishes the arguments of those who claim that the United States has been aggressive against Cuba. I believe that the factual report and analysis by Arthur Krock clarifies some of the confusion in the minds of some of my constituents and others who have been misled by advertisements which do not set forth events in their chronological order and consequently distort the meaning of historical events.

Mr. Krock's article follows:

[From the New York Times, May 18, 1961]

THE LIVELY ISSUE OF CASTRO'S JUSTIFICATIONS

(By Arthur Krock)

WASHINGTON, May 17.—Two conclusions reached by this department after an examination of the origins of the currently hostile United States-Castro relations, and published here under date of May 10, have evoked an unusual number of remarkably uniform dissents from readers. These conclusions were:

1. The factual weakness of an advertisement in this newspaper, signed by a number of Harvard professors among other distinguished citizens, which justified Castro's anti-Americanism on the ground that for at least a year U.S. policy has been "We must crush Castro," is that it began the chapter of United States-Castro relations in the middle.

2. Castro's unfriendly and illegal acts, and his anti-American incitements of the Cuban population, long preceded the date chosen in this advertisement to demonstrate that the burden of blame is on his Government.

In rebuttal of these conclusions the letter-writers generally contended that the United States refused a request from Castro to be invited for talks; rebuffed and snubbed him when he came here in February, 1959, to speak to the American Society of Newspaper Editors; and refused his offer at that time and thereafter to negotiate the differences between his regime and the Government of the United States. But the open record is the following:

1. Castro never requested an official invitation. When, on his own volition, he came unofficially to Washington, in April

1959, Secretary of State Herter gave him a luncheon at which no mention of any desired negotiation was made by the Cuban officials present; and, in the absence of President Eisenhower, the Premier was received by Vice President Nixon.

2. On February 22, 1960, Castro did propose—but for the first time—to negotiate with the United States on compensation to American citizens for their property in Cuba that he expropriated soon after his accession to power. However, his conditions were that during the negotiation the United States should bind both the Executive and Congress to refrain from any action which Cuba would consider to affect its interests, while he remained free to negotiate or procrastinate as he chose—conditions obviously unacceptable and, so far as Congress was concerned, constitutionally impossible.

3. From the time Castro assumed power until May 17, 1960, the United States made 9 formal and 16 informal offers to negotiate all differences with Cuba. The first was by Ambassador Bonsal in March 1959. In each note and statement the United States expressed sympathy with the social and economic objectives of the Cuban agrarian reform law under which the expropriation was made.

HERTER'S INDICTMENT

4. At the San José, Costa Rica, conference, August 1960, Cuban Foreign Minister Roa charged that this Goverment had consistently refused Castro's offers of negotiation. Secretary Herter made and documented this reply: That continuing attacks on the United States by the Castro regime began in January 1959, before the acts it alleges were U.S. aggression. He said also that from this date forward political assaults on the U.S. Government, "and scurrilous attempts to besmirch the characters of its leaders, have nevertheless been consistent and made with increased savagery."

The circumstance that the charges in Castro's justification that this open record refutes are being made by citizens of such quality is strange, disturbing and mysterious. But it is true, as pointed out in some of the letters, that Castro also can cite grievances prior to the preinvasion programing. For example, the United States did not completely bar arms to Dictator Batista until March 14, 1958; sent a Marine guard for the Guantanamo pumping station 6 miles into Cuba on July 28, 1958; and concluded a 20-year atomic energy aid agreement with Batista September 9, 1958.

The silly paradox, however, is that all this time U.S. businessmen in Cuba were knowingly financing Castro's revolution by paying their taxes at stations where he could seize them. Prior to that, the taxes on Cuban properties owned by Americans were always sent to Havana, the central collection office, until the other arrangement was deliberately made for the financing of Castro. And meanwhile the State Department was totally ignoring successive warnings from two Ambassadors that the interest of international communism would be served in Cuba by Castro's success.

President's Statement on Freedom of Information

EXTENSION OF REMARKS

OF

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 17, 1961

Mr. MOSS. Mr. Speaker, for 6 years the Special Government Information Subcommittee has studied the restrictions on the availability of Government information. Many of its reports and findings, after review and adoption by the Committee on Government Operations, have been filed with this House. The subcommittee has attempted to bring to the attention of the Members the critical nature of the problem of suppression of information.

In a recent address before the National Association of Broadcasters, the President made a most eloquent expression of the importance of freedom of information in our democracy. It was a dramatic indication of his personal concern that the people in our democracy should know the facts, and should be well-informed as they face the dangerous decisions that lie ahead. Discussing the strength of freedom, the President declared:

The great inner resource of freedom, the resource which has kept the world's oldest democracy continuously young and vital, the resource which has always brought us our greatest exploits in time of our greatest need, is the very fact of the open society.

Thus if we are once again to preserve our civilization, it will be because of our freedom, and not in spite of it. That is why I am here with you today. For the flow of ideas, the capacity to make informed choices, the ability to criticize, all the assumptions upon which political democracy rests, depend largely upon communication. And you are the guardians of the most powerful and effective means of communication ever designed.

For the history of this Nation is a tribute to the ability of an informed citizenry to make the right choices in response to danger, and if you play your part, if the immense powers of broadcasting are used to illuminate the new and subtle problems which our Nation faces—if your strength is used to reinforce the great strengths which freedom brings, then I am confident that our people and our Nation, and all other people and all other nations will again rise to the great challenge of the sixties.

The President spoke in the context of the successful Mercury astronaut flight. He noted, however, that the flight could have failed:

Because this is a free society, and because we therefore take our chances out in the open, of success or failure, all those who were part of the program, who were involved in the decisions which made the program possible, were also in hazard. And while their task did not in any manner approach that of the commander, nevertheless, it is a very real one, and it is the kind of risk which members of a free society must take.

There had been before the flight, as you know, a good many members of the community who felt that we should not take that chance. But I see no way out of it. I don't see how it is possible for us to keep these matters private, unless we decide on the highest national level that all matters which are risky, which carry with them the hazard of defeat, which could be detrimental to our society, that none of them will be printed in the paper or carried on radio or television.

The essence of free communication must be that our failures as well as our successes will be broadcast around the world. And therefore we take double pride in our successes.

I feel as a believer in freedom, as well as President of the United States, that we want a world in which the good and the bad, successes or failures, the aspirations of people, their desires, their disagreements, their dissent, their agreements, whether they serve the interest of the State or not, should be made public, should be part of the general understanding of all people.

The President spoke at a time when the city of Washington was welcoming the Mercury astronaut. The President spoke without a prepared text, and in order that Members may inform themselves of this important statement of principle, under unanimous consent I include the transcript of the President's remarks on May 8, 1961, to the convention of the National Association of Broadcasters in the Appendix of the RECORD:

ADDRESS OF THE PRESIDENT TO THE OPENING SESSION OF THE 39TH ANNUAL CONVENTION OF THE NATIONAL ASSOCIATION OF BROADCASTERS, WASHINGTON, D.C.

Governor Collins, Bishop Hannah, ladies and gentlemen, we have with us today the Nation's No. 1 television performer, who I think on last Friday morning secured the largest rating of any morning show in recent history. [Laughter.]

I must say, I think all of us as citizens of the free world are extremely proud not only of Commander Shepard, but also of Mrs. Shepard—and perhaps with the Vice President they would come forward. [Loud and prolonged applause.]

Commander SHEPARD. How do you get them to stop? We only have time for a few words here, because I understand we have a rather busy day ahead of us. I just want to say, thank you very much for such a warm welcome. [Applause.]

The PRESIDENT. I must say I think the presence of Commander Shepard and also Mrs. Shepard who I think is—I must say, when I saw her on television, I had great satisfaction as a fellow citizen. I must say we are delighted to have them all. It is a great source of satisfaction and pride to us.

I said this morning, when I read off the names of some of the other people who have been involved in this flight—Mr. Webb, who is head of NASA, and Dr. Dryden and all the rest—I said that they were names which were rather unknown. If this flight had not been successful, however, they would have been among the best known names in the United States. So that even I, who had nothing to do with the flight, would have become very much identified with it.

So that I do express my commendation to Commander Shepard and also his fellow astronauts who all involved themselves in the hazards and the discipline of the work, but also those who were involved with the program. Because this is a free society, and because we therefore take our chances out in the open, of success or failure, all those who were part of the program, who were involved in the decisions which made the program possible, who were involved in the very public decision which made the very public flight possible on Friday morning, were also in hazard. And while their task did not in any manner approach that of the commander, nevertheless it is a very real one, and it is the kind of risk which members of a free society must take.

There had been before the flight, as you know, a good many members of the community who felt that we should not take that chance. But I see no way out of it. I don't see how it is possible for us to keep these matters private, unless we decide on the highest national level that all matters which are risky, which carry with them the hazard of defeat, which could be detrimental to our society, that none of them will be printed in the paper or carried on radio or television.

The essence of free communication must be that our failures as well as our successes will be broadcast around the world. And therefore we take double pride in our successes.

I am delighted that there are members here of your profession who are not citizens of this country but who come from our hemisphere. I hope that they understand that we share a fraternal feeling with them, that we are engaged in a common effort to maintain freedom here in this hemisphere, and to assist freedom throughout the world.

And it has been our fortune to be placed in positions of responsibility—all of us—at a time when freedom is under its greatest attack.

I know that to those who live in some parts of this country and some parts of the world, that the discipline of the totalitarian system has some attraction. I called attention at my press conference more than a week ago to a comment made by a student in Paris, an African student, after the extraordinary flight of Major Gagarin, in which the student said, "The Russians don't talk about things, they do them, and then we hear about them."

It is difficult for me to believe that any young man or woman, or any citizen who understands the real meaning of freedom, who recognizes that freedom is at issue around the globe, could possibly hold that view.

I feel, as a believer in freedom, as well as President of the United States, that we want a world in which the good and the bad, successes or failures, the aspirations of people, their desires, their disagreements, their dissent, their agreements, whether they serve the interest of the state or not, should be made public, should be part of the general understanding of all people.

And that is why I was particularly anxious to come here today. There is no means of communication as significant as that in which you are involved: to hear, and to see, and to listen.

And you have the opportunity to play a significant role in the defense of freedom all around the globe.

Our adversaries in this struggle against freedom—and they are not national adversaries, we have no national disagreements, what is involved is the great struggle for freedom, and our adversaries in that struggle possess many advantages. Their forces press down upon us, on the borders of the Middle East, southeast Asia, and Western Europe. They use the secrecy of the totalitarian state and the discipline to mask the effective use of guerilla forces secretly undermining independent states, and to hide a wide international network of agents and activities which threaten the fabric of democratic government everywhere in the world. And their single-minded effort to destroy freedom is strengthened by the discipline, the secrecy, and the swiftness with which an efficient despotism can move. In addition, the ability of a totalitarian state to mobilize all of its resources for the service of the state, whatever the human cost, has great attraction for those who live on the marginal edge of existence, fired with a strong feeling of ancient wrongs and grievances, a feeling which is tirelessly exploited by our adversaries—the people who live on an income of $60 or $70 or $80 a year—the example of the Soviet Union which in the short space of 40 years has transformed itself from being among the most backward countries of Europe to being a leader in space, has powerful attraction.

Once a state succumbs, however, to this attraction, to the lure of communism, to the lure of totalitarianism—even for a moment—resistance is then crushed, opposition is destroyed, and despotic power is maintained even when finally the people may realize they have been cruelly misled—and the steady stream of refugees out of Vietnam in the north, out of Eastern Germany, out of Cuba, all indicate the real nature of their society once it has assumed control.

On this path thus far there has been no turning back. There can be no doubt, therefore, that this determined and powerful system will subject us to many tests of nerve and will in the coming years—in Berlin, in Asia, in the Middle East, in this hemisphere. We will face challenge after challenge, as the Communists armed with all the resources and advantages of the police state attempt to seize the balance of power in their direction.

But despite this, I do not believe that the tide of history is on the side of despotism. I do not believe that the tide of history necessarily is on either side. It is only what we decide ourselves we will do—which direction we will turn the tide of history—that we can be successful.

For we bring to the battle our own resources, the better advantages of a free society—advantages which our adversaries cannot match, advantages which if vigorously used offer hope for the ultimate triumph of freedom.

On our side is the simple and all-important fact that men want to be free, and nations want to be their own masters. It is this fact that helps to explain why no nation in the past decade—with the possible exception of Cuba, where a social revolution was betrayed, and where the story is not yet finally ended—has fallen under Communist rule without being subdued by armed force.

It is this fact that explains the courageous revolution against hopeless odds in Poland, and East Germany, and Hungary and Tibet—revolutions that would have succeeded if alien armies had not been present to put them down.

It is this fact that explains why the poverty-stricken nations of this hemisphere and Africa, filled with discontent in some cases, and social tensions, bearing the memory of past wrongs, have still not succumbed to the lure of communism.

And it is this fact that is man's best hope. For our Nation is on the side of man's desire to be free, and the desire of nations to be independent. And thus we are allied, if we are true to ourselves and true to our destiny, with the strongest force in the world today.

The great inner resource of freedom, the resource which has kept the world's oldest democracy continuously young and vital, the resource which has always brought us our greatest exploits in time of our greatest need, is the very fact of the open society.

Thus, if we are once again to preserve our civilization, it will be because of our freedom, and not in spite of it. That is why I am here with you today. For the flow of ideas, the capacity to make informed choices, the ability to criticise, all the assumptions upon which political democracy rests, depend largely upon communication. And you are the guardians of the most powerful and effective means of communication ever designed.

In the rest of the world this power can be used to describe the true nature of the struggle, and to give a true and responsible picture of a free society. And in addition, broadcasting has new and untried possibilities for education, for help to end illiteracy, which holds back so much of the world and which denies access to the information so vital to a free and informed choice. The full development of broadcasting as an instrument of education is one of the most significant challenges which confronts your industry. And here in our own country this power can be used, as it is being used, to tell our people of the perils and the challenges and the opportunities that we face—of the effort and the painful choices which the coming years will demand. For the history of this nation is a tribute to the ability of an informed citizenry to make the right choices in response to danger, and if you ploy your part, if the immense powers of broadcasting are used to illuminate the new and subtle problems which our Nation faces—if your strength is used to reinforce the great strengths which freedom brings, then I am confident that our people and our Nation, and all other people and all other nations will again rise to the great challenge of the sixties.

No man can hope to prophesy with precision the outcome of the great struggle in which our generation is now engaged. Yet we do know that the cause of human freedom has been threatened on many occasions since the system of free choice and democracy was developed in sunlit Greece more than 2,400 years ago. And yet from each threat and indeed from each defeat, as well as from each success, it has ultimately emerged unconquered.

That is why in the face of an ominous future we can share that faith which Winston Churchill expressed more than a half-century ago, "Humanity will not be cast down."

We are going along, along the same high road, and already behind the distant mountains the sun can be seen—and will be seen again.

That is your opportunity—and that is a responsibility which all of us who are citizens of the free world must once again meet.

An Analysis of the President's Tax Program by Prof. Robert Lekachman, of Barnard College

---

EXTENSION OF REMARKS

OF

HON. WILLIAM FITTS RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. RYAN. Mr. Speaker, a distinguished economist and professor, Robert Lekachman, of Barnard College, has analyzed the tax policy of the administration in the May 8 issue of the New Leader magazine. I believe that my colleagues would like to have the benefit of his observations, so I offer the article for inclusion in the Appendix:

KENNEDY'S TAX PROGRAM

(By Robert Lekachman)

President Kennedy's tax message to Congress makes it clear that the administration's policy is to pretend that the recession has either ended or is rapidly expiring. The slackening rate of the economy's contraction and improvements in economic indicators such as industrial production and automobile sales have apparently sufficed to persuade him that a really determined attack upon unemployment—still at nearly 7 percent of the work force—is unnecessary at this time.

There is an almost eerie parallel with President Eisenhower's responses to the 1958 recession: the same limited reshuffling of Government programs so as to increase current outlays, the same prolonged meditation on the merits of reducing personal income taxes to stimulate consumer spending, the same repeated taking of the economic auguries, the same promises of detailed review some months hence, and now the same conclusion that the economy is improving of its own accord without need for battle with Congress over substantial spending programs or general tax reductions. The brave words of the campaign, the exciting visions of the task force reports and the fabled influence of

John Kenneth Galbraith have apparently yielded to a yearning for changes which do not of themselves unbalance the Federal budget, and for programs which pose no greater challenges to Congress than that sluggish body has accustomed itself to meeting comfortably.

The President's tax program is not in itself bad; indeed much of it is aimed at remedying abuses that have long cried out for attention. It is easy to share the President's desire to end tax exemptions on such "business expenses" as hunting lodges and yachts, not to mention seaborne conventions and lunches at the Forum of the Twelve Caesars. Tightening expense allowances would discourage business waste, increase tax receipts and diminish the cynical immorality of an expense account society. The President is on equally firm ground in wanting to spread the tax net over dividends and interest. A flat 20 percent withholding on such earnings promises to add $600 million in new revenues and end some of the tax discrimination that favors those in the upper income brackets. Similarly, the suggested repeal of the 4 percent dividend tax exemption is a step in the right direction. The message also addressed itself to a series of tax advantages which American companies with foreign subsidiaries or branches now enjoy. Their present privilege of paying American corporate income tax on profits earned abroad only when they return these profits to the United States has had the effect of imposing a disadvantage on companies which operate entirely within the United States.

These are all desirable reforms, and they presumably reflect the hard work of Stanley Surrey, the new Treasury Department tax chief, and a number of able economists. If no reference to mineral depletion allowances is to be found, it may be that the President decided that this was not an opportune time to engage Texas in mortal combat.

But the blunt fact must be faced that these measures, desirable as they are in themselves, are irrelevant to an economy which badly requires a stimulus for recovery and reallocation of its resources for sound, balanced growth. Nowhere does this irrelevance appear more sharply than in what is billed as the Kennedy program's key antirecession measure. This is a proposal to promote new investment by offering tax credits. Its central passage recommends "enactment of an investment tax incentive in the form of a tax credit—15 percent of all new plant and equipment expenditures in excess of current depreciation allowances—6 percent of such expenditures below this level but in excess of 50 percent of depreciation allowances; with 10 percent on the first $5,000 of new investment as a minimum credit." The credit is subject to an overall limitation of 30 percent tax reduction in any one year and various safeguards will prevent companies from accumulating investment until they make enough to earn a tax credit.

The benefits will vary widely, but will be very substantial for some companies. Consider, for example, a firm whose current depreciation allowances amount to $10 million. If this company undertakes a $20 million program of new investment, it can compute its tax saving by taking 15 percent of the difference between $10 million (its depreciation allowances) and $20 million (its new investment), or $1.5 million. Assume that the company's profits amount to $10 million. Under present laws, its corporate income taxes would be $5.2 million, 52 percent of its total profits. Under the President's proposal, its taxes would fall to $3.7 million and its effective tax rate from 52 to 37 percent.

When a single interest within the community is offered such tangible benefits, we ought to be certain they are distributed fairly among managers and stockholders. More importantly, we should be sure that a vital national objective is being served and that no better program to accomplish this purpose more equitably is available. The tax credit provision fails these tests. It is not equitable; it does not attack existing misallocations of economic resources, and indeed may add to them; and it is painfully ill-designed to solve the problem of unemployment.

To whom is the proposal unfair? To some businessmen to begin with. Many of these tax credits would be windfalls, the lucky consequences of a decision to invest this year or next year instead of last year. Take the case of a company that modernized its facilities in 1960 and, therefore, has no need to invest for some time to come. Its major rival, perhaps more hesitant to adopt new techniques and more cautious in its estimate of business prospects, postponed its investment program until 1961. The second, less intrepid firm would benefit and the first would be penalized for its enterprise. While it is entirely conjectural how much genuinely additional investment this proposal would foster, it is unfortunately quite evident that a good many businesses would undeservedly benefit from it.

The thread of inequity extends still further and affects the general public. Why should stockholders be uniquely favored? If the President had proposed that a tax credit be offered to each home or car buyer, cries of outrage would echo through the land: Why should automobile buyers or home buyers get tax concessions? What makes them more deserving than those who may have done their duty to the economy by buying a house only the year before? (In view of the actual condition of the automobile and homebuilding industries, a tax credit to customers might have more to recommend it than a subsidy to stockholders.)

Tax policy, it might be answered, always represents a compromise among desirable objectives. Perhaps the price in equity would not be too high to pay, if, as the President argues, the Nation's resources would be more efficiently allocated and investments in modern facilities would be encouraged by the proposed program. But there is little reason to believe that these tax credits can gain these ends. It is hard to avoid skepticism about a concession extended to so many varieties of business.

If the program is really designed to improve our capacity to compete with European rivals, then its benefits should be centered upon the export industries, not on business in general. If its major target is improving the efficiency of conspicuously laggard industries, then benefits should concentrate upon such disorganized areas as the construction business (instead, the President's program specifically excludes construction from its benefits). If the aim is the more ambitious, Galbraithian redirection of investment toward more socially desirable purposes, again tax credits should be confined to a limited number of industries. The program is a peculiarly wasteful method of assisting in the achievement of any major national goal.

In fact, the allocation choice which is implicit in the tax credit notion is highly questionable. The apparent premise is the existence of an investment shortage. But at a time when many major industries are manifestly suffering from excess capacity and oppressively large inventories, it is difficult to see the need for plant extensions. And right now the other outlet for investment, modernization, threatens to add to the unemployment problem. Our real investment shortages aren't in machines and factories, but in education, libraries, scientific research, museums, and the array of activities which combine to improve the quality of human beings. Improvements, in industry as in life generally, derive much more from investment in human than in inanimate capital. Perhaps the President would have been better advised to offer his tax advantages to publishers of good books, makers of scientific instruments, recorders of classical music, and businesses that devote a substantial portion of their outlays to research.

Even so, much might be forgiven if the tax credit proposal at least served to stimulate recovery, end the recession and diminish unemployment to decent proportions. But there is, to begin with, reason to doubt that much investment will take place because of the proposal. The tax credit no doubt would influence a fair number of businessmen who are hesitating on the verge of decision. The vast majority of decisions, however, are made well within the margin of choice; in these cases sales prospects, industry growth and the general business outlook are likely to be much more important than tax incentives.

Nor should it be forgotten that the plan benefits only those who are making profits against which a tax credit can be applied. It may well be that Chrysler badly needs to revamp its facilities in order to compete with its major rivals in the auto industry, but it will gain no stimulus to do so from the tax credit proposals because it has been earning no profits this year. Nor is it an adequate answer to say that profits are a measure of efficiency. This may be true within an industry, but not between industries in a business slump; recession hits some industries much harder than others without regard to relative efficiencies.

As an antirecession measure, tax credits suffer from a second drawback: It takes too long for their effects to be felt. Businesses which increase investment rapidly probably do so in pursuit of well-laid plans and not in response to a new tax advantage. If the tax credit does stimulate new plans or revisions of old ones, then the effect of the investment will be felt only after a time lag of 6, 12, or 18 months. As far as this year's recession is concerned, there is little to be expected even from the most favorable consequences of a tax credit.

Since the President's tax program is apparently the last piece of "anti-recession" legislation that he plans to offer, this is a good time to ask what has happened to the brave hopes of only a few months ago. When Kennedy assumed office in January the country had been in a recession for about 8 months and there were few signs of its early termination. That recession is now nearing its first birthday.

Kennedy had a number of possible ways to combat the slump. He might have used the Eisenhower plan: hope for the best, assume that recovery is around the corner, propose a series of limited actions mostly within the control of the executive branch of the Government, and stall for time. A little more actively, he might have placed his bets on monetary policy, hoping that the tidy, efficacious, and reversible mechanism of central banking pressure on interest rates would stimulate credit. But this choice was partially blocked by balance of payment difficulties. Still more actively, he might have urged a general reduction of personal income taxes, safeguarded by an automatic expiration date; or he might have persuaded the country and the Congress to embark on a substantial program of Federal expenditures, financed out of deficits and designed to promote recovery and encourage desirable public programs. Finally, he might have pursued the route of encouragement to business, on the familiar conservative premise that the benefits would trickle down to the remainder of the population. And, of course, there were many possibilities of combination among these policies.

The Kennedy of the campaign might have been expected to urge substantial public

works programs. These would have served the immediate needs of antirecession policy by increasing payments to individuals and encouraging consumer spending. They also would have helped diminish the scandalous national neglect of our cities and schools.

The Kennedy of the task force reports might have preferred to reduce personal income taxes for several excellent reasons: Public works frequently are slow to accomplish their effects; personal income tax reductions promote free choice by allowing individuals to make their own decisions about the allocation of extra resources; and their spending might have assisted some of the industries which were in the worst trouble, notably autos and appliances. Essentially, cutting taxes is a conservative technique which emphasizes private spending and deemphasizes public spending. Perhaps it was this analysis that persuaded Vice President Nixon and Secretary of Labor James P. Mitchell to urge Eisenhower—without success—to reduce taxes during the 1958 recession.

It is dispiriting but accurate to report that Kennedy actually has done far less than the minimum which his supporters could reasonably expect from a politician elected on the 1960 Democratic platform. Administration pressure has had some small impact on long-term interest rates; aside from this trivial success, the President has grasped none of the major opportunities which confronted him. His belated tax program favors business rather than individual spending and has little relation to the recession. No major expenditure program designed to combat the recession has been offered and none is promised The actual Kennedy program is a series of cautious extensions of older measures, such as unemployment compensation (which was also extended during the 1958 recession) and minimum wages, or final enactment of old proposals such as aid to depressed areas.

To treat the passage of an occasional item first proposed by Americans for Democratic Action in 1947 as a substantial progressive advance is to confuse newsprint for nutriment.

These 3 months have taught us the necessity of reexamining some of the clichés of the political scene. The first concerns the general acceptance of popular Keynesian theory. Many economists have complacently assumed that the general public and Congress have come to accept the principles of compensatory finance—the unbalanced budgets and public spending programs of recession, and the counterbalancing surpluses and debt reductions of prosperity. If this professionally flattering belief were ever true, the 8 Eisenhower years have changed things. Possibly out of nostalgia, the Nation and Congress have embraced such easily comprehended objectives as balanced budgets and stable prices. It has been one of Kennedy's conspicuous failures of leadership that he has encouraged these delusions instead of educating the Nation to appreciate the Keynesian formula for proper government policy during nationwide recessions.

The Nation's complacency about unemployment should dispel another illusion: the pleasant conviction that Congress and the general public will never again put up with substantial unemployment. With 1 out of every 14 workers out of a job and many others working part-time, the unemployment problem is a pressing one. Yet neither Congress nor the President seems greatly alarmed and many Americans appear willing to tolerate a great deal of unemployment as long as it doesn't touch them personally.

It may be that the President is a good deal more conservative than either his rhetoric or his advisers intimate. If this be so, then his hesitancy to intervene, the pro-business emphasis of his tax program and the caution of his social welfare proposals truly represent the economic convictions of a leader with little real wish to alter our national manner of conducting our everyday lives, one who shares the conservative's fear of inflation and fiscal unsoundness.

On the other hand, it may be that President Kennedy is a good deal more worried about unemployment than his actions indicate and a good deal more dissatisfied with the state of the economy than this legislative session promises to demonstrate. Perhaps he is hampered by the conservative mood of both Congress and the country and is biding his time to fight again when the odds are more nearly even. This, in fact, is the usual excuse made for the President.

But the excuse is not good enough. Congress is a collection of small potentates who are usually far more responsive to the special interests which clamor for favors and threaten retaliation at the polls if they are refused, than to the distant claims of the national interest. The President's major political function in our peculiar political system is to mobilize the support that he needs among the ordinary citizenry. This, indeed, is the heart of the matter.

It is very hard to discern in the President's balanced responses to press conference questions any trace of genuine urgency about the state of the economy, nor has he seen fit to lay his case before the Nation in a major address. A President who operates only within the bounds of political practicability will never find it feasible to ask very much of Congress. If Kennedy continues to play the private political game of Washington and neglect the weapon of mass enthusiasm, then there is no hope this year and not much more the year after or the year after that one, that Congress will feel itself called upon to rise from its conservative slumbers and face up to the great economic challenges of our time.

The Growing Challenge to the States

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kansas City Star of April 23, 1961.

Because the editorial speaks quite well for itself, it needs no further introduction:

THE GROWING CHALLENGE TO THE STATES

(Over the Nation, it is the season of State legislatures. Their actions receive mention in news reports of preposterous and humorous hijinks. Kansas is a particularly good example. Its legislature has just gone home. Among the hundreds of newly enacted laws is one requiring every schoolhouse to fly the State flag. Since the word "Kansas" must be displayed across the blue field, all schools must purchase new flags. Some must put up flagpoles. It is doubtful that this crop of flags can flower for less than $100,000. In other sessions Kansas has considered bills to require hog-tight fences along every highway, or to require that every motor car carry a contraption that played "Nearer, My God, to Thee" when the speedometer touched 90. These proposals didn't pass.)

It is obvious, however, that State government has a more important function than providing humor. Acting in every field not preempted by the Federal Government, the State enacts laws that touch every citizen. These may affect the individual from cradle to grave, regulate the form of his birth certificate and determine how he shall be buried. The State's reason for existence is to perform services that it can provide more conveniently than any other agency. The main services include education, highways and health, welfare, correctional and regulatory activities to protect the citizen.

Serious problems are facing State governments. Taxes are skyrocketing. School enrollments are soaring. People continue to move from the country to the city. Along with manifest inequalities in the tax system, bureaus are proliferating and there are rapid changes in the social and economic structure.

Can States meet the challenge of mushrooming schools? Can they find a fair system of taxation? Can they solve the problems of the cities fighting traffic tangles, slum areas and river pollution with inadequate revenues? Do they have the resiliency to face change? Will they eventually go broke?

When the State stumbles, Washington steps in, often so gradually that the invasion is not immediately recognized. This happens because elected national representatives vote for bills they believe the electorate will approve. These bills usually provide services that the State failed to give. Once the Federal Government enters a field, it does not get out.

Should such a trend continue to its ultimate end—it might take many years—the States would be relegated to a minor role. They would be dealing with bounties on coyotes and other less ponderous subjects dear to the hearts of lawmakers.

Most State legislatures have similar weaknesses. In many cases the job of senator or representative is an unwanted one. Political organizations must find candidates and they take about anyone they can persuade to run. As a result, particularly in the Middle West, legislatures are largely made up of retired farmers and practicing lawyers. Many otherwise eligible candidates cannot afford to spend the time on the salaries offered.

These two groups give legislatures a built-in conservatism that seldom follows party lines. They are highly resistant to change. There are occasions when this is advantageous in stopping impractical or extravagant projects with a demagogic appeal. But the same attitude blocks progress and invites the intrusion of the Federal Government.

The typical State lawmaker is dedicated to preserving the status quo. Pressure groups through years have obtained tax exemptions and advantages not enjoyed by other citizens. Lobbyists continue to encourage the no-change attitude to protect their favored situations.

Legislatures, as a rule, lag behind the people. Samples of sentiment show that citizens are ready to make major changes long before the notion registers on their representatives. Kansas samplings have shown substantial majority support for reapportioning the senate. Another poll showed that a bare majority of the people, without even an education campaign, would support a short ballot. Legislators would consider neither.

There has been a steady movement from the farm to the city throughout the Nation. As the population moved, the dwindling farm areas have maintained the same representation. No increase was given the cities. As a result, in most States at least one house is dominated by farm members.

Thus in many States hundreds of thousands of citizens are denied representation in the legislature because of its refusal to reapportion. Consider Kansas. Its four most populous counties have 810,000 persons, or 40 percent of the State's population. These four counties have 4 State senators

out of 40. Each senator on a fair apportionment should represent 52,000 persons. The four counties are entitled to 16 senators, not 4. The effect is to deprive 600,000 Kansas citizens of representation in the senate. In contrast, for example, the Mitchell-Jewell County district has 19,000 persons and 1 Senator.

Some of the finest legislators come from farm areas. But one overall effect of rural domination is slanted tax-sharing formulas to favor rural districts. There is a tendency to measure each bill by how much it puts into Podunk County, rather than its fairness to the whole State. A majority of the persons in Midwestern legislatures are completely unaware of city problems. Living in areas of declining population, many of them have no conception of the fantastic growth of the schools in urban centers.

Under all these handicaps it seems almost a miracle when a State enacts progressive legislation to meet a real need. The fact that it often does so is renewed evidence of the strength of the democratic processes. The progressive actions usually can be credited to strong legislative leadership or a strong Governor.

A few of the States' pressing problems may be cited. Heading the list is education, a State responsibility. The swelling tide of students is a well-known fact. If legislatures prove unable to work out a system of State taxes to meet the soaring costs of teachers and buildings each year, the alternative is greatly increased real estate taxes to a confiscatory level. This explains the growing tendency among school board members to believe that the only solution is Federal aid.

Federal funds are playing a growing role in education. They provide student scholarships and loans, research grants and vocational education. They build student housing. In certain military areas Government funds are supporting the schools. The current drive for direct Federal aid for teachers and school buildings is sparked by the failure of the States to meet these needs in time.

Legislators usually are reluctant to equalize tax assessments. It is a way to anger many constituents. The citizens who have been enjoying extremely low taxes at the expense of someone else certainly will protest. The provincial attitude that would let the local communities run their own affairs —which means preserve the inequalities— must eventually give way to strong State control.

Years ago States began to build highway systems because the local communities could not, or did not have the resources. The need was for uniform all-weather highways that crossed county lines. Gradually the National Government became a partner with funds and supervision. More recently, the country has witnessed the rapid construction of an interstate system of national highways for modern, safe traffic.

Without the Federal program, many of the highways would not have been built to this day. Prior to the interstate system, various areas began the construction of turnpikes under private enterprise. This came to a halt as freeways developed.

Both systems developed after State legislatures had failed to move rapidly enough to meet the public needs. It is doubtful that many persons would change either system today. Yet States still have a responsibility for vast mileage in State and county roads.

The question of survivals of the cities poses a real problem for all States. Almost restricted to the real estate tax for streets, police, fire protection, and other service, cities have watched that tax mount. Annexations, a help in some States, have proved exceeedingly difficult under antiquated laws in others. Traffic congestion, requiring expensive trafficways, clearance of blighted areas for urban renewal, and sewage treatment have compounded the problem. Here, again, the Federal Government is stepping in because no other recourse has been found.

Another field demanding State action is mental health and social welfare. Kansas has offered a notable example of what can be done if a State is willing to pay the cost. Under modern treatment methods 80 to 90 percent of the patients who go to mental institutions may now be sent home improved or well in 6 months. Treatment costs more than custodial care. Kansas citizens believe it is worth the cost.

Can the States continue to meet the challenge of providing needed services in time? They have given no great assurance. But with all the legislative imperfections, they will continue to muddle through in many fields for years. They would, however, have a better chance to fill their time-honored role of government close to the people if certain guidelines were followed.

The quality of representation can be improved. If the voters want to keep government closer to home than Washington they should be careful in choosing their legislators. The post of State senator or State representative should be one of honor and prestige, one to be sought and competed for. The pay should be sufficient to attract the best.

According to a phony logic, inspired by lobbyists, low pay guarantees the highest type of representation. But in fact, low pay simply excludes most people other than the well-to-do, the retired, or lawyers acquiring a professional acquaintance.

Legislatures need to reapportion to restore confidence that they do represent the people. A test case, brought by the citizens of Memphis, Tenn., is challenging the failure of the Tennessee Legislature to reapportion. The action alleges that citizens are deprived of their rights under the 14th amendment. It is now before the U.S. Supreme Court. Indiana recently has declared a legislature void. The Kansas Senate is being sued in a State court for violating the State constitution.

States must bring uniformity into tax assessments. They need uniform school systems instead of the familiar patchwork of rich and poor districts. They must be alert to help the distressed cities. Unfair tax exemptions, tax inequalities, and double taxation should be eliminated.

Most Americans aren't too much concerned over the question of whether the services come from Washington or the State capital. But it would be unfortunate should the States abdicate their major roles. There are advantages of direct access to the legislative processes, of government close to the people. Any voter can tell his State representative what he thinks.

But unless the States do a far better job than they have been doing, the drift toward more and more aid from the Federal Government will continue. Ultimately, the States will be relegated to a minor regulatory role. The States need not degenerate into custodians of trivia.

Teach and See the World

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. GROSS. Mr. Speaker, from the publication, Cornell College Alumnus, Mount Vernon, Iowa, comes an article which sets forth the formula by which teachers can see the world and be paid by a benevolent Uncle Sam. Here's how:

TEACH AND TRAVEL

"How to travel and get paid"; "Free travel and free housing for teachers"; "See the World and Teach." You, too, can have these opportunities for the price of a 4-cent stamp. This is the greatest opportunity for teachers that has ever come along.

Since World War II, the U.S. Navy, Army and Air Force have established bases around the world in Japan, Okinawa, Philippines, Turkey, Morocco, Spain, Germany, France, England, Newfoundland and countless other countries.

In establishing our military men and materials overseas our U.S. Government believes in making the service man contented on his overseas assignment, whether it be for 12 months, 18 months or 2 years; therefore, families of our fighting men are also transported overseas to be with father in his new home away from home, and, where there are American families, there must be schools, and in order to have schools, there must be American teachers.

STATESIDE TEACHING ENVIRONMENT

The teaching assignment is the same as the position you left; American children in an American school with American teachers; the only difference is that everything has been transplanted to a foreign country. Most overseas teachers feel that the students in this environment are more resourceful and mature than the average stateside student due to their travel, firsthand opportunities in studying a foreign language and living with peoples of another nation.

TRAVEL OPPORTUNITIES

I had been teaching in consolidated schools in Iowa for many years. When the telegram from Washington, D.C. came, it read: "Teaching position open to you Island of Okinawa; wire within next 48 hours if you desire to accept." That was 10 years ago.

Since then, I have crossed the Pacific 7 times, the Atlantic 3 times and traveled through Hawaii, Japan, Thailand, Burma, with a 2-week trip on a Philippine freighter to Zamboanga and the pirate's island of Jolo, a 9-day trip to Indonesia spending 5 days on the fabulous island of Bali, to the Taj Mahal, and a week living in a houseboat with three servants in the beautiful Vale of Kashmir, to Pakistan, Baghdad, Istanbul—to Rome, Paris, and Berlin. This has all been on a teacher's salary of $4,000 a year—and you, too, can do it.

FREE TRANSPORTATION

Don't quibble about the salary; you probably are making considerably more at home, but what are you doing with it—saving a little each month so that some day you can take that one big trip to Europe?

Then why not take a cut in salary, travel to Europe or the Orient at Government expense. From the day you leave your hometown for your new teaching assignment, you are not only traveling free but being paid your food and lodging expenses for each day it takes you to reach your new oversea home (approximately 1 week to Europe and 2 weeks to the Orient).

LIVING ENVIRONMENT

When you reach your new assignment, living quarters are furnished rent free with no light bills nor water bills to worry about. Of course, it isn't that cute apartment you had back home. This will be just a private room in a modern bachelor's billet.

Most teachers hire a maid for $15 to $20 a month who keeps your room and bath spotless, washes and irons daily, makes your bed, polishes your shoes, straightens your dresser drawers, and spoils you in general. Of course you must be prepared for the uncertainties

of catching her using your brush, comb, and lipstick and even sometimes your toothbrush. She might even go through your mail but that's only so that she can "improve my English."

Most oversea bases have established an American community within the country, so that the beauty shop, shoe repair, radio and television repair, laundry and cleaners are on the base along with the commissary for grocery shopping and the post exchange.

The majority of teachers in the Far East find themselves during the Thanksgiving, Christmas, and Easter vacations traveling to Hong Kong, Formosa, Singapore, and Bangkok.

TAKE THE PLUNGE NOW

So now, why don't you take that plunge—leave your relatives and friends for a year (they'll still be there when you return). This is the opportunity of a lifetime—get excited about it. However, if you don't please keep paying your taxes so that I can keep wandering around the world—at Government expense.

The American Cotton Bale Package and Our Foreign Markets

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. WHITENER. Mr. Speaker, on May 3, 1961, I made a statement to the House of Representatives on my findings during a recent visit to the Far East. At that time I pointed out that the faulty packaging of our American cotton being delivered to textile manufacturers in Japan and Hong Kong was a matter which should be looked into at once.

While in Japan I asked Hon. Edward W. Doherty, Counselor of the American Embassy for Economic Affairs in Tokyo, to give me some specific statistical data bearing upon this question. In a letter dated May 10, 1961, Mr. Doherty has provided this information, together with a copy of Bulletin AMS–386 of the U.S. Department of Agriculture entitled "The American Cotton Bale Package and Our Foreign Markets."

I believe that Mr. Doherty's letter is of sufficient interest to justify my bringing it to the attention of my colleagues and to all others who read the CONGRESSIONAL RECORD. Furthermore, I believe that many would find the USDA Bulletin above referred to worthy of their study.

I insert Mr. Doherty's letter as a part of the Appendix of today's CONGRESSIONAL RECORD.

AMERICAN EMBASSY,
Tokyo, May 10, 1961.

Hon. BASIL L. WHITENER,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. WHITENER: I very much enjoyed meeting with you and Mr. Moore during your recent visit to Tokyo and hope you found your trip to be a worthwhile one.

I have looked into the cotton packaging question which you inquired about and have learned that it is one which has come up frequently before. Japanese cotton mill men often complain that the packaging of American cotton is very poor, worse than the packaging from almost any other country, and their complaints are visually confirmed when bales of American cotton in their warehouses are compared with bales from other sources. Specifically, the mill men complain that the bale heads often become uncovered and contaminated, and in addition there is much loss from sample holes.

During the 1957–58 cotton year, damage claims attributable to surface conditions of cotton bales were paid on 68 percent of all the U.S. cotton shipped to Japan. The average claim per bale was 68 cents. Damage resulted mostly from exposed bale heads and sample holes which were found to be three-fifths greater in American bales than in bales from competing countries.

A majority of the mills have reported that they have to do at least some surface cleaning of American cotton bales. The estimated cost of this cleaning on a worldwide basis, including loss in the value of cotton was 30 cents per bale for bales actually cleaned and 22 cents for all American bales used.

Although Japanese mill men have frequently expressed complaints about the condition of American cotton bales, they still do not want any improvements in packaging that would increase the price of cotton. If improving the bale would increase the price, the Japanese would rather continue receiving the bales as they are now.

A detailed study of this subject on a worldwide basis was made by the Department of Agriculture and the results were published by the Department in report No. AMS–386 dated June 1960, a copy of which is enclosed.

Trusting that the above information will be of assistance to you and with every good wish, I am,

Sincerely,

EDWARD W. DOHERTY,
Counselor of Embassy for Economic Affairs.

The Un-American Activities Committee Has a Problem

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. SCHERER. Mr. Speaker, one of the dedicated Americans of our day is Mr. Maurice Ries, of Los Angeles, Calif. He recently took of his valuable time, when in the East, to make an eyewitness survey of the housekeeping facilities of the Committee on Un-American Activities. His findings were as follows:

THE UN-AMERICAN ACTIVITIES COMMITTEE HAS A PROBLEM

(By Maurice Ries)

You have seen the Committee on Un-American Activities of the U.S. House of Representatives, or pictures of it, conducting its hearings, wrestling with its enemies * * * with your enemies, that is. But what goes on behind the scenes? What of the committee at work, of its offices, its equipment, its staff?

Naturally, you understand that the committee is an arm of the U.S. Congress. You know the Congress is a majestic body and that its committee is cloaked with the dignity of the Government of which Congress and committee are parts. You are aware that the committee is the stanchest (and almost the last remaining) rampart in this Nation's languid efforts to hold off the we-will-bury-you onslaught of world communism.

You may even know that the committee's offices are on the second floor of the sprawling, gray-granite Old House Office Building, across the street from the Nation's Capitol. But what about quarters? Under what kind of physical conditions must it operate, as it carries on the invaluable routine that occupies so much more committee time than hearings and other outwardly visible activities?

To put it bluntly, the conditions aren't good. The House Committee on Un-American Activities lives like Cinderella before the invention of glass slippers.

The staff numbers upward of 50 men and women (several of whom have worked for the committee, continuously, for more than 16 years). It is packed into 10 rooms—2 of them, however, not even connected with each other, or with the rest. One is on another floor.

Ten rooms. Only two are of standard size for the building. For the most part, the remaining eight have been created by subdividing.

Half filling the director's office, because of a lack of space elsewhere, is a massive table topped with green felt. Here meet the nine Members of the House of Representatives who comprise the actual committee.

Five of the committee's little squad of investigators have their desks and certain file cabinets and a table or so packed into a room where two desks should be. Several additional investigators are having to do their chores elsewhere, jammed in among other staff members. Incidentally, the House Committee on Un-American Activities gets along with only about eight investigators in all. In the Senate, that McClellan-Jack Kennedy-Bobby Kennedy committee which probed labor's misdeeds employed more than 80 investigators—10 times as many.

The eight investigators, together with file clerks, typists, secretaries, two attorneys, a librarian, researchers, editors, proofreaders, indexers, a switchboard operator, an information officer, publications shippers, a fiscal officer, a staff director, an administrative assistant—these carry on the committee's day-by-day staff operations in Washington.

The room in many ways the most important is, unfortunately, the worst. This is the long, narrow crypt presided over by the committee's librarian, a pleasant lady long a part of the staff. Once upon a time this was simply the end of a main corridor. Someone walled it off, to create a sort of tunnel to nowhere. It is a room of many purposes. Here the librarian and her assistant have their desks, chairs, tables. Here are banks of card file cabinets—and this is the very heart of the committee's operations. In those cabinets are the names and records of several million Americans with subversive affiliations. The committee has been building up these files for 23 years. Today they form a fantastically comprehensive source consulted by all security agencies in the Government. As a result, the files ultimately affect just about every sensitive job in the Nation—in defense plants, in the military, in intelligence work, in Federal employment, and in a dozen additional areas.

By repeated Presidential order, these and other committee files (for example, the scores and scores of file drawers filled with pamphlets, organizational letterheads, clippings, photographs, copies of speeches, magazine articles, and countless other types of source material) must be checked by Federal investigative agencies, including the military, before an investigation can be considered to

be complete. Probably the most important user of this material is the FBI.

As a matter of fact, certain of the agencies keep researchers in this office of the Committee on Un-American Activities on a full-time basis.

But the accommodations which the Committee on Un-American Activities is able to provide for visiting investigators are downright heart rending. At one end of the clutter are various battered old tables, covered with brown wrapping paper, accompanied by a clutch of orphaned chairs. On the tables are gooseneck lights guaranteed to keep Methusaleh's name alive. Unfortunate security men from proud and properly equipped agencies must toil at those tables in semigloom, elbows bumping elbows and chairs bumping chairs.

Add sets of shelves, books, stools, wastebaskets, telephones, photocopy machines—one of them as bulky as an upright piano—and you realize that here is a room bulging at the seams. Then crowd in a number of busy people, and—but why go on?

Que será, será. If the committee cannot obtain more space for its work, it must work in the space it has. The work is the thing. For it is work which vitally affects every American alive, and uncountable numbers yet unborn.

The Committee on Un-American Activities has to perform its large miracles on short rations. A larger appropriation would help.

Take a look at the punctuation mark terminating this sentence. Then look at the entire page. The committee's $331,000 budget for 1961 is about the size of that dot, when compared with the horrifying sums of your money (and mine) that the U.S. Government is pouring into Communist Tito's pocket alone. Think what this committee, against communism and for America, could do with a budget the size of even three little dots instead of one.

Anyone for the House of Representatives giving its Committee on Un-American Activities a modest million a year?

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Preservation of American Freedoms

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Friday, May 19, 1961

Mr. CARROLL. Mr. President, I am very happy to bring to the attention of my colleagues three essays written by school children in Pueblo, Colo. They were the winning essays in a recent contest on the subject, "What Can I Do To Preserve and Perpetuate American Freedoms." The essay contest was part of a celebration of Arleigh Burke Day in Pueblo, commemorating the visit made last year by Adm. Arleigh Burke, the Chief of Naval Operations, to Pueblo County School District No. 70 when he dedicated seven new schools. Admiral Burke is a native Coloradan.

These students demonstrated a keen sense of the problems confronting American citizens in today's difficult times. Mell Smithour, a sixth grader, noted aptly that freedom is not all free, and we must work hard for peace. Evelyn Ruth Klock, a ninth grade student, pointed, out an important rule of a free society: "Every right or privilege carries a duty with it." And Marie Albrecht, a high school senior, recognized a very timely problem in remaining free by saying, "Perhaps, the most important thing we can do is to help other people who are trying to gain or keep their freedom."

I ask unanimous consent that the essays by these three students be printed in the Appendix of the RECORD.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

WHAT I CAN DO TO HELP PRESERVE AND PERPETUATE THE AMERICAN FREEDOMS

(By Mell Smithour, Pueblo)

Each schoolchild will be a citizen of the world someday. Our way of government as a democracy is meant to be the servant of the people, not the ruler. Some of the boys and girls in our school will be leaders in government in the future. We must study well the settling and history of our country. Each of us has a great chance today to learn to study and then to think for ourselves.

Rights of citizenship are balanced by responsibilities. To keep our freedom we must vote, serve on juries, and serve in the Armed Forces. I must learn to obey the laws of our land while I am young. The Boy Scouts, 4-H groups, and little league baseball teach us teamwork and to get along with each other.

Our country was founded for freedom of religion. America is strong because of her faith. Our church teaches me the way of eternal life and the Golden Rule.

One thing I can do to preserve and perpetuate our freedom is to remember that freedom is not all free. We must work hard for peace and understanding and fight for our way of life. Right now I can study our Declaration of Independence and the Constitution of the United States. I can be well informed about world affairs by reading the newspaper.

In my Scout citizenship book Patrick Henry says: "Eternal vigilance is the price of liberty."

HOW I CAN HELP PRESERVE AND PERPETUATE THE AMERICAN FREEDOMS

(By Evelyn Ruth Klock, Rye)

It is my duty to protect and perpetuate the freedoms that have been given so freely to me to use. These are freedoms that float over a free nation where the will of the citizens is the law of the land. Here, the poorest boy may rise to the highest position in the Nation, and here no law will interfere with his religion.

Every right or privilege carries a duty with it. I can say that I have a right to walk along the street without harm. This is true, but have I ever thought that if it is my duty to walk in peace, it is my duty not to interfere with another? If the public library offers me books to read, it is my duty not to tear or deface them. On the other side of every right or privilege is a duty.

Boys and girls do not always understand this fact, which is the foundation of all society. We expect our parents, city, and State to give us everything that we desire and never think that we owe something in return. One who always takes and never gives, does not make a good citizen.

If the Nation protects me, it is my duty to conduct myself properly. Every time I do something wrong, I am being ungrateful to the Nation of which I am a part. If I am to be worthy of this freedom I must be a good citizen and a good citizen is not one who sits still and does nothing. Someone said that people could be divided into those who lift and those who lean. By lifting instead of leaning I can show my love for freedom and all it stands for.

I may say that one person in a hundred and fifty million does not matter. This statement is untrue. The fact that our country is a democracy makes the actions of each individual important. If every boy and girl grew up thinking "I do not matter among so many," what kind of nation would we have?

When I am grown and can have a voice in the Nation's affairs, I hope I will be worthy of being called a good citizen. In the United States there is no higher honor.

WHAT I CAN DO TO HELP PRESERVE AND PERPETUATE OUR AMERICAN FREEDOMS

(By Marie Albrecht, Rye, Colo.)

Everyone has heard and read a great deal about keeping America strong and preserving our freedoms, but they seem to think it is all meant for the other fellow.

Young people think it is meant for older people because they elect our officers and pay the taxes to support the Government. The older people think it is meant for the younger generation because they will soon take over the responsibility for running the Government.

There are many ways I can help preserve our freedoms. One is to use them, but not to abuse them. We can worship in any church and believe in any faith, but let's not persecute those of a different faith. It might not be as good as ours, but they have the right to believe in it. Another way is to take an active interest in our Government. It belongs to the people and it is one of their freedoms to improve it by lawful and peaceful means. Instead of complaining about some Government official and doing nothing more, we can use our freedom of speech and press to campaign for another candidate and then vote for him. Our freedom to vote is one of the most precious possessions we have, and the only way to keep it is to use it wisely.

Learning and understanding the history of the gaining of our freedoms is an important part of it. This helps us to realize the cost of freedom.

Perhaps, the most important thing we can do is to help other people who are trying to gain or keep their freedom. If need be we should even be prepared to go to war. Patrick Henry sums it all up in these words:

"Is life so dear or peace so sweet, as to be purchased at the price of chains and slavery? As for me, give me liberty or give me death."

Why Is Government So Costly?

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. PELLY. Mr. Speaker, a short while ago Life Lines carried an editorial dealing with the subject of Government spending. It seems to me it deserves wider readership and, therefore, under leave to extend my remarks, I include it with the hope that it will be widely read:

WHY IS GOVERNMENT SO COSTLY?

During the present fiscal year our Federal Government is spending money at a rate that is equivalent to approximately $2,000 for every family in America.

Government is not productive. It has nowhere to get money except from the people. Since this money is ours, or was ours, until we had to turn it over to the tax collector, we have a right to ask, "Why does Government cost so much?"

Is it because of the heavy expenditures for national defense? That is the impression the spenders of our money like to give us. But it is not true that defense spending is responsible for the growth of the public debt in recent years. In fact, current expenditures for defense amount to $9 per family less than they did in 1954. But nondefense spending is $300 more per family than it was then.

Our Government has become so costly because it has grown so big. We are supposed to have a Federal budget, but the budget actually has expanded to such an extent that it is literally out of the control of the elected Representatives of the people. Every year a budget is put together by thousands of Government employees in hundreds of different agencies.

It is literally true that nearly every Federal agency has a group of employees who

spend all their time drawing up the agency's next annual budget.

Our Federal Government has entered many fields of activity where it has no constitutional right to be and is spending a vast amount of money for purposes never contemplated nor approved by the American people generally. For instance, our Federal Government is not only the largest lender and the largest borrower in the country, but the Federal Government is also the largest insurer. The Government is the largest producer of electric power in the Nation. The Federal Government is the largest landlord and the largest holder of grazing grass. It is the largest holder of timberland and the largest owner of grain. The Federal Government is the largest shipowner and the largest truck operator.

Of course, our Federal Government is the country's biggest employer. To keep all its employees busy, our Government owns several hundred substantial corporations and 19,000 small businesses of all kinds, plus a large number of service organizations. These corporations lose money every year at a rate amounting to $250 for every family in America.

But they do not go out of business simply because they are losing money, as any private company eventually would have to do. They simply chalk up a deficit and keep right on operating with borrowed money which becomes a part of the debt that you owe, and every American owes.

The principle of economy in Government is one of the most important that we could consider. This great Nation of ours was built on the solid virtues of hard work, thrift, and frugality. These virtues are just as important today as they were in the early days of our Nation.

But they are virtues that have largely been abandoned. Our Government has been spending the taxpayers' money recklessly and extravagantly for too long. As a result, we now have the highest debt in our history.

Who is to blame? Shall we point a finger at a President or a Congress, or shall we be honest and put the responsibility where it really belongs, on each one of us, on our own apathy, on our own selfishness in not wanting to take time out from our own pursuit of material things to really be responsible citizens of the greatest system of freedom in the history of man?

The hard truth is that such practices as these, if a halt is not called, eventually will destroy the economy of the United States. And we can be quite sure that once our economy is destroyed, our whole way of life will go right down. The mistaken will have won their greatest victory, and without a shot being fired.

It is for these reasons that the principle of economy in Government should be of the greatest concern to every American citizen. Simple honesty and basic morality call for sound economy in Government; for waste is a sin and extravagance with the people's money is evil.

Uncle Sam was never meant to be Uncle Squanderer. To save our country, we are going to have to get back to bedrock principles and to those sound virtues of thrift and frugality from which we should never have departed.

A Dying Foreign Policy

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. COHELAN. Mr. Speaker, the need for a reevaluation in our thinking regarding the nations on the periphery of Asia is painfully evident.

As Walter Lippmann has so astutely pointed out in a recent Washington Post article:

The revolutions in South Korea and Iran, following the disorders in Laos and South Vietnam, are a warning that in Asia the policy of containment by American satellite states is breaking down.

Mr. Lippmann goes on to examine some of the major implications of this breakdown for our thinking as a nation, and I urge my colleagues to read his comments thoughtfully:

A DYING POLICY

The revolution in Iran and the revolution in South Korea are warning signs about the situation on the periphery of Asia. They are warnings that it is not only in Laos that there is trouble for the American client states.

In Iran, the revolution is a desperate attempt at the top, with the blessing of the Shah, to reform the regime before it is overthrown from below. The present revolution is not anti-Western, anti-American, or pro-Communist. But it may well be all of these things in the end if the reforms which it has begun do not go deep enough. The hour is late in Iran.

In South Korea, the revolution is the work of the army, and it is not now anti-Western, anti-American, or pro-Communist. But this new military government, although it is not anti-American in theory, is in fact defying and ignoring our Embassy and the American Army commander.

The revolutions in South Korea and Iran, following the disorders in Laos and South Vietnam, are a warning that in Asia the policy of containment by American satellite states is breaking down. In all four of these countries the governments have been our clients; indeed, they have been our creations. All of them are crumbling, and in the last analysis they are all crumbling for the same reason. In relation to the rising popular feeling of independence and the rising popular expectations of material welfare, these American client states are not only corrupt but they are intolerably reactionary. The fact that they are also under the protection of a foreign and non-Asian power is an additional liability.

The Kennedy administration did not form the policy of setting up on the periphery of Asia a semicircle of American military clients. But it is now confronted with the breakdown of that policy, with the disorders, the dangers, and the pains of having to pick up the pieces. This is an experience which the American people have never had before and it is one for which their leaders have not prepared them. They have not been told by anyone in authority that there has been a radical change in the military situation and what the consequences of that change are. They have not been told that the military situation which existed when John Foster Dulles established this policy no longer exists. They have not been told that he made it work by shaking the bomb at the Communists. That is why so many of them suppose that Mr. Kennedy can make it work with a few Marines and by shaking his fist.

Our moral and intellectual unpreparedness for the reality of things is causing widespread demoralization among us. We must not let ourselves be overcome by it. We can do that best, I think, by recognizing that our present experience on the periphery of Asia is the American equivalent of what the British and the French are experiencing during the liquidation of their colonial empires. For what we are witnessing is the dissolution of the Dulles system of Asian protectorates.

There are diehards in France who would like to overthrow General de Gaulle in order, as they think, to keep Algeria French. There are diehards in Britain who are passionately opposed to Mr. Macmillan because he is liquidating the colonial empire. And there are diehards here who are prepared to call Mr. Kennedy an appeaser or worse because he is trying to negotiate his way, rather than to fight his way, out of the Indo-Chinese disorders. But whatever the diehards now call de Gaulle and Macmillan and Kennedy, the future will be theirs.

John S. Mayfield, Distinguished Texan, Son of Former Senator Earle B. Mayfield, Named To Syracuse University Library Post

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, May 19, 1961

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Sunday, May 7, 1961, issue of the Tyler Courier-Times-Telegraph which tells of a fine achievement of the distinguished son of a distinguished Texan.

John S. Mayfield, son of former U.S. Senator Earle B. Mayfield, of Texas, who preceded me in the Rusk line of succession, has recently been appointed Curator of Manuscripts and Rare Books for the Syracuse University Library.

Mr. Mayfield, who holds a B.A. degree from the University of Texas, an M.A. from Southern Methodist University, and has studied constitutional law at Columbia University, is an outstanding collector of rare books. He is a man of great ability, outstanding accomplishments and a source of pride to the State of Texas. John Mayfield and I were classmates in government courses at the University of Texas in 1923–24; I wish him success in his new and very responsible position.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, the aforementioned article from the Tyler Courier-Times-Telegraph headed:

"J. S. Mayfield Appointed Syracuse Library Curator."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Tyler Courier-Times-Telegraph, Sunday, May 7, 1961]

J. S. MAYFIELD APPOINTED SYRACUSE LIBRARY CURATOR

SYRACUSE, N.Y.—One of the Nation's most renowned private book collectors, John S. Mayfield, of Bethesda, Md., and Tyler, has been appointed Curator of Manuscripts and Rare Books for the Syracuse University Library.

Dr. Wayne S. Yenawine, Director of the Syracuse University Library, announced the appointment Saturday. Dr. Yenawine said that Mayfield will assist the library in acquiring valuable collections and in publishing activities.

Mayfield is the son of former U.S. Senator and Mrs. Earle B. Mayfield, of Tyler. He earned his B.A. degree at the University of Texas and his M.A. at Southern Meth-

odist University. He also studied government and constitutional law at Columbia University.

A former member of the staff of the Columbia Encyclopedia, Mayfield has served as a headmaster for a military academy and junior college, has organized many special exhibits of manuscripts and rare books across the country, has authored numerous literary criticisms, bibliographies, reviews, and essays, and has advised a number of libraries.

For the past 10 years, Mayfield has been on the staff of the Montgomery County (Md.) Department of Public Libraries. Prior to that time, he served in a number of positions with the U.S. Government.

In World War II, Mayfield served in the U.S. Navy in the South Pacific, and after the war he rose to the position of Director of Civilian Personnel in the Office of the Secretary of Defense.

He is vice president of the American Rail & Steel Co., and is a former adviser to the president of the Baldwin Locomotive Works.

Mayfield has gained nationwide distinction for his personal library of 48,000 books and manuscripts, valued at more than a million dollars. His library will be transported to Syracuse, and will be available to scholars and all students.

His collections of works by Swinburne, O. Henry, Sidney Lanier and Lord Byron are considered by scholars to be the most distinguished in the world.

Dr. Cecil Y. Lang, professor of English at Syracuse University and editor of the Swinburne letters being published by the Yale University Press, says that the Swinburne collection is "incomparably the most valuable and most extensive in scope anywhere in the world today."

The library contains first editions, rare editions, limited editions, privately printed works, autographed works, manuscripts, letters and documents, original oil paintings and books with unusual and rare bindings.

Mayfield has been collecting books for 40 years. The volumes range in date from 1200 to the present, with special emphasis on English and American literature of the 19th century.

Highlights of the collection, in addition to the above named authors, are works by George Bernard Shaw, Fred C. Kelly, Robert Browning, Jack London, Walt Whitman, Alexandre Dumas, Vachel Lindsay, Edwin Markham, Arnold Bennett, Alfred Noyes, Stephen Crane, Benjamin Disraeli, F. Scott Fitzgerald, Charles Dickens, Robert Frost and many others.

Mayfield is a trustee of the S.U. Library Associates and a member of the Manuscript Society, Authors Club (Washington, D.C.), Palaver Club (Washington), Army & Navy Club (Washington) and the Military Order of the World Wars.

Depressed Areas

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Friday, May 19, 1961

Mr. GOLDWATER. Mr. President, recently we passed a so-called depressed areas bill. I should like to remind my colleagues that depressed areas are not new. Out in the West numerous ghost towns attest to this fact.

Just recently the Tucson Daily Citizen editorialized on the historic fact that we have had depressed areas in the West. The paper has done it in a very clever and thought-provoking way. For example, the editorial reads:

Consider, for example, such towns in Arizona as Contention, Russellville, Charleston, and Galeyville. These once-thriving communities were centers of employment and recreation for miners and millhands, gamblers, outlaws, and bartenders.

But the mines closed. Nobody thought of moving a lace factory out from Boston and training the miners to work in it. So the miners left. So did the bartenders and barbers. The towns died.

I ask unanimous consent that the editorial be placed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Tucson Daily Citizen, May 8, 1961]

PLEASE, MR. PRESIDENT, DON'T OVERLOOK ARIZONA

President JOHN F. KENNEDY,
New Frontier, Washington, D.C.

DEAR MR. PRESIDENT: Now that you have signed the $394 million depressed areas bill, making it the law of the land, we would like to call your attention to some badly depressed areas you may have overlooked.

There are a lot of them. Some of them are so badly depressed they are defunct. Out here on the old frontier, we used to call them ghost towns. We liked that poetic term, but to expedite communication on the New Frontier, we'll call them depressed areas. They certainly qualify.

Consider, for example, such towns in Arizona as Contention, Russellville, Charleston, and Galeyville. These once-thriving communities were centers of employment and recreation for miners and mill hands, gamblers, outlaws, and bartenders.

But the mines closed. Nobody thought of moving a lace factory out from Boston and training the miners to work in it. So the miners left. So did the bartenders and barbers. The towns died.

This tragedy could have been prevented, Mr. President, had your depressed areas act been operating. As we understand it, you have set up a Federal loan and grant program to attract industries to areas which have lost their main source of support and to retrain workers with obsolete skills.

It probably isn't fair to ask you to revive Contention, Charleston, and Galeyville. You have less than $400 million to work with, and that's too little and too late. These defunct areas are a long way from any major market for lace. And, besides, no voters live there anymore.

But we do call your attention to Tombstone. This is no ghost town, but it is one of the most famous depressed areas in all America. Once the biggest and busiest city in Arizona, Tombstone lost its main source of support when its silver mines flooded. Jobs disappeared by the thousands. The 1,200 people presently living in Tombstone deserve a lot of consideration because their area has been depressed ever since 1860. We doubt if any area in West Virginia or Pennsylvania can match that.

There are, Mr. President, some 18,000 communities in this Nation engaged in a highly competitive battle to attract industries. They have been doing this with their own money. As we understand it, the depressed areas program will use Federal money, largely collected in successful areas, to pay for increased competition from unsuccessful areas.

Some diehards out here on the old frontier don't think that's fair. They don't even think it will work. Even in Tombstone, some folks refuse to believe a cold cash subsidy in the offing will freeze economic history in the making.

We think they'll quit carping just as soon as you move a nice, big factory to Tombstone from, say, Chicago. You might get a few complaints from Chicagoans because their city, with its unemployment rate of 6 percent, also qualifies as a depressed area. But Tombstone certainly deserves priority. It has been depressed even since Wyatt Earp hung up his six-guns for the last time.

And then, Mr. President, we suggest that Jerome be next on the priority list. This Arizona copper-mining community was thriving until 1925, when the whole town started skidding slowly down the mountain at three-eighths of an inch per month. The mines have closed, but a couple of hundred people still live there. We don't know what they do for a living, but they have a nice museum.

We would like to put Allentown—formerly a cattle-shipping community—on the list, but are afraid the New Frontiersmen could not find it. The realistic citizens of Allentown, not offered a subsidy, went along with economic history and deserted the place. And the Navajos carted all the buildings away to their reservation.

Respectfully yours,
AN OLD FRONTIERSMAN.

Expansion of Teaching Services to All Handicapped Children

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. FOGARTY. Mr. Speaker, I have today introduced legislation calling for the extension of the grant program for expansion of teaching services for mentally retarded children to include the hard of hearing and the speech impaired, the visually handicapped, the deaf, the emotionally disturbed or socially maladjusted, the crippled, and those children with other health impairments. My proposal will also remove the present statutory limitation of $1 million per year for the program for the mentally retarded children.

The Members of the House will recall that I introduced the bill authorizing the creation of a fellowship program to prepare professional personnel in the education of the mentally retarded. My bill was enacted on September 6, 1958, and it contained two major provisions relating to the training of professional personnel: First, it provided the necessary authorization for the U.S. Commissioner of Education to make grants to public and other nonprofit institutions of higher learning to assist them in providing training of college instructors who would, in turn, train classroom teachers and second, it provided authorization for the Commissioner of Education to make grants to State educational agencies for the support of fellowship programs for training classroom teachers and supervisors in the area of the mentally retarded.

This program has now been in operation for 2 full years and has already demonstrated several important facts.

There was immediate favorable acceptance of this program. It stimulated nationwide interest among educators and laymen alike. Recently, my committee held lengthy hearings regarding the problems of educating exceptional children. There was a great deal of expert testimony given by leaders in both the field of medicine and the field of education. Based upon this information, the committee prepared a report which unmistakably indicated the urgent necessity for both expansion and extension of this program. I might also add that, due to my strong personal interest in the problems in this area, I have spent a great deal of time analyzing and observing the present fellowship program for educational services for the mentally retarded. From my own firsthand information I can report complete acceptance of the purposes and results of this very worthwhile undertaking.

I would like to call the Members' attention to a few pertinent facts which are related to this program. During the present school year, there are 148 fellows enrolled in 32 colleges and universities. Sixty of these fellows are in training to become college instructors, who will in turn train classroom teachers. The other 88 are training to be classroom teachers or supervisors. The statutory limitation of $1 million is the only factor which has prevented larger numbers of students from entering this program.

There are estimated to be some one and a quarter million mentally retarded school-age children in the Nation and only about 312,000 of them are receiving suitable education because of the lack of qualified teachers. An additional 50,000 specially trained teachers are needed to do a satisfactory job of educating these unfortunates. Because of this great need, and also because of the amount of interest being shown, the legislation which I have just introduced proposes the removal of the amount limitation of $1 million and will, therefore, permit appropriations to be more nearly commensurate with the need.

My personal observations and my mail both tell me that not only should our assistance for education of the mentally retarded be greatly expanded, but there are equally compelling reasons to extend the provisions of the existing legislation to include all areas of exceptionality. My legislation will authorize extension of this program to include fellowship grants in the areas of speech and hearing impairment, the completely deaf, the visually handicapped, the emotionally disturbed or socially maladjusted, and the crippled, and other special health problems. The fields of medicine and education are now able to do much to help many of the 4 million children suffering from these handicaps. Without Federal aid in all of these important areas, the application of medical and educational skills to the education of many of these children will be delayed for years because of a lack of a sufficient number of properly trained teachers. The education of these children cannot wait. With each passing year the benefits of a postponed education will certainly become less and less effective. The resulting toll in human suffering and economic loss will far exceed the costs of the program which I am proposing.

The Commissioner of Education has reported that with an average annual expenditure of slightly more than $9,500,000 for the training of professional educators in all areas of exceptionality we can expect to have approximately 3,500 additional well-trained leadership and instructional personnel by the end of 1966–67 academic year. This will still leave us far short of the total need, but it will have provided a large corps of college instructors and will also have permitted time for expansion of university facilities in such quantity and extent that a stepped-up training program will be possible in subsequent years. I know of no other area in education where the shortage of well-qualified classroom teachers is so appalling. There is an immediate need for almost 150,000 additional professionally trained teachers and supervisors to adequately meet the need. I hope my colleagues on both sides of the aisle will join me in their support of this legislation.

Rest in Peaceful Coexistence

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, May 19, 1961

Mr. WILEY. Mr. President, throughout history there has never been a propaganda program to match the Communist machine—a phenomenon in trickery and deceit.

By comparison U.S. professionals of the so-called Madison Avenue type appear to be amateurs.

On a global scale the Reds have turned truth into falsehood, fact into fiction, right into wrong. They commit crimes and yet successfully accuse Western nations of the same crimes. They commit aggresssion and tag the Western nations as aggressors. The greatest imperialists of modern times they successfully brand the Western nations as imperialists.

To the world the Red leaders pose as missionaries of peace. With one hand, they hold aloft the dove of peace; meanwhile with the other blood-dripping hand, they inhumanely wield the sword of slaughter. And, this time, the right hand knows what the left hand is doing and vice versa.

Despite the fact that the United States has been the prime target of this propaganda, we have not yet determined how successfully to cope with it.

We were initially stunned—and have not yet recovered—by the brazenness with which they distort the truth and make it stick.

Now the world vocabulary contains a glossary of words with double meaning—meaning one thing to the West and quite another to the Communists.

Until we better understand the tactics and strategy of the Reds—and how to cope with it—we will in all probability continue to lose the psychological war.

Yesterday, the Washington Daily News published an article concerning the double meanings of Red propaganda.

Reflecting some light on their tricky tactics, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REST IN PEACEFUL COEXISTENCE

(By Robert Molyneux)

What does Nikita Khrushchev, the friendly undertaker ("we will bury you") really mean by peaceful coexistence?

This is what he means. And it's official: Peaceful coexistence of states with different social systems does not mean reconciliation between the socialist and bourgeois ideologies. On the contrary, it implies an intensification of the struggle of the working class and of all Communist parties for the triumph of socialist ideas.

Relax, in short, while the Reds continue the fight.

There it is, straight from the manifesto issued after the Moscow conference of world Communist leaders last December.

HOT DOCUMENT

Because it established current guidelines for Communist global troublemaking, it perhaps is the hottest document of its type since Khrushchev's supposedly secret speech denouncing Stalin.

It is heavy going, but it is perhaps the best example of newspeak and doublethink since George Orwell's book, "1984" (full of such big brother mottoes as "freedom is slavery"). The lingo is pure newspeak, and only when you get the hang of it does the manifesto make sense.

Since it is shaping up into something of a bestseller an abbreviated glossary is in order.

Belligerent: Anyone who defends his homeland and his way of life against communism.

Creative Marxism-Leninism: Any act calculated to bring about the downfall of any or all of the free world.

Criminal plot: Any act of the free world calculated to stymie communism.

Culture: whatever the Reds say it is; subject to change.

Democracy: totalitarianism.

Equality: commies are more equal than others.

Exploit: anything the United States does to help others.

Heroic: any gimmick the Reds can dream up to give the free world a bad time. Korea, Laos, Vietnam.

Imperialism: anything the free world does.

Liberation: Communist enslavement, domination.

Masses: the voiceless millions in Communist lands in whose name the Reds elite acts.

National independence: Communist satellite status.

Peace: anything at all short of total thermonuclear war, Korea, Laos, Vietnam.

Progressive: Communist.

Provocation: Self-defense against communism.

Reaction, forces of: anti-Communists of all stripes.

Renegades: disillusioned defected Communists.

Revisionist: a Communist who doesn't buy the sino-Soviet line.

Stooges: anybody on our side.

War: Thermonuclear holocaust only. Not Korea, Laos, Vietnam.

Yoke of capitalism: on our side.

It would be all too easy to ridicule newspeak, to kid about Red true-is-false, false-is-true patois, but these sample definitions are in dead earnest.

Organization for Economic Cooperation and Development—Key Letters in Europe

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, May 19, 1961

Mr. HUMPHREY. Mr. President, a recent article written by Wilbur Elston, of the editorial staff of the Minneapolis Star, points out the deep concern of the Kennedy administration for genuine economic cooperation between the free nations of the Atlantic community.

The Senate, on March 16, approved ratification of the treaty creating the Organization for Economic Cooperation and Development. The OECD provides a structure for improved economic cooperation in building a prosperous free world economy and speeding economic progress in underdeveloped countries.

As Mr. Elston points out so clearly:

It has become clear to all concerned that economic cooperation is going to be just as necessary in the future as military cooperation has been in the past.

Mr. President, I ask unanimous consent that Mr. Elston's fine article, published in the Minneapolis Star of April 26, be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Minneapolis Star, Apr. 26, 1961]

OECD: KEY LETTERS IN EUROPE—THEY STAND FOR IMPROVED ECONOMIC COOPERATION

(By Wilbur Elston)

PARIS.—Fourteen years ago, when I first visited Europe after World War II, England and France were still struggling for economic survival.

Rationing was still in effect in both countries for many essential items. There were food shortages. The lights had not yet gone on again in Paris because of an electric power shortage. Even the famous Parisian night clubs were so cold that patrons wore their overcoats.

In both countries, however, there were high hopes that the Marshall Plan which then was just being authorized by the American Government would help restore their economic well-being.

In fact, I recall the late Secretary of State George Marshall, who conceived the Marshall Plan, being cheered to the echo by the Pilgrim Society, a hands-across-the-sea society to promote friendship between England and America, when he spoke at its meeting in London.

Present and paying tribute to the American Secretary of State on that occasion were the late Ernest Bevan, then the British Foreign Secretary, and Georges Bidault, the French Foreign Minister, who with Marshall then were trying to iron out an Austrian peace treaty with the Soviet Union at a conference in London.

Now, 14 years later, both England and France are enjoying the full fruits of prosperity. Unemployment is negligible. The British reported only 340,300 unemployed as of April 10, which amounted to 1.5 percent, the lowest April rate since 1956. And the French, currently with almost full employment, have a labor shortage, especially of skilled workmen.

Both the British and the French today still give full credit to the Marshall plan for bringing Europe back to economic health. But they are still looking to America for economic help to preserve their present prosperity.

What they want from the United States today is not money but economic cooperation. And under the Kennedy administration they seem to be getting it in full measure.

Thus there is pleasure in France at the unusual importance that President Kennedy and his principal economic adviser, Walter H. Heller, paid to the meeting of the Economic Policy Committee that will transfer its activities from the old organization for European economic cooperation—a Marshall plan agency—to the new Organization for Economic Cooperation and Development.

The OEEC was set up largely to iron out problems that occurred in the distribution of Marshall plan funds which were aimed to bring prosperity back to Europe. The OECD is being set up to improve economic cooperation and planning among the free nations of the Atlantic Community in order to preserve their prosperity and expand it beyond their frontiers to the less developed nations of the world.

In Britain, the new American emphasis on economic cooperation among the free nations accounted for a sharp shift in attitude toward the Common Market. After Prime Minister Macmillan's recent visit to President Kennedy, British officials who had been explaining why Britain could not work out any arrangements with the Inner Six suddenly began to find explanations for Britain's new interest in joining or at least cooperating with the Common Market.

What the British and the French are learning is that the Kennedy administration is serious about its new interest in economic cooperation. From now on, they are being told, the United States wants to operate its economy in concert with its friends and allies so that there will be a minimum of damage to any nation when economic policies have to be revised.

From the American point of view, there also are selfish advantages in the kind of economic cooperation envisaged in OECD. For if the new organization's purposes are achieved, it should be possible to avoid repetition of such threats to stability as the gold crisis that frightened many Americans last year. Some economists say that this crisis never would have gotten started if OECD had been organized and in operation at that time.

It has become clear to all concerned that economic cooperation is going to be just as necessary in the future as military cooperation has been in the past. And the foe that was just becoming visible over the horizon in Europe in 1947—the Soviet Union and its Communist satellites—still is ready and waiting to take advantage of any trouble among the Atlantic partners.

Congress Should Recognize Commander Shepard's Achievement

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, May 19, 1961

Mr. MUNDT. Mr. President, in a recent issue of the Evening Star, Ralph McGill has written a very effective tribute to Cmdr. Alan Shepard as a consequence of his being the first American ever to ride a rocket into space.

I ask that this tribute be printed in the Appendix of the RECORD. I sincerely hope that before this session of Congress is concluded we shall have acted favorably on the legislation introduced by Senators BRIDGES and COTTON, of New Hampshire, and me calling for the awarding of a special Congressional Medal to Commander Shepard.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

BRAVE JOURNEY INTO UNKNOWN—COMMANDER SHEPARD'S ROCKET FLIGHT CALLED INSTANCE OF MAN AT HIS NOBLEST

There is a line in Carl Sandburg's poem concerning "The Family of Man" which says, "There is only one man in the world and his name is all men." And this is philosophically true.

But, for a few minutes after the historic blastoff of the Redstone rocket at Cape Canaveral there was, in so far as 180 million Americans were aware, but one man in the world and his name was Alan B. Shepard.

He left the world and returned to it. And that portion of it to which he came back was better because of him. He had not remade it. He had solved none of its pressing international problems. But he had transformed its spirit.

For a time he had been where the winds blow between the planets. When he had returned, it seemed, somehow, as if the rushing speed of these winds had blown away a miasma of failure, disappointment, frustration and doubt. His swift flight out of this world and his reentry into it lifted up hearts and minds.

For a time on that day, the blood ran faster in all of us. For minutes in that hour there were no small or unworthy thoughts. There is nothing more noble than man at his best, and for a while that morning, all that yearns within us to be useful and worthy of life was riding with the calm and prepared young man in the marvelously complex capsule machine which some men had conceived in their minds and others had wrought with tools.

"God has made man a little lower than the angels," the Psalmist sang, and when Commander Shepard left the earth and returned to it again, we understood better the meaning of the sentence, and something within us gave answer.

Let us salute, therefore, man at his best. He often is. But, rarely do we see him so magnificently presented with sky and space as a backdrop and all the hearts of his countrymen as his stage.

And let us salute, too, the Russian, Yuri Gagarin. Let us forget for the moment his politics and the cause he serves. Let us greet him, too, as a man who played well that role. Alan Shepard and he as individ-

uals make us proud and enable us to understand there are many wonderful things in the scheme of God's creation, but the most wonderful of all is man.

Commander Shepard controlled his space craft. He, himself, used his brain and his training to explore the critical retarding rockets. He, too, had time to note that earth of land and sea and sun is beautiful. He is also reported from space to earthlings far below that all was well, and the myriad of dials, valves, wires, pumps, compressors, batteries, and the dozens of recording devices were functioning together in the manner of a vast mechanical symphony.

Alan Shepard was a prepared man, inwardly as well as outwardly. He knew what to do with each of the many controls before him. But this alone was not enough. Outside him was space. For a time he was free of earth's mysterious pull. He was weightless. God alone knew what was outside. The invisible forces which physicists and mathematicians chart were pounding at his capsule. Friction was beating its outer skin to a burning temperature.

Down on earth men and women were praying for him. It is a tremendous thing to leave the known things of earth and enter into unknown space, but there was no panic in him and no doubt.

And so it was that man and the mechanism made by man jointly left the earth and jointly returned to it for doctors and scientists to examine and learn what they can for future and greater ventures into space.

And so it is that America is renewed. There was a national therapy in this for a people whose pride has been hurt by repeated Soviet successes.

There is a kind of healing in what Alan Shepard has done. We can hold up our heads again. He cured the fevers of frustration. He lifted up our hearts.

At such moments we can comprehend that man is an earthly man but worthy of heaven.

Keeping Usury Out of Aid

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Friday, May 19, 1961

Mr. BOGGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Keeping Usury Out of Aid" which appeared in the Christian Science Monitor, May 12, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, May 12, 1961]

KEEPING USURY OUT OF AID

That tenacious preserver of the American Congress financial good sense, Senator JOHN WILLIAMS of Delaware, has moved to amend the new Latin American aid act in a way that dramatically emphasizes its economic reform purposes.

The Williams' amendment consists of a simple stipulation that American aid funds cannot be reloaned at any interest rate exceeding 8 percent. The Senator said he had been informed of cases in which local Latin American authorities were charging buyers of dwelling space built with low-interest U.S. loans as much as 18-percent interest.

Since much of the projected alliance for progress is expected to deal with loan capital, for workers to buy houses, and for small farmers to buy seed, tools, and fertilizer, it is imperative that the low-interest feature of U.S. loan aid be passed along to the people of countries being aided.

Senator WILLIAMS' example deserves emulation by both lawmakers and administrators throughout the course of the Latin American loan program.

Interview With John T. McCarty, General Electric Co.

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, May 19, 1961

Mr. KEFAUVER. Mr. President, in the mail addressed to me as chairman of the Senate Antitrust and Monopoly Subcommittee, I have received a newspaper account which relates to an interview given to a reporter on the Jackson Daily News, Jackson, Miss., on May 6, 1961, by a high official in the General Electric Co.

In this interview, Mr. John T. McCarty, identified as manager of employee and plant community relations in the important defense electronics division of General Electric, expresses some policy views which are rather surprising to me, and which I think, Mr. President, that you and other Members of the Senate, as well as the public in general, will find of interest. According to the newspaper account, Mr. McCarty was in Jackson, Miss., to address the Mississippi Manufacturers Association.

I ask that the pertinent part of the account of this interview by this representative of General Electric be printed in the Appendix of the RECORD.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

KEFAUVER HEARINGS CALLED NONSENSE

(By Pat Flynn)

A General Electric official in an interview here yesterday called the Kefauver price-fixing hearings sheer nonsense.

The only reason for the hearings, said John T. McCarty, manager of employee and plant community relations for the company, was "'a very ambitious little man (KEFAUVER) who almost got to be Vice President on the strength of another investigation and is just trying to see what he can do for next time."

McCarty, here to address the Mississippi Manufacturers Association annual management conference, added that he had been back and forth to Washington so many times lately he "was beginning to feel like a ping-pong ball."

Throwing a "crack" at the Kennedy administration, McCarty said the easiest way to get from his native Syracuse, where General Electric's main plant is located, to Washington is to "go to Harvard and turn left."

GOLDEN OPPORTUNITY

McCarty said southern industrialists "have a golden opportunity that is all but slipping out of their fingers—the same opportunity that the North lost 30 years ago—operating their plants without unions."

He said management had to realize that loyalty could not be bought with company picnics, bowling teams, and Christmas parties.

"In fact," he said, "people go to Christmas parties, get all tanked up and set company relations back 15 years."

By using a film slide strip, he showed the procedure used by General Electric for combating union influence over its employees.

"Collective bargaining is the most insidious, spineless game played by adults," he said. "It's nothing but management and a bunch of union bums both getting a lawyer and sitting around a table to see how much they can get away with at the expense of the public.

"You can solve your own problems," he said, "if you do it now before a bunch of thugs force it on you."

Speaking on supervisor training he said the foreman had the complicated job in the history of American labor, because he had to be "doctor, minister, den mother, and football coach."

Although strikes are losing thousands of manpower hours, he added, the largest time-killer is the "zombie time" spent by those "inspiring people hanging around the water cooler."

"This is what the good foreman can combat without losing proper labor-management relations," he said.

Armed Services Housing (Capehart) Mortgages

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, May 19, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter and a statement relating to Capehart housing.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

MEMORANDUM TO MEMBERS OF THE SENATE AND HOUSE BANKING AND CURRENCY COMMITTEES AND ARMED SERVICES COMMITTEES; ALSO TO VARIOUS OFFICIALS OF THE ADMINISTRATION

Hon. HOMER CAPEHART,
Banking and Currency Committee,
U.S. Senate, Washington, D.C.:

We are addressing this memorandum to you because, either as a Member of the Congress or as an official of the administration, we believe you have an interest in the merits and demerits of armed services housing (Capehart) mortgages.

The Scripps-Howard newspapers, through news articles signed by Jack Steele and through their editorial columns, have been conducting a campaign strongly slanted against Capehart mortgages. No reference has been made in these articles to all of the good features of Capehart mortgages and we, therefore, felt that it was worthwhile to send the enclosed letter to the editor of the New York World Telegram & Sun which is the New York member of the Scripps-Howard chain.

In a few cases, of which the Hal Hayes case is the best, and possibly the only example, the Capehart program has been poorly administered but the good that has been accomplished by the program far outweighs the bad. We have attempted in the en-

closed letter to point out the good features of the Capehart program and to emphasize that any wasteful results have been due to poor administration of the act and not to any of the provisions of the act itself.

We sincerely hope that this memorandum and the enclosed letter will be helpful to you in arriving at a decision to support a modest additional program of Capehart housing.

J. MAXWELL PRINGLE.

J. MAXWELL PRINGLE & CO., INC.,
New York, N.Y., May 11, 1961.

The EDITOR,
New York World Telegram & Sun,
New York, N.Y.

DEAR SIR: I have read your editorial of May 9 and Mr. Jack Steele's news report of May 10, both with reference to armed services family housing mortgages (more familiarly known as Capehart mortgages). I find myself in strong disagreement with almost all of the opinions expressed by your newspaper editorially and by Mr. Steele individually. I also have read many of Mr. Steel's earlier articles and consider that all, or most of them, were strongly slanted to give only the case against the Capehart program and none of the arguments in its favor.

There are, I'm sure you will admit, two sides to every question and I would like to present, in this letter, what seems to me to be the favorable aspects of the Capehart program which far overbalance the Hayes fiasco. My qualifications for doing this are that I am chairman of the board of J. Maxwell Pringle & Co., Inc., which does a nationwide brokerage business in the secondary market for all types of Government insured and guaranteed mortgages. We have been particularly active, since the early part of 1956, in arranging construction and/or permanent financing for Capehart mortgages and have been identified with business of this kind aggregating over $700 million.

In the Hayes case, where this builder walked off the job a year ago on five projects having Capehart mortgages aggregating some $55 million, the mistakes, I believe, were made by the FHA and the Department of Defense and were not in any sense, it seems to me, due to defects in the Capehart law. First of all, I don't believe that the FHA and the Department of Defense should have let one builder undertake such a large volume of projects at one time. Secondly, when he did walk off the job last spring, immediate steps should have been taken by the Department of Defense and the FHA to complete the projects, one of which was some 90 percent completed at the time of default. The damage which has resulted in 1 year of leaving these properties to stand idle instead of completing them has been entirely the fault of the Government and not of the Capehart law itself.

Another thing that should be kept in mind is that competitive bidding by builders for these Capehart projects has often been very close and I, personally, known of some cases where the builders have completed the projects and realized substantial losses. If such properties had been built by appropriated funds, the loss would have been charged to the Government and not to the builder.

The Capehart program has, in my opinion, been successful in accomplishing the following exceedingly worthwhile results—

A. Capehart mortgages, because when completed they are guaranteed as to principal and interest by the U.S. Government, have, to a large extent, been purchased by public pension funds which are generally limited by law or by policy to the safest kind of investment. By offering slightly larger yields than can be obtained from U.S. Government bonds, the Capehart loans have enabled such public pension funds to increase somewhat their net yield on their portfolios and thus the benefits paid to State and municipal employees.

B. Mr. Steele makes the point that the military wants family housing built at bases where there is no real need for such housing. I don't say this is never true but I think such cases are the exception rather than the rule and I think that if housing was built with appropriated funds, the military would still recommend a few locations where such housing is not badly needed. However, in the great majority of cases decent family housing at inaccessible bases is badly needed because only in this way can the Army, Air Force, or Navy secure from its personnel a higher percentage of reenlistment. Many more trained men, whose training has cost the Department of Defense a great deal more than the price of a house, will not reenlist if they can't have their families with them in decent living quarters.

You, of course, have my permission to quote this letter provided you quote the entire letter and not just abstracts from it.

Very truly yours,

J. MAXWELL PRINGLE.

Address of Newton N. Minow, Chairman, Federal Communications Commission

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, May 19, 1961

Mr. MAGNUSON. Mr. President, during the hearings on the nomination of Newton D. Minow to be Chairman of the Federal Communications Commission, great emphasis was made with regard to television programing, the responsibility of a broadcaster to operate in the public interest, and the role of the FCC in discharging its duty in issuing and renewing broadcast licenses.

At that time, Mr. Minow outlined generally his views with regard to this entire subject matter.

On Tuesday, May 9, 1961, in his first speech since assuming office, a little less than 3 months ago, Mr. Minow, in an address to the 39th annual convention of the National Association of Broadcasters, meeting in Washington, D.C., set forth his views on this overall subject in broad detail.

He outlined certain guidelines he proposed to pursue in discharging his duties as Chairman of the Federal Communications Commission.

In view of the significance of his policies and the wide interest in this matter, I ask unanimous consent that his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY NEWTON N. MINOW, CHAIRMAN, FEDERAL COMMUNICATIONS COMMISSION, TO THE 39TH ANNUAL CONVENTION OF THE NATIONAL ASSOCIATION OF BROADCASTERS, WASHINGTON, D.C., MAY 9, 1961

Governor Collins, distinguished guests, ladies and gentlemen, thank you for this opportunity to meet with you today. This is my first public address since I took over my new job. When the New Frontiersmen rode into town, I locked myself in my office to do my homework and get my feet wet. But apparently I haven't managed to stay out of hot water. I seem to have detected a certain nervous apprehension about what I might say or do when I emerged from that locked office for this, my maiden station break.

First, let me begin by dispelling a rumor. I was not picked for this job because I regard myself as the fastest draw on the New Frontier.

Second, let me start a rumor. Like you, I have carefully read President Kennedy's messages about the regulatory agencies, conflict of interest, and the dangers of ex parte contacts. And, of course, we at the Federal Communications Commission will do our part. Indeed, I may even suggest that we change the name of the FCC to "the Seven Untouchables."

It may also come as a surprise to some of you, but I want you to know that you have my admiration and respect. Yours is a most honorable profession. Anyone who is in the broadcasting business has a tough row to hoe. You earn your bread by using public property. When you work in broadcasting you volunteer for public service, public pressure, and public regulation. You must compete with other attractions and other investments, and the only way you can do it is to prove to us every 3 years that you should have been in business in the first place. I can think of easier ways to make a living, but I cannot think of more satisfying ways.

I admire your courage—but that doesn't mean I would make life any easier for you. Your license lets you use the public's airwaves as trustees for 180 million Americans. The public is your beneficiary. If you want to stay on as trustees, you must deliver a decent return to the public—not only to your stockholders. So, as a representative of the public, your health and your product are among my chief concerns.

As to your health: Let's talk only of television today. 1960 gross broadcast revenues of the television industry were over $1,268 million; profit before taxes was $243.9 million, an average return on revenue of 19.2 percent. Compared with 1959, gross broadcast revenues were $1,163,900,000, and profit before taxes was $222.3 million, an average return on revenue of 19.1 percent. So, the percentage increase of total revenues from 1959 to 1960 was 9 percent, and the percentage increase of profit was 9.7 percent. This, despite a recession. For your investors, the price has indeed been right.

I have confidence in your health.

But not in your product.

It is with this and much more in mind that I come before you today.

One editorialist in the trade press wrote that "the FCC of the New Frontier is going to be one of the toughest FCC's in the history of broadcast regulation." If he meant that we intend to enforce the law in the public interest, let me make it perfectly clear that he is right—we do. If he meant that we intend to muzzle or censor broadcasting, he is dead wrong.

It would not surprise me if some of you had expected me to come here today and say in effect, "Clean up your own house or the Government will do it for you." Well, in a limited sense, you would be right—I've just said it.

But I want to say to you earnestly that it is not in that spirit that I come before you today, nor is it in that spirit that I intend to serve the FCC. I am in Washintgon to help broadcasting, not to harm it; to strengthen it, not weaken it; to reward it, not punish it; to encourage it, not threaten it; to stimulate it, not censor it. Above all, I am here to uphold and protect the public interest.

What do we mean by the public interest? Some say the public interest is merely what interests the public. I disagree.

So does your distinguished president, Governor Collins. In a recent speech he said, "Broadcasting to serve the public interest, must have a soul and a conscience, a burning desire to excel, as well as to sell; the urge to build the character, citizenship and intellectual stature of people, as well as to expand the gross national product. By no means do I imply that broadcasters disregard the public interest, but a much better job can be done, and should be done." I could not agree more.

And I would add that in today's world, with chaos in Laos and the Congo aflame, with Communist tyranny on our Caribbean doorstep and relentless pressure on our Atlantic alliance, with social and economic problems at home of the gravest nature, yes, and with technological knowledge that makes it possible, as our President has said, not only to destroy our world but to destroy poverty around the world—in a time of peril and opportunity, the old complacent, unbalanced fare of action, adventure, and situation comedies is simply not good enough.

Your industry possesses the most powerful voice in America. It has an inescapable duty to make that voice ring with intelligence and with leadership. In a few years, this exciting industry has grown from a novelty to an instrument of overwhelming impact on the American people. It should be making ready for the kind of leadership that newspapers and magazines assumed years ago, to make our people aware of their world.

Ours has been called the jet age, the atomic age, the space age. It is also, I submit, the television age. And just as history will decide whether the leaders of today's world employed the atom to destroy the world or rebuild it for mankind's benefit, so will history decide whether today's broadcasters employed their powerful voice to enrich the people or debase them.

If I seem today to address myself chiefly to the problems of television, I don't want any of you radio broadcasters to think we've gone to sleep at your switch—we haven't. We still listen. But in recent years most of the controversies and crosscurrents in broadcast programing have swirled around television. And so my subject today is the television industry and the public interest.

Like everybody, I wear more than one hat. I am the Chairman of the FCC. I am also a television viewer and the husband and father of other television viewers. I have seen a great many television programs that seemed to me eminently worthwhile, and, I am not talking about the much bemoaned good old days of "Playhouse 90" and "Studio One."

I am talking about this past season. Some were wonderfully entertaining, such as "The Fabulous Fifties," the "Fred Astaire Show," and the "Bing Crosby Special," some were dramatic and moving, such as "Conrad's Victory" and "Twilight Zone"; some were marvelously informative, such as "The Nation's Future," CBS Reports," and "The Valiant Years." I could list many more programs that I am sure everyone here felt enriched his own life and that of his family. When television is good, nothing, not the theater, not the magazines or newspapers, nothing is better.

But when television is bad, nothing is worse. I invite you to sit down in front of your television set when your station goes on the air and stay there without a book, magazine, newspaper, profit-and-loss sheet or rating book to distract you, and keep your eyes glued to that set until the station signs off. I can assure you that you will observe a vast wasteland.

You will see a procession of game shows, violence, audience participation shows, formula comedies about totally unbelievable families, blood and thunder, mayhem, violence, sadism, murder, western badmen, western good men, private eyes, gangsters, more violence, and cartoons. And, endlessly, commercials, many screaming, cajoling, and offending. And most of all, boredom. True, you will see a few things you will enjoy. But they will be very, very few. And if you think I exaggerate, try it. Is there one person in this room who claims that broadcasting can't do better?

Well, a glance at next season's proposed programing can give us little heart. Of 73½ hours of prime evening time, the networks have tentatively scheduled 59 hours to categories of "action-adventure," situation comedy, variety, quiz, and movies. Is there one network president in this room who claims he can't do better? Well, is there at least one network president who believes that the other networks can't do better?

Gentlemen, your trust accounting with your beneficiaries is overdue. Never have so few owed so much to so many.

Why is so much of television so bad? I have heard many answers: Demands of your advertisers; competition for ever higher ratings; the need always to attract a mass audience; the high cost of television programs; the insatiable appetite for programing material—these are some of them. Unquestionably, these are tough problems not susceptible to easy answers. But I am not convinced that you have tried hard enough to solve them.

I do not accept the idea that the present overall programing is aimed accurately at the public taste. The ratings tell us only that some people have their television sets turned on and of that number, so many are tuned to one channel and so many to another. They don't tell us what the public might watch if they were offered half a dozen additional choices. A rating, at best, is an indication of how many people saw what you gave them.

Unfortunately, it does not reveal the depth of the penetration, or the intensity of reaction, and it never reveals what the acceptance would have been if what you gave them had been better, if all the forces of art and creativity and daring and imagination had been unleashed. I believe in the people's good sense and good taste, and I am not convinced that the people's taste is as low as some of you assume.

My concern with the rating services is not with their accuracy. Perhaps they are accurate. I really don't know. What, then, is wrong with the ratings? It's not been their accuracy, it's been their use.

Certainly, I hope you will agree that ratings should have little influence where children are concerned. The best estimates indicate that during the hours of 5 to 6 p.m. 60 percent of your audience is composed of children under 12. And most young children today, believe it or not, spend as much time watching television as they do in the schoolroom. I repeat—let that sink in—most young children today spend as much time watching television as they do in the schoolroom. It used to be said that there were three great influences on a child: home, school, and church. Today, there is a fourth great influence, and you ladies and gentlemen control it.

If parents, teachers, and ministers conducted their responsibilities by following the ratings, children would have a steady diet of ice cream, school holidays, and no Sunday School. What about your responsibilities? Is there no room on television to teach, to inform, to uplift, to stretch, to enlarge the capacities of our children? Is there no room for programs deepening their understanding of children in other lands? Is there no room for a children's news show explaining something about the world to them at their level of understanding? Is there no room for reading the great literature of the past, teaching them the great traditions of freedom? There are some fine children's shows, but they are drowned out in the massive doses of cartoons, violence, and more violence. Must these be your trademarks? Search your consciences and see if you cannot offer more to your young beneficiaries whose future you guide so many hours each and every day.

What about adult programing and ratings? You know, newspaper publishers take popularity ratings too. The answers are pretty clear: it is almost always the comics, followed by the advice to the lovelorn columns. But, ladies and gentlemen, the news is still on the front page of all newspapers, the editorials are not replaced by more comics, the newspapers have not become one long collection of advice to the lovelorn. Yet newspapers do not need a license from the government to be in business—they do not use public property. But in television—where your responsibilities as public trustees are so plain, the moment that the ratings indicate that westerns are popular there are new imitations of westerns on the air faster than the old coaxial cable could take us from Hollywood to New York. Broadcasting cannot continue to live by the numbers. Ratings ought to be the slave of the broadcaster, not his master. And you and I both know that the rating services themselves would agree.

Let me make clear that what I am talking about is balance. I believe that the public interest is made up of many interests. There are many people in this great country and you must serve all of us. You will get no argument from me if you say that, given a choice between a western and a symphony, more people will watch the western. I like westerns and private eyes too, but a steady diet for the whole country is obviously not in the public interest. We all know that people would more often prefer to be entertained than stimulated or informed. But your obligations are not satisfied if you look only to popularity as a test of what to broadcast. You are not only in show business; you are free to communicate ideas as well as relaxation. You must provide a wider range of choices, more diversity, more alternatives. It is not enough to cater to the Nation's whims, you must also serve the Nation's needs.

And I would add this—that if some of you persist in a relentless search for the highest rating and the lowest common denominator, you may very well lose your audience. Because, to paraphrase a great American who was recently my law partner, the people are wise, wiser than some of the broadcasters, and politicians, think.

As you may have gathered, I would like to see television improved. But how is this to be brought about? By voluntary action by the broadcasters themselves? By direct government intervention? Or how?

Let me address myself now to my role not as a viewer but as Chairman of the FCC. I could not if I would, chart for you this afternoon in detail all of the actions I contemplate. Instead, I want to make clear some of the fundamental principles which guide me.

First. The people own the air. They own it as much in prime evening time as they do at 6 o'clock Sunday morning. For every hour that the people give you, you owe them something. I intend to see that your debt is paid with service.

Second. I think it would be foolish and wasteful for us to continue any wornout wrangle over the problems of payola, rigged quiz shows, and other mistakes of the past. There are laws on the books which we will enforce. But there is no chip on my shoulder. We live together in perilous, uncertain times; we face together staggering problems; and we must not waste much time now by rehashing the cliches of past controversy. To quarrel over the past is to lose the future.

Third. I believe in the free enterprise system. I want to see broadcasting improved

and I want you to do the job. I am proud to champion your cause. It is not rare for American businessmen to serve a public trust. Yours is a special trust because it is imposed by law.

Fourth. I will do all I can to help educational television. There are still not enough educational stations, and major centers of the country still lack usable educational channels. If there were a limited number of printing presses in this country, you may be sure that a fair proportion of them would be put to educational use. Educational television has an enormous contribution to make to the future, and I intend to give it a hand along the way. If there is not a nationwide educational television system in this country, it will not be the fault of the FCC.

Fifth. I am unalterably opposed to governmental censorship. There will be no suppression of programing which does not meet with bureaucratic tastes. Censorship strikes at the taproot of our free society.

Sixth. I did not come to Washington to idly observe the squandering of the public's airwaves. The squandering of our airwaves is no less important than the lavish waste of any precious natural resource. I intend to take the job of Chairman of the FCC very seriously. I believe in the gravity of my own particular sector of the New Frontier. There will be times perhaps when you will consider that I take myself or my job too seriously. Frankly, I don't care if you do. For I am convinced that either one takes this job seriously, or one can be seriously taken.

Now, how will these principles be applied? Clearly, at the heart of the FCC's authority lies its power to license, to renew or fail to renew, or to revoke a license. As you know, when your license comes up for renewal, your performance is compared with your promises. I understand that many people feel that in the past licenses were often renewed pro forma. I say to you now: Renewal will not be pro forma in the future. There is nothing permanent or sacred about a broadcast license.

But simply matching promises and performance is not enough. I intend to do more. I intend to find out whether the people care. I intend to find out whether the community which each broadcaster serves believes he has been serving the public interest. When a renewal is set down for hearing, I intend, wherever possible, to hold a well-advertised public hearing, right in the community you have promised to serve. I want the people who own the air and the homes that television enters to tell you and the FCC what's been going on. I want the people, if they are truly interested in the service you give them, to make notes, document cases, tell us the facts. For those few of you who really believe that the public interest is merely what interests the public—I hope that these hearings will arouse no little interest.

The FCC has a fine reserve of monitors, almost 180 million Americans gathered around 56 million sets. If you want those monitors to be your friends at court, it's up to you.

Some of you may say, "Yes, but I still do not know where the line is between a grant of a renewal and the hearings you just spoke of." My answer is: Why should you want to know how close you can come to the edge of the cliff? What the Commission asks of you is to make a conscientious, good faith effort to serve the public interest. Every one of you serves a community in which the people would benefit by educational, religious, instructive, or other public service programing. Every one of you serves an area which has local needs, as to local elections, controversial issues, local news, local talent. Make a serious, genuine effort to put on that programing. When you do, you will not be playing brinkmanship with the public interest.

What I've been saying applies to broadcast stations. Now a station break for the networks:

You know your importance in this great industry. Today, more than one-half of all hours of television station programing comes from the networks; in prime time, this rises to more than three-fourths of the available hours.

You know that the FCC has been studying network operations for some time. I intend to press this to a speedy conclusion with useful results. I can tell you right now, however, that I am deeply concerned with concentration of power in the hands of the networks. As a result, too many local stations have foregone any efforts at local programing, with little use of live talent and local service. Too many local stations operate with one hand on the network switch and the other on a projector loaded with old movies. We want the individual stations to be free to meet their legal responsibilities to serve their communities.

I join Governor Collins in his views so well expressed to the advertisers who use the public air. I urge the networks to join him and undertake a very special mission on behalf of this industry: you can tell your advertisers, "This is the high quality we are going to serve, take it or other people will. If you think you can find a better place to move automobiles, cigarettes, and soap, go ahead and try."

Tell your sponsors to be less concerned with costs per thousand and more concerned with understanding per millions. And remind your stockholders that an investment in broadcasting is buying a share in public responsibility.

The networks can start this industry on the road to freedom from the dictatorship of numbers.

But there is more to the problem than network influences on stations or advertiser influences on networks. I know the problems networks face in trying to clear some of their best programs, the informational programs that exemplify public service. They are your finest hours, whether sustaining or commercial, whether regularly scheduled or special, these are the signs that broadcasting knows the way to leadership. They make the public's trust in you a wise choice.

They should be seen. As you know, we are readying for use new forms by which broadcast stations will report their programing to the Commission. You probably also know that special attention will be paid in these reports to public service programing. I believe that stations taking network service should also be required to report the extent of the local clearance of network public service programing, and when they fail to clear them, they should explain why. If it is to put on some outstanding local program, this is one reason. But, if it is simply to carry some old movie, that is an entirely different matter. The Commission should consider such clearance reports carefully when making up its mind about the licensee's overall programing.

We intend to move, and as you know, indeed the FCC was rapidly moving in other new areas before the new administration arrived in Washington. And I want to pay my public respects to my very able predecessor, Fred Ford, and my colleagues on the Commission who have welcomed me to the FCC with warmth and cooperation.

We have approved an experiment with pay TV, and in New York we are testing the potential of UHF broadcasting. Either or both of these may revolutionize television. Only a foolish prophet would venture to guess the direction they will take, and their effect. But we intend that they shall be explored fully, for they are part of broadcasting's New Frontier.

The questions surrounding pay TV are largely economic. The questions surrounding UHF are largely technological. We are going to give the infant pay TV a chance to prove whether it can offer a useful service; we are going to protect it from those who would strangle it in its crib.

As for UHF, I'm sure you know about our test in the canyons of New York City. We will take every possible positive step to break through the allocations barrier into UHF. We will put this sleeping giant to use and in the years ahead we may have twice as many channels operating in cities where now there are only two or three. We may have a half dozen networks instead of three.

I have told you that I believe in the free enterprise system. I believe that most of television's problems stem from lack of competition. This is the importance of UHF to me: with more channels on the air, we will be able to provide every community with enough stations to offer service to all parts of the public. Programs with a mass market appeal required by mass product advertisers certainly will still be available. But other stations will recognize the need to appeal to more limited markets and to special tastes. In this way, we can all have a much wider range of programs.

Television should thrive on this competition, and the country should benefit from alternative sources of service to the public. And, Governor Collins, I hope the NAB will benefit from many new members.

Another and perhaps the most important frontier: Television will rapidly join the parade into space. International television will be with us soon. No one knows how long it will be until a broadcast from a studio in New York will be viewed in India as well as in Indiana, will be seen in the Congo as it is seen in Chicago. But as surely as we are meeting here today, that day will come, and once again our world will shrink.

What will the people of other countries think of us when they see our western badmen and good men punching each other in the jaw in between the shooting? What will the Latin American or African child learn of America from our great communications industry? We cannot permit television in its present form to be our voice overseas.

There is your challenge to leadership. You must reexamine some fundamentals of your industry. You must open your minds and open your hearts to the limitless horizons of tomorrow.

I can suggest some words that should serve to guide you:

"Television and all who participate in it are jointly accountable to the American public for respect for the special needs of children, for community responsibility, for the advancement of education and culture, for the acceptability of the program materials chosen, for decency and decorum in production, and for propriety in advertising. This responsibility cannot be discharged by any given group of programs, but can be discharged only through the highest standards of respect for the American home, applied to every moment of every program presented by television.

"Program materials should enlarge the horizons of the viewer, provide him with wholesome entertainment, afford helpful stimulation, and remind him of the responsibilities which the citizen has toward his society."

These words are not mine. They are yours. They are taken literally from your own television code. They reflect the leadership and aspirations of your own great industry. I urge you to respect them as I do. And I urge you to respect the intelligent and farsighted leadership of Governor LeRoy Collins, and to make this meeting a creative act. I urge you at this meeting and, after

you leave, back home, at your stations and your networks, to strive ceaselessly to improve your product and to better serve your viewers, the American people.

I hope that we at the FCC will not allow ourselves to become so bogged down in the mountain of papers, hearings, memorandums, orders, and the daily routine that we close our eyes to the wider view of the public interest. And I hope that you broadcasters will not permti yourselves to become so absorbed in the chase for ratings, sales, and profits that you lose this wider view. Now more than ever before in broadcasting's history the times demand the best of all of us.

We need imagination in programing, not sterility; creativity, not imitation; experimentation, not conformity; excellence, not mediocrity. Television is filled with creative, imaginative people. You must strive to set them free.

Television in its young life has had many hours of greatness—its "Victory at Sea," its Army-McCarthy hearings, its "Peter Pan," its "Kraft Theaters," its "See It Now," its "Project 20," the world series, its political conventions and campaigns, the great debates—and it has had its endless hours of mediocrity and its moments of public disgrace. There are estimates that today the average viewer spends about 200 minutes daily with television, while the average reader spends 38 minutes with magazines and 40 minutes with newspapers. Television has grown faster than a teenager, and now it is time to grow up.

What you gentlemen broadcast through the people's air affects the people's taste, their knowledge, their opinions, their understanding of themselves and of their world. And their future.

The power of instantaneous sight and sound is without precedent in mankind's history. This is an awesome power. It has limitless capabilities for good, and for evil. And it carries with it awesome responsibilities, responsibilities which you and I cannot escape.

In his stirring inaugural address our President said, "And so, my fellow Americans, ask not what your country can do for you—ask what you can do for your country."

Ladies and gentlemen, ask not what broadcasting can do for you. Ask what you can do for broadcasting. I urge you to put the peoples' airwaves to the service of the people and the cause of freedom. You must help prepare a generation for great decisions. You must help a great nation fulfill its future. Do this, and I pledge you our help.

Trade Policy: A Strategy for the Coming Battle

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Friday, May 19, 1961

Mr. CASE of New Jersey. Mr. President, problems now confront many segments of American industry, their employees and their communities, as a result of increased foreign competition. In seeking a solution, two basic requirements appear to me to be essential:

First. Our country must avoid restricting foreign imports in a way which would touch off retaliation by other countries and lead to a downward spiral of world trade. It is generally agreed that such a process had much to do with bringing about the great depression of the thirties. The nations of the free world could be committing economic suicide if we were to follow that course again.

Second. We must avoid arbitrarily cutting off imports where this would permit an economically aggressive Soviet bloc to move into world trade as America moved out. We must keep in mind the vital needs of our trading partners as well as ourselves. We must not force our friends, particularly among the newer and less developed countries, to become dependent on trade with the Soviet bloc, for such trade is manipulated to serve the political ends of the Soviet empire.

It has seemed to me that the basic concept which most nearly meets these requirements is that of trade-adjustment assistance, in which my distinguished colleague from New York, Senator JAVITS, has displayed such creative leadership. His article "Trade Policy: A Strategy for the Coming Battle," appears in the May 25 issue of the Reporter magazine. I believe this article deserves the widest attention and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRADE POLICY: A STRATEGY FOR THE COMING BATTLE

(Senator JACOB K. JAVITS, of New York)

In the coming months, Congress and the Kennedy administration will face the most crucial struggle over U.S. trade policies since the Reciprocal Trade Agreements Act became law in 1934. The act itself is not up for renewal until next year, but the battlelines are now forming.

Even as our economy recovers from the recession, there is no letup in complaints about "unfair competition" from foreign imports or in demands for quotas or other protection to reduce or keep them out. Last year there were four requests for specific tariff increases for every one on file in 1955, and there were three opponents of further tariff reduction for every one in 1955. There is no doubt that the problem some businesses are facing is a real one, and their firms and workers need help from the Federal Government.

Protectionist sentiment today is getting an added boost from the recent imbalance in our international payments and from the chronically depressed areas around the country where unemployment has persisted in recent years even when the business cycle was in its boom phase. Perhaps a quarter to a half million American workers are being seriously affected by concentrated import competition today, and many of these firms are located in chronically depressed areas.

Against this background the Senate recently took a giant step in the direction of greater economic cooperation with our allies by approving our membership in the Organization for Economic Cooperation and Development. Scheduled to start formal operations next September (after ratification by at least 15 nations), OECD is the first serious attempt to build an economic complex of free nations equal to the task of closing the development gap between the so-called "have" and "have-not" areas of the free world. The 20 prospective member nations of OECD—18 European members, plus the United States and Canada—possess a total productive power of more than $900 billion a year, and account for two-thirds of all world trade. Here is potentially the most important economic bloc in the world.

TRADE IS OFTEN THE BEST AID

But obviously any retreat by the United States from the principles of expanding multilateral, nondiscriminatory trade could ruin OECD's chances of achieving its major objectives right at the start. Last year the United States imported nearly $15 billion in goods and services. Protectionist barriers erected around this largest of all national markets are bound to invite sharp retaliation from OECD members and other free world trading nations. They will also affect the willingness of the other OECD members to shoulder a greater share of the aid burden in the less developed areas of the free world, a primary objective of the second Eisenhower administration and now of President Kennedy's. Indeed, the goal of supplying in partnership the $10 billion in grant and loan aid required annually by these areas could then not be realized. For that matter, if economic nationalism stages a comeback in the free industrial nations, how long could the United States maintain its present level of foreign economic aid? Last year, our $5 billion trade surplus was big enough to pay for our entire foreign-aid bill, economic and military.

Unless we devise a program that can negate the appeal of protectionism to businesses hit by concentrated imports, the Communists may be able to dictate the terms of economic survival to key nations in Latin America, Africa, and Asia. The United States now buys about a quarter of everything these nations export, including great quantities of raw materials required by our industries. The dollars they earn from us give them an amount to invest in development three times greater than the dollars we loan and grant them as economic aid. It would be unrealistic to believe that Congress could pass an aid bill large enough to compensate for any substantial decline in this trade.

Right now the 20 prospective OECD members are the principal trading partners of the Asian, African, and Latin American nations. But we are on notice that the Communist bloc intends to reverse this situation wherever and however it can; and in view of the rising rate of Communist bilateral trade deals, this objective might be realized in more countries by 1975 than we dare to contemplate. It will also be more likely to happen if markets in the OECD countries shrink.

In other words, unless we lead the OECD bloc in a trade-aid offensive, the free nations will soon find their position as the principal trading partners of the less developed areas of the free world undermined. This is the general conviction of the leading legislators of the NATO nations, almost all of them foreign-policy specialists, with whom I confer regularly as chairman of the Economic Committee of NATO Parliamentarians.

FROM TEXTILES TO TOYS

We must start working now, not next year, to head off a damaging controversy over protectionism. Much valuable time has already been lost both in Congress and in the administration, even though the danger signals of an impending trade struggle are everywhere. Paralleling the all-out effort of many businesses, unions, and trade associations, 16 Southern governors last fall pressed the Tariff Commission for restrictive rulings. In a unanimous resolution, they demanded a comprehensive investigation of our trade policy and urged specific protection to reduce foreign competition with goods produced by industries in the South, particularly textiles.

The accent on protectionism is not heard in the South alone. Congressmen from al-

most every area are paying increasing attention to similar protests. Witness, for example, the uncomfortably close vote last month on Senator Barry Goldwater's amendment to the minimum-wage bill. It would have permitted import quotas based on differentials in wages paid to workers in exporting countries and those paid to workers in the United States. This generally protectionist Goldwater measure lost by only 11 votes.

The Kennedy administration did manage to head off the threatened May 1 boycott of Japanese fabric imports by the Amalgamated Clothing Workers of America, and at the same time took a first step to meet the basic problem. The business and labor leaders in the textile trade have been promised a program of special assistance by the Kennedy administration, including an international conference to discuss the quantity of textiles that Japan, Hong Kong, Pakistan, India, and others may export to the United States; presumably the conference will work out agreements on such things as voluntary quotas and minimum labor standards.

This approach, however, is woefully incomplete if it stops there. Those in the textile business who are hurt as much by technological obsolescence as by imports should be helped to increase their productivity, diversify their lines, or transfer into other economic activity entirely. We must make a fair distinction between producers who do and those who do not need Federal help. And we must be able to reduce gradually whatever new trade protection may be granted. Unless these other steps are taken, our major trading partners will interpret this first move by the administration as the start of a retreat toward economic nationalism. American consumers and taxpayers will face the prospect of supporting a permanent program of Government subsidy that could extend far beyond the limits of the textile industry.

The great majority of briefs filed last year in opposition to new tariff reductions came from groups involved with fabricated metal products, industrial chemicals, cord and twine, electronic and office-machine equipment, sporting goods, buttons, and toys. They are not going to understand or tolerate favoritism toward the textile industry, which filed less than 15 percent of all opposition briefs received by the Tariff Commission in 1960.

In early February, President Kennedy told Congress that protectionism was no answer to our adverse balance of international payments, and he urged an export drive to earn more dollars. But we are still waiting for him to recommend or support—as he did in the Senate—a positive legislative approach to the very real problem of those who are already being seriously hurt by concentrated import competition. Helping hard-pressed industries and promoting exports are two sides of the same coin, but apparently Democratic leaders in Congress are waiting for a go-ahead from the White House before scheduling action on import legislation already introduced this session.

ON TWO FRONTS

In company with other Senate colleagues, I have proposed two bills to head off the coming conflict over trade policy. One is a measure to stimulate exports; the other would help workers, businesses, and communities that are seriously disrupted by import competition.

The proposal to stimulate exports calls for the creation of a Council for Export Promotion, under the chairmanship of the Under Secretary of Commerce. The Council would augment, coordinate, and publicize the Government's various services to the U.S. exporter. The proposed legislation also strengthens the authority of the Export-Import Bank to make short- and medium-term export credit guarantees against both political and commercial risks. The American exporter wants and deserves a service similar to that offered by the major exporting countries of Western Europe, where guarantees cover between 6 and 15 percent of exports annually.

These suggestions have been well received in the Senate by Republicans and Democrats alike, including JOHN SPARKMAN, Democrat, of Alabama, chairman of the Senate Small Business Committee, who is a sponsor of the export bill. The importance of exports in our economy is becoming ever more appreciated, since some 4 million workers in the United States are engaged in producing and servicing exports. Between one-fifth and one-third of our production of civilian aircraft, railroad cars, construction and mining equipment, textile machinery, sewing machines, and steel-rolling machinery has been exported in recent years, along with 10 to 20 percent of our machine tools, coal, agricultural machinery and equipment, diesel engines, trucks, and buses. All this is quite apart from our enormous agricultural exports. Forty-five percent of all our cotton and wheat, 29 percent of our tobacco, and 25 percent of our soybean production is exported.

Last year the United States sold $19.6 billion in merchandise exports, nearly $5 billion more than we imported in merchandise. Our exports to the new European Economic Community went up 50 percent in 12 months and topped our imports from this area by $1 billion. It is obvious that increased exports can be a very helpful anti-recession measure and can contribute substantially to solving our balance-of-payments problem while helping to meet our international responsibilities.

More difficult but equally important is the form that legislation should take to help workers, business firms, and communities adjust to an economy where foreign trade plays an increasingly important role every year. Today those who cannot get relief under existing trade-agreement legislation turn to Congress. We are asked, sometimes almost ordered, to revise duties, broaden "Buy American" provisions, impose quotas, and strip the President of his power to negotiate reciprocal tariff concessions. While such remedies are usually unacceptable, the descriptions of hardship are often accurate and compelling.

The solution I propose is based on the principle of trade-adjustment assistance, which is endorsed by leading economists and key segments of management and labor. It recognizes the Federal Government's responsibility to help workers and those injured by the national interest in developing multilateral nondiscriminatory trade as the cornerstone of U.S. foreign economic policy.

Under my proposed legislation, Federal loans and tax incentives would be available to individual businesses and communities that could prove hardship as a result of concentrated import competition. Money would be available to retrain and relocate workers. Unemployment payments could be extended and early retirement under social security would be possible. Businesses failing to regain their competitive position could be helped to diversify or to undertake a new line of production.

With trade-adjustment assistance, the Federal Government could help individual firms and communities without according blanket protection to a whole industry. The present "escape clause" provision does not differentiate between those segments of an industry which can compete and those which cannot. Relief under it is on an all-or-nothing basis. But with trade-adjustment aid available, the Tariff Commission, which now rules on requests for relief under the escape clause, would do so with the knowledge that help of a nonprotectionist nature could also be given. In addition, my bill would permit the President to limit additional tariff or quota protection recommended by the Tariff Commission to 7 years, during which time it could be reduced gradually.

There is growing bipartisan support for this approach in both Houses, along with a growing recognition that the President must play a more active role in this special area if we are to remove the major threat to the continuation of the broad trade policies this country has followed so successfully for nearly a generation. Such legislation may be highly complex and it may be highly controversial. But it is urgently needed to head off a really damaging struggle over present U.S. trade policy. It is vital to continue that policy both for the national interest and for peace.

One Hundredth Anniversary of Founding of Lewiston, Idaho

EXTENSION OF REMARKS
OF
HON. HENRY DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Friday, May 19, 1961

Mr. DWORSHAK. Mr. President, on Saturday, May 13, the city of Lewiston, Idaho, began a summer-long celebration of its 100th birthday. At the founders day dinner, historical developments of a century ago were reviewed as speakers emphasized the exceptional opportunity for future development resulting from utilization of the rich water resources in the area. The completion of the four Lower Snake River dams will bring slack water navigation to Lewiston and provide unusual opportunities for the city to become a shipping center. The Lewiston Morning Tribune has played an important role in the area since 1892. On May 13, 1961, the distinguished editor of this newspaper, William Johnston, wrote a timely editorial. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LEWISTON'S FIRST 100 YEARS

The summer-long celebration of Lewiston's 100th birthday, beginning with a busy Founders' Day program today, promises to create among the city's residents a deeper understanding and appreciation of things past and a better perspective to greet the future.

Lewiston has an unusual opportunity in this centennial celebration to set a standard for observances all over Idaho during the next two years. Indications thus far suggest that the opportunity will be seized and the standard sturdily established.

The Lewiston centennial celebration is, of course, a home-grown product. Its charm for visitors must be based chiefly upon faithfulness by which the city re-creates the image of its pioneer beginnings. And its value for the city's own residents—who will be the chief beneficiaries—likewise will depend upon the citizens' willingness and ability to look clearly into the past for clues to wisdom for the future.

Lewiston's first hundred years have been productive, challenging—sometimes dreadfully hard—years, but the changes in this valley of the shining waters during the last

century are nothing as compared with the changes clearly foreseeable in the years ahead.

The steadfast courage of the pioneers will be needed by their descendants to cope with the challenges of these years. But needed, too, will be a revival of the pioneer willingness to take huge new risks in creating bold new patterns of progress out of the needs of tomorrow and the experience of yesteryear.

By comparison with most of this young nation, and in startling contrast to most of the worn and weary world, the Lewiston country is a fresh and unspoiled land. Its mistakes still can be corrected. Its goals still can be achieved. It can use the tools of twentieth century technology to translate into fact the dreams of those pioneers who envisioned here a rich, rewarding homeland for generations still to come.

But this area must contemplate steadily some of the overwhelming causes for change which are shaking the world and will shake this quiet valley, too. The population explosion, which will double the world's total population within the next half century, surely will change the face of this sparsely settled region. The critical water shortage, which will plague vast sections of the nation in the years to come, will mark for rapid change this area so richly blessed by an abundance of pure, fresh water. These are only two of the many key factors certain to hasten the pace of Lewiston's development. There are others—all pointing in the same direction and all bearing the urgent reminder that this region's vigorous, exciting, rapidly changing future lies just around the corner.

Now a century has passed since the first band of miners landed at the juncture of the rivers to establish the trading camp which became the city of Lewiston. Soon that city will be behind dikes as the broad river which bore the stern-wheelers of that far day is tamed at last for barges, too. Soon a stream of traffic will pour across the Lolo Pass to funnel into Lewiston the travelers who have passed this way in trickles since the days of Lewis and Clark, but will come now in volume over a new transcontinental highway link. On its 100th birthday, Lewiston is on the threshold of vast change.

It is fitting at such a time to recall some of the key purposes of a centennial celebration. To borrow from the originally proposed objectives of the 1963 Idaho Territorial Centennial (which the Idaho Legislature left freely available to borrowers), a meaningful centennial can achieve certain key values: It can re-create among the citizens themselves a deeper appreciation of their own heritage. It can attract visitors to the celebration scene to participate in the recapture of history. It can stimulate out of the celebrations some achievements of lasting worth and value to serve the citizens after the bunting has been torn down. And it can help to bring all the people together in unity to visualize better where they might go in the future, now that they have glimpsed more clearly where they were in the past.

(There are those, of course, who contend that the only purpose of a centennial celebration is to trap the tourists—particularly the rich ones. Such intellectual paupers do not deserve a centennial. In communities or States where they prove to be in control, they perhaps will not have one).

But Lewiston already has risen far above such short-sighted greed as that espoused by the tourist-trappers. Lewiston has recognized that a 100th birthday party is something chiefly for the family—adults and children alike—and that the visitors can only share those celebration values which are genuinely created and honored by the folks who live here.

Lewiston—100 years ago the Gateway to Gold—today faces new, exciting, largely unknown challenges. The city with a past is also a city with a future. Its citizens would do well to look carefully, searchingly backward—then face resolutely ahead.

Forest Access Roads

EXTENSION OF REMARKS
OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Friday, May 19, 1961

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent letter from the Oroville, Wash., Chamber of Commerce which completely describes the tremendous values that accrue to our economy through the prompt construction of needed forest access roads. Our national forests are important sources of timber and recreation as well as a major source of water for many of our western communities.

The Oroville Chamber has made an intensive study of the opporunities to increase both timber and recreation use on the Okanogan National Forest. Their study shows that an investment of $2,850,000 would open up for proper management 3 billion board feet of presently inaccessible overripe timber. If this investment were promptly made the allowable cut in this northern part of the Okanogan Forest could be increased from 20 million board feet anually.

In addition, the extremely popular recreation areas of Bonaparte Lake, Beaver Lake, and Lost Lake would become available for recreation bringing many benefits to the people and surrounding communities. It is my hope that in this year's budget and succeeding budgets, we shall be able to fulfill the needs that exist to develop these great public forest resources for all of our people.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OROVILLE CHAMBER OF COMMERCE,
OROVILLE, WASH., *May 10, 1961.*

U.S. Senator HENRY M. JACKSON,
Washington, D.C.

DEAR SENATOR JACKSON: I received your telegram of May 2, 1961, and thank you for your continued interest in forest access roads and forest timber sales in north Okanogan County. It seems impossible to discuss the forest roads problem without bringing in the forest timber sales—or the forest timber sales, without the road problem. We have met several times with Fritz Moisio, supervisor of the Okanogan National Forest.

Mr. Moisio has made several timber sales available to the small sawmill operators in this area who never have been able to purchase before. However, the road situation for hauling this timber through Chesaw to Oroville is still in a critical condition. As an illustration, the Oroville Lumber Co. recently purchased 6 million feet of timber in the Lost Lake area called the West Strawberry Mountain sale. If the road from the sale to the forest boundary and into Chesaw were improved they could deliver this timber to their mill at Oroville over 27 miles of road—21 miles of which is oiled. As it is, they are now hauling via the Republic Road and through Tonasket, a distance of 54 miles, or 108 miles per round trip.

Bonaparte Lake, Beaver Lake, and Lost Lake are very popular recreation areas for people of this part of the county who are also forced to use this roundabout route. On this timber sale there is a $20,000 road to be built—approximately a 2-mile stretch of road, graded and graveled which deadends near the top of the mountain. We feel this is overly designed and extravagant, and is doing the job a spur road would do. This is in the middle and close to new roads recently built. If only this $20,000 could go into the Lost Lake to Chesaw Road, it would make a good start and bring many benefits to many people and surrounding communities that are now practically shut off.

We believe this is an emergency and that funds be made available if possible for immediate construction. We were promised 5 years ago that they would build this road before now. We feel it is very important to have money enough, but that it is also important to build the roads that do the most good.

We mailed you a report on the road problem and sales June 3, 1959 along with a good sized map with the roads marked in color. In this report, we requested $2,800,000, for forest access roads for this north Okanogan district. We are sending a report about the same as the June 3, 1959, along with a map. Most of the roads shown have been planned for future construction by the Forest Service. We have added some proposals in order to complete them into through roads without any deadends, such as the Pontiac Ridge Road from the Joe Allen Corner to go by Beth Lakes and down to Taroda Creek Junction. We do believe this is a key road of great importance and should be considered as priority No. 1.

It would permit the flow of timber between the Colville National Forest and Okanogan National Forest as the shortest route to the most sawmills. It could be of great advantage, as a military road, also a shortcut from the coast through Keremeos, Nighthawk Road to Oroville via Chesaw to Toroda Creek. The Beth Lakes and Beaver Lakes to Toroda Creek offer very good tourist attractions. It would offer Oroville a 33-mile shortcut to Spokane. It would make it 70 miles closer for the Molson and Chesaw area. It is about 4½ percent grade. We have had estimates that there is more than enough timber that could be tapped from this road to more than pay for it. The estimate was 28 million. Several million could be hauled on this road from the eastern slope of Cedar block and Bonaparte block and the west drainage of the Colville National Forest to the east of us.

We estimate this would be 10 miles of road and cost about $250,000. Meyers Creek, the loop road to extend as shown in the Bonapart block south and over eastern section to Lightnigh Creek to come out on the south end of the Toroda Creek area. This would tap into miles of timber going to waste, likely one-third of a billion feet. The road would give an equal opportunity for the timber to flow to the mills in the Tonasket, Omak, or Oroville district.

In our report to you of June 3, 1959, we stressed our concern about the 1½ to 2 billion feet of extra timber. We are enclosing a separate sheet with a breakdown of roads and a key for the map. We are also enclosing two copies of a report from Ferry County Timbermen's Association which we highly recommend and endorse.

In conclusion we also feel that if the $2,850,000 we asked for to build access roads for this district was allowed and these roads were to be built, all of the 3 billion feet of

timber would be made accessible and salvage overripe timber could be cut and a sustained yield of approximately 37½ million feet could be set up instead of the present 20 million feet yearly cut in this north Okanogan County. About 280 miles of access roads would complete this project. We especially refer to the Bonaparte block, which includes Meyers Creek, the Mount Hull block, Cedar Creek block, and Aeness Valley block, all of which have a great deal of virgin timber and are located in the north Okanogan district and easily accessible to the mills in this north Okanogan district.

Thank you very much for your consideration of this matter.

Yours very truly,

OROVILLE CHAMBER OF COMMERCE.

History of Migrant Work in Mesa County, Colo.

EXTENSION OF REMARKS

OF

HON. JOHN A. CARROLL

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Friday, May 19, 1961

Mr. CARROLL. Mr. President, much attention has been given in recent years to the condition of the migrant workers and their families across our land. Some excellent studies of this serious human problem and some fine leadership have come from the Secretaries of Labor under both the Eisenhower and Kennedy administrations, as well as the present Secretary of Health, Education, and Welfare. The distinguished Senator from New Jersey [Mr. WILLIAMS] and his subcommittee have devoted countless hours to a scholarly series of hearings and findings on the subject. They are now sponsoring legislation in the Senate, some of which I have found relevant to my State of Colorado. I am proud to be a cosponsor of several of these bills, which offer hope of ameliorating some of the hardships which occur in some areas.

Still, even the best of public servants and the wisest lawmakers cannot hope to accomplish what the people of the area most concerned can do when they see a problem and decide to act. A shining example can be found in the good people of Mesa County, Colo., one of the finest irrigated orchard areas in the West, renowned all over the Nation for its peaches.

I am indebted to Mrs. H. A. Talbott, of Palisade, Colo., for the story of the locally organized Mesa County Migrant Council. It is my firm belief that if the people of other localities could and would do what these folks have done, there would be very little need for legislation in this field.

I ask unanimous consent to have printed in the Appendix of the RECORD a brief history of this splendid group, so that others may read it and take inspiration.

There being no objection, the history was ordered to be printed in the RECORD, as follows:

CAPSULE HISTORY OF THE MIGRANT WORK IN MESA COUNTY

Until 1948, there was no organized effort to better the lot of the many migrant workers who help grow and harvest the crops of Mesa County. In June of that year, the State director of the migrant ministry of the Council of Churches came in person to pioneer a work in the newly purchased labor camp of the Palisade peachgrowers.

In order to support these efforts, Palisade women from several churches organized themselves into a group known as United Churchwomen. They supplied toys, clothing, milk, volunteer service, and some money. Realizing that their efforts were inadequate in comparison to the need, they began asking the help of other organizations and agencies.

In this way the program was substantially broadened year by year. At their request, the Red Cross gave free swimming lessons to the children; the recreation commission supplied used sports equipment, the county library gave books, the FFA began a long-range tree-planting project in the camp and the Girl Scouts conducted a pilot project. In 1955, the United Churchwomen were instrumental in bringing to Palisade a health project, financed by Federal funds, which provided nursing and clinic service to Mesa County migrants.

The same year, the Palisade Woman's Club added their strength to the existing program. They established and successfully operated the first thrift shop, free child care center, and sewing center. The need for a coordinating group was most evident, so that fall they invited all organizations which had contributed to the child care center to send a representative to form a county migrant council. Thirty-five organizations and eight interested people joined with the professional agencies, health, welfare, and Migrant Ministry, in answer to this appeal.

So was born the Mesa County Migrant Council which coordinates activities in behalf of migrant workers; supplies information to the public, to growers, and to the migrants themselves; carries on projects, such as the child care center; and develops other services as needed. As a council, we have been able to secure a special summer school for migrant children, extend the original services of the public health department, and continue to increase the effectiveness of existing services.

EVALUATION, 1960

The close of a most difficult season finds the migrant council in good shape, having demonstrated capacity to adapt to the unusual circumstances caused by the severe Easter freeze.

The excellent program planned in March by health, welfare, education, and migrant ministry was thrown into confusion by doubt as to whether there would be enough fruit to justify operation of any of the services to migrants. Giving to the council projects came to a quick standstill.

When it became evident, during the last of July, that there would be a third of a crop, and that the labor camp would be opened, we tried to set things in motion for the August program as originally planned. This was difficult due to the illness or absence from the county of several key people who had sparked the work of previous years.

Organizations who had given money in other years were contacted, and enough funds assured to justify our proceeding with the child care center and medical night clinic to be held downtown.

By August 1, Mrs. Bea Randolph was back at her post as clinic nurse at the labor camp; the migrant ministry staff had arrived and set to work, and plans were complete for a pilot summer school to begin the 8th. The thrift shop opened August 8 and was the source of enough school clothing to make attendance possible for the children. Sewing machines were made available in the community building, and were freely used by the migrant women.

Several trends appeared that were most encouraging. First, there was a greater use of all the services by workers housed on the ranches, particularly the school, the medical clinic, and the child care center. As we are entering a period when those housed in the labor camp are becoming a less important factor in the fruit industry, it is vital that our services reach those on the ranches.

Encouraging, also, was the evidence that migrant families are taking more interest in helping by giving their time, when unemployed, to clean and to mend as well as to sort toys at the community building, give volunteer service at the child care center, and help others within the camp. This participation is an important part of building a sense of self-respect.

More interest was shown by local church people and by families engaged in the fruit industry. Three key people in this year's programs were from families who own peach ranches. They were Mrs. Eugene Rowley of the thrift shop, Miss Annette Power of the migrant ministry staff, and Mrs. Lyman Wallace, assistant supervisor of the child care center. Their experience with migrant workers was a stabilizing force in a year when a number of new people were brought in to help with our services. More individuals and organizations from the fruit districts gave volunteer help this year. There seems to be evidence of a growing understanding on the part of the families who employ migrant workers.

The very suitable rummage, carefully cleaned and mended, which was received from churches, clubs, and individuals, showed a growing understanding of the migrant's needs by the citizenry in general. The fact that these people never grow tired of helping makes possible the good accomplished in this area.

All of the agency programs, health, welfare, School District 51, and migrant ministry were excellent. The cooperation among these groups makes possible a great deal of help at low cost by eliminating overlapping and duplication.

Our new council project, the night medical clinic in Palisade, was much appreciated by the workers and the growers who employed them. The council paid Dr. C. H. Bliss for his time and the use of the office on six different evenings, and the health department furnished the services of their nurse, Mrs. Randolph, and bore the cost of medications. Beside the 61 persons treated at the clinic, Dr. Bliss cared for many who came in at other times. It is evident that more clinic nights are needed, as well as secretarial help for the doctor.

Dr. Ralph Kibler gave dental service to a considerable number. Sometimes it was possible to arrange with the employer for the fee, if the person in question was working. In harvest, there was no time for that. There seemed to be a lot of acute dental troubles this year. We hope to arrange something for emergency cases in the near future.

The generosity of the school district in allowing us to use two rooms of Taylor Elementary School was deeply appreciated, as well as the services of Principal Ralph Wobick as director of the child care center. We are also grateful to the migrant ministry for loaning toys, tables, and chairs for the center, and for enrolling the labor camp children. Mrs. Randolph also enrolled children, and inspected them daily for health problems. Her thoroughness prevented any

outbreaks of illness among the children. The volunteers sent by United Churchwomen of Grand Junction also performed an indispensable service, for which we are thankful.

Our budget, before the frost, was set at $650. Due to the short time of operation, and the generous amount of volunteer help, we spent only $395.51. We received $520.81 in gifts, so close the year in good financial health.

If the value of our council was measured by the money spent, we would certainly rate as the least of service organizations; but if you count the hours of service contributed by over 200 persons, and add to it the benefits received by migrant workers and our own citizenry, the total becomes quite substantial.

MARGARET TALBOTT,
Secretary.

Proposed U.S. Host Corps

EXTENSION OF REMARKS
OF

HON. JOHN A. CARROLL

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Friday, May 19, 1961

Mr. CARROLL. Mr. President, it now seems evident that we soon will have a new law authorizing establishment of an active agency within the Department of Commerce which will devote itself to stimulating tourist travel from abroad. As I have said many times in the past, I am proud to have joined in sponsoring this plan, first advanced by the distinguished senior Senator from Washington [Mr. MAGNUSON], and heartily endorsed by the Kennedy administration.

This winter and spring there has been a great deal of comment from well-informed circles pointing to our national deficiencies as a tourist mecca. One of the first people to do something about this was a constituent of mine, Mrs. George—Mable—Grimes of Denver, whose proposal for a U.S. Host Corps was outlined by me in the RECORD for March 24. A similar idea occurred to a constituent of the able and distinguished Senator from New York [Mr. KEATING], and I have no doubt that many persons in our great country who have never heard of either the Host Corps or the Welcome Corps are independently arriving at the same conclusion—that our people can make good use of their native hospitality by organizing to welcome foreign tourists and make their stay here more pleasant.

Mrs. Grimes of Denver has continued her efforts to organize support in Colorado for establishment of a Host Corps there. At the same time she has been perfecting her ideas for the benefit of the Department of Commerce. During her last visit to Washington in late March she not only testified in behalf of the idea before a House subcommittee, but she also had a long interview with John W. Black, special assistant to the Secretary of Commerce for travel. At his invitation she drafted a letter detailing her plan for a Host Corps.

I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Mrs. Grimes to Mr. Black and a brief article written by Mrs. Grimes for the periodical of the Denver Chamber of Commerce.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

DENVER, COLO., *April 24, 1961.*

MR. JOHN W. BLACK,
Special Assistant to Secretary of Commerce, Department of Commerce, Washington, D.C.

DEAR MR. BLACK: When I was in your office early this month, you asked me to send you suggestions for putting the Host Corps into operation. In order of my conception of their importance, here is the nucleus of a starting plan.

1. Appointment of a national coordinator. This person must have great and infectious enthusiasm for the project and be willing and able to devote full time to its implementation. Much traveling and constant contacts with the local groups will be necessary to keep interest high until volunteers are busy enough to generate their own enthusiasm.

2. The decision on the location of the first districts to be placed in operation is important. New York would seem likely, but due to its extreme size and large volume of tourists, I would suggest that the first pilot groups be in Washington, Boston, New Orleans, and San Francisco.

3. The establishment of a national telephone number—dial WELCOME—9352663. When the Host Corps is ready to function on a nationwide basis, pamphlets explaining and publicizing this number will be distributed to travel agencies around the world. The recorded answers to this number should be in English, French, German, and Spanish, giving a short welcoming sentence and the local Host Corps number. Taxi company-owners should be asked to place signs in the windows of their cabs designating the language their bilingual drivers speak.

4. Preparation of a manual of aims and procedures must be carefully approached. The primary aim of this program being "people-seeing," this will not be a book of rules, but one to stimulate the interest of the volunteer worker. Suggestions on low cost and interesting entertainment that in no way infringes on the services of the travel and sightseeing agencies. The questionnaire to be used by local chairmen in selecting and categorizing the volunteer hosts is of the utmost importance. It must be prepared to compliment the manual and pave the way for a personal interview between the chairman and the prospective host. This manner of selecting representatives serves a dual purpose; making membership an honor and thereby desirable, and impressing each applicant with the fact that in the "people-seeing" program of the Host Corps he becomes an ambassador of good will.

5. The most crucial task of the coordinator is the finding of capable and dynamic local chairmen. Editors, bankers, and civic organization presidents can be of assistance in confidential interviews. The recently retired and semiretired people offer a source of unused time, energy, and experience from which to make this selection. A salary of $1 per year for these appointees permits the coordinator to be selective, and the prestige of a Federal Government appointment makes the chairmanship interesting to qualified people. An orientation seminar held in Washington and addressed by members of the Cabinet and perhaps the President, would start the publicity campaign with the proper flourish. All chairmen called to such meetings should be on a small per diem. This entire program will be defeated if it becomes fair game for those who want something from the Government.

6. The public should be asked to volunteer on the local level. The prepared questionnaire to be sent on request followed by a personal interview with the chairman. People from all walks of life should be encouraged to become hosts. Contact with people of other countries can promote understanding here and let stay-at-homes enjoy some of the broadening effects of travel. The assistance of language teachers and students should be solicited.

This is all preliminary, the program can be endlessly expanded. I have only set down the things that require time to accomplish and must be done before this program can even start. It seems advisable to implement the Host Corps in advance of the projected increase of tourists so that it will be a smooth running operation when it is needed. I again urge consideration of a start that can be fitted into the larger program at any time.

Thank you for your interest, and let me know if I can do anything more to further this plan.

Sincerely,

MABLE S. GRIMES.

DENVER SHOULD PIONEER WITH HOST CORPS

(Article prepared for Denver Chamber of Commerce periodical by Mrs. Mable Grimes)

As a long-time member of the chamber of commerce it seems to me to be the place to launch a national project; knowing that aims are high, interests progressive, and membership of the upper echelon of astute business people.

There is a bill now before the House of Representatives to establish a Bureau of International Travel to entice foreigners to spend some of their travel dollars in the United States. Under the number S. 610, the Senate passed such a bill; Senator JOHN A. CARROLL, of Colorado, being one of the cosponsors. A budget of $5 million was authorized to establish tourist information offices in population centers around the world. The administration of this project to be under the Secretary of Commerce.

Tourism has helped in large measure toward European monetary recovery since World War II. The United States helped in this effort, with the present need to readjust the imbalance in dollar flow we need to attract tourists to our shores.

On two recent visits to Washington I realized how potent the voice of an individual can be if only we bestir ourselves. May I suggest that the chamber send a resolution supporting this legislation to Congressman BYRON G. ROGERS, of the First District of Colorado.

I presented to the subcommittee of the House holding hearings on this bill my plan for a Host Corps. This group to be volunteers to welcome foreign visitors. These hosts to be recruited partially from retired and semiretired people interested in a rewarding and stimulating activity. The basic idea is to permit our visitors to see life in the United States at its grassroots, thereby furthering understanding. The Host Corps is possible only after the passage and implementation of the international travel bill. We must have tourists before we can make plans for their entertainment. I urge each member of the chamber to write his Congressman to support the international travel bill.

Talking to Mr. Khrushchev

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, May 19, 1961

Mr. WILEY. Mr. President, the people of the United States, and the world, are awaiting word of agreement for a conference between Mr. Khrushchev and President Kennedy.

The decision to meet with Khrushchev, of course, rests solely with the President.

According to preliminary speculation, the meeting, if held in the near future, would be focused upon informal talks rather than attempts to reach decisive final decision on the major issue between the East and West.

Unfortunately, our experience in such East-West negotiations provides little ground for great optimism. To the contrary, the results have largely been:

First, providing new propaganda opportunities for the Reds; second, disillusionment for those who anticipate real progress toward peace.

Despite previous summit conferences, innumerable meetings at nonsummit levels, and thousands of hours of negotiation between East-West delegations—the Reds have yet to yield, compromise, or conciliate on any major points—even though they themselves have substantially extended their spheres of influence and control during this time.

There is, of course, always the hope that the pressures of world opinion, or of conditions at home, will force Mr. Khrushchev and his cohorts into negotiations for lessening of world tensions and the imminence of war. Realistically, however, this is only a hope—since the Communists themselves have shown no signs of receding from their oft-stated goals of world conquest.

Today the New York Times published an editorial entitled "Talking to Mr. Khrushchev." The editorial attempts to put into perspective the meaning of the conference itself as well as its possible results. I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, May 19, 1961]

TALKING TO MR. KHRUSHCHEV

Barring forbidding complications, President Kennedy now plans to meet Premier Khrushchev for informal bilateral talks in Vienna early next month in an effort to stem further deterioration of the world situation, to make a personal appraisal of the Soviet's ruler's intentions and to warn him that the United States and the West are determined to defend the frontier of freedom.

The projected meeting, long sought by Premier Khrushchev, marks a revision of the quiet diplomacy first essayed by the Kennedy administration but frustrated by Communist aggressiveness. But it cannot yet be described as either a summit meeting in the accepted sense, or a return to personal diplomacy that led to the fiasco in Paris.

For President Kennedy is not expected either to negotiate or to reach agreements at this meeting on problems which inevitably involve the interests of other nations. Rather, as did Prime Minister Macmillan on his trip to Moscow, the President would be expected to exchange views with the Soviet Premier, to explore possible areas of agreement, and to expound the Western position. As by the time of the meeting he will have conferred with Mr. Macmillan, Chancellor Adenauer, President de Gaulle, and many other statesmen, he would be able both to take their views into account and act as the principal spokesman of the West.

Despite this limited objective, however, the meeting could well have decisive results. Though it would take place at a time marked by free world setbacks in Cuba and Laos, which might lead to misinterpretations of it, it would still be worth while, even as a gamble. It would enable President Kennedy personally to warn Premier Khrushchev not to mistake Western reasonableness and restraint in the world's trouble spots as weakness, and to serve notice on him that in decisive areas, such as Berlin, the West will tolerate no new Munich. At the same time, depending on the Soviet's ruler's responses, it would enable the Kennedy administration to give final shape to its foreign policy, still in flux.

These responses should decide in particular whether it is still possible to save the Geneva test ban conference from collapse or whether the United States must resume testing at the price of further delay in disarmament talks. They should decide whether the Kennedy administration must step up its armament program beyond what is now contemplated. And they should decide whether the United States and its allies must meet Communist guerrillas in southeast Asia with their own guerrilla troops at the risk of widening conflicts.

In such an effort President Kennedy can count not only on the imposing strength of the West and allied solidarity displayed at the Oslo meeting of the North Atlantic alliance but also on the moral backing of the whole free world now living under the shadow of Communist aggression.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Wise Advice to President Kennedy To Resume His Campaign Position on Summitry

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. HOSMER. Mr. Speaker, during the presidential election campaign, President Kennedy expressed the view that summit conferences were to be preceded by large efforts by subordinates to define areas of agreement which could be ratified by the heads of state. This position, concurred in by Mr. Nixon, was that which both candidates presented to the Nation. Now it seems, a summit conference is about to occur without such preliminaries. This inconsistency between words and actions is discussed in the following editorial appearing in the Long Beach Independent-Press-Telegram:

MAKE HIM EARN IT

An exchange of notes between President John Kennedy and Premier Nikita Khrushchev suggests the possibility that another "summit" conference may take place in the near future.

The man who said hope springs eternal was certainly right.

Exactly one year ago, in Paris, Premier Khrushchev called the President of the United States (Dwight Eisenhower) a thief, and withdrew the invitation which had been issued to the President to visit Russia. The era of personal diplomacy with the Khrushchev regime would seem to have come to an emphatic end.

Subsequently, Senator John Kennedy agreed with his opponent, Richard Nixon, in the race for the Presidency that another summit meeting was a long way off and could occur only after some rigid tests of good faith.

Said Mr. Kennedy:

"I will not meet Mr. Khrushchev unless there were some agreement at the secondary level, foreign ministers or ambassadors, that would indicate that the meeting will have some hope of success or useful exchange of ideas."

Dean Rusk, the man who became Mr. Kennedy's Secretary of State, made this comment on summit meetings in a speech January 18, 1960:

"* * * It diverts time and energy from exactly the point (the Presidency) at which we can spare it least; it does not give us effective negotiations; such experience as we have had with summit diplomacy does not encourage the view that it contributes to the advancement of American interests * * * Summit diplomacy is to be approached with the wariness with which a prudent physician prescribes habit-forming drugs."

Wherein lies the hope that a new summit conference would produce good results? Where is the proof that another summit conference would be a good investment of presidential time?

If such hopes or proofs exist, they have been completely obscured by Khrushchev's boasting, missile rattling, and meddling in Cuba, Laos, Africa.

Summit conferences with Russia are barren and futile, and the advantages, if any, fall to the Russians.

Such meetings hold the spotlight of world attention and afford the Communists a propaganda forum which they exploit relentlessly and skillfully.

Such meetings merely give Khrushchev more recognition, honor, and prestige. This would seem to be the worst possible time to hand him those gifts.

Will the nations of Latin America really believe American warnings against communism if they see President Kennedy entertaining or being entertained by the leader of communism?

We have told them that Khrushchev can't be trusted. Are we now to sit down and negotiate with the man we don't trust—after having been slapped in the face by that man such a short time ago?

This is a dubious way to build American prestige, gain the confidence of neighbors, and prevent the spread of communism.

Before going to another summit conference, this Nation should require a substantial and dramatic demonstration of good will by the Soviet Union.

Let Khrushchev declare free elections in despoiled Hungary or withdraw his armaments from Cuba or Laos or North Korea.

Let him do just one thing that shows he really wants peace and good will in this world.

Far from giving evidence of good will in the form of deeds, he rarely bothers any more to speak in civil terms.

Under such circumstances, another summit meeting will merely demonstrate that the drug of summitry has indeed overwhelmed better judgment.

If Nikita gets another summit meeting, let's make him earn it.

Physical Fitness Among Members of the Armed Forces

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, May 22, 1961

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news release from the Public Information Office of Fort Jackson, near Columbia, S.C. The article tells of the purchase by post Special Services of 28 new bicycles for use of the troops stationed at Fort Jackson to encourage and assist our servicemen in keeping physically fit.

It may be recalled, Mr. President, that I made a speech in the Senate on March 24 of this year stressing the importance of bicycle riding from the standpoints of good health and physical fitness. At that time I pointed out that President Kennedy and former President Eisenhower have both expressed a deep interest in promoting physical fitness in America.

I commend Maj. Gen. H. D. Ives, the Commanding General at Fort Jackson, Col. Paul S. Reinecke, Chief of Staff, and others responsible for initiating this worthwhile project at Fort Jackson. I hope others will follow this fine example.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FORT JACKSON, S.C.—Supplementing the many recreational facilities of Fort Jackson, the post Special Services has obtained 28 new bicycles for use by troops stationed here. In addition to providing recreation and transportation to and from Special Service activities located at Fort Jackson, they assist the soldier in keeping physically fit.

The bikes were purchased by the central post fund, a welfare account which is financed by post exchange profits instead of tax dollars. They may be rented for a small fee on a first-come, first-served basis. All revenue collected is returned to the Post Fund for continuation of the program.

Maintenance of the vehicles is performed by men of the Special Services boat shop, another recreation facility of the Special Services. If a bike is damaged through neglect of the renter it is taken to a shop in Columbia for repair and the renter must pay the cost.

The bicycles must remain within the limits of Fort Jackson and may be used only during daylight hours as they have no lights. They may be signed out at the main service club, presently the only checkout point. Beginning May 15, a bicycle may be obtained at Twin Lakes enlisted men's recreational area or at the miniature golf course on Jackson Boulevard. With the advent of the two new checkout points a soldier may ride the bike to one of the areas, turn it in, enjoy a swim or a game of golf, and not have to pay for the bike while he plays. When he is ready to return he checks out another bike and rides to the desired checkout point and again signs the bike in.

Present plans are for operating the bikes the year around, weather permitting with more to be added when additional funds are available.

East Europe Views Summit Talk as Indication of U.S. Weakness

EXTENSION OF REMARKS
OF
HON. CLARK MacGREGOR
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. MACGREGOR. Mr. Speaker, in a few days, on June 3, the President of this country is scheduled to meet Mr.

Khrushchev in Vienna. To help provide valuable assistance in ascertaining how other peoples view this meeting, I suggest the following article whch appeared in the Minneapols Sunday Tribune of May 21:

EAST EUROPE VIEWS SUMMIT TALK AS INDICATION OF U.S. WEAKNESS

(By Graham Hovey)

VIENNA, AUSTRIA.—President Kennedy's projected trip to Vienna to meet Nikita Khrushchev will be regarded in Eastern Europe as another indication of American weakness.

It will be taken as another sign that for the present Russia is winning and the United States is losing the cold war.

After 16 days of observation, inquiry, and argument in Communist-ruled Poland and Czechoslovakia, I am confident this will be the general reaction in this part of the world. It is the reaction that will be expected by most Western diplomats with substantial experience in this area dominated by Russia.

This inference of American weakness will be drawn gleefully by the top Communist leaders of Czechoslovakia and by some—perhaps not all—party chiefs in more independent Poland. It will be drawn reluctantly by a substantial majority of ordinary Czechs, Slovaks, and Poles.

The incessant Communist propaganda barrage had not succeeded in making the majority of the ordinary citizens of these two countries anti-American, veteran diplomats assured me. What the propaganda, coupled with a series of genuine Russian successes and American failures, has accomplished is to create the widespread belief that communism will eventually prevail.

"The Czech people have definitely not turned against America," a seasoned Western official told me in Prague. "More and more of them, however, are getting the impression that the Soviets are winning—and this is posing an increasingly difficult problem for the United States."

It is not that the people under Communist rule in eastern Europe are automatically opposed to a meeting between the American President and the Soviet premier.

But this two-man summit comes after spectacular American failures in Cuba and Laos. It comes at a time of increasing restlessness in American-backed South Vietnam and right after the overthrow of the U.S.-backed South Korea Government.

It comes just after the American-backed Shah of Iran has had to dissolve both houses of his parliament in an attempt to stave off a crisis in his part of the volatile Middle East. It comes after the Soviet success in launching the first man in outer space.

Had some of these events not occurred or had the results been reversed, the Eastern European reaction to the Vienna summit might have been different.

Above all, had there been no Fidel Castro to bedevil and embarrass and humiliate the United States in its own backyard, things would have been different.

As things stand, it looks to Eastern Europe as though Mr. Kennedy will come to Khrushchev out of weakness, and with few bargaining weapons.

There is another aspect of the meeting that confirms this impression—the fact that President Kennedy will be meeting Khrushchev on neutral ground with America's chief allies absent.

Eastern Europeans know that it has long been Khrushchev's objective to settle the world's problems in a face-to-face meeting with the American President. The claim that the Vienna affair will be only an "informal" meeting does not dispel the impression that Khrushchev has succeeded partially in splitting America from its British and French partners.

Defense Procurement and Small Business

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, May 22, 1961

Mr. JACKSON. Mr. President, I call to the attention of my colleagues a scholarly study just completed by a research team of five University of Washington professors on "Defense Procurement and Small Business." The study, in book form, has been published by the University of Washington Press.

This book presents the practices and opinion of some 1,165 small business firms who responded to the questionnaire sent them by the research team. Because the study covers a subject of great interest to the Congress and the various Government agencies dealing with small business, I ask unanimous consent that there be printed in the Appendix to the RECORD the following brief summary of this research project.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

DEFENSE PROCUREMENT AND SMALL BUSINESS

A University of Washington survey of small defense industries has determined that an overwhelming proportion of them prefer to sell their products to the Government by a process of negotiated bidding rather than through advertised bids.

The survey, which studied the experiences and views of more than 1,100 firms who employ 1,000 persons or less, was the first systematic attempt to learn the preferences of small businesses who sell or seek to sell defense products to the Federal Government.

Although only sporadic attempts to ascertain these preferences had been made in the past, the opinion has often been expressed that small businesses preferred selling to the Government by advertised bids rather than negotiated bids. Advertised bidding is a system of purchasing wherein an open invitation is made to prospective suppliers to submit bids, and the contract is awarded to the lowest bidder who meets the criteria established. Negotiated bids are a system wherein a buyer may deal with only one company as a potential supplier, or in which he may deal with two or more companies.

Contrary to the oft-expressed supposition that small businesses preferred the advertised bidding procedure, the study showed that more than 90 percent of firms surveyed preferred to sell their defense products through negotiated bids.

While, in the sale of "nonweapon" products such as fuel, office supplies, uniforms and barracks, the small firms indicated they preferred advertised bids, negotiated bids were highly favored for the production of missiles, privately designed oxygen valves, new missile designs, and the first production lot of missiles.

As their reasons for preferring negotiated bids, the surveyed firms listed:

1. The buyer is more likely to get the product he wants more economically under negotiated bids.

2. Negotiated bidding is more profitable to the supplier.

3. Negotiated bidding affords greater protection to the proprietary information of the creative supplier.

4. Negotiated bidding favors neither large nor small suppliers.

5. Negotiated bidding is more familiar to the small firms, who use the system in doing business with other private industries.

The study discovered that the small firms rarely use advertised bidding in the purchases that they make, whereas more than 80 percent of their purchases—measured by dollar volumes—are made through negotiated bids.

The small firms, when given a choice, also prefer Government defense subcontracts to prime contracts, the study concluded.

The survey drew its findings from the experiences of the small firms in securing defense business, their actual selling and buying practices and their attitudes regarding bidding procedures on Government contracts and the methods of awarding the contracts. It was made by a research team directed by Prof. Albert N. Schrieber, and consisting of Profs. Edward G. Brown, Sumner Marcus and Robert A. Sutermeister, all of the University of Washington College of Business Administration.

The majority of the firms surveyed expressed the belief that bidding procedures can be improved. Suggestions for improvement cited most frequently were:

Making descriptions of the product to be procured more comprehensive and the specifications simpler.

Investigating bidders more thoroughly.

Insuring that invitations to bid are sent to all companies on qualified bidders lists.

Cutting complicated red tape.

The small firms also indicated that the Government, in emphasizing low prices, often excluded consideration of quality and past performance to its detriment.

The survey was made by the university on a grant by Aerospace Industries Association, Inc.

Results of Public Opinion Poll

EXTENSION OF REMARKS
OF
HON. TOM V. MOOREHEAD
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. MOOREHEAD of Ohio. Mr. Speaker, recently, I have been conducting a public opinion poll of the 15th Congressional District of Ohio in an effort to determine how the residents of the seven southeastern Ohio counties I represent here feel about a number of important national issues. These are issues which, in one form or another, may be considered by the Congress this year. Many of the 19 questions in the poll are based upon specific recommendations on which President Kennedy has requested legislation. The survey is now complete and I wish to call the attention of the Congress to the expressions of opinion I have received.

This poll represents the tabulation of responses from 5,860 residents of my district. The questionnaire was given a large distribution by direct mail and through the cooperation of daily and weekly newspapers in the seven counties. Every effort was made to assure that the circulation was completed without regard to the political sentiments or special interests of those who received the questionnaire. It has also been my purpose to exercise care in the preparation of the questions so that their phras-

ing would not influence the answers given or impose my own opinions in any way. The results represent a very large sample of the total population of the district and it is my belief that the poll is a very good gage of public sentiment there at this time.

Since this is my first experience with a survey of this kind, I was very pleased that such a large number of persons responding commented in considerable detail, explaining why they feel as they do. These remarks cannot, of course, be reflected in the statistical tabulation. However, they have often raised points of view that I have not previously considered. Therefore, they have been very helpful to me in my own analysis of these issues. I am particularly grateful for the serious and widespread interest the questionnaire has been accorded.

The most persistent expression in the poll was concern over increased Government spending and the expansion of Federal powers. Overwhelming responses to actual questions dealing with these issues were received and I received an avalanche of comments on these subjects, often as part of explanations pertaining to other questions.

I had expected a far greater divergence of opinion on many questions than was borne out by the poll. Out of the 19 questions, the tabulation showed that, on 9, more than two-thirds of the responses were in agreement. These involved opposition to the expansion of Federal authority, agreement on the need for stronger laws to protect voting rights of all citizens in Federal elections, approval of changing the Constitution to require the election of Presidents and Vice Presidents by direct population vote, opposition to empowering the President to raise and lower taxes, approval of tax deductions by parents for their children's college expenses, opposition to farm programs providing more price supports and crop-production controls, approval of assistance for economically distressed areas, opposition to the admission of Red China to the United Nations, and approval of stronger laws to protect American industry from foreign import competition.

Greater variation of opinion was expressed on a number of other issues. On the measure to raise the hourly minimum wage from $1 to $1.25 and to broaden the coverage of the law, 2,734 responses favored the proposal, while 2,733 disapproved—a difference of 1 vote. Only 3 percentage points separated those who approved and those who disapproved changing the social security laws to permit men to obtain reduced benefits at age 62, although more than 60 percent favored increasing benefits to widows.

Much interest was directed to the question of financing medical assistance for the aged. The answers and the comments in the poll showed wide disagreement. Twenty-seven percent of the people agreed with the proposal to include such assistance in the social security program. Twenty-four percent opposed Federal participation in medical care costs for older citizens. However, 39 percent favored Federal and State participation with the individual on a voluntary basis in financing the expense of such care.

The complete tabulation of the results of my 1960 public opinion poll is as follows:

	Yes	No	No opinion
1. Would you authorize the President to estimate annual world food needs and to use existing tax-supported farm programs to raise U.S. production to a level to meet world deficiencies?	32.85	57.59	9.56
2. Do you believe stronger laws are needed to protect voting rights of all citizens in Federal elections?	78.24	17.44	4.32
3. Are you in favor of Federal aid to education costing a minimum of $5,600,000,000 over several years to be used either for school construction or teachers' salaries?	37.06	56.39	6.55
4. Should social security taxes be raised to—			
(a) Permit men to obtain reduced benefits at age 62?	45.39	48.08	6.53
(b) Increase widows' payments from 75 to 85 percent of their husbands' benefits?	60.95	31.05	8.00
5. Do you think the Federal Government is taking over too many responsibilities from local and State governments?	71.16	23.30	5.54
6. Do you feel increases in Federal spending are important enough to justify resulting rises in the cost of living?	21.55	64.26	14.19
7. Which one of the following do you support:			
(a) A compulsory Federal program of medical care for the aged under social security with costs borne by increased taxes on employees and employers?	27.51		6.20
(b) A voluntary program of medical care for the aged with costs shared by the Federal Government from general tax revenues and the individual beneficiary?	39.84		
(c) No medical care for the aged involving Federal Government participation?	24.65		
8. Should expansion of our economy be encouraged by granting Federal tax relief to companies which modernize and expand their plants?	53.49	39.09	7.42
9. Would you change the Constitution to abolish the electoral college and require the direct election of Presidents and Vice Presidents by popular vote?	75.26	21.25	3.49
10. Do you think the United States should continue its ban on testing nuclear weapons without reliable assurances that the Russians have also abandoned their tests?	15.36	80.19	4.45
11. Should Congress give the President power to raise or reduce taxes?	6.72	88.15	5.13
12. Do you favor a farm program with increased price supports and more production controls?	14.51	76.82	8.67
13. Do you believe Red China should be admitted to the United Nations?	13.23	79.43	7.34
14. Would you support the extension of the 1-cent tax on gasoline which expires this year to finance more rapid expansion of highways?	66.42	31.64	1.94
15. Should students' college expenses be deductible from parents' income taxes?	67.49	27.92	4.59
16. Would you favor stronger laws to protect domestic industries from competition of products imported for sale in the United States?	78.11	15.08	6.81
17. Should Congress raise the minimum hourly wage from $1 to $1.25 and increase the number of workers covered by the law?	46.6551	46.6382	6.7067
18. Should Federal aid be given to areas which are suffering chronically depressed economic conditions?	69.89	19.84	10.27
19. Do you support the proposal that a Peace Corps be established and financed by the U.S. Government wherein Americans would be recruited and sent abroad to help underdeveloped countries?	41.18	49.25	9.57

The Practical Value of Social Work Service

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 22, 1961

Mr. HUMPHREY. Mr. President, all too little attention has been focused on the great contribution to the betterment of our society that is being made by social workers.

Skilled social workers operating within an enlightened public assistance program are promoting the general welfare of our people and the stability of our society.

And we should also realize that a good public assistance program helps recipients to become self-supporting, thus ultimately reducing the cost of public assistance and easing the burden on our taxpaying citizens.

Recently I received a very impressive report on 10 demonstration projects in public assistance. This report, sponsored by the New York School of Social Work at Columbia University, offers convincing evidence that a good public assistance program is a sound investment for a community. I believe this study merits the attention of all Americans who are seriously concerned about the value and cost of public assistance programs.

Mr. President, I ask unanimous consent that this report by Winifred Bell be printed with its footnotes and list of supporting studies in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

THE PRACTICAL VALUE OF SOCIAL WORK SERVICE

(Winifred Bell)

During the last decade numberous demonstration projects carried out in public welfare agencies have provided convincing evidence that substantial savings to the taxpayer can be secured by reducing caseloads of public assistance workers so that they have time to counsel actively with the troubled families seeking financial aid.

Our past efforts to save money have led us to keep assistance grants to the minimum, to insist upon tight controls over eligibility, and to spread the caseloads over small, untrained, and poorly paid staffs. The 10 demonstration projects reviewed to date consistently show that his has been a pennywise, pound-foolish approach. It is, in fact, one

way to guarantee that dependency will not only persist but will increase.

The cost of dependency is not easy to measure. Certainly, it far exceeds the cost to the public assistance agency, but even viewing this limited aspect of the problem, unless our investment is returning some dividends in terms of preparing families for independent living, we are wasting money. Our present penny-pinching policies could not be better designed to encourage the continuation of dependency, not only for this generation but for generations to come. It could not better promote high turnover of staff, wasteful concentration on airtight controls at the expense of time to give constructive help.

If we did not know better, it would be more understandable. The conclusions set forth in this paper are not new. They have been presented in a variety of forms by their sponsors, but the impression is secured that they are in, but not of, the public domain.

CONCLUSIONS

What do they prove? (1) It is wasteful to concentrate the efforts of public assistance agencies exclusively on the determination and verification of eligibility. This may well continue to be the focus for those families with simple, uncomplicated economic need including mothers who are needed at home to care for young children. But for those with complicating social problems we must focus our efforts on discovering the obstacles to self-help and provide services to strengthen families if we wish to save money. (2) No investigator or social worker will have time to counsel with families unless he is responsible for only a reasonable caseload, generally defined as ranging from 35 to 50 cases. (3) Skilled supervision and in-service training programs are essential to a constructive program in public assistance. This is particularly true in these days of acute shortage of graduate and experienced social workers. (4) Untrained investigators may have been able to verify eligibility, but effective family counseling requires the skill of trained social workers, and the more skillful the staff the more money the community will save. This is tantamount to saying that we don't save money by hiring 10th graders to build missiles.

The 10 projects reviewed returned a significant number of families to self-support and decreased both the duration of grants and the incidence of reapplications. In some instances, the maximum money grants allowed by the States were increased during the studies; nonetheless, savings overbalanced costs incurred by smaller caseloads, more highly trained personnel and skilled supervision.

The 10 studies also showed that the public image of the "lazy, indolent" assistance recipient is simply not based on fact. Most of these families wish to be employed, and this includes the "ADC mother." But their marginal skills and minority status render them pecularly vulnerable to shifts in the economy. Many of them came from families who had known only misfortune and discrimination, broken homes, and dependency. The current adult on public assistance is our warning for the future, for our present policies are excellently devised to breed more in the same mold. Again and again, these studies note that the typical public assistance recipient is the "first fired, and last hired."

In these demonstration projects, social workers devoted time and skill to building confidence, exploring difficulties, extending employment counseling and referring for vocational training. When mothers were in a position to work, ingenuity was brought to bear on formulating adequate plans for children during their mothers' employment. The economy of providing adequate vocational training, day care and homemaker facilities was demonstrated. We can safely conclude when we study the result with care that given time to explore the obstacles to independent living, a concern about helping families to overcome those obstacles, a community atmosphere in which minority groups are employed during times of stress on somewhat equal terms with majority groups, and given day-care facilities so that low-income mothers can work without neglecting their children, substantial social and economic savings could be effected.

DEMONSTRATION PROJECTS

The studies reviewed were carried out in California, Michigan, Pennsylvania, Florida, Texas, New York, and Washington, D.C. Supporting evidence is found in studies made in Illinois, Maine, New Jersey, and North Carolina.

In each of the demonstration projects, the focus of the work with families was changed from one exclusively concerned with the determination and verification of eligibility to one centered on helping families with their difficult problems, whether in the emotional, budgeting, employment, marital or parent-child areas. Most studies were self-consciously concerned with securing the employment or reemployment of the head of the family. When the projects dealt primarily with ADC cases, this goal might well be questioned, since the program was initially established to enable mothers to provide the supervision and nurture required by children in their formative years. In 1935 when the Social Security Act was passed, this appeared to require the presence of the mother in the home. However, these studies and others in recent years suggest that mothers on ADC consider themselves to be "second-class citizens" and they would prefer employment. The crux of the matter is how and why the mother decides to work and what plans she is able to make for her children. Should mothers on ADC be forced to work because insufficient appropriations mean that they cannot support their children in dignity and self-respect? Should social workers be pressured into forcing mothers into the economy as a proof of success? Or should mothers and social workers be free to plan jointly for the welfare of the family? These studies suggest that current inadequate assistance grants seriously limit the freedom of choice.

Without exception, in these demonstration projects, caseloads were reduced. In 1959, the median caseload of public assistance workers for the Nation was 147 cases. In these projects, on the whole, caseloads ranged from 35 to 50 cases. In the project reported in the 1960 annual report of the Texas Department of Public Welfare, the size of these special caseloads is not mentioned. However, note is made of "specialized caseloads" consisting primarily of ADC cases. "By intensive training along specialized lines, and by removing diversions caused by working with cases in other categories, these specialized ADC caseworkers were able to meet and overcome some of the problems facing ADC families." [1] Considering that Texas had the highest caseloads in the Nation at the time of that study (in June 1959, 360 cases per worker), it seems probable that these caseloads were not only specialized but reduced.

The increased visits with families made possible by this reduction varied from "being available quickly whenever needed," as in Marin County, Calif., to approximately once monthly, as in Washington, D.C. At both ends of the spectrum, a totally new experience was available to the families receiving public assistance, since their traditional relationship with the agency has had to be limited to the infrequent and brief visits required by statute to verify eligibility. But quantity is not the only change. The new focus, the concern for strengthening families, meant a new spirit and a changed pace for visitor and family alike. For the first time, the agency was not merely a watchdog, determined to ferret out abuses and irregularities. Now skilled counseling and trained concern were extended, and in this climate problems were more apt to be confided, and social workers and families had a chance to become partners in a mutual undertaking. It is little wonder that positive changes occurred.

These studies all give the facts regarding the financial and/or social savings they effected. They were all carried out during the last decade, and some of the reports are only now available.

WASHINGTON, D.C.

The Washington, D.C., project involved 240 families with 900 children and was carried on from February 1953 to March 1954. Three skilled social workers were responsible for all of the counseling. They conclude that the status of the family was improved for 141 of the 240 families, as evidenced by increased financial support from 34 absent fathers, improved marital relationships in 32 families, improved health in 51 families, full-time employment in 18 cases, part-time employment in 9 cases, marked progress toward employment in 16 families, better housing for 23 families, and alleviation of school difficulties experienced by 9 children. These gains are particularly significant when we realize that in all of these demonstration projects, the project families have not been the typical assistance families but the hard core, those with static or deteriorating conditions, those long known to the agency, those for whom little improvement could be anticipated.[2]

MICHIGAN

There have been two projects in Washtenaw County, Mich., both focused on multiproblem families receiving general assistance. In the most recent study (1960), 14 cases involving 84 individuals were selected for intensive study. The work was evaluated after the families had been in the project from 3 to 10 months, and even within this brief period, considerable gains had been made. Families were evaluated according to financial status, family relationships and individual adjustment, and finally, their improved capacity to use community resources wisely and constructively. Three families showed gains in all three areas, five families in two areas and three families improved in one area. The authors state that the total monthly cost (to the public assistance agency) for these 14 families was $2,300. During the first 6 months the project operated, six families became partially or totally self-supporting which produced an estimated savings per month of between $700 and $750. On an annual basis, an annual savings of $8,400 to $9,000 was thus effected.[3] This result was achieved despite the fact that these 14 families had received relief for an average of 21 months, and that the project workers were the usual employees of the general assistance agency. Highly skilled supervision, an active inservice training program and reduced caseloads made the difference.

FLORIDA

The Florida project involved 505 families. After a 14-month period, about half of those families were no longer on public assistance. By comparison, during that same period, about one-third of the cases carried by the regular staff were closed. Of the new applications handled by the experimental group, about 42 percent were accepted for financial assistance while among the regular staff about 56 percent were accepted.[4]

The annual report of the Florida State Welfare Board for 1957–58 compares financial dependence with disease and states that "there are two wonder drugs available: the money of the public assistance grant, and

Footnotes at end of speech.

the time and skill which the social worker is able to devote to the case. Controlled experiments in the treatment of this disease (chronic dependency) have been conducted by this department. Again and again, in actual cases * * * * the social casework theory has been confirmed: for a substantial percentage of the ADC families this is a curable disease. In many instances, as high as 50 percent of certain caseloads in certain communities, can be returned to self-support when the social worker carries a practical caseload."[5] Although we might well question whether mothers who decide to utilize a public program designed to enable them to remain at home on the theory that home is where they belong are, in fact, "diseased," nonetheless the confirmation of the effectiveness of lower caseloads is a pertinent addition to our story. Unfortunately, from the point of view of the taxpayer, changes made the following year by the Florida Legislature resulted in decreasing the time social workers could devote to counseling.

PENNSYLVANIA

The 1960 annual report of the department of public welfare in Pennsylvania reports on the rehabilitation demonstration project of the Allegheny County Board of Assistance. "The economy of small caseloads (35 in the project) was demonstrated clearly. Ninety-eight cases, out of the project's 349 cases, were closed because of employment. Savings on assistance grants alone for these cases from the time they went off assistance until October 1958, totaled more than $256,000. In October 1958, a followup was attempted with the 37 cases that had left assistance for employment a year or more before * * * 16 were located. Assistance had been given in each of these cases for more than 5 years before it was discontinued. Handicaps (in these families) included severe physical handicaps (11), mental (9), social (9), no skill or experience (10). Only two of these people might have found work by their own efforts. The total earnings ($114,500) of the 16 families alone almost equaled the entire cost of the project ($124,000). If these people had not had this special help, it is likely that they would have continued to receive assistance totaling $53,262."[6]

CALIFORNIA

Fixel and Wiltse conclude their report on a project involving 43 ANC families in California by stating, "These data suggest that if the department were adequately staffed so that individual attention could be given to the interests, emotional, and physical problems, and the educational needs of each client, the time on assistance would be greatly reduced. Let us expand this hypothesis to a statewide basis. The total cost of ANC in California will be approximately 120 million this fiscal year (presumably 1959–60) and the average length of time on aid, 42 months. If the average time on aid were reduced even 1 month the resultant saving would pay for all statewide increments in quality and quantity of staff. Whether expanded to a statewide, nationwide, or reduced to the smallest local level, these simple facts indicate that an adequately trained staff in sufficient quantity to keep caseloads down to optimum level is the simplest form of economy."[7]

TEXAS

In Texas, during 1959 and 1960, "mature, experienced workers" were selected to work with ADC cases and by the end of the year they were credited with having achieved a remarkable drop in the caseload. "In September 1959, payments were made to 23,147 families representing 73,381 children under this program. By August 1960, these dropped to 19,662 families representing 62,512 children under 14 years of age, a decrease of 4,132 families (17 percent) and 12,772 (17 percent) children. During the corresponding period, average payments per family per month increased, $1.66 per family. Recipients of ADC assistance (nonetheless) received $17,930,831 in money payments for the year, a decrease of $3,103,614 under the total for the previous year."[1] Without a detailed report on this project, these financial gains are difficult to assess, since at this time no information is available on employment or unemployment rates in Texas, on the usual case movement of other ADC cases, on the rate of applications, or on the services made available by social workers.

INDIANA

Lake County, Ind., limited caseloads to 40 families for selected caseworkers in 1958 and referred only families who had been chronically dependent and showed signs of serious deterioration. Despite the gravity of these cases, "it was found that the average rate of termination of grants for the total ADC caseload of the agency in 1958 was 19.4 percent while the rate of termination for the 125 intensive cases was 28.8 percent." They estimated a savings only to the agency of $16,593. It is most interesting that in 1959 it became necessary to raise the caseloads in the experimental group by assigning 40 family units rather than 40 separate cases, as in 1958. The termination rate dropped, although it still remained higher than the rate for the entire ADC caseload. Despite a lower rate of termination, the savings were higher for the simple reason that the families involved had more children and thus had received higher grants. In 1959, an estimated $22,556 was saved by effecting earlier terminations through intensive casework counseling.[8]

NEW YORK

Westchester County, N.Y., instituted a demonstration project in June 1957. Highly skilled social workers, excellent supervision, and reduced caseloads were again proven to be economical. These 152 families were plagued with many problems, and had been receiving relief for an average of 25.1 months prior to being assigned to the project. After an average of 6.7 months of counseling, 49 of the families were able to function independently.[9]

Niagara County also initiated a project in 1957. Forty-one families were involved who had been continuously or intermittently on public assistance for 5 or more years. Despite the high unemployment rates in Niagara County at the time, 17 families became self-supporting, while over one-half of the families involved took concrete steps in the direction of improving their employment potential. The author observes, "These changes are not as spectacular * * * as actual case closings through employment. A long range goal of * * * self-support for many of these families has a reasonable chance to be reached."[9]

MARIN COUNTY

Marin County, Calif., stands out as the site of intelligent experimentation and planning for public assistance, and particularly the ANC caseload. In 1951 a new director, Betty Presley, was employed by that department. Miss Presley brought conviction that an informed community would support an effectively organized county welfare department able to provide help with difficult family problems. She foresaw that professionally trained staff and smaller caseloads prerequisite to giving skilled social services might increase administrative costs. However, she believed such services would strengthen family relationships and individual efforts, and in many instances result in self-support, thus ultimately decreasing assistance costs.[10]

These opinions were supported by the administrative survey in June 1951 by Kroeger and Associates which said, "We are firmly convinced that there is no room for the inexperienced or poorly qualified social worker on the staff in the Marin County Welfare Department." A family care unit was established to provide intensive casework, and an experimental caseload was forthwith established in this unit. Twenty-four chronic cases were assigned to a worker with graduate social work training. In the previous 5 years, $91,920 had been spent on these families in assistance and medical care. After 1 year's work, improvement was noted in all but two cases and expenditures for the entire group began decreasing. Most of these cases involved immaturity, marital conflict, mental deficiency, mental illness and alcoholism. They included 104 children ranging from 2 to 9 in a family, and 24 of these children were known to have personality disturbances. So convincing was the improvement that the agency concluded that intensive effort in all such cases was indicated and that casework help given in the early stages of agency contact contributed to the prevention of personal and family breakdown and economic dependence.[10]

Between 1952 and 1956 further administrative changes were made, so that a senior clerk was trained to do much of the clerical work previously assigned to social workers, who were then free to concentrate on counseling families. Caseloads were reduced throughout the family case unit to approximately 40 to 50 cases, qualifications for workers were raised systematically. Salaries were raised, more supervision was provided, and the work of various related officers was coordinated. The results achieved in Marin County were then rigorously compared with results and trends in the San Francisco area, as a whole. Marin County was found to show a significant drop in ANC cases per 1,000 population when compared with the San Francisco area, despite the same rate of applications. Not only was the discontinuance rate higher but cases stayed discontinued longer. During the 1954–56 period the costs of ANC in surrounding areas increased, although it decreased markedly in Marin County. There were also decreases in average grants per child in Marin County and studies revealed that this probably related to both increased support from absent fathers and increased earnings of parents. Finally, the following table illustrates the shifting relationship of salaries and assistance costs in the county:

	July–September 1953	July–September 1955
Aid to needy children	$114,713.63	$87,880.77
General relief	21,651.40	20,822.81
Salaries	6,496.90	12,323.00
Total	142,861.93	121,026.58

The director also pointed out that based on the average monthly aid to needy children grant in this county of $125, the saving represented by discontinuance of three aid to needy children cases exceeds the monthly salary of one worker. Four discontinuances exceed the salary of a supervisor.

In summarizing their comparisons of the Marin County statistics and those from the San Francisco area generally, the authors of this report note: "Consistently the foregoing figures point up a picture of downward trends in ANC caseload (both in relation to population and absolutely) and in total costs in the four-year period (1953 through 1956) that the family care unit has operated in Marin. Concurrently, in the San Francisco area group of counties which have many common factors in their economic and social patterns, the trends are upward."

In concluding their report, they note that their program was in jeopardy in July 1955 when a firm of administrative analysts made

Footnotes at end of speech.

a survey of the welfare department for the county grand jury. In the eventual public hearing, it is noteworthy that a representative of the California Taxpayers' Association brought out that "per capita expenditures for welfare in Marin County were lower than in any of the other 11 counties of the State closest to Marin in population." He also pointed out that the administrative costs of Marin's total welfare programs were the second lowest in this group of counties. He stated, and several other speakers agreed, that "If you spend $10 more in administrative cost to save $100 in the aid program, you've saved money." It is encouraging to note that the director's budget was granted and that caseloads were kept down to their 40–50 limit. "The support given by the board and community amounted to a vote of confidence in the preventive and rehabilitative approach taken by the Marin County Welfare Department." [10]

Could There Not Be Built in the Nation's Capital a Park Which Would Be a Fitting Memorial to Franklin Delano Roosevelt, Who Wanted a Simple Monument?

EXTENSION OF REMARKS

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1961

Mr. McDOWELL. Mr. Speaker, home rule, which received its greatest momentum from the Boston Tea Party, and achieved one of its greatest successes in the ultimate establishment of our own government when English power was at last decisively broken, is about to be given a setback in the very Capital City of our Nation which was founded on such revolutionary principles.

I refer, Mr. Speaker, to the imposition of some tasteless slabs of concrete in a park area of Washington, D.C., which will have the ultimate effect of destroying some of the most historic parkland to be found anywhere in our country.

The ostensible reason for the destruction of the 27-acre park is to raise a memorial to our late, great, and beloved President Franklin Delano Roosevelt, certainly one of this Nation's greatest conservationists.

What irony, to destroy parklands in the name of one of the greatest champions of parks the people have ever known, a man who specifically asked for a simple memorial.

Critics of the prizewinning design for the Franklin D. Roosevelt Memorial were immediately smeared with the "anti-art" tag by a few people with axes to grind—people who live outside of Washington, D.C., it was quickly noted by the discerning.

This particular form of attack has now suffered a well-deserved setback. A leading art magazine in the United States, Art News, in its May 1961, issue, declares editorially that the winning design for the FDR Memorial gives off the "unmistakable air of giant tombstones."

Alfred Frankfurter, the editor, draws a distinction between a "memorial" and a "monument." The memorial concept can be lost and entombed in a huge monument structure, according to Mr. Frankfurter.

Mr. Frankfurter then asks:

Could there not be built, on the Potomac peninsula a park to make men gasp—as Roosevelt's social remaking of his country made men gasp nearly a generation ago?

The Franklin D. Roosevelt Memorial Commission should reject completely the winning design which the Commission is now attempting to foist—there is no other word to describe the situation—on the people of our Nation in the name of the greatest commoner of them all.

Franklin Delano Roosevelt, like Jefferson, Lincoln, and Woodrow Wilson, had the common touch. The words of Lincoln: "God must have loved the common people, He made so many of them," ably expresses a view and a conviction shared by FDR. Beyond all other world leaders, of his time, Franklin D. Roosevelt was the spokesman for the people in all countries, everywhere in the world.

So, it is remarkable, indeed, to find Mr. Biddle, the Chairman of the Franklin D. Roosevelt Memorial Commission, insisting on a memorial that only a small minority of the 12-member Commission wants, and which is not symbolic of the man he seeks to immortalize.

The Washington (D.C.) Post of May 10, 1961, reported that:

Although the Memorial Commission conducted the national competition for a design, the group need not recomemnd construction of the winning entry.

Biddle said, however, that he and a small minority of the 12-member Commission favor the slabs, and most of the others "seem willing to go along with whatever we want; nobody has expressed any over-my-dead-body opposition."

The Washington (D.C.) Star of May 9, 1961, reported that:

President Roosevelt's son, JAMES, the Democratic Representative from California, is reported to be impressed with the Recreation Department plan. He has indicated the Commission memorial may not be as plain as his father would have wished."

Two of the Commissioners of the District of Columbia have voiced opposition to the concrete slab monument which Mr. Biddle favors.

The Washington (D.C.) Star of May 10 reported that:

Instead, they said yesterday, they support in principle the District Recreation Department's viewpoint that any memorial of Mr. Roosevelt should be a "living" one.

Commissioner Robert E. McLaughlin told a department board luncheon that "instead of marble, we should be putting up memorials of a living nature."

Later, in answer to a query, Commissioner Walter N. Tobriner said he believed a Roosevelt memorial should be "something that people can use daily, with pleasure.

"Apparently Mr. Roosevelt wanted a simple monument," Mr. Tobriner continued. "I feel a man is entitled to the kind of memorial he wanted."

Mr. Tobriner said that a living memorial could be a laboratory, a stadium or recreational area—anything that people can use.

I would agree with Mr. McLaughlin in feeling a living memorial is more consistent with Mr. Roosevelt's life and more desirable than some pile of marble, he said.

President Franklin Delano Roosevelt was deeply concerned with the one-third of the Nation which was ill-fed, ill-housed, and ill-clothed.

To think the problems of economically underprivileged have been entirely solved is to be unrealistic. We must continue in the great tradition of Franklin Delano Roosevelt to try and meet

their problems whether they be those of adequate food, housing, clothing, or the finer things of life, such as parks.

The homes of the economically privileged are surrounded by parks, but this is not the case in the depressed areas of our cities, where the poor live.

I hope that the Commission will give further consideration to the suggestion for a living memorial to the man who, during his lifetime, and as the 32d President of the United States, so ably and so simply caught the imagination of the common man.

I include as part of my remarks articles from the Washington Post and the New York Times, and I commend these articles to the members of the FDR Memorial Commission for their close study:

[From the Washington Post, Sept. 7, 1960]

THE MARBLE LOBBY BESIEGES CAPITAL

(By Marquis Childs)

Tourists who pour into this Capital, like those here over the Labor Day weekend, almost invariably speak of Washington's broad tree-lined streets and the vistas that Pierre L'Enfant envisioned when he laid out the first plans for the city.

This, the sense of space and light, a river with its banks unspoiled by industry, impresses them perhaps as much as the Nation's shrines which they dutifully visit. One of the minor themes running through recent sessions of Congress has been how to keep Washington that way and to prevent a rash of ill-assorted monuments from cluttering the landscape.

It was symbolized by the attempt, thwarted for the moment at any rate, to build a memorial to Theodore Roosevelt on the island in the Potomac that bears his name. On this wooded island still largely in a state of nature it was proposed to put a big bronze globe, and with it would have gone concrete parking space and all the appurtenances of a so-called tourist attraction. The President's daughter, Alice Roosevelt Longworth, who has lost none of her capacity for acidulous comment, called it a global jungle gym and it was thanks to her frank assault that Congress held up the memorial project.

As many devoted followers of TR pointed out, nothing could be more fitting as a memorial to him than to leave the island bearing his name a green and secluded place. The indefatigable Teddy, who took his children and any guests who happened to be in sight on strenuous tramps through the then rugged Rock Creek Park, would be appalled by what is happening to much of the United States—the asphalt jungle of highways and airports interspering the vast urban sprawl. And he would be the first to note that Americans seem to have given up the use of their legs entirely for motorized transportation.

With the last vestiges of the beautiful untouched America of the past rapidly being encroached upon, Congress has shown a strange reluctance to act. One instance is the Indiana Dunes on the shoreline of Lake Michigan where steel companies are planning new plants. The effort to preserve this untouched shore as a national park for the recreation of the whole region has so far been stopped.

Another instance is the proposed Dunes and Sea Lion Caves National Park on the Oregon coast. This was initiated by the late Senator Richard L. Neuberger who was a true conservationist with an intimate knowledge and love for the splendor of the west. Representative CHARLES O. PORTER (Democrat, Oregon), has proposed that the park be fittingly named for Neuberger.

A national park is a living and functional memorial, as those currently resisting the erection of more political sculpture in Washington like to point out. The Capital abounds with static—and often ugly—monuments to men long since left behind by the sweep of history.

In the midthirties, an ambitious architect suddenly made Congress conscious that there was no monument in the Nation's Capital to Thomas Jefferson. A successful effort was lobbied through Congress to create another static monument, the Jefferson Memorial, on the tidal basin which is today a 15-minute stop for the tourist buses. Opponents of the monument had pointed out that Washington was without an adequate hall for large public gatherings and what, it was argued, could be a better memorial to the eloquent Jefferson than such a hall.

The Capital is still without a proper hall for large public gatherings. Those who propose to memorialize James Madison could hardly find a better monument than a handsome public meeting place that would bear his name. A citizen's committee is currently trying to raise money for a cultural center to fill a longfelt need for an adequate auditorium for opera and ballet. A James Madison hall as part of such a center would mean a continuing and lively association with one of the greatest of the architects of America's freedom.

More and more monuments are being pressed upon a capital in which there are already too many indiscriminately strewn about. Something called a Freedom Wall is being urged, as though freedom could be symbolized in a wall. A Franklin D. Roosevelt Memorial is on the way, although FDR has been dead only 15 years. A bell tower in memory of Robert A. Taft went up on Capitol Hill less than 5 years after his death.

Without greater care and discrimination this can become absurd. And in the process, the spacious beauty of Washington can be destroyed.

[From the New York Times magazine, Sept. 11, 1960]

LEST WASHINGTON BE AN UNPLANNED CEMETERY—THE PLETHORA OF MONUMENTS SCATTERED ABOUT THE CAPITAL, SOME GOOD AND SOME NOT SO GOOD, HAS GIVEN RISE TO DEMANDS FOR A TIGHTENING UP OF THE STATUTES GOVERNING STATUES

(By Alvin Shuster)

WASHINGTON.—The Nation's Capital, which never seems to run out of politicians, epithets, also-ran ball teams, farm problems, scandals, blunders or baked chicken for the banquet circuit, is running out of statue space. And the cry has gone out: The city's majestic beauty is in jeopardy.

The alarmed crier is Senator HUGH SCOTT, Republican, of Pennsylvania, who takes a rather dim view of the past-time here of building monuments to the dead, often without waiting for either history's judgment or artistic inspiration.

"The tendency to make the Capital a catch-all for a variety of monuments to honor the immortals, the not-so-immortals, the greats, the near-greats, and the not-so-greats must stop," he said recently. "We must be on our guard lest the Nation's Capital come to resemble an unplanned cemetery."

The Senator thus touched on a monumental problem that is beginning to bother others around here. With its expanses of green, tree-lined streets and stately buildings and monuments, Washington remains one of the most beautiful cities in the world. But monument space is getting scarce.

The weight of all the monuments and statues still hasn't reached the point where the city has started sinking beneath the Potomac. Nor have the residents here become so overly aware of the statues that they've headed en masse for the couches, complaining of a feeling that they're being watched. Nor has the Park Service found that it needs to augment its staff of five men who, every 6 months or so, give the statues a bath with soap and water.

Nobody—except perhaps one or two of our more erudite starlings—knows for sure just how many of these statues and memorials dot the city's landscape. One estimate put the number at more than 175. And this doesn't include the nearly 160 statues and busts cluttering up the Capitol building corridors and its Statuary Hall, considered by some a depressing chamber of horrors—with no disrespect, of course, intended for the favorite sons who reside there. They include Florida's John Gorrie, the inventor of the ice machine that made "on the rocks" possible, who stands not far from Illinois' favorite daughter, Frances E. Willard, the founder of the Woman's Christian Temperance Union.

But, precisely counted or not, there they stand. In the circles, squares, triangles and vistas. The hatless and the plumed. The poets and the pols. The Latins and the lanterns. The gulls and the gals. The cubs and the cardinals. The unarmed men and the sword-waving women. The gloved and the barefisted.

And horses. Plenty of horses, rearing, cantering or plunging—in every posture that will hold a rider. Jackson's is up on his hind legs, a sculptural triumph; Sheridan's is dashing along; Pulaski's, Greene's, McPherson's, Hancock's McClellan's and Logan's are walking calmly over the field; Scott's and Sherman's are simply standing there watching the whole business.

What they, the residents and the transients see is a chiseled agglomeration of statues and memorials of all shapes, forms and sizes, "planted" without much discrimination, hit or miss, wherever space allowed. In addition to the city's famous landmarks, for example, there are a 300-year-old lantern from Japan, a memorial to the original patentees of land in the District of Columbia, a bell tower honoring the late Senator Robert A. Taft with 27 bells that ring on Capitol Hill 96 times a day, an Andrew Jackson Downing memorial vase, a Jules Jusserand memorial bench, a Charles W. Kutz memorial bridge, a discus thrower from Italy, several urns, heroic figures representing heritage, guardianship, the past and the future, lots of lions and probably more eagles.

Joining in the wholesale exposure to the elements are statutes of men like Samuel D. Gross, Joseph Henry, John A. Rawlins, Alexander Shepherd and Albert Pike—all heroes, even if history remembers them only after a little prodding. Suffice it to say, they played a role of some kind in the past and have been duly rewarded with permanence on Washington pedestals.

How have the more famous fared? Is Benjamin Franklin, for instance, in Franklin Park? No. John Barry stands there. Is Franklin then in Barry Park? He probably would be but there's no such place. He's down at 10th and Pennsylvania Avenues. Is Lafayette in the middle of the park named after him, just north of the White House? No. He's on a corner of the park. Jackson on that acrobatic horse is smack in the park's center, looking not toward the White House, nor eastward toward the Capitol, but just staring westward toward nothing in particular.

No one has quite figured out why Jackson who had nothing to do with the War of Independence, is made the center of attraction in a park otherwise devoted to Revolutionary War heroes. Washington, who had everything to do with it, is riding his horse several blocks away from his comrades in arms.

Nor has anyone quite figured out the pattern in the cluster of statues in beautiful Meridian Hill Park, with its statue of Joan of Arc (on a horse), a monument to President Buchanan, a statue of Dante and a memorial to Lt. Comdr. William Henry Scheutz.

Then there is the Grant Memorial at the foot of Capitol Hill. This one took 22 years to build, stretches no less than 252 feet along First Street and is one of the largest and most costly pieces of statuary in the city. There are 12 horses, 11 soldiers and 4 lions in the memorial. Up on a pedestal looking it all over is a statue of the equestrian General Grant, described at one time as one of the largest in the world, topped only by that of Victor Emmanuel in Rome, which is 5 inches taller.

As one might expect from all this, many of Washington's statues have been criticized for suffering from a poverty of artistic inspiration, despite their historic importance. Few, for example, command raves of the art lovers as do the hard-to-find memorial to sailors and marines—a simple wave crest with a few gulls—and Saint-Gaudens' "Grief" in Rock Creek Cemetery.

There are rather general complaints. John Ericsson, the inventor of the screw propeller that revolutionized navigation, usually gets a bad review sitting there near the Lincoln Memorial looking as if he were still exhausted from the achievement. Art News calls the Iwo Jima statue, reproduced from a photograph, "artistically appalling." The three-sided marble shaft with pinched corners erected not long ago in front of the U.S. District Courthouse has carved figures that reminded one critic of "appliquéd animal crackers."

What some critics don't realize, however, is that it all could have been worse. For example, you can thank a lack of funds and a sudden surge of good sense for saving the Washington Monument, an island of simplicity in a baroque sea. It was to have had a fatuous base in the form of a heavy circular colonnade with a statue of Washington driving a six-spanned chariot. Sort of a birthday cake with a big candle.

Then, with a little bit of bad luck, Greenough's statue of Washington could still be standing up there on the Capitol concourse. This one had Washington clad in a toga so, according to the sculptor, he wouldn't look ridiculous when fashions changed. It was subject to constant attack because a Washington shoulder was left exposed as though he were entering or leaving a bath. In 1908 it went into the Smithsonian Institution.

Two more statuary groups seem also to be on their way to relative oblivion * * *. Discovery, once described as a "man rolling ninepins," and Rescue, a tableau of a frontiersman bravely saving his wife and child from an Indian who hates women and children.

The significance of the removal of these statues is that extremely few—too few—statues ever seem to disappear from the Washington landscape. For getting approval to remove one has about as much chance of winning over Congress as an effort to replace the statue of Freedom atop the Capitol with one of Whistler's mother.

Ask Representative BASIL L. WHITENER of North Carolina. For months he's been trying to get Congress to order a new site for the James Garfield statue at the foot of Capitol Hill. That's the one of the former President with the four characters who look as if they're waiting for a handout. WHITENER only wants it moved, not destroyed. "The thing is a traffic hazard," he says.

So, too, is the Peace Monument not far away. But Members of Congress fear that any effort to move that one might put them on record as being prowar.

Although the Capitol groups may be coming down, more are on the way to make up for them. Plans are afoot to build memorials to Franklin Delano Roosevelt on the city's last great site—in West Potomac Park between the Lincoln and Jefferson memorials—to Theodore Roosevelt, General of the Army John J. Pershing, Adm. Richard E. Byrd, Mary McLeod Bethune, the Negro educator, and James Madison. The President has also renewed a request for funds to start work on a giant and controversial $24 million freedom monument with walls 60 feet high. And Congress is thinking about memorials to others, including John Foster Dulles and Taras Shevchenko, a Ukrainian poet.

Patriotic societies and zealous friends may provide the ideas and money for new monuments, but it takes Congress to follow through. For no monument may be erected on any foot of the 7,000 acres of Federal park lands in the District of Columbia without specific congressional approval.

Accordingly, under the prodding of well-meaning constituents, dozens of monumental bills are introduced at each session, many of which fortunately never get out of committee files. If they are pushed with any vigor, however, chances are they will go right on through without too much difficulty. But in most cases involving private sponsors the bill specifies that there should be no cost to the Federal Government (except for the free park land) and that unless the Congress seeks the advice of the Fine Arts Commission and the National Capital Planning Commission, both independent agencies, and the Interior Department's National Park Service, the landowner. But in virtually no instance have any of these agencies spoken out and bluntly said: "No, don't build it." They feel that that decision is up to Congress and that their functions are limited solely to advice on the design and the location.

"We once started to write a letter to Congress saying 'positively no' on one proposal for a statue," recalls a Park Service official. "After the political pressures were applied in the right places, we ended up saying 'we have no objection.' This is usually the case. There's no real coordinated policy on such things. Whether to go ahead is up to Congress to decide. Whoever squeals the loudest often seems to get the monument."

The seven experts of the Fine Arts Commission have only advisory powers on design. And they've had their setbacks. President Truman wouldn't listen when they advised against the White House balcony. Congress paid no attention when some Commission members privately expressed opposition to the Taft bell tower. Generally, though, in the construction of most statues here, designers take the Commission's advice.

For example, one of the first proposals for the Pershing memorial to be built on Pennsylvania Avenue was to put the good general on that ever-ready, trusty steed. There was even talk of putting him in a tank, just as there are now good-humored proposals to honor F.D.R. with a cigarette holder jabbing higher into the sky than the Washington Monument. However, Commission officials thought a Pershing fountain might help "cool" a hot spot in downtown Washington and the approved designs include just that, together with a relatively small statue of the general, without horse.

The job of site selection isn't always easy either. There was the group that wanted to put its hero in the middle of a reflecting pool. Rejected.

Undoubtedly the present system leaves something to be desired. One answer—and this comes from the Interior Department itself—is to set up an advisory committee to screen all the memorial proposals submitted to Congress. It would come up with some sort of a coordinated policy, though still leaving the final say to Congress.

Perhaps more merit lies in giving such a committee the sole power to say yes or no, just as the Post Office Department now has the final say on commemorative stamps.

Another proposal to improve the quality of the monuments that are selected is to have more open competitions such as that now underway for a design for the F. D. R. memorial. First prize here: $50,000. Moreover, to head off the rash of monuments to persons posterity might never recognize, the suggestion has been made that no memorial be put up here for any individual until at least 25 years after his death. Representative Stewart Udall of Arizona thinks it ought to be 50 years.

Unless something is done, Washington, just 160 years old and a youngster compared to other world capitals, might well catch up with and pass London and Paris, no slouches themselves when it comes to monuments. Indeed, those European cities offer no particular help to a capital city in search of a solution. They have statue trouble themselves.

The city of Paris at present owns about 250 statues and the French state about 50 or 100 more around town in various public places. Many more would be there, of course, if it were not for some political upheavals long ago and, more recently, World War II. In 1941, for instance, the Nazis removed all statues that could be melted for use by the German war machine. Some were saved, but there are still more than 70 empty pedestals scattered around the city.

The Parisian agencies that must approve such things have cleared the way for 20 new statues since the end of World War II, more new ones than even Washington has managed to produce in the same period. But now they are trying to discourage any more. A main reason seems to be they're beginning to cause Garfield-like traffic problems. Public-spirited groups and individuals, however, keep pushing for more and more.

London, too, has more statues and monuments than Washington. Its grand total is over 200, and there is pressure for more. City officials are having trouble getting some of the old ones down to make room. A few years ago a proposal was made to remove James II from in front of the National Gallery. He got a reprieve.

Thus Washington will not find any solutions in Paris or London. Obviously, not enough of the authorities—whether French, British or American—agree with the Roman Senator Cato who once said: "I had rather men should ask why my statue is not set up, than why it is."

Interest and Concern With Respect to Farm Programs—Resolution

EXTENSION OF REMARKS

OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 22, 1961

Mr. YOUNG of North Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the Parshall Chamber of Commerce in Parshall, N. Dak.

I am sure that the interest and concern for farm programs expressed by the

businessmen of Parshall is shared by businessmen in all farming areas. There is a community of interest between businessmen and farmers which is very ably expressed in this resolution.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF THE PARSHALL CHAMBER OF COMMERCE

In a farm county like Mountrail, the boundaries of a community do not stop at the city limits but extend to the entire trade area of that community.

Today's family farmer is a businessman, as such he is as an important and integral part of the business community as the businessman on main street. His problem is main street's problem.

It is to the best self-interest of any community to support such farm programs and policies that will keep our farm family customers on the land and improve and secure their income.

Therefore, the members of the Parshall Chamber of Commerce do hereby declare full support and aid to a farm program that will immediately improve farm family income, permit farmers the freedom to manage their own production and marketing, enable an orderly reduction of food inventories now in storage and thus lessen the burden on taxpayers.

Further, we recommend that other civic and business groups throughout the State publicly declare their support of a modern and constructive farm program that will keep our farm family agriculture sound and prosperous.

Adopted this 15th day of May 1961.

H. D. STEWART, *President.*

Not the Best Time

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1961

Mr. DERWINSKI. Mr. Speaker, the general reaction of the American public to the summit conference between President Kennedy and Soviet tyrant Khrushchev is "Here we go again." Although words of ours are obviously too late, as the President, propelled by the peaceful coexistence addicts of the State Department, prepares to stumble up to the summit, an editorial in Chicago's American, Tuesday, May 16, entitled "Not the Best Time" should have been studied before the fateful decision was made. Even after the die is cast it is still worthy of attention. It follows:

NOT THE BEST TIME

It seems to us a chancy sort of time for President Kennedy to meet Premier Khrushchev.

The United States and Russia are engaged in two intensely volatile discussions at Geneva, Switzerland—the negotiation between the two countries for a permanent discontinuance of nuclear test explosions and the 14 nation conference on the future of Laos.

If the conduct of the United States in either of these meetings displeases Khrushchev—as it is almost certain to do—then Khrushchev certainly is capable of making a meeting with Kennedy the occasion for a screaming denunciation of Kennedy for the aborted Cuban invasion.

Eisenhower submitted to Khrushchev's abuse on the U–2 incident (we have never understood why he didn't just tell Khrushchev to shut up, and then walk out) and we would not like to see another President of the United States humiliated in the same way.

We hope Kennedy, if he has any meeting with Khrushchev, will make it clear in advance that any affront which Khrushchev may offer will be accepted, instantly and vocally, as an affront, and that it will bring the conference to an immediate end.

It is Khrushchev who wants this meeting, and he has good reasons for wanting it now. He has just made fools of the western nations by stalling the Laos cease-fire until he could help the Communist rebels win most of Laos; he has won the acclaim of the world for the first man-in-space rocket shot; and the United States has built up Communist prestige, and shockingly reduced its own, by falling on its face in the bungled attempt to help Cuban insurgents overthrow Castro.

If there is a meeting, it will look to the world like a triumphant Khrushchev receiving, more or less graciously, a chastened Kennedy.

In order to dissipate this impression Kennedy would have to lay down some sharp demands on the part of the West. He could do it, but it might easily produce fresh tensions instead of easing any.

We think this would be an excellent time for President Kennedy to stand fast on his earlier idea that if there is to be a meeting at the summit, it should be approached deliberately, with ample diplomatic preparation. No one in the West has ever gained anything by letting Khrushchev hurry him.

The Civil Defense Issue

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, May 22, 1961

Mr. THURMOND. Mr. President, Col. W. D. Workman, Jr., a distinguished news columnist and author from Columbia, S.C., has written an important news column which I take pleasure in calling to the attention of the Senate. It is entitled "Civil Defense Issue," and was printed in a number of daily newspapers in the Southeast on May 17, 1961. The article stresses the importance of having well-trained Army civil affairs units ready to assist on the homefront in the event of an enemy attack. Colonel Workman points out that we may need to use the civil affairs specialists as "rescue squads" here at home long before we are ready to occupy foreign soil and utilize these specialists to clear battlefields, handle refugee problems, and provide military government in occupied areas.

Mr. President, I ask unanimous consent that this article as printed in the News and Courier of Charleston, S.C., be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CIVIL DEFENSE ISSUE

(By W. D. Workman)

If war is too important to be left to the generals, then civil defense is too important to be left to the civilians.

This is said with all due respect to the hosts of dedicated public servants and volunteer workers who have been, and are now, striving to put muscle into the U.S. civil defense effort. They face a difficult enough job as it is. Were real catastrophe to strike, their task would become impossible.

The demands of prompt recovery from enemy attack in this era of nuclear destruction could not conceivably be met by civilians.

This fact has not yet penetrated the thinking of the Nations' political leaders. But the deadly seriousness of the situation is beginning to be reflected in the public pronouncements of top military men.

Only last month. Gen. George H. Decker, Army Chief of Staff, put in one terse paragraph the new military attitude on the subject:

"The second aspect (the first is air defense) of our effort in continental defense is planning for participation in civil defense. We feel that it is only realistic to plan for such a contingency. Although the Army considers its primary mission to be ready to fight the land war, there is no doubt in my mind that all of the military services will be called upon to make a major contribution to the civilian agencies charged with the recovery effort which would follow a thermonuclear attack on the United States."

The mere fact that General Decker can make such a statement without throwing the Office of Civil and Defense Mobilization into an uproar of injured pride is a sign that progress is being made toward greater realism.

When and if American communities are devastated by enemy action, there will be a compelling and immediate need for disciplined, trained, and uniformed personnel on the scene. White helmets, armbands, and good intentions cannot do the job.

For one thing, the restoration of order amid hosts of uprooted, upset, and badly injured men, women, and children will require more authority than civilians can manifest in such circumstances.

For another, civilians will normally, properly, and inevitably be preoccupied with their own safety and that of their families.

Even more basically, there is the great probability that the destruction wrought on a given community by nuclear attack will either wipe out or badly shatter whatever civil defense organization may exist at that spot. Whoever takes charge will have to come in from some other point—and here again arises the need for trained, mobile forces of the military.

Fortunately, the Army has units which are peculiarly well trained for precisely this sort of emergency. Scattered throughout the Nation are civil affairs units, which consist of officers and men experienced in the various economic and governmental functions necessary to the life of any community, whether at peace or at war.

These units represent military groupings of administrators, police officials, economists, lawyers, engineers, educators, bankers, editors, and other professionally skilled individuals capable of maintaining or restoring community life.

Enlightened national policy should even now begin tailoring the training of such units toward the possibility of employment of the homefront. Units in one area could be pinpointed for a takeover elsewhere if the need arose. A unit at Chicago, for example, could maintain a continuing study of the Cleveland area, so that if Cleveland were hit Civil Affairs personnel could move to the scene promptly with knowledge of the plans for its rehabilitation.

Obviously, if the United States becomes involved in any total struggle, the need for "military government" to(to employ a now-discountenanced but still descriptive phrase) may exist here in this country long before we are ready to occupy foreign soil.

Civil defense is part and parcel of national defense, and these Civil Affairs units—the equivalents of governments in uniform—should look first to their likely role as "rescue squads" at home.

Summary of Remarks by Thad McSandstrom at the Kansas Congressional Breakfast

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1961

Mr. AVERY. Mr. Speaker, on several occasions over the past 2 weeks I have taken exception to the unfavorable references that have been made to the broadcasting industry by responsible persons speaking for this administration. I only wish that every Member of Congress might have had the opportunity to have heard Thad M. Sandstrom, president of the Kansas Association of Broadcasters, speak briefly to the members of the Kansas congressional delegation and to members of the Kansas association at a recent congressional breakfast held in Washington. Perhaps the broadcasting industry in Kansas has established higher criteria than have the broadcasters in other States. I have the impression, however, that the ideals and objectives herein stated by Mr. Sandstrom are fairly representative of the broadcasting industry of the 50 States.

We are all aware that perfection has not been reached by this association or by any other association that performs public service. I do think, however, that there is supportable evidence that the broadcasting industry has been derelict in the public responsibility that has been delegated by the Congress and assumed by the licensees. In support of this point of view I am including in the record the text of Mr. Sandstrom's remarks to the recent congressional breakfast:

SUMMARY OF REMARKS BY THAD M. SANDSTROM, GENERAL MANAGER WIBW AND WIBW–TV, TOPEKA, KANS., PRESIDENT, KANSAS ASSOCIATION OF RADIO BROADCASTERS, AT KANSAS CONGRESSIONAL BREAKFAST, TUESDAY, MAY 9, 1961, WASHINGTON, D.C.

This week, over 3,000 of the Nation's leading broadcasters are in Washington for the annual convention of the National Association of Broadcasters. We have come to Washington with just one purpose in mind, to be better broadcasters. Represented in this room this morning are the leaders of the broadcasting industry in Kansas. It is my firm belief that Kansas is blessed with outstanding radio and television stations operated by men who are dedicated to serving the best interests of the people of Kansas and of our Nation.

All of our Kansas radio and television stations are making a concerted effort to build better news operations. And we need your help in this effort. We hope that you will include our radio and television stations whenever you have an important news release that deals with matters of importance to the people of Kansas or to the people of your district or a particular area. Be sure to send us news releases, either by mail or by telegram or telephone. If possible, send us a film clip for television or a tape recording for radio. We can use them. We want them. We need your help to help us to do a better job. Within the next 2 weeks we will send to each Kansas Congressman and Senator a list of every radio and television station in the State along with the correct mailing address, the telephone number, the name of the station manager, and the name of the head of the news department so that you will have this information for the purpose of sending news information back to the people of the State so we in turn can tell the people in Kansas what you are doing here in Washington. We hope that you will call this list to the attention of your administrative staff.

Yesterday our convention heard a stirring address by the new president of the NAB, the former Governor of Florida, the Honorable Leroy Collins. Governor Collins said that we must make broadcasting a great force in the American way of life. He described broadcasting as the greatest means of mass communication ever known to man. He emphasized that broadcasting must be free of Government control. Governor Collins' address, I am sure, was a tremendous inspiration to every broadcaster, and we are pleased to have this capable man as the leader of our industry.

We are glad to be able to meet with you this morning in this informal atmosphere and have an opportunity to discuss with you some of the problems facing broadcasters today. There is no urgent legislation pertaining to broadcasting now pending in the Congress. A wide variety of bills relating to broadcasting has been introduced. So far, none of these have been a matter of great urgency or concern to the broadcasting industry.

We are concerned about the proposal to permanently amend section 315 of the Communications Act—the equal time amendment. As you know, the presidential debates were made possible by a temporary amendment. It is our hope that this amendment might be made permanent.

Those of us in television are concerned with the legislation recently introduced by the FCC concerning the cable TV systems. We feel that the cable systems should be under the regulation of the Federal Communications Commission and we hope you will support this legislation.

We have all been disturbed, however, by some of the rumblings here in Washington. We have been particularly disturbed by the plan to reorganize some of the Federal agencies and in particular, the Federal Communications Commission. As you know, there have been recommendations that some broad, sweeping administrative powers be given to the FCC Chairman. Now as we Kansas broadcasters interpret this proposal, the changes will take some of the jurisdiction over the Federal agencies away from the Congress and place them in the hands of the White House and the appointed official. We view this as a bad thing; we feel that we might lose our voice—our ability to speak through our elected representatives on matters pertaining to broadcasting if Congress loses any of its jurisdiction over the FCC. We are opposed to these changes and hope that you Kansas Congressmen and Senators will oppose these proposals.

We have also been disturbed by some of the statements by the new Chairman of the Federal Communications Commission, Mr. Minow. We are all anxiously awaiting his feature talk at the NAB Convention at noon today. I don't know what he is likely to say today noon. I have some ideas. After we get through hearing him, it is entirely possible that a lot of us may be back here to see you again this afternoon. He has, however, made some statements which I believe indicate some of his basic thinking. For example, he made the statement recently that "We don't know the stations the way the PTA's, church groups and League of Women Voters do." Now I am sure that the people of Kansas don't want the PTA and the League of Women Voters to decide what kind of programs they hear on radio and see on television.

And so with this background, there are some things that I would like to say to you Congressmen and Senators who are our guests here this morning.

I don't believe the responsible broadcaster has very much to worry about. I think it is high time some of these critics who get up and make these statements about there being nothing but rock and roll on radio and westerns on television be told about some of the positive things we are doing in broadcasting. They need to know about the radio and TV campaign put on in behalf of the United Fund, the campaign for school bond issues and savings bonds, the Kansas Centennial, highway safety, the religious and educational programs and a dozen other projects that every broadcaster supports.

We must be better broadcasters. That is why we are here in Washington for this meeting. We are searching for a better way, a better service, a better program, a better news format, a better technical plant, a better weather service. But we must make our own decisions. I don't believe the citizens of Kansas or the United States want four of seven men appointed to a Federal agency to decide what kind of programs they see on television and hear on radio.

Great strides for self-regulation have been made within the broadcasting industry through the radio code and the television code. I am proud to tell you that Kansas ranks second only to Nebraska among the 50 States in the percentage of radio stations which actively support the radio code of good practice. We do not intend to remain second. Our record is equally good in the television code. Seventy percent of the television stations in Kansas currently participate in the television code.

It seems to me that broadcasters have never faced a stormier future. We are being criticized on every side, by those who know, those who don't know, and those who ought to know better. Kansas broadcasters, indeed the Nations broadcasters, are not second-rate citizens. We have mounted the offensive and we are off the defensive. We must sell broadcasting to those who would hamstring our freedom with more forms to fill out, more questionnaires to answer. We've got to make ourselves felt in all walks of life, we've got to make broadcasting a force for good in America today.

Last week, radio and TV broadcasted one of the most exciting news stories in recent times, in a manner that portrays realism unmatched by the printed word, with the actual sound of the voice of America's astronaut. America had been challenged by the Russian space feat and broadcasting took its place in telling our answer. It was a great risk and the story was told only as a free broadcasting industry can tell it.

We must do more than carry sensational news, we must probe the most vital issues of the day. We must tell how and why, and what America is doing about it.

The time for greatness in broadcasting is at hand, the opportunity has never been greater, and we Kansas broadcasters must and will fulfill our role. We must stimulate thinking on the part of all of our citizens to an awareness of the forces which would destroy our way of life, which creep closer and closer every day. We Kansas broadcasters believe we must use broadcasting as it has never been used before, to stimulate

action by responsible Americans, to stimulate interest by our young people and by all citizens in the American way of doing business.

To you Congressmen and Senators, we bring this basic thought. This is not the time for containment of creativity. Broadcasting means much to millions of Americans. It informs, safeguards, entertains, and sells. It creates the desire to buy. It turns the wheels of business. It creates more of the jobs, more of the factories, more of the desire for something better. It is one of the great moving forces that can lull Americans out of their sense of complacency. It offers hope for the great struggle that lies ahead.

The broadcasting industry has the leadership, has the knowledge, has the skill to do this job, but it cannot be done if we're going to spend our time filling out forms we don't understand, forms which are unrealistic and impractical, forms which are not related to practicalities of broadcasting.

Broadcasting must remain free, free to create and stimulate, expand, and explain. Broadcasting must retain that one basic characteristic which is the secret of our very way of life, freedom to make our own decisions.

Broadcasting must remain free to remain great. Broadcasting must be in the hands of responsible licensees who do a responsible job of serving community, State, and national goals.

Kansas broadcasters have at their disposal a great force for good, the broadcast editorial. More and more Kansas stations are using the editorial tool, clearly labeled, carefully considered, and professionally presented.

The facts are pretty clear. We have a job to do. We are determined to improve our service and make broadcasting an even greater force for good in American life.

It is up to each one of us to operate our stations in such a manner that no one could possibly question our right to hold a license. The challenge is great but I am firmly convinced that broadcasters can and will meet the challenge.

King Zog and Albania

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, May 22, 1961

Mr. SPARKMAN. Mr. President, last month, King Zog I, exiled ruler of Albania, died. Mr. Hugh Grant—now of Augusta, Ga.; formerly of Alabama—an ex-minister of Albania, was a close friend of King Zog. He felt that the King stood for democracy in his little kingdom of Albania and had hopes of being able to bring that country once more into the democratic fold.

On April 10, 1961, in the Augusta, Ga., Chronicle there appeared an Associated Press story telling of the death of King Zog. In the same issue there appears an interview with Mr. Grant. I believe the interview, particularly, will be found interesting, and may serve to recall the ever-continuing fight by some in the interest of regaining Albania for the free world.

I ask unanimous consent that both news items be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

ZOG'S VIRTUES RECALLED—KING'S DEATH SADDENS AUGUSTAN, EX-MINISTER

The death of King Zog I, exiled ruler of Albania, brought sadness to Hugh Grant of Augusta, who was U.S. Minister to Zog's kingdom for 4 years prior to Mussolini's invasion.

Grant met the King in 1935 and remembers him as a real leader and a fine military man.

He believes that many of the colorful stories surrounding Zog originated with the Italians, who wanted to discredit him for political reasons.

CALLED PATRIOTIC

"I found him very intelligent and well informed about political matters in Europe. He was well educated and was one of the most patriotic Albanians I ever met," Grant asserted.

Contrary to many reports, the Augustan said Zog was making progress in Albania and leading his country toward stability.

"If the Fascists hadn't come, he would have ruled Albania successfully," he added.

LAST DAY: APRIL 6, 1939

Still vivid in Grant's memory is the day before Mussolini's invasion of Albania (April 6, 1939) when Zog summoned him to the palace for his last audience with a foreign diplomat.

"The Queen had just had her first baby and Mussolini had just given Zog an ultimatum," Grant related. "He told me about the Italians' demands that he submit and said he was going to resist."

Zog had 15,000 troops in comparison with Mussolini's 50,000.

WOULDN'T SURRENDER

Grant said that Zog knew it would be nothing more than token resistance, but chose to follow that road rather than surrender without a fight.

Queen Geraldine, whose mother was American, was sent to Greece in an automobile before the battle started. Zog left later with his cabinet.

"It was a trying time for him. I believe the Italians selected that particular time, because they knew of the Queen's condition."

CIANO BEST MAN

Grant recalled that Count Ciano, Mussolini's son-in-law, was best man at Zog's wedding in 1938.

"Mrs. Grant and I were present at the wedding. The Queen was a great deal younger than the King, but their fondness for one another was genuine.

"There was Count Ciano as best man, and then a year later he was flying over Tirana in a bomber plane."

SAW THEM IN 1951

Grant did not see Zog or Geraldine again until 1951 when they made their first and only visit to this country.

"Though he never said so in so many words, I think he had hopes of returning to Albania someday and leading the country to independence from the Communists, successors to the fascists," Grant said.

Zog's son, Prince Lika, he added, attended military school in England.

SON TO RETURN?

"It's my impression that King Zog probably looked forward to the time when his son would go back to lead the Albanians."

"His death is very tragic to my wife and myself. Our relations with him were most pleasant. He was a great friend of the United States."

FIGHTING MONARCH NEVER ABDICATED—DEATH CLAIMS KING ZOG OF ALBANIA

PARIS.—King Zog I, a feudal mountain fighter who became the first and last monarch of Albania, died in exile in Foch Hospital in the suburb of Suresnes Sunday. He was 65.

Long in ill health, he entered the hospital a week ago suffering from ulcers and liver trouble.

Although Zog spent the last 22 years in exile he never abdicated the throne he created in 1928.

A member of his entourage said Zog's son, Prince Leka, 22, who was born only three days before the family was forced by Benito Mussolini's Fascist troops to flee Albania in 1939, would succeed to the title. Prince Leka is a student at the British military school at Sandhurst.

A nervous, energetic man irked by exile and inaction, Zog spent his time in recent years in preparing a four-volume story of his life. Handicapped by loss of many of his papers in a bombing raid in England in World War II, he had completed only two volumes.

"My life is an adventure novel," he once said. "I want to write it to explain certain events which were badly interrupted because of a lack of facts."

Zog was born Ahmed Bey Zogu, a member of the rich land-owning family of Zogilli on October 8, 1895, at a time when the 500-year Turkish rule of Albania was tottering.

He attended military school and an academy in Monastir and Constaninople—now Istanbul—and led clansmen of his rugged district of Mati against Balkan troops seeking to partition the country when it became autonomous in 1912.

At the end of World War I he led a band of his men in blocking Yugoslav occupation of the port of Shkoder (Scutari), and the Albanian provisional government rewarded by making him governor of the district. He eventually became premier of the country and then president. Finally, in 1928, the form of government was changed to a monarchy, and Zog was elected the first king.

He survived several assassination attempts and revolts. An aid was killed and another wounded but Zog escaped when two Albanian gunmen took shots at him in Vienna in 1931. In an earlier attempt, when he was interior minister, Zog leaped on his assailant in a corridor in the parliament building, snatched the pistol from his and and beat him with it.

Once, wounded by a would-be assassin, Zog cooly wrapped a handkerchief around his bleeding hand went on into parliament to make a speech.

Zog astutely played off Yugoslavia and Italy against each other. Although Yugoslavia gave him assistance in 1924 when he was temporarily driven from the country by a revolt, he later allied himself with Italy.

Mussolini's army, navy, and air force violated the treaty of alliance on Good Friday, 1939, just before the outbreak of World War II, and made a surprise invasion of the country. Zog's forces could put up only token resistance, and the king, with his wife, four sisters, and baby son, fled to France. The king was reported to have brought with him bags of gold and jewels.

For a time he lived in grand style in a 15-room mansion near Cannes. He got the last boat out of Bordeaux for England when France fell before the German armies.

After the war, when Albania's Communist rulers abolished the monarchy, Zog took up residence in Cairo, but left there in 1955 after a tax dispute with Egyptian authorities and a police raid in which arms were seized in his house.

Taking up residence a second time in France, Zog lived an almost hermit-like existence in a nearly bare villa on the Rivera, never going out and seldom seeing anyone. Most of the servants and aids who had surrounded him were gone, as were the money and the jewels of the royal days.

Queen Geraldine, 20 years his junior, rarely left his side, acting as nurse and companion. The queen is the former Countess Geraldine Apponyi of Hungary, the daughter of the former Gladys Virginia Stewart of a New York banking family.

In 1951, Zog bought a 60-room mansion on Long Island and planned to move to New York. The property remained vacant, however.

Third President Foresaw Troubles

EXTENSION OF REMARKS
OF
HON. JOHN H. ROUSSELOT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. ROUSSELOT. Mr. Speaker, nearly 200 years ago Thomas Jefferson made some comments concerning the Nation's economy which are quite timely today. The essence of his counsel is that we must not allow our national debt to get out of control. The words of this wise man are discussed in an editorial which appeared in the April 26, 1961 issue of the Post Advocate, a newspaper published in Alhambra, Calif. I ask unanimous consent to have the editorial printed in the Appendix of the RECORD:

JEFFERSON'S DEBT WARNING—THIRD PRESIDENT FORESAW TROUBLES

If Thomas Jefferson could return today he well might say, "You did not heed my warning."

In the early days of our struggling Republic, the patriots who moulded and safeguarded our form of Government showed rare insight into human frailties in the way they charted the course for our way of life.

One of these men, Thomas Jefferson, our third President, also must have had the gift of prescience, for he seemed to foresee some of the troubles that now beset his beloved country. This was his warning:

"I place economy among the first and most important virtues and public debt as the greatest of dangers to be feared. To preserve our independence we must not let our leaders load us with perpetual debt. If we run into such debts, we must be taxed in our meat and drink, in our necessities, and in our comforts, in our labor and in our amusements. If we can prevent the Government from wasting the labor of the people, under the pretense of caring for them, they will be happy."

Thomas Jefferson was indeed a wise man. And how true the words he spoke nearly 200 years ago. For today we have in fact the very situation he warned us against.

We have the perpetual debt (more than $350 billion).

We carry a tremendous burden of taxes.

And we have not prevented the Government from wasting the labor of the people, under the pretense of caring for them.

Suppose we operated our personal affairs the way the Government is operated. We would spend far beyond our incomes, then borrow what we could and spend that too. And give not a thought to paying back what we had borrowed. Then would follow disgrace and bankruptcy.

On the other hand, suppose the Government conducted its affairs the way any average successful businessman does. It would begin by estimating what its revenues would be, then hold its spending to below that figure. And it would begin paying off its indebtedness, instead of adding to it every year, as are Government has been doing.

Tax Foundation, Inc., estimates each American family's share of the fiscal 1961 taxes to be collected by Federal, State, and local government at $2,390, up $113 from the previous year. Estimated Government spending will be $2,850 per family, up $100 from fiscal 1960, so the public debt will increase a few more billions.

When will the lavish hands of our public spenders be curbed? When will we all come to realize that, as Thomas Jefferson said, "To preserve our independence we must not let our leaders load us with perpetual debt"?

Future of the Columbia River

EXTENSION OF REMARKS
OF
HON. MAURINE B. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 22, 1961

Mrs. NEUBERGER. Mr. President, the importance of developing the Columbia River for its manifold benefits is the subject of a thoughtful article which has appeared in the April 1961 issue of the American Federationist, official monthly magazine of the American Federation of Labor and Congress of Industrial Organizations. The author of the article, Mr. George Taylor, is an outstanding authority on Columbia River development. I am glad to recommend his article, especially for the background it provides for examining our future course of action in dealing with problems of the Columbia Basin. I ask consent to have printed in the Appendix of the RECORD a portion of the article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

About 5.5 million people live in the Columbia Basin's American area—about 3 percent of the national total, but occupying 6.2 percent of its land area. Nearly two-thirds of the population live west of the Cascade Mountains in an area comprising less than one-fourth of the region's total land. The combined population of Oregon and Washington represents nearly 84 percent of the total for the Pacific Northwest.

Since the days of the fur traders, the region has been a raw materials producer, controlled by absentee corporations. It has long suffered from discriminatory freight rates on finished and other goods shipped in from the East and from the lack of a well-developed market. With a basically lumbering-farming-mining economy, there are marked seasonal fluctuations in employment. A diversified economy would bring with it more industries providing year-round jobs and payrolls.

With the coming of Bonneville and Grand Coulee Dams, the transmission and marketing facilities of the Bonneville Power Administration and the new electroprocessing industries, a new day appeared to be dawning for the Pacific Northwest in the 1940's. After World War II, the electroprocessing industry remained and expanded. By 1948 the region produced nearly one-half of the Nation's primary aluminum, requiring one-fourth of the total energy produced by the Federal Columbia River power system. Demand for power bounded upward, confounding the private utilities and their gloomy predictions of a million kilowatt surplus by 1950.

Between 1940 and 1950 the region's population, mainly in Oregon and Washington, increased 44 percent in contrast to a national increase of only 13 percent. Between 1950 and 1960, however, the combined population of Oregon, Washington, and Idaho rose only 17.3 percent compared to a nationwide increase of 22.3 percent over the same decade. The primary reason for this slowdown has been failure to continue development of the region's greatest industrial asset—cheap electrical energy—to attract more large power-using industry of the kind that came to the region during the 1940's.

Both the Bureau of Reclamation and the U.S. Army Corps of Engineers have been operating in the region for half a century, but until 1949 had never emerged with a joint, comprehensive plan for development of the water resources of the Columbia. Both agencies had published separate and, in some ways, conflicting engineering blueprints—the Bureau in 1946 and the corps in 1948.

The great Columbia River flood of 1949, culminating with the tragic disaster that overtook the city of Vanport, Wash., caused former President Truman to order both agencies to immediately combine their plans. This was done in April 1949. This action was important from the standpoint of the need to prevent damage and loss of life from floods and for the purpose of creating an overall coordinated plan calling for full development of the river's multipurpose potential.

Between 1943 and 1947 no new power starts had been undertaken on the Columbia River system. There continued to be a lack of upstream storage to control the river and provide an integrated system of multipurpose dams which would enhance production of firm power and provide optimum flood control, navigation, and other important benefits.

Although by 1949 McNary, Hungry Horse, and four smaller projects had been started with 4.2 million acre-feet of storage and installed power capacity of 1.5 million kilowatts, the annual report of Bonneville Power Administration for the 6th consecutive year renewed its plea to the executive branch and Congress for affirmation of a policy that will continue to accelerate Federal generation in the Pacific Northwest until power supplies meet existing needs.

The 1949 Army-Bureau joint comprehensive plan for development of the Columbia Basin was designed to bring about the optimum productive use of all the region's resources * * * to aid individual initiative and private business in expanding economic activity * * * to distribute the benefits as widely as possible among the people, communities and industries of the region, and to provide opportunities for better living.

The joint comprehensive plan called for ultimate development of 125 million acre-feet of storage, eliminating all but local flood dangers, about 32 million kilowatts of installed hydropower capacity, 500 miles of inland navigation, and 8 million acres of irrigated land. It proposed development of fish and wildlife, minerals, land and recreational resources.

Additional requirements of the plan were the interconnections of projects and load centers by means of the BPA regional transmission network and coordinated financing, including use of surplus power revenues to aid in financing reimbursable costs of future irrigation projects.

The immediate phase of the comprehensive plan was to be reached between 1960–70 and would provide 27 million acre-feet of upstream storage, 12 million installed hydropower kilowatts for 1960 requirements and enhanced inland water transportation.

The bureau-corps plan had the broad backing of organized labor in the region, as well as other groups—farm, public power,

and business. Labor was particularly aware of the role cheap abundant power had played in bringing in new industries, year-round jobs and a broad tax base.

What has happened to the comprehensive plan? It became a victim of the Eisenhower administration's "partnership" power policy. As part of the partnership, the Eisenhower administration adopted a no-new-starts policy on multipurpose power development projects which was not relaxed until 1960 and which was dented, but not broken, by efforts of Democratic Senators and Congressmen from the Columbia region. Coupled with the no-new-starts policy was a slowdown of construction schedules on dams already being built.

The Dalles Dam was to be completed in 1957; it was not fully in operation until December 1960. Ice Harbor's completion date was August 1958; in actuality, it will be fully producing this year. Three other lower Snake River dams—Lower Monumental, Little Goose, and Lower Granite—were to be in operation in 1961–62 and 1963, respectively; there is no firm schedule for their completion. Two upper Snake projects—Upper and Lower Scriver Creek—were scheduled for 1957 and 1958 completion; they are not even authorized.

Priest Rapids was deauthorized and a two-dam project is currently under construction. This will result in a loss of 2 million acre-feet of storage and cheaper Federal power for industrial expansion. John Day was delayed by the administration under its partnership policy and will not be ready for full production until 1968.

Hells Canyon was a major victim of the dismemberment of the comprehensive plan by the Eisenhower administration. Despite a tremendous fight by organized labor, public power, rural electric cooperatives, and farm groups through the National Hells Canyon Association and liberals in Congress, the Federal Power Commission in 1955 issued a license to Idaho Power Co. for construction of three lesser dams in the reservoir area of High Hells Canyon. The decision was sustained by the U.S. Supreme Court. Legislation to authorize the high dam, after passing the Senate, died in the House Interior Committee in 1958.

Two other major elements of the comprehensive plan are in danger. The great Paradise storage site on the Clark Fork in Montana has been for years threatened by the Montana Power Co.'s application to build two inferior projects at Buffalo Rapids sites which would lose most of the storage and power potential in the same fashion as it was lost at Hells Canyon.

In the great dark gorge of the middle Snake, a momentous struggle is being waged over whether the mighty Nez Perce project or some alternative or alternatives should be constructed and who should do the building. This issue is further complicated by the effect of high dams on migratory salmon fingerlings on their way to the ocean from the tributary spawning beds. The Snake and Salmon Rivers in this area account for a great proportion of the region's annual salmon and steelhead runs. This has involved not only States, publicly and privately owned utilities, and the Federal Government in a confused battle, but it has brought commercial fish interests and conservationists storming into the fray.

The Corps of Army Engineers in its 1948 comprehensive plan proposed the combination of Hells Canyon and Nez Perce for full harnessing of the middle Snake and Salmon Rivers. Because of the fish problem, Hells Canyon was to be constructed immediately and Nez Perce, located downstream from Hells Canyon, ultimately, when further research might result in adequate fish passage facilities for high dams.

In 1953 the Bureau of Reclamation recommended an alternative to Nez Perce to be built at Mountain Sheep site, located a few miles upstream. The Bureau later, however, abandoned a High Mountain Sheep project because of unsatisfactory site conditions and instead emerged with a two-dam plan—a run-of-the-river project at Mountain Sheep, and a medium-sized storage project further up the Snake at Pleasant Valley.

The private utilities thereupon moved into the picture. The Pacific Northwest Power Co., a generating combination composed of four of the largest companies in the region—the Washington Water Power, Pacific Power & Light, Montana Power and Portland General Electric Cos.—applied to the Federal Power Commission in 1955 for a license to construct the Mountain Sheep and Pleasant Valley projects.

Opposition from the National Hells Canyon Association and its major components of organized labor, public power, farm and rural electric cooperatives, once more made itself felt before the FPC.

On January 20, 1958, the Federal Power Commission denied the Pacific Northwest Power Co.'s application for the same basic reasons that it should have used but did not in the Hells Canyon proceedings.

"It is readily apparent * * * that any combination of projects which includes Nez Perce is consistently superior to any combination of projects which does not include Nez Perce," the FPC order said.

There the matter rested until the Corps of Army Engineers, under a directive from the Senate Public Works Committee, issued a revised review report of development of the Columbia in 1958, just 10 years after publication of its historic document.

The corps' major water plan consists of 17 projects. It would by 1985 add 22.5 million acre-feet of usable storage and 3.2 million kilowatts of installed hydropower capacity and be capable, together with the 10.5 million acre-feet of upstream storage now in operation, of controlling a flood of the dimensions of the largest on record.

In addition to power and flood control, the 1958 review plan provided for extension of navigation on the Columbia and Snake Rivers, another 4 million acres of new irrigated land, enhanced recreation, fish and wildlife protection and pollution abatement.

The 1958 major water plan lowers power development sights. The 1948 Army review report called for 12 million kilowatts of Federal power installed by 1970 at the latest. The 1958 review report calls for only 10 million kilowatts installed Federal capacity by 1985 and has scaled down the river's 34 million kilowatt hydropower potential to an ultimate 13.2 million kilowatt practical potential.

If the projects in the major water plan are all constructed, it will be possible to control floods to the size of the greatest on record, which occurred in 1894. This would be the principal achievement. The projects reasonably sure of construction, with one or two exceptions, are higher-cost, lower-volume power producers. Moreover, the corps' future powerload assumptions indicate that the region will in the next few years depend upon higher-cost steam generation, rather than hydro. These two factors would inevitably bring about a substantial increase in regional power rates to all classes of consumers.

The effect of the 1958 review report was to accentuate the divisions between groups supporting Federal multipurpose development since the days of Franklin D. Roosevelt. These divisions had arisen out of 8 years of abandonment of Federal leadership in the region and the rush to non-Federal utilities to fill the vacuum. It also opened the door for another attempt to control lower Hells Canyon by the Pacific Northwest Power Co., which had been turned back at Pleasant Valley by the FPC decision denying its Mountain Sheep-Pleasant Valley license application.

In March 1959, the Pacific Northwest Power Co. applied to the FPC for a license to construct the Army's proposed High Mountain Sheep project. In March 1960, just prior to the Commission's scheduled Washington hearings on the project, the Washington Public Power Supply System, a group of 16 public utility districts, applied for an FPC license to build the Nez Perce project. The Commission consolidated the hearings on both applications, since the two projects are mutually exclusive. The proceedings have been in progress since the fall of 1960.

There is no doubt that the action by the 16 Washington public utility districts, augmented by 40 other municipalities, rural electric cooperatives, and consumer-owned utilities in Oregon, Idaho, and Washington, prevented PNPC from walking away unopposed with a license for a project which would produce much less power and create a smaller storage potential. Power produced under the PNPC proposal would, in all probability, be higher-cost power.

Nez Perce would be ultimately the biggest power dam in the Western Hemisphere, exceeding present installed capacity at Grand Coulee by over a million kilowatts.

The problem of fish is identical at both the High Mountain Sheep and Nez Perce sites, except that the fish run on Salmon River is greater than the fish run above the mouth of the Salmon on the Snake. The public group has earmarked $28 million for upstream and downstream fish passage facilities. PNPC had been unwilling to present its fish passage designs or cost estimates to the Federal Power Commission and only recently agreed reluctantly to do so.

Passage for fish proceeding downstream is the key to the situation, as the main risk has been the destruction of fingerlings caught in the turbines of the dam. Research toward meeting this problem is promising, although still inconclusive.

Of immediate interest to organized labor is the full-scale resumption of the Federal multipurpose water development program on a scale commensurate with the need for its stimulus to the region's economy. The Federal program as it now stands is only what is left of the dams studied, proposed, authorized and constructed during the Roosevelt-Truman administrations. The last of these—John Day—will be completed in 1968. A firm new schedule of dam building is a priority matter.

Nonpower land and water development problems and needs also offer a challenge. Flood control goals must be met before population and industry growth make desirable storage sites economically unfeasible because of added costs of relocation.

Fish and wildlife resources must be husbanded and enhanced. Labor has pointed out that the goal of the region is both fish and power, not a continuation of the frustration of fish versus power. Reservoir areas can foster non-migratory-fish resources, just as adequate fish facilities can preserve and even enchance migratory fish runs. Use of inland water navigation can be quadrupled in a few years if storage to control the river during lowflow stages, plus channel improvements, are included in water development programs needed now.

Range, crop and forest land conservation has suffered during the overshadowing struggle for control of the mighty power storehouse of the Columbia. The vast recreational potential of the region can add hundreds and millions of dollars to the region's economy and enjoyment to millions if it is adequately and rapidly developed.

The present ruinous fight for possession of the great upstream storage sites between the privately and publicly owned utilities must stop. Neither can develop and operate an integrated system of multipurpose proj-

ects. Neither can produce power at costs that will attract industry in large volume to the region. Too many utility groups are already trying to seize the water resources that should be developed according to an overall plan. There are 25 different entities, ranging from the big Federal engineering and construction agencies—the bureau and the corps—to small combinations of rural electric cooperatives.

The situation calls for the Federal Government to reassume the leadership in the great task of harnessing the Columbia and other river systems and to abandon the destructive no-new-starts policy in multipurpose water development programs. It must move toward basic reorganization of Federal resources agencies to eliminate duplication and waste and aim toward the goal of establishing regional development agencies in the Columbia and other river basins, employing the TVA principle of unified administration of land and water resources.

In no area in the land is this kind of approach more necessary than in the Columbia Basin, where 8 years of turning back the conservation clock has resulted in the kind of anarchy on the river that can do irremedial harm not only to the region but to the Nation.

Here's How Bay City, Mich., Is Building Debt-Free Schools

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1961

Mr. CEDERBERG. Mr. Speaker, today one of the principal legislative subjects under discussion is Federal aid to education. Many Members of Congress feel that solving local classroom needs can be done without outside intervention in the majority of instances.

My hometown of Bay City, Mich., is one of the best examples of building debt-free schools at the local level on a pay-as-you-go basis.

In that connection I would recommend that my colleagues read how we in Bay City have accomplished this. The following article appeared in a widely distributed publication entitled "America's Progress Through Voluntary Action":

HERE'S HOW BAY CITY, MICH., IS BUILDING DEBT-FREE SCHOOLS

In 8 of the last 10 years, the people of Bay City, Mich., have built 11 new school buildings—and paid for them with cash on the line.

In the next 4 years, five old schools still in use will be demolished. Their replacements—new, modern structures—will have been paid for when each is finished.

Since 1950, Bay City's two high schools have been vastly improved and expanded. The city's 39-year-old junior college has gotten more facilities. Extra classrooms have been added to a number of the 11 new buildings as need arose. There is no bonded indebtedness.

This remarkable record of a community caring for its own school needs is the result of Bay City's 15-year pay-as-you-build program.

It has meant the spending of $5,781,785—$4,578,019 of that amount for new schools and $1,203,766 for additions and improvements to buildings.

All from local resources. What's even more distinguishing is that fact that 95.2 percent of the total spent came from local taxes. Only 3.3 percent was derived from State matching funds and only 1.5 percent was miscellaneous income, mostly from school-owned property.

What has happened and is happening in the little city of 55,000 population, situated a mile or so up the Saginaw River before it empties into Saginaw Bay on Lake Huron, demonstrates that where there is sound planning and spirited leadership, schools can be financed and built locally with no need of outside intervention.

Foresight preceded planning. The former came during the forties when projections showed a coming 35 percent enrollment increase within a few years.

Ten of Bay City's fifteen elementary schools were from 60 to 75 years old. Most of the buildings constituted fire hazards, were poorly lighted, poorly heated, and generally lacking in facilities demanded for an efficient education program. Many were already overcrowded.

Earlier, proposed bond issues for new buildings failed miserably in two separate elections. Public interest was visibly lacking.

Hurting with need school officials sought out members of the business community in 1944. The Bay City Chamber of Commerce responded, one prominent member becoming chairman of a citizens' committee.

The committee endorsed a relatively modest 2-mill extra tax levy, to run for 5 years, and got busy selling the program to voters of the school district.

VICTORY SCORED

To the surprise of many the proposition was approved. The Bay City Times declared it was because the citizens' committee and its chairman "worked tirelessly in order that every voter become fully and accurately acquainted with every conceivable phase, angle and possibility of the entire program."

The 2-mill levy produced $120,000 annually. What with war-created shortages and building restrictions, no new buildings went up. Some money was spent for urgently needed repairs, certain enlargements were made to the high schools, but the balance of the funds accumulated.

NEEDS STILL UNMET

As 1949 approached, Bay City still faced the prospect of sorely needed new classrooms, in fact, an almost totally new school plant. School board trustees soberly counted the modest amount of money in the till.

One day, early in 1949, the Bay City Chamber of Commerce was asked to call a meeting of business leaders. The request came from the city's newly engaged school superintendent about whom rumors marked as an aggressive, new-idea man with an unstaid approach to education.

The word got out that he and the school board would seek the backing of businessmen for a broad, sweeping and costly new school program. Enroute to the meeting, the business leaders' attitudes ranged from wary to one (the newspaper editor) of disgruntled doubt.

SCOPE OF PROPOSAL

When the proposal was laid before them it called for scrapping of the old elementary, junior and senior high school system and a reorganization into three dimensions: primary, intermediate and high school.

For the new system, the plan proposed the construction of 15 to 19 new community elementary schools, designated "K–4" schools for kindergarten through fourth grade; a number of new intermediate schools to be called "5–8" schools, housing the fifth through eighth grades; additional shops, music rooms, cafeteria, gymnasium and athletic field facilities for the high schools. All to be done in 15 years.

Before the meeting participants caught their breaths, the cost and method of financing the program were thrust forward:

An estimated $3,500,000 "pay-as-you-go" total outlay to be raised through a special 4-mill tax, or from $4 levied annually on each thousand of assessable property valuation.

There was no way of stopping the enrollment rise, the business leaders were told, the pupil load was on an upsurge. In the high schools alone, the 1949 total of 2,515 would burgeon out to 4,200 by 1962.

(This was an accurate forecast. Of Bay City's total school population of 10,718 today, there are 4,198 young people in the high schools).

Convinced of the worth and need of the program, the business leaders assented, going a step farther and naming a 34-member citizens' advisory committee to carry the fight to the people for approval of the 4-mill levy, "K–4; 5–8 Plan."

THE COMMITTEE MOBILIZES

A banker assumed the chairmanship. His lieutenants were merchants, attorneys, manufacturers, ship builders, insurance salesmen, dentists, doctors, food processors and others, named to subcommittees charged with fundraising, publicity, speaking appearances, meeting promotions and other projects.

Restful weekends disappeared for these men. Saturdays became planning session days of the citizens' advisory committee. Donations were sought and $4,000 quickly came in from a number of firms to pay advertising and promotional expense.

On a Sunday morning in May, the Bay City Times announced to the people that the 4-mill levy would be submitted to their vote in little more than a month hence.

The once doubtful newspaper editor turned loose photographers and reporters to daily record fluelike stairwells in firetrap schools, dark classrooms, almost primitive sanitary facilities. The intent was to awaken the people.

SPREADING THE MESSAGE

Meanwhile, businessmen hit a planned public speaking trail, appearing at PTA's, before civic clubs, community groups and over the town's radio station wavelength.

Full page newspaper advertisements, bought and paid for by cooperating business firms, thundered arguments for the "K–4; 5–8 Plan" and for Better Schools for a Better Bay City."

There was special attention given the city's large Catholic and Lutheran population. More than 6,800 children are enrolled in Bay City's parochial schools.

Great stress was laid on the proposed "K–4" schools as a valuable adjunct to each neighborhood, to be made available for community meetings and social events, with facilities open to all. No discernible opposition developed, but instead, support came from spokesmen in the parochial community.

After a full-page election eve advertisement by the citizens' committee exhorted: "It Is Up To You Tomorrow," Bay City's people went to the polls.

A RESOUNDING TRIUMPH

The result was a thumping 3-to-1 majority for 15 years of extra taxes to build schools, the first (a "K–4") going up in 1950–51, and the other 10 coming along at regular intervals.

Rising costs for buildings and equipment have not dented the program. The assessed value of property in Bay City was $65,225,000 when the program was voted, but equalized valuation has caused the base to rise sharply to a present-day total of $161,205,000.

The fortunate Bay City schools' take from the 4-mill levy reached $561,000 last year, a heavy increase over the first year's return from the lower tax base.

Still active and interested in the school system in the best watchdog sense is the

citizens' advisory committee and the Bay City Chamber of Commerce, making certain that there are classrooms, built well and economically, for the growing number of children of the city and in newly developed suburbs.

And all this Bay City has accomplished for its school children despite an economic situation in the area which a Federal Government agency has defined as depressed.

Need for Long Beach Naval Hospital

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. HOSMER. Mr. Speaker, the conferees of both bodies of Congress meet tomorrow on the military construction authorization bill. One of the items in dispute is the Long Beach Naval Hospital. Fortunately a writer with considerable skill has been familiar with the medical needs of the naval service in the area of the proposed hospital for over a quarter of a century. She is Virginia Kelly, wife of a retired naval officer. Her compelling résumé of the acute need to be filled by the proposed construction appeared in a column carried by the Long Beach Press Telegram and other newspapers on May 18. It is as follows:

IF YOU WANT NAVY HOSPITAL HERE, WRITE SENATOR RUSSELL

(By Virginia Kelly)

It would be helpful if active duty and retired service men and their dependents would write immediately to Senator RICHARD RUSSELL, chairman of the Senate Armed Services Committee, requesting him to approve the authorization for construction of the Long Beach Naval Hospital this year.

Letters should be brief and pertinent, setting forth the individual hardships stemming from the lack of a naval hospital in the Long Beach area.

The second ranking Senator in seniority, Senator RUSSELL, Democrat of Georgia, is a man of vast experience and legislative ability. He is a compassionate man, but he is also noted for his thrift. He feels a tremendous responsibility in his capacity as Armed Services Committee chairman for the defense of this country and for the proper allocation of military installations and funds. Senator RUSSELL has told Senator ENGLE that he has an open mind and is willing to hear further arguments on behalf of the hospital.

Throughout the years, legislators of both parties from California have worked together for the hospital in the most exemplary way. These include Representative CRAIG HOSMER, Republican of Long Beach-Lakewood, Representative CLYDE DOYLE, Democrat, and Senator THOMAS KUCHEL, Republican, and Senator CLAIR ENGLE, Democrat, a member of the Armed Services Committee.

Senator RUSSELL and Representative CARL VINSON, chairman of the House Armed Services Committee, and their committees have always been above the taint of political expediency.

Senator RUSSELL's reluctance to approve the hospital this year is based, in part, because he has believed the military services are unwilling to use the hospitals of another service and because he has thought the hospital requirements could be met by the use of available hospital beds in other areas. He also has been critical that the Navy did not protest in 1950 the re-assignment of the Long Beach Naval Hospital to the Veterans Administration.

In 1950, this reporter was one of the persons who entreated the Navy to make a fight for the hospital. The Navy's official position was that to protest an Executive order would be insubordination. Privately, this reporter was told by some that the Defense Secretary had told them to keep quiet.

In the Senate debate May 8, Senator ENGLE stated bluntly that the Navy did not make a good case for the hospital (including their 1950 meek acceptance of the hospital transfer). At Senator ENGLE's insistence recently the Navy's 1961 presentation was rephrased and reemphasized.

During the May 8 debate Senator KUCHEL made a strong case for the Long Beach Naval Hospital which was so felicitously phrased that Senator RUSSELL said it was moving to him and his entire committee.

Both of the California Senators made valiant efforts for the hospital during the debate.

Recently Representative HOSMER urged the Long Beach community to write and wire the Senators on behalf of the hospitals. This was helpful in informing and inspiring the Senators.

In a further presentation of facts over the years, there was a period when the Navy Bureau of Medicine and Surgery did not favor a Long Beach Naval Hospital because they preferred to develop the hospital facilities in San Diego.

Had BuMed and the entire Navy been aggressive throughout the years, a Long Beach Naval Hospital would now be in existence.

For over 25 years, this reporter has been familiar with the Long Beach Navy medical care for dependents. As a young bride I lived in Long Beach when there was no Navy hospital and only minimal outpatient care for dependents. I know what it is to sit for 4 to 6 hours with influenza and a high temperature in a drafty corridor in a Navy clinic awaiting care. I also know what it is to be alone and ill at home without care because there was no hospital and no doctor available for house visits.

During these years also, I was a Navy Relief volunteer worker and knew the tribulations of Navy families.

After the Long Beach Naval Hospital was reassigned in 1950, many retired and active duty military men and their dependents wrote me. At one time, I prepared a sizable file of these letters and sent them to Robert B. Anderson (then Navy Secretary).

Those who have been the greatest sufferers throughout the years have been those most deserving of aid: the ill, the elderly, dependents, widows and orphans of servicemen.

This is in direct violation of the teachings of Christ and—in fact, of the concepts of all civilized persons. For years, this reporter has plucked at the coat sleeves of Defense Secretaries, Navy Secretaries, Navy Surgeons General, Chiefs of Naval Operations, and members of the Armed Services Committees of Congress. It is difficult to penetrate the consciousness of harassed and busy men who are trying to prevent a communistic holocaust and who are striving to stretch dollars when the U.S. budget is in the red.

What is the answer? Never to give up trying, never to be discouraged. Freeborn citizens must always exercise their basic freedom, the right to petition their Congress and the President and his advisers.

While the Long Beach Naval Hospital matter is pending, two other situations need light and heat: the first is equalization of pay of retired personnel in ratio with the pay of active duty officers. Letters to Senator RUSSELL might help.

Secondly, it is imperative that pensions should be properly adjusted for the small and unfortunate group of service widows whose husbands died before there was legislation which enabled military men to transfer some of their pensions to their wives. The poverty of some of these women is pitiable.

No one speaks for them. Everyone has forgotten them. It would be an admirable civic undertaking if the city of Long Beach and its citizens were to work to right this injustice just as groups adopt orphans in Korea and elsewhere.

There are 500 beds needed in this joint service facility and the need therefore has been calculated as follows:

Service	Strength	Beds
Navy and Marine Corps	36,000	[1] 310
Air Force	5,900	[2] 50
Army	3,380	[3] 50
Dependents and retired (all services)	58,000	[4] 90

[1] Bureau of Medicine and Surgery records show 94 per 10,000 servicemen are hospitalized each day. Thus, of 36,000 servicemen, 338 will be hospitalized daily. In the above table this has been reduced to 310 to account for an average of 28 men estimated to be on leave from the hospital during the final recovery stages.

U.S. hospital standards indicate a gross capacity of 402 beds is required for a hospital maintaining an average daily patientload of 310.

[2] Department of Defense has directed Navy to provide 50 beds in this hospital to accommodate March Air Force Base patients in need of specialized care for orthopedics, urology, and major surgery. This is to obviate the necessity to provide such facilities and staffing at March Air Force Base itself.

[3] An obsolete 85-bed Army hospital at Fort MacArthur can be disestablished on the availability of these 50 beds at this joint service facility, effecting a net savings to the Government.

[4] These 90 beds essentially represent the difference between the 310 average daily patientload and the 402-gross-bed capacity (92 rounded off at 90) mentioned in footnote 1. It will, of course, satisfy only a small percentage of total overall dependent and retired hospitalization requirements.

Johnson Campaigns in Southeast Asia

EXTENSION OF REMARKS
OF
HON. CLARK MacGREGOR
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. MacGREGOR. Mr. Speaker, in the 1960 election campaign we heard a great deal about the tremendous need for a new approach in the way the United States carries out its responsibilities in foreign policy. In that connection I would like to recommend to my colleagues the following pertinent article which appeared in the Minneapolis Sunday Tribune of May 21:

JOHNSON CAMPAIGNS IN SOUTHEAST ASIA

(By Robert Hewett)

BANGKOK, THAILAND.—"All the way with LBJ." Disconcerting echoes of last year's familiar campaign slogan kept bobbing up last week in the unlikely atmosphere of Communist-threatened southeast Asia.

Vice President LYNDON B. JOHNSON buzzed by jet plane in and out of four countries in 1 week on what he proclaimed several times daily was "a mission of purpose." It was billed as a factfinding mission.

The trip also was aimed at reassuring America's weak Asian allies, alarmed at the demonstration of U.S. ineptitude in the Lao and Cuban debacles, that the new Kennedy administration still meant to take a firm stand against Communist expansion.

But there have been times in South Vietnam, the Philippines, Formosa, and Thailand when it seemed that tireless, grinning, handshaking JOHNSON was running for office again.

And strange as it may seem at first examination, that is exactly what JOHNSON was doing in such exotic, faraway cities as Saigon, Manila, Taipei and Bangkok. Always a canny man to look ahead in politics, the tall Texan is already running for president in 1968 as Democratic party successor of President Kennedy.

It was very plain to those accompanying the Vice President on his whirlwind tour that he is deadly serious about building up a public image of himself as an international statesman. It is probably natural—involving as it did a man steeped in 30 years of hard, practical American politics—that the tour's frenzied pace and grandiloquent oratory often had more of the aspects of a combined whistlestop campaign and a party convention than of a critical diplomatic mission.

But there is a difference between winning hometown votes by flattering everybody in sight, especially the local political bosses, and presenting a picture of a firm, serious-minded United States involved in a fight for survival not only for ourselves but also for our free world friends and, in a sense, dependents.

JOHNSON's folksy politicking smacked a little too much of artificiality to come off well. And there is the danger that in portraying the flying tour as a huge diplomatic success for American public consumption, JOHNSON will be deluding himself as well as lulling the American people into a false sense of security.

It would be unfair to the Vice President to give the impression that his every action was motivated by building up personal political stature. He is a hard-working patriot with a keen awareness of the growing Communist menace in southeast Asia and elsewhere. His schedule and the commitments he could make were laid down by the State Department and by President Kennedy.

But having said that, it must be emphasized that the southeast Asian tour—now being followed by courtesy calls in India and Pakistan—did not accomplish nearly as much as the claims made in JOHNSON's speeches, communiques and "background briefings."

Under the circumstances any dramatic results could not be expected. A start has been made at restoring anti-Communist morale among our uneasy Asian friends. Deeds, not words, will determine whether communism continues to gain in southeast Asia and the main effort must be made by the Asians themselves.

Despite all the talk of mutual friendship and defense, there is very real danger that Thai leaders may choose a path of "neutralism" because they fear the United States will be as ineffective in helping combat communism in their country as in neighboring Laos.

Filipino leaders, America's closest friends in the Orient, also are worried. In South Vietnam autocratic President Ngo Dinh Diem got what he has been seeking for more than a year—more economic aid and more money for a larger army.

It remains to be seen whether he puts through much-needed internal reforms to popularize his Government, and Johnson certainly got carried away by his own oratory when he compared Diem to George Washington, Abraham Lincoln, and Winston Churchill.

Johnson paid the same sort of public adulation to Gen. Chiang Kai-shek in Formosa and, on behalf of the Kennedy administration, pledged as much or more support than Chiang got from the Eisenhower administration.

The cheering receptions for JOHNSON in South Vietnam and Formosa—complete with banners and friendship slogans—were Government mobilized demonstrations. And it is doubtful that JOHNSON's determined lessons in handshaking and crowds, aimed at showing Diem and Chiang how to conduct American style politicking, will have much effect on getting those two aloof personalities closer to the masses.

In Thailand JOHNSON's own person-to-person program proved to be pretty much of a flop. Thai officials gave him a cool, correct welcome and JOHNSON's few efforts to shake hands with roadside bystanders were met mainly with bewilderment.

Photos may look good in American newspapers. But Vice President JOHNSON won't have much encouraging news from his factfinding mission to report to President Kennedy.

Federal Aid to Education

EXTENSION OF REMARKS
OF

HON. J. ERNEST WHARTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1961

Mr. WHARTON. Mr. Speaker, I have consistently felt that the subject of education could best be continued solely at the State level and I am very pleased to note that the majority of the informed correspondents from my district seem to agree. During last fall's campaign, this issue was clearly drawn with my opponent, who strongly favored all proposals of the New Frontier, including Federal aid. At that time, the segregation issue was apparent but religion and private schools had not yet been injected into the discussion. The matter of the constitutionality of aid to private schools will no doubt be passed upon by the judicial branch of the Government, in due course. However, the argument that Federal aid will not result in the Federal control of education has obviously fallen by the wayside even before the program has left the ground. Such recent developments have confirmed my original suspicions and I feel that these are but a few of the many problems that are bound to arise at the Washington level.

Another question in my mind is just what does constitute "aid," as none of the current proposals provides for an equal return on New York State's contribution to the program; in fact, one of the formulas shows that our residents will pay as much as $2.90 in Federal taxes to get back $1. I regret that considerable confusion exists as to just who is supposed to benefit from such "aid."

Whenever such subjects arise in connection with Federal legislation, my respect for the Founding Fathers and the Constitution is renewed, and I am again impressed by the fact that certain issues may properly be handled in Washington while others belong at the local fevel. Education is one of the latter, and in my opinion, our several States are entirely capable of handling the situation as the occasion may arise.

One of my informed constituents has very ably commented in the following manner:

R. D. 11, KERR ROAD,
Rhinebeck, N.Y., May 16, 1961.

The fallacious phrase "separation of church and state," regarding Federal aid to education is realized. This erroneous interpretation of the Constitution and first amendment is a political gimmick. An argument over religion and aid to nonpublic schools overcasts the true aspects of Kennedy's Federal aid bill.

We now look at the education bill in its true form. Americans do not want Federal aid. Why? Since 1945, we have built 550,000 classrooms costing approximately $19 billion; practically all of it raised by townships, towns, and cities. This provided accommodations for over 15 million pupils while the increase during that same period was only 10 million. During the 1950's, our school population increased by 38 percent, while our cash expenditure for education increased by 124 percent. We have proved that without Federal help we have the ability and willingness to build needed schools. Further, present census figures show the rate of increase or new pupils will begin to drop by 1965. "The pressure of growth upon schools," states the Chamber of Commerce of the United States, "will be far less heavy in the 1960's than it was in the past 10 years."

Who wants Federal aid? The National Education Association, one of the most potent lobbies in Washington, and other influential groups such as the AFL–CIO and bureaucrats in the Federal Department of Health Education and Welfare. Many Members of Congress are politically indebted to these groups. We have reached a disastrous situation in which unscrupulous individuals and greedy politicians are using our educational system for personal gains. These pro-Federal aid groups have flooded us with school shortage and insufficient teachers and salaries propaganda for so long that we are inclined to agree if we do not inform ourselves with the truth. One example of NEA's propaganda: NEA and the Kennedy administration have us believe we desperately need more teachers and much better pay for them. The truth is, teachers' salaries paid by localities and States have nearly doubled—up 99.8 percent during the past 10 years. Also, the number of teachers has increased by 47.6 percent in the past 10 years, while the school enrollment has increased only 44.9 percent.

Since there is no comparable lobby to check adverse statements and to defend the taxpayer, it is extremely difficult for us to arrive at the truth. It is evident, however, that we can no longer have a passive interest in the affairs of our local, State, and Federal Government. When unethical practices, political gimmicks, and personal gain enter our country's educational system a national chaos results. Our American educational system is the criteria for maintaining our country's democracy and heritage.

We must read all pamphlets and newspapers, covering every aspect of the proposed Federal aid to education. Once establishing the truth of this matter, it is our duty as able citizens to relay the facts to our neighbors and spokesmen of our community, State, and Nation. Will our Government be of the people, by the people, and for the people; or of, by, and for a handful of powerful bureaucrats?

Sincerely,

MRS. NEIL R. MANSFIELD.

J.F.K. Faces Devastating Dilemma

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose an editorial by Roscoe Drummond which appeared in the Sioux City (Iowa) Journal, of May 17, 1961:

CIVIL RIGHTS VERSUS THE SOUTH—J.F.K. FACES DEVASTATING DILEMMA

(By Roscoe Drummond)

The sweeping new civil rights bills, introduced in Congress by two leading Democrats, Representative EMANUEL CELLER, of New York, and Senator JOSEPH S. CLARK, of Pennsylvania, confront the Kennedy administration with a delicate and perhaps, a devastating dilemma.

If President Kennedy fails to give this new civil rights legislation strong support at this session of Congress he will be abandoning specific pledges of the campaign and party platform. He will also be pulling the rug from under the two Members of Congress he appointed to act for him.

If the Kennedy administration does put its full weight behind the six new civil rights bills, then the President runs the risk that he will destroy the carefully contrived operation of the White House to win more and more southern Democratic support for the Kennedy program. Without this gain in Southern support, much of Mr. Kennedy's legislative program would be in limbo today.

Thus it will take fantastically delicate maneuvering for the President to avert the most devastating consequences.

Take the House vote on the minimum wage law, which in the end gave the President almost exactly what he asked. It was 230 to 196. Without the votes of 32 out of 99 Southern Democrats, the President's bill would have lost.

From several Southern States the White House even got a majority of the delegations: 5 of 9 members from Alabama, 5 of 9 from Tennessee, 8 of 12 from North Carolina, 5 of 8 from Louisiana.

The President knows full well that if the White House puts its prestige and power behind the Clark-Celler civil rights bills, this southern support would drop radically—almost certainly below the point absolutely needed for administration success.

The reason is that the Clark-Celler bills add greatly to the powers of the Federal Government to enforce civil rights.

It would seem to me that the only freedom of maneuver open to Mr. Kennedy is timing. He would like to delay civil rights legislation until next year, while Attorney General Kennedy sees what headway he can make by rigorous endorsement of present laws.

In order to measure Mr. Kennedy's problem let's take a look at two questions he has to answer. How committed is the President to the Clark-Celler bills?

In the campaign Senator Kennedy pledged civil rights bills which "will implement the pledges of the Democratic platform."

The Clark-Celler bills accomplish this end. In introducing them, CLARK and CELLER are carrying out their assignment by Mr. Kennedy after the Los Angeles convention to draft and introduce the bills.

They have done so in response to Mr. Kennedy's September 1, 1960 statement that "we will seek the enactment" of these bills "early" in the next Congress.

But when the bills were introduced in Congress this week, there was no visible support from the White House. The Associated Press reported Senator CLARK and Representative CELLER as "not attempting to explain President Kennedy's silence."

The President's silence is explained by the fact that he needs every single vote among the Southern Democrats he can get. Very little of his program would be law today without this increased southern support. The rest of his program will have little chance of becoming law unless this support keeps up.

Editorial Support for Tax Exemptions or Tax Credits for Educational Expenses

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. SCHWENGEL. Mr. Speaker, last week I introduced three bills to approve either an increased exemption or a tax credit for college expenses.

There is considerable support for this approach in the area I represent as evidenced by two editorials which were in spontaneous response to the introduction of these bills.

Under leave to extend my remarks, I ask that the editorial from the Cedar Rapids (Iowa) Gazette, "Best Kind of Federal Aid," and the one from the Washington (Iowa) Evening Journal, "SCHWENGEL Offers a Workable Plan on Education," be printed in the Appendix of the RECORD:

BEST KIND OF FEDERAL AID

Congressman FRED SCHWENGEL of Iowa's First District has renewed his fight for the best kind of Federal aid to education possible—if Congress would only enact it. We are talking about laws which would permit those who are financing college educations for children or wards to deduct legitimate expenses for this purpose when filling out Federal income tax returns.

Representative SCHWENGEL has introduced again three bills designed to give the folks at home some tax relief along this line. One bill would increase personal exemption from $600 to $1,000 for each full-time student, taxpayer, spouse of dependent paying college expenses. The others would authorize tax credit for certain educational expenses including tuition, fees, charges and required textbooks, as well as board, lodging, and transportation.

We have long been an advocate of this type of aid as the best kind the Federal Government could offer. It meets all the requirements that might be established for an aid program. Moreover, it has a built-in answer for the church-state problem at the national level since each taxpayer could claim credit for college expenses no matter where his son, daughter or ward attended college.

Finally, the money would go farther for it wouldn't have to go through the shrinkage process of being sent to Washington and appropriated by Congress to be doled out formula-wise as concocted by that branch of Government.

This is so simple that probably it has little chance for acceptance by Congress—at least not until the home folk make their voices heard by letting Congress know that it's not so simple that the fellow who's paying the college expenses—and, not so incidentally, the congressional salaries as well—can't understand it.

SCHWENGEL OFFERS A WORKABLE PLAN ON EDUCATION

Congressman FRED SCHWENGEL is trying to secure an increased income tax exemption for college educational expenses. His proposals have been introduced in Congress and are the result of long study by his own research team at the State University of Iowa.

The Congressman would authorize tax credits for educational expenses. He would provide a credit of $1,000 for each full-time student. There would also be credits for tuition, fees, required textbooks, board, lodging, and transportation—in fact, all the essential college costs that the student or his parents must meet.

SCHWENGEL says he believes this is a far better answer to the educational problem than the administration proposals for various types of Federal aid. Ask the parents of any college student and you will likely get a report that the costs call for heavy financial sacrifice. Tax credits for those who face up to this problem should prove helpful and popular.

Greater Boston Young Republican Club Opposes Federal Aid for Education

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. CURTIS of Massachusetts. Mr. Speaker, in an extension of my remarks, I include a resolution of the Greater Boston Young Republican Club as follows:

At its regular monthly meeting on May 8, the Greater Boston Young Republican Club, considered to be the second largest east of the Mississippi, with a dues-paying membership of over 600, adopted a resolution placing the club on record as unalterably opposed to Federal financial aid for school construction, teachers' salaries, or general public education.

This resolution stating strong opposition to any form of general "Federal Aid to Education" was passed after a lengthy discussion by a 2-to-1 vote. The resolution in full follows:

"Whereas Federal aid to schools is inconsistent with both our time-honored tradition of State and local responsibility for education and the spirit of the Constitution; and

"Whereas no conclusive proof has been presented that any emergency exists in the area of classroom construction, the 68,000 current annual locally financed classroom construction rate exceeding the projected 61,000 annual classroom need; and

"Whereas the main problem in education today is one of quality, rather than quantity, which cannot be solved by Federal financial aid; and

"Whereas the Federal Government with debt and accrued liabilities of $750 billion is much less able to finance whatever additional educational expenditures may be necessary than are State and local governments with a combined debt of $62 billion; and

"Whereas it is inevitable, based on past Federal aid formulas, that Massachusetts

will receive back less than half the tax dollars sent to Washington to finance any Federal aid to education plan, which difference the taxpayers of Massachusetts can ill afford to donate to other States;

"We, therefore, being mindful of the inevitable connection between subsidization and control, are unalterably opposed to Federal financial aid for school construction, teachers' salaries, or general public education."

Big Business—That's Cars

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. RABAUT. Mr. Speaker, a new angle considering the relationship of automobiles to people in the United States was brought forcibly to the attention of the readers of the Detroit Free Press in an article written by Fred Olmsted, the automotive writer for that paper. The article follows:

WORLD OF WHEELS—BIG BUSINESS—THAT'S CARS

(By Fred Olmsted)

If you wanted to move the 7.7 million people out of New York's five boroughs (for example, if somebody started pushbuttoning a war), you would have to load an average of 5.9 persons in each of the 1,316,665 available cars.

In Los Angeles County, you could put everybody in the front seat. For with 1.7 million less population than New York, Los Angeles County has nearly twice as many cars (2.5 million versus New York's 1.3). The average: 2.4 persons per car.

In Denver, the fleeing residents would rattle around with only 1.9 per car, lowest concentration among the counties with a quarter-million or more population.

Wayne County, too, could transport its 2.6 million without using the rear seats. Its 955,497 cars figure out to an average of 2.8 persons per car.

Places like Gary, Ind., Louisville, Ky., Cincinnati, Syracuse, and Newark would have 3.1 persons in each car, which is the national average.

This dispersal of cars is shown in the 1961 issue of Automotive Facts and Figures, a fascinating compilation of the Automobile Manufacturers Association.

Some other intriguing items:

Fifty-four percent of U.S. cars are 5 years old or more. The average truck is 7.6 years old. (Which ought to mean a whale of a new market for both.)

Fifty-two percent of auto-driver trips are to work or for shopping, nearly 15 percent are for social-recreation purposes.

Fifty-seven percent of all cars on the road have automatic transmissions.

In the 50 largest cities, 48,094 taxicab licenses were issued in 1959. Biggest total, New York, 11,870. Detroit, 1,308.

And if you think there are a lot of other drivers to complain about on the road, you're right. As of 1959, the total of car, truck, and bus drivers was nearly 84.5 million, up nearly 3 million from the year before.

Incidentally, the AMA is fond of citing such figures as these:

Twenty-two percent of all retail sales in the United States are automotive. This amounts to $45 billion.

Automotive retail, wholesale, and connected service business receipts top $93 billion, or 18 percent of all such business activity in the country.

One business in six is automotive and 10.5 million persons are employed in highway transportation business.

For the first time, more than 75 percent of the Nation's families own at least one car, 13.4 percent own more than one.

Motor vehicle registrations reached a new high of 73,897,000, with 61,569,000 cars and 12,328,000 trucks and buses.

These vehicles traveled a record 720 billion miles in 1960.

In 1960, another first was chalked up: For the first time (with the aid of the compacts) more than a million station wagons were sold in 1960. This is seven time as many as in 1950.

Altogether, factory sales in 1960 included 6,674,796 cars and 1,194,271 trucks. This total of 7,869,271 was second only to 1955. Their combined value: $14.4 billion.

In achieving this, the industry bought nearly $6 billion worth of goods produced by other industries, in addition to huge quantities of steel, rubber, leather, and other raw materials.

Motor vehicle tax collections were at an alltime high of $10.6 billion. Federal excise taxes totaled $4.5 billion. Special truck taxes were $3 billion.

The AMA figures that taxes eat up 26 cents of every dollar of the delivered prices on a new car.

But perhaps the top statistic: The industry has turned out 185 million motor vehicles since 1900, or better than one for every man, woman, and child now populating the United States.

Teacher Gap Being Closed?

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. DERWINSKI. Mr. Speaker, we will soon struggle with the Federal aid to education proposals and will be faced with the usual perverted logic that is used by the proponents of these inconsistent and impractical proposals. Before the Congress is pressured into blindly accepting the false propaganda of the forces supporting Federal aid to education, it might be well for the Members to study an editorial of Friday, May 12, in the Chicago Daily News. I respectfully submit it for the RECORD for the enlightenment of my colleagues:

TEACHER GAP BEING CLOSED?

The evidence continues to mount that the much-publicized teacher shortage will be overcome within the old-fashioned rules of supply and demand. Short supply and heavy demand have forced salaries upward and otherwise improved the status of teaching as a profession.

One straw in the wind is a survey made at Northwestern University showing that no less than 41 percent of this year's graduates who have made up their minds about a career are choosing teaching. Engineering came in second.

The figures indicate a 4-percent gain in teaching preference in 1 year, and seem to intensify an upward trend already noted. Even among the men students, 22 percent of those who are decided say they will go into teaching.

The high birth rate insures a big demand for teachers for a long time to come. Few careers offer more in the way of security and stability. Present starting salaries averaging about $4,800 a year—earned in 10 months or less—are higher than women graduates can expect in any other field.

Northwestern's director of placement, Dr. Frank S. Endicott, has added one more statistic as a clincher. NU graduates who go into teaching, his study proved, get married at the same rate as those who choose other careers. The old libels about old-maid schoolteachers are as outdated as the hoop skirt.

When that news gets around, added to the other inducements now being offered teachers, we can confidently expect the teacher shortage to go the way of the missile gap.

Sante Fe Trail Caravan

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the second installment of reports being sent to me by Mr. and Mrs. Dick Janes, who are the acting official reporters for the Santa Fe Trail Caravan, presently making its way across the great expanse of western Kansas as part of the Kansas centennial celebration. The first report was in the RECORD of May 17, when the caravan was on the trail heading toward Lyons, Kans. Now, the caravan has covered more territory, and this report takes up from Lyons to Sublette:

SANTA FE TRAIL CARAVAN

Here we are in Lyons, Kans. This area was sought by Francisco de Coronado in 1541. A 30-foot granite cross stands west of Lyons as a monument to Juan de Padilla, a follower of Coronado, who was killed by the Indians in this area. Both men are represented in this caravan parade.

A horse-drawn surrey represented by Susan Magaffin and Josiah Gregg was the entry from Ellinwood, our next stop. After the parade we found the townspeople had done something a little different. Most of the merchants had brought their wares out on the sidewalks and they were having a sidewalk bazaar. There were such items as cowboy shirts, centennial souvenirs, etc.

The first leg of our journey was coming to a close as we arrived in Great Bend for the weekend. The parade here was one of the longest and drew the largest crowd yet. A covered wagon representing Fort Zarah was Great Bend's entry in the parade. The fort is one of the five still found along the old Santa Fe Trail. We were afraid we were in for a terrible weekend, with storm warnings out for a couple of hours. But, despite the warning, the Santa Fe Trail Rodeo went on as scheduled. One of the caravan members, Buddy Heaton, was featured as one of the clowns. All in all it was a very nice rodeo with some of the top animals and cowboys appearing.

After a horribly cold and windy weekend we awoke to a bright, sunny Monday morning. It was such a refreshing sight to look out on the rolling plains of Kansas. After a hearty breakfast we were on our way to Larned, the sight of Fort Larned. En route the caravan ran into an Indian Raid at Pawnee Rock. Indians swarmed down on us from every direction. It looked like the Indians would overcome us, but even in this modern age the caravans were quick to defend themselves and soon won out. We made a quick departure for Fort Larned. This fort is supposed to be the only intact fort left in the Old West. In the caravan the fort is represented by a covered wagon drawn by mules.

When we arrived at Fort Larned, movies were taken of the Cavalry unit from Mission, Kans., and of General Custer, portrayed by Dave Gastman, from the State of Oregon. A delicious lunch was served to us on the green in the center of the fort. After that we toured the buildings and museum.

The "Cow Town" of the Old West was our next stop along the Santa Fe Trail. The Boot Hill Stagecoach is the unit which represents Dodge City in the caravan. Dodge City presented many tourist attractions which kept us busy most of the evening—Front Street, Boot Hill, Beeson's Museum, etc.

Another cold and windy morning greeted us today as we prepared to move out for Sublette, Kans. Traveling across the plains we really felt like the pioneers as we looked out and could see nothing for miles but a lonely tree bending with the wind. Grove Vicker represented a St. Louis fur-trader, William Sublette, who was the first man to take a wagon across the Rocky Mountains.

Satanta, Kans., is our next stop. It's named after Chief Satanta, most dreaded Chief of the Kiowa Nation. Of interest in Satanta is the Indian Teepee Museum, which houses Indian relics found in this area.

Comdr. Alan B. Shepard, Jr., U.S. Navy, Should Be Permitted To Wear His Uniform

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. HOSMER. Mr. Speaker, this Nation should be and, I believe, is proud of its men and women in uniform. There is no doubt that the members of our armed services are proud of their uniforms. They should be allowed to wear them, as detailed in the following article by Columnist Virginia Kelly from the Long Beach Independent-Press-Telegram:

MANY CURIOUS OVER WHY ASTRONAUT DID NOT WEAR UNIFORM
(By Virginia Kelly)

America's astronaut episode was an unforgettable affair. And here is one of the things about it which some persons cannot forget:

Comdr. Alan B. Shepard, Jr., U.S. Navy, the astronaut, did not wear uniform while he was in Washington.

Many of the general public (as well as the military) were astonished and disappointed that he was in civilian dress when he was decorated by our Commander in Chief, President Kennedy, at the White House. Before they came to Washington, Commander Shepard's parents, Colonel Shepard, USAR, retired, and Mrs. Shepard said they hoped their son would wear his uniform.

President Kennedy gave Commander Shepard only the NASA Distinguished Service Medal. The President did not award the Distinguished Service Medal (of the armed services) which was also on his desk.

The Secretary of the Navy John B. Connally and the Chief of Naval Operations Adm. Arleigh Burke told this reporter tersely that they do not know why Commander Shepard was not in uniform.

A National Aeronautics and Space Administration spokesman said it was a NASA decision in line with deemphasis on the military because NASA is a civilian agency. The policy was made originally during the tenure of NASA Administrator Dr. T. Keith Glennan and is still the policy of the present Administrator, James E. Webb.

NASA states that the space effort is a national effort. NASA also takes the view that the astronauts (who are from the Navy, Marine Corps and Air Force) are regarded as 'engineering test pilots—the same as civilians." Why then were civilians not chosen? NASA admits that no civilians could be found who met the rigid standards it set.

Military selectivity, training, and lifetime discipline have contributed much to the astronauts—all from the Armed Forces—who meet the standards of technical qualifications, superiority of mind and body, moral character, bravery, and spirit.

There seems to be a strange philosophy among some people in this country: that it is not quite nice to be a military man or to wear a uniform.

Commander Shepard took his Naval Academy class ring with him on his historic flight. This proves his devotion to the Navy. All of the services are equal, however, and Americans will be just as joyous when Marine or Air Force astronauts fly. The Army has such a small pool of pilots that they have no astronauts so far.

President Kennedy has said we are in grave danger. It would be well for him to examine NASA's viewpoint which is not helping the morale of the armed services, which are our shield in time of national peril.

Every effort is being made to keep career men in military service. Incentives of pay, extra medical care for dependents, and the unusual privilege of allowing dependents abroad in great numbers have been offered without significant success. It is amazing that the President and the Congress do not see—what the youngest enlisted man knows by instinct—that the greatest incentive to the military is the love and respect of their fellow citizens of the United States of America. Instead of underplaying esprit de corps, every effort should be made to encourage the proper pride of brave military men.

The Critical Decisions of the Next 2 Weeks

EXTENSION OF REMARKS
OF
HON. CLARK MacGREGOR
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. MACGREGOR. Mr. Speaker, the drifting of U.S. international policy during the past 100 days has become cause for increasing alarm all over the Nation. I believe there is a strong and growing feeling that hard decisions must be made and must be made soon. I believe the public will support these decisions. And for a well-expressed summary of the critical time which lies just ahead I recommend the following which appeared in the New York Times of Friday, May 19:

THE CRITICAL DECISIONS OF THE NEXT 2 WEEKS
(By James Reston)

WASHINGTON, MAY 18.—For the moment everybody in Washington seems to be rushing off in all directions doing precisely what they originally said they wouldn't do.

The President, who said he was determined to decide what he wanted to negotiate before he went on the summit circuit, is now negotiating with the great men before deciding what he wants to negotiate.

The Vice President, who is an expert on domestic policy, is running all over southeast Asia negotiating foreign policy and making promises which Kennedy is probably not going to be able to keep.

The Secretary of State, Dean Rusk, who came to Washington 3 months ago determined to stay home and run the State Department and be the principal adviser to the President on foreign policy, is now doing neither.

And even the Washington Senators, who were supposed to lose to everybody, have won five in a row, including two from the Yankees.

In due course, all this will settle down: the Senators will descend into the cellar where they belong, and the natural intelligence of the Government will assert itself, but for the time everybody is restless and even a little quarrelsome.

President Kennedy apparently realizes this, and is finally planning to go to the country in an attempt to give a sense of direction and priority to his programs. This will be done before he goes to Paris at the end of the month to see President de Gaulle, and what he decides between now and then will therefore be of considerable importance.

His letter to Alicia Patterson, editor and publisher of Newsday, illustrates the problem. "Each time we make any move or commitment in foreign affairs," he said in that letter, "I am in need of the support of the American people, their understanding, their patience, their willingness to endure setbacks and risks and hardships in order that this country can regain leadership and initiative."

As a generalization, this is all right, but while there is quite a lot of patience in the country, there is very little understanding, because on the major question of the nation's strategy in the cold war, it is not clear what the President is asking.

He is asking for support but not telling what the country is expected to support. Is it being asked to block every move of the Communists into every area right up against and close to the Communist borders: in Laos, in the rest of southeast Asia, and in Iran? Or is it being asked to reconsider the assumptions of the past and defend areas that are more defensible?

Nobody knows the answer to these fundamental questions. Vice President JOHNSON has been scattering promises generously in Vietnam, the Philippines, and Formosa, but every time he makes another pronouncement, many of his associates in the Government wince, not because they all disagree with the policy of defending southeast Asia, but because they know that no careful decision has been made here about what can and should be done about the defense of these areas close to the Communist borders.

This uncertainty at the top of the Government is now being reflected in the criticism of the press. Because it is widely known or believed here that the administra-

tion has not decided on its strategy of what can and what cannot be defended, the press is engaged in a kind of campaign to persuade the Government to do this or do that.

Henry Luce is publicizing the hard line and glorifying intervention as a noble principle. Walter Lippmann is arguing for a reappraisal of past commitments and for detachment from what he regards as untenable entanglements.

Elsewhere, the old clichés and fighting words of past debates are beginning to appear. Thus those who do not think it wise to try to defend everything everywhere are being labeled as appeasers and isolationists and pacifists, while on the other side those who want to be bold are being condemned as warmongers.

Obviously, there is very little future in such a dialog. Everybody agrees here on one thing: that the present trend of policy has to be changed. They all agree, too, that any policy involves serious risks, and they are all waiting to see what lead the President will give to cut through the current fog and confusion.

The trouble is that the Government has been speaking before deciding, and promising more than they have to give, and acting without a set of priorities. The next 2 weeks will provide an opportunity to correct this, and what the President decides will be important, for nothing is more dangerous in the alliance at the moment than an ill-considered conference with De Gaulle, and nothing worse in the cold war than an ill-prepared talk with Khrushchev.

Kings Point: Fifth Academy Molds Sailors for Commerce

EXTENSION OF REMARKS

OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1961

Mr. BECKER. Mr. Speaker, for many, many years, Kings Point has been a landmark in Long Island, training the young men of that whole area for careers in the merchant marine. The youngsters in my congressional district vie for the honor of appointment to this most excellent Academy, and fortunately are well represented there.

I think the recent article appearing in the Navy Times under date of May 13 will be of particular interest to my colleagues in the House as well as the public generally. I have asked that it appear intact in the RECORD today.

The article follows:

KINGS POINT: FIFTH ACADEMY MOLDS SAILORS FOR COMMERCE

KINGS POINT, N.Y.—The U.S. Merchant Marine Academy is one of five Federal academies. The others are the Military Academy, Naval Academy, Air Force Academy, and Coast Guard Academy. The Merchant Marine Academy—or Kings Point—is, like its counterparts, a national institution, military in character, and an accredited, 4-year, degree-granting college.

Kings Point prepares selected young men to become officers in the U.S. Merchant Marine, and qualifies them at the same time for commissions as ensigns in the Naval Reserve. Entrance requirements are similar to those of the other Federal academies.

The U.S. Merchant Marine Cadet Corps was established in 1938, and construction of the Academy began at Kings Point in January 1942. Upon completion of the facilities it was officially dedicated in September 1943.

In September 1945 the present 4-year course replaced the accelerated wartime training program. The Academy became an accredited college in 1949 and was authorized by Congress to award bachelor of science degrees to its graduates. Congress made the Academy a permanent institution on February 20, 1956.

Rear Adm. Gordon McLintock, USMS, a ships' master from the age of 24 and a member of the U.S. Naval Reserve since 1928 is the superintendent of the Academy.

It was under Admiral McLintock's supervision that the Academy has been nationally accredited.

The Navy is represented at Kings Point by the Department of Naval Science and the Chaplains' Office.

Comdr. Zaven Mukhalian, USN, also himself graduated from Kings Point before entering the Navy, is head of the naval science department. Six officer instructors and six chief petty officer instructors imparted knowledge to the Kings Pointers in the fields of naval orientation, history, gunnery, operations, administration, law, and leadership.

Navy chaplains are stationed at Kings Point. Comdr. John Danielsen, USN, is the Protestant chaplain; Lt. Giles Morrill, USN, is the Catholic chaplain who has come aboard to replace Comdr. Mark P. Sullivan, assigned to the just-commissioned carrier *Kitty Hawk*. Father Morrill recently completed a tour of duty at Guam.

An important decision confronts the new fourth classman as he arrives at Kings Point for the first time. Shall he chose to be a deck or engineering officer—to aim at being the master of a ship or a chief engineer. Some know, but for others special counseling is available.

The deck and engineering curricula, both require the study of general education courses, along with professional and technical subjects. The successful completion of the course of study leads to the degree of bachelor of science.

The faculty at Kings Point differs quite a bit from some colleges or universities. In addition to their academic degrees, many of the staff have marine licenses—some as masters or mates, some as chief engineers or assistant engineers.

The engineering department will also train future crews of the nuclear ship *Savannah*. The latest in equipment and teaching techniques can be found at Kings Point. This also holds true for nautical science and the other departments that comprise the staff of the Academy.

The Academy occupies 65 acres on the north shore of Long Island, N.Y., overlooking Long Island Sound. The landscaped grounds, with its 38 buildings and marine facilities, is centered upon the former Walter P. Chrysler estate. The Chrysler mansion, renamed Wiley Hall, serves today as the main administration building. Since all other buildings—residence halls, academic halls, mess, hospital, and gymnasium—were built from a single master plan, it was possible to maintain a pleasing uniformity of architectural style throughout * * * with the result that Kings Point is said to be one of the most beautiful campuses in the Nation.

Kings Point residence halls are divided into rooms accommodating two cadets each and, like all Academy facilities, bear the names of leaders and heroes in American maritime history. One additional building, the Merchant Marine Memorial Chapel, has been erected on a site overlooking the sound.

The average enrollment at Kings Point is 725. In addition, about 225 cadets are training at sea during the second year of their Academy program.

The entering student learns first that his title is "cadet," and that during his fourth class (freshman) year, he will have the additional title of "plebe." As a cadet, he wears a uniform similar to that worn by midshipmen at Annapolis and is subject to military discipline.

Cadets are organized into a regiment, which is subdivided into three battalions of two companies each. Each is under the command of cadet officers, with supervision by U.S. Maritime Service officers.

It is this regimental life which represents the greatest departure from life on the campus of a civilian college or university. It is, however, an integral and necessary part of the cadet's training as a career officer, since the efficiency and safety of ships at sea depend as much upon the discipline and leadership of their officers as upon their technical competence.

To instill this high degree of military discipline and training in the courtesies of the service, a system of "class rates" operates within the Kings Point Regiment. As a fourth classman, the plebe finds he has many duties and few privileges. His prospects improve, however, as he progresses upward—especially when he becomes a first classman (senior) and is eligible for appointment as a cadet officer with command or staff functions. As a first classman he also bears the major responsibility for maintaining the standards and traditions of the Academy and for passing them on to succeeding classes.

The cadet will also find an athletic program that is second to none here at Kings Point. The big sport is football, but the Academy fields teams in all major sports and is a member of leading athletic associations.

Baseball, basketball, soccer, sailing, swimming, wrestling, tennis, track, cross country, rifle, and pistol are the varsity sports.

In addition, an excellent intramural program includes every sport on the intercollegiate schedule, plus boxing, rowing, handball, volleyball, softball, table tennis, and pocket billiards.

Comdr. James W. Liebertz, director of athletics, commenting on the intercollegiate and intramural sports programs, said, "It is our purpose to provide for the future officers of the U.S. Merchant Marine, activities that teach self-discipline and self-control, develop morale and mold character in the tradition of American individualism and build sound minds and bodies through mental and physical coordination."

The Kings Point motto is "Acta Non Verba"—deeds, not words. The motto is reflected in the emphasis which Academy training places upon the actual operation of the tools of the mariner's profession. Much time is spent in the laboratory and shop, putting classroom theory into practice.

In consequence, an outstanding feature of Kings Point is the variety of equipment provided for instruction. The laboratories aim at simulating actual working conditions aboard ship—with the types of devices used on those ships.

Even the location of Kings Point tends to broaden its facilities. It is conveniently near the vast port of New York, which provides a giant "classroom" in which cadets see marine equipment manufactured and observe the operation of terminal facilities.

The seven seas themselves are classrooms for Kings Pointers. During their second year of study, they sail in one or more merchant vessels for practical experience as cadet officers.

Following graduation, about 10 percent of the Kings Pointers go on active Navy duty, the other 90 percent receive their inactive commissions in the Naval Reserve and sail as third officers or third engineers.

Men of the merchant marine—Kings Pointers prominent among them—find broad

horizons of adventure in the technological advances of this age. In addition to atomic propulsion for vessels, they are involved in the development and staffing of huge supertankers and recordbreaking passenger liners; in revolutionizing ship navigation and stability; in expediting new cargo-handling techniques.

KINGS POINT DEDICATES CHAPEL

KINGS POINT, N.Y.—An interfaith chapel was dedicated here May 1 to the memory of all U.S. merchant seamen who have lost their lives in the service of their country.

A message from President John F. Kennedy was read at the ceremonies.

The chapel will be used by the cadets at the Merchant Marine Academy here. The $660,000 for its construction was given by members and friends of the merchant marine.

Did You Hear About Farmer Joe?

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. SHORT. Mr. Speaker, one of my constituents in North Dakota put together the following thoughts which point up the extent of the use farmers are making of products imported from foreign countries.

While this is prepared in a humorous vein, practically everything brought out by Mr. E. N. Dornacker is true. Mr. Dornacker was in Washington with a group of people from North Dakota to testify at the hearings being held in connection with the extension of the Sugar Act. To these people who would like to grow more sugar beets, the fact that the United States has been importing about half the sugar we consume is a little difficult to understand.

Mr. Speaker, I ask unanimous consent that Mr. Dornacker's statement "Did You Hear About Farmer Joe?" be included with my remarks in the Appendix of the RECORD:

Did you hear about Farmer Joe—
Who rolled out of bed in the morning, looked at his Swiss watch,
He pulled on a pair of boots made in Japan,
Went downstairs—turned on his Japanese transistor radio,
Poured himself an eye opener from a bottle of Scotch whisky,
Filled the coffee pot with coffee grown in Brazil,
Fried a piece of Danish ham in a German skillet, put two spoons of sugar grown in Cuba on his breakfast food?
Went outside—
Filled his tractor made in England with gas imported from the Middle East,
Filled the fertilizer attachment with Canadian fertilizer,
Took a pinch of Copenhagen snuff,
Opened a bag of Canadian selkirk seed wheat—only to be stopped by the rural mail carrier who drove up in a Volkswagen to give him a special delivery letter from his son. He opened it and read:

DEAR DAD: The factory where I work is still only working every other week. I cannot make both ends meet, even with unemployment check. Wire $50.

GEORGE.

Don't blame Farmer Joe—He did not buy a single one of these things until some American businessman convinced him the imported product was cheaper and just as good.

Be American, buy American, sell American, we all will be happier in the long run.

Patriotism, Valor, Fidelity, or Pay Promotion Benefits?

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following article appeared in the May number of the National Guardsman, New York edition.

Chaplain Timothy S. Healy, S.J., has put his finger on a very disturbing trait that has taken on tremendous proportions in our national and personal life.

This trait is that everything has to be measured and evaluated by the dollar sign and the materialistic yardsticks of pensions, retirement, insurance, and every possible kind of security. These are the inducements that are now being held out as bait to our fighting men.

Mr. Speaker, these things are not enough. There must be something beyond security that we can hold out to the defenders of our country.

PATRIOTISM, VALOR, FIDELITY, OR PAY PROMOTION BENEFITS?—HAS THE ARMY MISDIRECTED ITS SALES PITCH FOR PROSPECTIVE YOUNG OFFICERS? ASKS AN EDUCATOR AND NATIONAL GUARD CHAPLAIN

(By Chaplain (Capt.) Timothy S. Healy, S.J., director of alumni relations, Fordham University)

(Both in his role as chaplain of New York's 102d Engineer Battalion and as director of alumni relations and assistant professor of English literature at Fordham University, Chaplain Healy is in constant contact with the young men who will be the lieutenants and captains of tomorrow's Army. In this thoughtful treatise, he wonders aloud whether the Army's officer recruitment literature is aimed at the kind of man it wants.)

"Through good fortune and the grace of God, I was chosen a leader * * * an honor which meant more to me than any of you will ever know. When you remember me in your prayers, pray that I be given the strength, character, and courage to lead these magnificent Americans."

Thus, in a few simple but moving words written not long before he was killed in battle in Italy, an American captain gave expression to the spirit of selflessness which is the hallmark of the military officer. The words, written by Capt. Henry T. Waskow to his family, are an eloquent tribute to the thousands of other American military leaders, great and small, who must have uttered a similar prayer many times as they prepared to lead their troops into battle.

Captain Waskow's words prove, too, that the qualities of devotion and dedication are not the especial province of the professional military man, because the captain, later immortalized in Ernie Pyle's "Brave Men," was a part-time soldier, a National Guardsman, and member of Texas 36th Infantry Division.

Most of all, though, his simple sincerity gives assurance that American military officers willingly accept the great responsibilities and heavy sacrifices which their position entails.

Why, then, must our efforts to recruit young officers be concentrated so exclusively on good pay, big benefits, and personal prestige? Why can't the literature we use, the sales talks we give these young men, openly and unashamedly cite the greatest reward of all, the satisfaction they'll get by serving their country?

Let's look, for example, at a book issued last year by the Army titled "Take Command," which seems to typify the officer procurement approach. Although it is only one piece of literature in hundreds, and has the single narrow objective of enticing college ROTC students into full-time Army careers, its shortcomings are symptomatic of the weaknesses which pervade nearly all our officer recruiting efforts, for full-time or part-time careers.

MADISON AVENUE INFLUENCE STRONG

As an example of the adman's and printer's art, "Take Command" is more than up to snuff. Its layout is excellent, its art work is good, the text clear, simple, and direct. Externally, the book is superior. It's in what it says that it, and most other officer recruiting literature, leaves so much to be desired.

It presents a distorted picture of the rewards of military service; the reasons advanced for accepting a position of military leadership are an insult to most prospective young officers; and if it has any success at all, it most likely will draw into the Armed Forces precisely the type of young men they want least.

Since World War II, it has become evident to all our services that they must recruit widely and well in our colleges and universities. Only in this way will they be able to make up the difference between the number of new officers our service academies provide and the large numbers needed to staff our Active and Reserve Forces. Properly tapped, the colleges of America can go a long way toward filling the needs of both components.

"Take Command" begins with some general ideas on leadership. It outlines what it calls the roots of leadership, listing such characteristics as intelligence, character, alertness, self-confidence, pride in self. There is no doubt that all these are necessary to the leader, but one wonders if a certain amount of devotion could not have been mentioned. And does not a military leader find also that courage, and self-sacrifice, are part and parcel of his job? Must the only pride be "pride in self," or cannot a second lieutenant—or lieutenant general—also have pride in the uniform he wears, in the traditions of his unit, and in the men who serve under him? Madison Avenue not only has produced the book, it has written it as well.

Listen to the reasons listed, presumably in what the Army believes to be the order of their importance, which might sway a college student toward the military as a career. Heading the list is pay. Then in quick order come promotion, schooling, career guidance, athletics, travel, family life, housing, social life, retirement benefits, security, finally, a brief description of the various branches of the Army.

HOW ABOUT SERVICE AND SACRIFICE?

Is this all we wish to discuss with prospective young officers? Seldom do we mention, in our efforts to attract high-caliber young officers, that service in the Armed Forces is a service rendered to the United States of America. (One exception can be found in "Take Command," in the three-line description of the Chaplain's Corps—but are our chaplains the only ones who should feel that services to their country is worth their time?) Rarely do we touch on the fact that today the Armed Forces have attained a significance in our national life which they never enjoyed before; that the wearing of

the uniform should be as much a matter of pride at home as it too frequently has been one of arrogance abroad.

One wonders if it would not be wise, too, to remind these future junior officers that those who live by the sword may someday be called upon to die by it. It may be our good fortune never again to hear a shot fired in anger, but it seems a vast misreading of undergraduate intelligence to suppose that college students are unaware of the disagreeable opposite possibility. It is also a sharp commentary on what we seem to expect of our officers to presuppose that the possibility of combat may not even be mentioned until they're a "member of the family."

Finally, one waits in vain to hear even a single mention of the sacrifices an officer must make; by the careerist, a permanent home, uninterrupted schooling for his children, his own comfort; by the guardsman or reservist, time devoted to duty which he otherwise could spend with his family, personal effort and expense for which he receives no recompense and, like the careerist, personal comfort and ofttimes personal safety. No mention is made of some of the officer's proudest traditions: that the bars, or stars, he wears on his shoulders are a mark of responsibility and not of privilege; that he is always the last to be served since his primary responsibility is to look after his men; that he never asks a man to perform a duty he wouldn't do himself.

It's not necessary to paint the life of the military leader as one of nothing but hardship, sacrifice, and danger. But neither should we withhold from prospective young officers the knowledge that their intelligence, courage, steadfastness, and devotion frequently will be challenged and that the compensations for their achievements will amount to more than mere pay, promotion, and PX privileges.

Attempt to analyse the thinking behind our officer procurement programs and you reach the conclusion that the Armed Forces employ the best Madison Avenue advertising techniques to persuade college students that military service is exactly like a career in any large commercial organization, only more so. Bigger and better benefits are promised, but underneath lies the same basic orientation.

SUGAR VERSUS VINEGAR

It is just possible, of course, that the staffs responsible for officer procurement feel that this is the only practical approach to today's college population. Perhaps before the admen were let loose to write the lines, it was decided that the only way to procure a steady stream of officers was to lure them in with sugar—and save the vinegar until later.

Certainly it is difficult for those of us who grew up during the depression and lived through World War II to understand the generation that means Korea when they say "the war." Personally, though, I don't see much evidence that this generation of kids is very much worse than the one that fought World War II.

They are at worst a mixed lot but at their best, they are good—perhaps a long sight better than we ever were.

Nor are there any signs whatsoever that the idealism, enthusiasm, and basic generosity of the young has deserted them. They are no more afraid of deep personal commitment than we were—in fact, they're less so. And nothing says that this commitment cannot be made in the service of their country, specifically in its Armed Forces.

They have a resistance to the sound of "Gung-ho," but the resistance is to the sound and fury, not to the substance; it's to the Hollywood idea of prettied-up service, sacrifice, and death, not to the root reality of sacrifice for what they believe. And far more than any generation before them, they have been forced to clarify their belief in the American dream and in its significance for the future of human life on this planet as we have known it for some 2,000 years. The doubts that beset us in the 1930's no longer are doubts for them. The air is clear—they are young—the challenges lie all about them, even in the conservative areas of military life.

Yet all we can think to talk about to them is pay, promotion, recreation and security.

Whatever type of commission the college graduate accepts—Regular, National Guard, or Reserve—will contain three key words which might well be submitted to the men who lay down our recruiting guidelines. As they reread those words, perhaps they will be startled, even a little bit frightened, but enormously proud, just as will the new officers reading them for the first time, at realizing that the words apply to themselves.

"Reposing special trust," the commission reads, "in the patriotism, valor, fidelity and ability of * * *."

Why are we in this mid-20th century so afraid to speak of patriotism? Why do we flinch from the implication of the word valor? Why have we forgotten the lonely but stanch fidelity of thousands of young Americans in the Pacific, the Ardennes, or along the 38th parallel? Do we think that the qualities of American greatness have disappeared in so short a time?

In some corner of the Pentagon, there still must be copies of "The Crisis." Would it be too much to hope that, inspired by its message, the staffs of our Armed Forces might be persuaded to send the ad men back to the patriotic sunshine of Madison Avenue and see if somewhere in the 50 States we cannot find another Thomas Paine to point the way for us?

A Risky Tax Proposal

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1961

Mr. BYRNES of Wisconsin. Mr. Speaker, the New York Herald Tribune for May 18, 1961, contains a signed commentary by the business and financial editor of the paper, Mr. Donald I. Rogers, which is titled "Tax on U.S. Firms Abroad Is Risky." Mr. Rogers discusses the proposal in the administration's tax message which would attempt to impose a U.S. tax on a foreign corporation to the extent that corporation happens to have American investors.

The column points out that the present principal proponents of the administration's recommended changes in the area of taxation of foreign income, Messrs. Dillon and Surrey, had previously argued against the change they now advocate.

In his well reasoned commentary Mr. Rogers indicates that the Treasury Department in seeking to gain revenue to the extent of $250 million will run the risk of subjecting American enterprise abroad to retaliatory actions on the part of foreign countries.

Mr. Rogers also points out the great stake that our American economy has in exports to foreign countries and the adverse effect the administration's tax changes could have on those exports.

Mr. Rogers concludes by observing that this tax proposal is difficult to "reconcile" with our endeavor to expand U.S. exports and to encourage investment in underdeveloped countries. Mr. Rogers raises the interesting question as to whether it is desirable to let private enterprise operate abroad, "Or is it better to tax money away from Americans and give it to foreign countries?"

Mr. Speaker, as a part of my remarks I will include the article from the New York Herald Tribune to which I have referred:

TAX ON U.S. FIRMS ABROAD IS RISKY

(By Donald I. Rogers)

Administration proposals now before Congress to impose U.S. tax sovereignty on other nations, even "developed" countries of the free world, must confuse foreign governments as much as they do American businessmen. Certainly the taxing of American-owned properties in foreign countries is contrary to long-established policy and in effect it violates our tax conventions with our friends among the industrialized nations.

Moreover, it would seem to me, such a program of taxation would damage our export trade and destroy our reputation for living up to our economic commitments abroad.

Whether this Nation has the right to reach across borders of other countries to tax income earned abroad, including that retained for long-range reinvestment in those other countries, is something Congress will have to decide. The administration thinks it's a proper thing to do, for it proposes taxing all income earned abroad by American interests.

As a matter of international ethics, the United States cannot change the rules on private foreign investment without either dishonoring its commitments or undertaking to persuade the industrialized nations to change their rules along with us. This they are not likely to do, just to enrich our Treasury by some $250,000,000 annually at the expense of their own internal tax revenues.

DILLON'S STAND IN 1958

It seems hard to believe that the Treasury is behind these proposals, for its Secretary Douglas Dillon, when he was Under-Secretary of State for Economic Affairs, said, in 1958:

"Over the past 3 years there has been a total of about a billion dollars a year of U.S. profits abroad reinvested in those countries. Certainly, if we want to further stimulate that, one means is possible, and which should be explored is some form of broadened deferral of taxation on income until such time as it is returned to the United States; in other words, allow it, as long as it is being used in the country where the profit is being made, or in another foreign country, to remain abroad, and that would obviously stimulate the incentive for companies to leave their profits abroad for a longer length of time."

Well, has the time now come when we don't want to further stimulate the reinvestment of profits abroad? If it was advisable in 1958 it is advisable in 1961, isn't it? Or is it better to tax money away from Americans and give it to foreign countries?

Stanley Surrey, the former Harvard law professor, who was appointed (over numerous protests) as the Treasury's new tax policymaker, in testimony before the House Ways and Means Committee's Subcommittee on Foreign Trade Policy, in 1958, was asked, "Should we, continue this foreign tax deferral?" He responded, "Yes; most of our foreign business is conducted that way."

Well, if it was conducted that way in 1958, isn't is conducted that way now?

There are now almost 10,000 U.S. subsidiaries operating abroad. In addition there are thousands of U.S. individuals who hold private portfolio investments abroad.

The book value of U.S. direct long-term private investment abroad was estimated in 1957 (latest reportable year) to be about $25 billion and that of portfolio investment about $8 billion. At that time it was estimated that about $1,500 million a year was being retained and reinvested abroad out of the earnings of all U.S. private investment.

Anybody want to make up that difference out of foreign aid gifts?

In that same year the Commerce Department estimated the value of exports from the United States to U.S.-direct investment enterprises abroad (and that excludes trading companies) was about $2,600 million. That was $1,100 million more than the total income retained and re-invested abroad.

Taxes always confuse me, but it seems to me that if we tax this income we will be reducing our exports, or, if we maintain our exports, we will be forced to finance them by exporting more capital, which is something the administration is trying to avoid.

I can't quite reconcile this, either, with the proposal from Commerce Secretary Luther H. Hodges that the United States offer guarantees to American investors in the less developed countries protecting them against foreign governments' seizures of their plants or funds.

Doesn't this boil down to the passing of one law to make it possible for the less responsible nations to confiscate American property, while at the same time we pass a law to penalize the more responsible nations which have attracted private American investments?

Foreign Polls: Murrow Agrees With Ike

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. SCHWENGEL. Mr. Speaker, during the last campaign we heard a lot about America's prestige, or lack of same, or loss of same, whatever was most convenient for the Democratic presidential candidate to latch onto for the moment.

Since the inauguration, however, not much has been said about this matter which was so vital during the campaign. Perhaps what has happened to America's prestige in the last few months has had some bearing on this strange silence. Or, maybe, it was not an issue anyway. Maybe it was just something you throw into a campaign to make political capital of, and then forget.

At any rate, the Kennedy administration spokesmen now agree with what President Eisenhower was saying about the famous prestige polls when he declined to release them. As a case in point, I offer an editorial from the Davenport (Iowa), Daily Times, "Foreign Polls: Murrow Agrees With Ike":

FOREIGN POLLS: MURROW AGREES WITH IKE

American prestige has skidded to lowest ebb in history and the Kennedy administration has decided to abandon the polls abroad about which Mr. Kennedy raised such a hubbub in his campaign.

Edward R. Murrow, Kennedy appointee as head of the U.S. Information Agency, has decided such polls are "inaccurate * * * and of little use to the Government."

As a candidate, President Kennedy made these polls one of his major issues, insisting that they showed U.S. standing in Europeans' opinion was farthest down the scale it had ever been.

He demanded that the polls be disclosed. Senator J. WILLIAM FULBRIGHT, Arkansas Democrat, chairman of the Foreign Relations Committee, got into the act with a request to President Eisenhower to reveal them. Mr. Eisenhower declined on the ground that the polls were of no real value. Democrats, following Kennedy's lead, tried to blow up the refusal to an issue of principal importance.

Now Murrow has fully confirmed Mr. Eisenhower's view. No request was made for an appropriation. The amount granted last year was $150,000.

Representative FRANK BOW, Ohio Republican, questioned Murrow sharply as to the reason for dropping the polls in a closed-door meeting of the House Appropriations Committee.

"Is the Kennedy administration worried about its prestige abroad?" asked Bow.

"The polls are being discontinued," said Murrow. "We found they had little depth. Some were inaccurate and of little use to the Government."

Bow served notice on Democratic members of the committee that if his exchange was deleted from the transcript of the proceedings, he would denounce such action on the floor of the House.

This instance provides an interesting revelation of how soon the Kennedy administration discovered the Eisenhower administration was correct in a position which prior to election had been bitterly denounced.

Our American Way of Life

EXTENSION OF REMARKS
OF
HON. BOB CASEY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. CASEY. Mr. Speaker, these are days filled with crises and change. Alien doctrines and godless ideologies threaten what so many of us lightly term "our American way of life."

To defend ourselves from those who would destroy us—we must first know and understand what we are trying to preserve.

In these trying times, it is gratifying to me to find that some of our people are aware of this need to know and understand our heritage, and the threat that is posed to our Constitution and our Republic. I am proud that within my district, one such group is the Houston Chapter of the Women's Council of the National Association of Real Estate Boards.

Each year, this group sponsors an essay contest among the students of 20 Houston high schools. The topic this year: The Constitution of the United States of America—How Can We Preserve It and Our Constitutional Republic?

Four outstanding students won the awards from the many entries:

Diane Young, of Mount Carmel High School, won first prize; Marsha Goren, of Bellaire High School, second prize; Daniel H. Johnston, Jr., of St. Thomas High School, third prize; and Melanie Lewis, of Bellaire High School, fourth prize.

It is in the hands of youngsters such as these that the fate of our Nation rests, and in my opinion, it rests securely.

I cannot commend too highly the action taken by the Houston Chapter, Women's Council of NAREB, or the loyalty and patriotism the members have shown through the years. Our community owes a deep debt of gratitude to the members, and to their president, Ruth Cozad Landon.

I am proud to submit for the attention of my colleagues, the essay chosen as the most outsatnding by the judges of the contest by Diane Young, Mount Carmel High School:

It was a typical day. Joe Smith, average American businessman, strode across the street and into the bar. He had had a hard day at the office and he needed a few moments of relaxation before he headed home. Slinging his coat over the nearest stool, he leaned over the counter, smiled wearily, and said to Vic, typical bartender, "The usual, Vic."

On the stool at his right sat Mike Miller, average American citizen, expounding his favorite subject—What's wrong with the government. He shouted vehemently, "Those guys in Washington are a bunch of crooks. All we ever do is pay taxes. Boy, that burns me up. They don't even know what they're doing. It's just a race to see who can put through the most expensive programs, the Democrats or the Republicans." On and on he raved until someone yelled, "Look Mike, if you're so worked up about it, why don't you go to Washington?"

In the mind of Joe Smith, average American businessman, wheels were turning. Every day he became more and more aware of the problems in American government. And today listening to Mike, he began to think about it more and more.

Joe Smith doesn't know it but he isn't the only one who is thinking about this problem. Millions of Americans are beginning to worry about their government. They are wondering if it has gone too far.

Joe Smith's daughter is an average American teenager. As she sat in her civics class yesterday and listened to her teacher's discussion of the constitutional checks and balances and the separation of powers between State and Federal Government, she began to wonder, "What's happened to the Constitution? Why isn't the separation of powers still in force?"

Other teenagers in other classrooms are thinking the same thing. They are wondering about the purpose of government. They are wondering how much power it should have.

One hundred and seventy-four years ago, a group of men sat together and built a nation. It was a unique nation, the first of its kind. It recognized several basic principles—first, that every man was a son of God with certain God-given rights; second, that for the benefit of the people, a government should be established with certain delegated powers; and third, that this government should be restrained against its natural tendency to expand, by means of a constitution.

With these principles in mind, the constitutional republic of the United States of America was formed. These men that formed this nation had tasted the bitter oppression of absolute power. They knew that throughout history government has proved to be the chief instrument for thwarting man's liberty. Thus they established the

Constitution to limit the functions of government and assign to it only those powers which are necessary and which are conducive to individual freedom. In this spirit they formed America and gave it to us, their offspring. But these men were not visionaries. They knew that the Constitution, no matter how well constructed or how carefully worded to cope with imperfect nature of man, would be no match for men who were determined to disregard it. They were aware that each of our rights brings with it added responsibilities.

When asked by an inquiring woman, what the Constitutional Convention had given the people, Benjamin Franklin replied, "We have given you a Republic—If you can keep it."

It is a typical day. People all over the United States are wondering, "Have we kept it? Do we still have our Republic? Or are we drifting along the road toward the chaos of socialism?"

Bill Porter, average American lawyer has made up his mind. He thinks that we have not kept our Republic, that the system of constitutional restraints has fallen into disrepair. He points out that the Federal Government has moved into almost every field of American life, that the powers of the States and the individuals are dwindling day by day. He asserts that inside the Federal Government both the executive and judicial branches have roamed far outside their constitutional boundary lines. He tells those who argue with him that the more the Federal Government interferes in American life, the more control it will have over its individuals. Bill Porter doesn't want to exist for the State. He wants to stand on his own two feet. He thinks we should observe the Constitution.

Fred Baker is another American. Hopefully, he isn't too typical. Fred says that we live in a progressive world. He thinks the Constitution is old hat. To him, the modern inventions such as the jet, the television, the atom bomb, have made this a new world that needs a new rule of law. Fred's favorite saying is "What's in it for me?" All he can get from government is what Fred wants. Socialism seems like a pretty good idea to him. "After all," he says, "the Constitution was written a long time ago. It's outdated now."

Poor Fred Baker is sadly confused. He has forgotten that although material things and mechanical devices change from year to year, spiritual truths and basic principles remain the same.

All people are different. Joe Smith, his daughter, Mike Miller, Bill Porter, Fred Baker, no two are alike. Yet each, in one way or another has realized the trend; the trend toward centralization of power in the hands of a few, the trend away from the Constitution and the constitutional republic.

Some of them realize, some of them don't, that America can be killed by Americans just as easily as by anyone else. Our defense against the internal dangers should be just as strong as our defense against our external foes.

Some of them know, some of them don't, that they can save America. A few of them know, most of them don't, how they can save America.

Bill Porter knows that we should enforce the Constitution but he doesn't know that it won't be enforced until thousands of average Americans like him decide to put the man in office who is pledged to enforce the Constitution and restore the Republic.

Mike Miller knows that there are many things wrong with the Government. Unfortunately he doesn't know that he can help to correct them if he will stop talking and start acting.

Joe Smith's daughter thinks that the Federal Government has too much power. But she doesn't realize that she can help the situation by writing to the people who make the laws and making them aware of the proper functions of government.

Joe Smith knows that a problem exists but he doesn't realize that unless he understands it thoroughly he can't begin to solve it. He doesn't realize that by learning more about his country and by telling others about it, he can be a power force for the good of the Nation.

All these people know that we have drifted away from the Constitution. They realize that the trend is increasing. There is, however, an important fact that they are not aware of. Our Constitution and constitutional Republic can be preserved if each of us will affirm—that we have a Republic—and we can keep it.

Lattimore Again

EXTENSION OF REMARKS
OF
HON. JOHN M. ASHBROOK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. ASHBROOK. Mr. Speaker, last week on the floor of the House, I brought to the attention of the Members information concerning a concerted effort to bring about a compromising position with Cuban totalitarian Communists and at the same time included material which indicated an impending recognition of another Red satellite, Outer Mongolia. The Cincinnati Enquirer, on Sunday, May 14, published a very interesting article concerning Outer Mongolia which I am including after my remarks.

It is apparent to me that the architects of agrarian reform in China and those like Owen Lattimore who have in the past demonstrated a strange color blindness are once more having their day in court. It is inconscionable that we should be adapting our American foreign policy to fantastic hopes in dealing with the ruthless Communist bloc. The thoughts that we should recognize Outer Mongolia because it will encourage diversity in the Communist block or give us a listening post there are absurd. Let me add further that if men like Owen Lattimore are to be our listening post in Outer Mongolia then we should be on the alert at once since their color blindness may be matched by an impairment of hearing. The article follows:

MEMO TELLS STORY—MONGOLIA POLICY DATES TO 1956

(By Alice Widener)

NEW YORK.—Owen Lattimore is about to celebrate his great day of triumph. The State Department is planning diplomatic recognition of Lattimore's pet political protege, the Soviet satellite People's Mongolian Republic, known as Outer Mongolia.

What Congress, the press, and the American people do not know is that the State Department—in defiance of generally understood U.S. policy—already has given de facto recognition to Outer Mongolia as an independent territory. Thus State took the first major step toward handing victory to Lattimore.

This writer can now reveal exclusively that the State Department's action was taken sometime prior to August 26, 1956. Documentary evidence exists that on that summer day the policy was enunciated in Assistant Secretary Walter Robertson's office, where a group of State Department officials met to discuss the passport request of Jack Raymond to go to Outer Mongolia. An intradepartmental agreement was reached and the following memorandum of what transpired was written by a subordinate official of the State Department:

"At the meeting it was stated it had been concluded that Outer Mongolia is not a part of China but an independent territory constituting a doubtful entity controlled by the U.S.S.R. Therefore, it was stated that travel to Outer Mongolia is not forbidden by the general ban on travel to China and separate permission to a passport holder to visit Outer Mongolia is not required."

This State Department attitude toward Outer Mongolia as "an independent territory" entirely reversed generally accepted U.S. policy toward it. In hearings before the Senate Internal Security Subcommittee in 1951, several U.S. Senators expressed their amazement at Lattimore's description of Communist Outer Mongolia as "independent," and they elicited from him the admission that he had been forced to get a Soviet visa to visit that region.

Information about the State Department's sub rosa change of policy toward Outer Mongolia—affirmed on August 26, 1956—was not made public. In fact, the United States—on scene at the United Nations—always has opposed the Soviet proposal for admitting an alleged "independent" Outer Mongolia to the U.N.

A first glimmer of the dire consequences of the State Department's sub rosa policy became apparent March 20, when the Associated Press reported that Lattimore would travel on a U.S. passport to spend this coming summer in Outer Mongolia having accepted an invitation extended to him by the Mongolian Academy of Science. The AP reported that Lattimore said he had met members of the Mongolian Academy last year in Moscow.

Such Red invitations and Moscow meetings are not at all new to him. Nine years ago the full Senate Judiciary Committee issued a report describing Lattimore as "a conscious, articulate instrument of the Soviet conspiracy."

Exactly 1 month after AP broke the story on Lattimore's forthcoming trip to Outer Mongolia, the New York Times carried the front page story (Apr. 21, by Kathleen Telsch, from U.N. headquarters) "Ties With Mongolia Are Planned By United States." A subhead in this Times' story says, "United States To Seek Relations To Test Whether Mongolia Is a State." Also on April 21, the Times announced "a policy change made by the Kennedy administration" toward Outer Mongolia.

At present, the Soviet Union is sponsoring Outer Mongolia for U.N. membership in a "package deal" that would include the West-sponsored newly independent African territory of Mauritania, which formerly was controlled by the French.

Informed sources at the U.N. say it is highly probable that Lattimore's real mission to Mongolia during this summer will be to work with Mongolian Reds conducting negotiations for the setting up of an official U.S. diplomatic mission at Ulan Bator, capital of the Mongolian People's Republic. The New York Times reports that the State Department believes a U.S. diplomatic setup there would provide "a listening post" for what is going on in Red China. Doubtless Lattimore and his Red Mongolian scientist hosts would be delighted to set up quite a system for transmitting information to such a listening post.

In regard to all this, it is imperative to know the background of Lattimore's relationship with the United Nations.

In 1950, he was head of a U.N. Mission to Afghanistan, having been chosen for this post by the British Socialist, David Owen, chairman of the U.N. Technical Assistance Board. At the time Owen was U.N. Assistant Secretary General for Economic Affairs. In his department our Government discovered a subversive cell of U.S. nationals headed by David Weintraub. Questioned by a grand jury in New York and the Senate Internal Security Subcommittee, five members of this cell took the fifth amendment. All were dismissed from their employment.

His attitude toward political matters is well illustrated by the following quotation from his book "Solution in Asia" published in 1945: "Soviet policy in Outer Mongolia cannot be fairly called Red imperialism. It certainly established a standard with which other nations must compete if they wish to practice a policy of attraction in Asia. The Russian-Mongolian relations in Asia, like Russian-Czechoslovakian relations in Europe, deserve careful and respectful study."

Well, it seems Lattimore is now going to win out. All indications are that finally he is going to get his way, and our country will recognize his pet, Outer Mongolia, as an "independent" state entitled to a U.N. vote.

Gross National Product

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, May 22, 1961

Mr. GOLDWATER. Mr. President, I ask unanimous consent that an excellent article entitled "About GNP," written by an outstanding columnist, Holmes Alexander, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ABOUT GNP

(By Holmes Alexander)

You could say that last autumn Candidate John Kennedy indicted the American economy under Eisenhower as being sluggish, wasteful, and inadequate to the challenges of the 1960's.

You may say today that the Kennedy administration is now in the process of trying to convict the American economy on these campaign charges. Treasury Secretary Dillon and Labor Secretary Goldberg have been before the House Ways and Means Committee in the roles of prosecutors. Other Cabinet officers will follow. Thus far the star witness against the Eisenhower-type economy (as much free enterprise and as little Government intervention as possible) is an ugly-named monster called gross national product. Here is Dillon calling upon this witness:

Dillon: "As we look back over the past century, we see that our record of economic growth has been unmatched * * * of late we have fallen behind. From an historic growth rate of 3 percent per annum in gross national product (GNP), we have fallen to 2 percent in the latter (Eisenhower) part of the 1950's."

Secretary Dillon then goes on to show that the GNP in West Europe has grown twice as fast, and the GNP in Japan has grown three times as fast as ours. Russia's GNP compares with ours in a 7 to 2 ratio.

All this is alarming—but we should remember that we are not hearing, as yet, much of the other side of the case. How good a witness to our economic health is this GNP? Who is this strange slanderer anyhow?

Well, two Republican Senators, BUTLER and BUSH, with three Republican Representatives, CURTIS, KILBURN, and WIDNALL, have been chipping away at the GNP character. GNP is an aggregate of economic activities. It is supposed to be the sum of all enterprises which add something to the American economy.

But Republicans say that GNP does not include, nor does it measure, many important activities. For example:

If a man stays home on Saturday and improves his mind with reading, this does not appear in the GNP. Nor does GNP reflect the work that a housewife does, such as home laundering or driving the children to and from school. Nor does the GNP give credit to the homeowning couple whose labor improves the property and community.

GNP is a grossly materialistic way of measuring American status and blessings. "It knows," as Oscar Wilde once defined a cynic, "the price of everything; the value of nothing." Wasteful productions, such as food surpluses and throwaway military items, are added up. But how do you add the satisfactions of a well-cooked meal, a paid vacation, the feeling of security that sound banking, good policing and congenial neighbors give?

There are several ways to characterize this first year of the Kennedy administration and of the 87th Congress. One way would be to say the administration and majority party are tearing down the American image, while the Republican minority is trying to build it up.

For the Democrats to look good, America must look bad. Unless the New Frontier reveals our sores, it cannot cure them. Unless it exaggerates our misery, it cannot claim to have pulled off political miracles.

For their part, the Republicans are always in danger of appearing to be standpat and smug in the face of obvious imperfections. Only the best of Republical spokesmen manage to depict America as we all know her to be. The country is not hurting for schools and hospitals, as the worst of the Democrats say—but, as the best of the Republicans say, we can and should improve the quality of teaching and medical care. Our jobs are not disappearing, as the calamity howlers say, but are migrating to new industries.

The true picture of America, then, is of a nation which has accomplished all that gross materialism can give. Me must now improve, refine, and distribute our blessings. But this is a difficult thing to express in the language of political pleading.

The GE Scandal and Peoria

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. MACK. Mr. Speaker, under leave to extend my remarks, I include the following editorial titled "the GE Scandal and Peoria" from the May 21, 1961, issue of the Register, official newspaper of the Catholic diocese of Peoria, Ill.:

THE GE SCANDAL AND PEORIA

It is understandable that eyebrows were lifted last week in Peoria at the announcement of a strange change in the management of one of Peoria's major industries. One of the community's most highly regarded businessmen was dismissed as the head of the LeTourneau-Westinghouse plant, and was replaced by a GE executive recently jailed for price-fixing.

In the face of the yet-unfolding revelations concerning the price scandal, and of the unconvincing reasons given for the change in administration, it is no surprise that the community views the whole business with more than little suspicion and regret. At best it seems to indicate an almost cynical disdain of public sentiment. And at work there are many possibilities.

As the Peoria Journal Star commented, the issue is not a personal one. But on the corporate level, it is hard for people to understand how involvement and conviction in an antitrust case could be a recommendation for leadership in one of the city's major industries. As the paper said, as long as the top authorities prefer to remain mum about the maneuver, they cannot blame us for wondering what motives—and perhaps obligations—prompted this dubious switch.

In the eyes of the public, the LeTourneau-Westinghouse affair only heightens suspicions about the real extent of collusion and cooperation between the big companies.—(J.J.D.)

Resolution of the General Assembly of the State of Louisiana

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I present for further consideration of the Members of the House of Representatives House Concurrent Resolution 22, originated in the General Assembly of the State of Louisiana and introduced by Messrs. Branton, Jack, and Rau:

HOUSE CONCURRENT RESOLUTION 22

Resolution relative to a proposal before the U.S. Congress with respect to a so-called 3-year program of general Federal assistance for public elementary and secondary classroom construction and teachers' salaries

Whereas there is now before the Congress of the United States a proposal to institute a so-called 3-year program of general Federal assistance for public elementary and secondary classroom construction and teachers' salaries, which, it is said, would assure every State no less than $15 for every public school student in average daily attendance and would be distributed according to an equalization formula; and

Whereas this type of so-called Federal aid to education is another in the current series of insidious measures and actions on the part of the Federal Government which, while on their face may appear to be of great advantage to the States in that they offer financial assistance in areas in which all States are constantly striving to find additional methods of providing better facilities and qualities of services to their people, actually, however, are no more than means by which the Federal Government can further en-

croach upon the constitutional rights of the States; and

Whereas it is recognized that should the Federal Government be permitted to enter the field of public education in the various States in a more substantial way than already is the case, there is grave danger that, while the funds provided to the States might allow additional public school construction and the employment of more and perhaps even better qualified teachers, the much less desirable purpose may be accomplished of permitting the Federal Government to control such phases of public education as curriculum, teaching methods and ways of life which are within the fundamental rights reserved to the States: Therefore be it

Resolved by the House of Representatives of the Legislature of Louisiana (the Senate thereof concurring), That the members of this honorable body do hereby go on record as disapproving the proposed measure now before the Congress of the United States which proposes to grant Federal aid to public elementary and secondary education for construction and teachers' salary purposes; and be it further

Resolved, That this legislature does hereby urge and request the Members of the Louisiana delegation in Congress to exert every effort at their command to the defeating of this proposal; and be it further

Resolved, That copies of this resolution shall be transmitted without delay to each of the Members of the Louisiana delegation in Congress.

Sacrifices Needed

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kansas City Kansan of May 17, 1961. It includes some worthy grassroots advice to which it is hoped there will be a response.

Our people, Mr. Speaker, and I have in mind my midcontinent constituency, believe that those who preach sacrifice should practice what they preach. Our people will sacrifice what is necessary to the end that American ideals shall live, perpetuate, and flourish. They will not stand for schemes proposed in the name of sacrifices that are designed to accomplish something other than that for which sacrifice is needed. That is to say, our people are a discerning people, and the wool will not be pulled over their eyes. Sacrifice they will for legitimate ends, but not for the accomplishment of politically self-serving objectives. The editorial follows:

SACRIFICES NEEDED IN DISTRICT OF COLUMBIA

A leading news magazine has a hunch that President Kennedy may ask for reinstitution of wartime wage and price controls. This would be an example of the sort of sacrifice the President has said we may be called on to make. The President has been pressed for explanation of just what he means by sacrifices. He has been charged with being too vague on the subject.

Price and wage controls would be definite. No one would be left in doubt about such measures, although many at present are in doubt as to the worthiness of such a move. One of the first accomplishments of the Eisenhower administration 8 years ago was to remove such restrictions imposed by reason of the wars. Prices and wages promptly started climbing as was to be expected. It is true the inflationary spiral slowed speed but inflation did not vanish.

Both inflation and controls are obnoxious, and in the absence of discipline, exercised by individual citizens, groups, and governmental agencies from low to high, the country may not attain the heights of greatness the President speaks of. The great majority of citizens stand willing to make sacrifices if they can be convinced of the need and that measures asked for are correct. But they will not make sacrifices cheerfully if they know that exceptions are being made, special privileges are being granted.

Let the Federal Government itself take the lead. Let it crack down, for instance, on work stoppages and outlandish costs involved at the missile bases. Let the Government crack down and not simply pass the buck in order that political interests be served. Some sacrifices could be made by Government, and maybe that would be a good place for sacrifices to start.

Uncontrolled Foreign Aid

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. DEROUNIAN. Mr. Speaker, the following editorial which appeared in today's Wall Street Journal, points out the weaknesses in our foreign aid program, as well as the dangers of backdoor spending.

FREEDOM FROM CONGRESS

Foreign aid administrators have long fretted under congressional restraints on their spending. Accordingly, when the President's new aid requests go to Capitol Hill in the near future, much will be made of the administration's alleged need for authority to make long-term—instead of yearly—commitments overseas.

Sepecifically, Mr. Kennedy wants permission to borrow well over $7 billion from the Treasury over a 5-year period. That is by no means the sum of the contemplated aid spending, but only the amount that would be generated by this backdoor financing method which frees the administration from getting annual congressional approval of its spending.

The administration's argument goes like this: The way it is now, the United States can't underwrite projects that take several years to complete. This, it's said, keeps us out of a lot of useful spending and makes it difficult to engage in "rational" planning. It may even encourage waste when officials try to obligate their current funds at the last minute before the fiscal year runs out.

We find the argument unimpressive. Backdoor spending is inherently an unsound device, and can be inflationary. Apart from that, there is no excuse whatsoever for officials to spend money just because it is available. And it can be seriously questioned whether U.S. money should be used for long-term projects, which customarily turn out to be monuments to the greater glory of socialist rulers in backward countries.

There is plenty wrong with the foreign aid program, but its troubles do not stem from such so-called congressional restrictions. They come from the Government's failure to understand that effective foreign aid must be selective, from gross mismanagement, and from just plain gullibility.

In view of those deficiencies, the program needs a lot more, not less, congressional scrutiny and congressional restraint.

Congressman Bell Urges Resumption of Nuclear Tests

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. HOSMER. Mr. Speaker, our colleague the gentleman from California [Mr. BELL] recently urged recognition that the Geneva test ban talks are hopelessly deadlocked and that the United States lift its voluntary moratorium on nuclear testing. His views on the subject which coincide with my own, were commented on favorably in the following editorial from the Los Angeles Herald-Express:

[From the Herald-Express, May 17, 1961]

WHY NOT RESUME TESTS?

Congressman ALPHONZO BELL, of California, Santa Monica Republican, has called for immediate termination of the ban on nuclear tests, declaring that "in the interest of both our national security and progress in our space competition with the Russians we must resume underground and high-altitude nuclear tests at once."

This reference to our "space competition" is particularly timely now since Navy Comdr. Alan Shepard Jr.'s historic rocketing into space because some form of nuclear propulsion is under study for such space flights as those to the moon and other planets as well as manned flights.

Senate Minority Leader DIRKSEN, speaking for the Republican leadership in the House and Senate, also has called for drastic action to allow this Nation to defeat what he has called the "monumental stall" by the Russians in arriving at any agreement to halt nuclear testing.

Senator DIRKSEN has called on the President to fix a definite deadline either for an agreement with the Russians or for this Nation to resume its nuclear testing.

The facts of the matter are that for 2½ years the United has observed a voluntary moratorium on nuclear testing, hoping that the Russians would reach an agreement with this country that they would do the same.

They not only have failed to do so, through their "monumental stalling," but there has been no assurance that they have been refraining from at least underground nuclear testing, which cannot be checked by other countries.

The Soviet stall on nuclear testing also should be a warning to those few people who express the opinion in this country, including the California Democratic Council, that the United States should disarm first.

In an editorial on February 17, last year, the Herald-Express called attention to the Democratic council convention in, Fresno, where a "statement of policy" was adopted. The editorial called attention to the world disarmament policy adopted by the convention, as follows:

"That if the negotiations at Geneva should fail, then the United States should take unilateral action; in other words, this Nation

should scrap itself of military weapons and stand forth naked of any defense against Soviet Russia or any other attacking nation."

Concerning the nuclear propulsion rocket system, Congressman BELL had this to say:

"There is almost unanimous belief among our scientists that test suspension has impaired or will impair development of Project Orion (the classified nuclear propulsion rocket system).

"There is great suspicion among Government experts that the Russian Government has conducted undetected underground tests during the period of the moratorium.

"There is a significant body of opinion that even with secret Soviet tests the United States continues to enjoy technical superiority over the Communists in the nuclear field and that, as a result, our best chance to pass the Russians in space is with nuclear propulsion rockets."

It is time that we stop kidding ourselves and the rest of the world. The Russians have made it plain enough that they have no intention of observing any moratorium on nuclear testing, as this country has done.

Let's set an early deadline for agreement, weeks and not months, and if they continue to stall notify them and the rest of the world that we're resuming testing.

A Family Doctor's Fight Against Socialized Medicine

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1961

Mr. AUCHINCLOSS. Mr. Speaker, much has been written and said about medical care for the aged or, as designated by many, "socialized medicine," which has resulted in confused thinking and misunderstanding of what it really means and what it aims to accomplish. So when I read the article entitled "A Family Doctor's Fight Against Socialized Medicine," by Dr. Joseph R. Mallory, a practicing physician of Mattoon, Ill.—population 19,088—which appeared in the May 23 edition of Look magazine, my thinking on this important subject was very much clarified. It is a calm, factual statement which I am sure will be of help to everyone interested in this subject and it is with this hope that I asked and received permission to have it printed in the RECORD.

There is no doubt that we all in Congress want to aid those elderly citizens who are unable, for one reason or another, to help themselves, but I am sure none of us want to be wasteful with the taxpayers' money. This excellent statement is as follows:

A FAMILY DOCTOR'S FIGHT AGAINST SOCIALIZED MEDICINE

(By Joseph R. Mallory, M.D.)

(EDITOR'S NOTE.—Joseph Ross Mallory, 46, is a physician who practices general medicine at Mattoon, Ill. (population 19,088). Civic-minded as well as a good doctor, he has become one of Mattoon's best-known and best-liked citizens. Within the past few months, Dr. Mallory has been one of hundreds of physicians who have been speaking at the request of county medical societies concerning medical-care problems of the aged. He warns of the threat of socialized medicine at gatherings such as PTA meetings and business-club luncheons. As a solution, he favors the recently enacted Kerr-Mills law, which authorizes the use of general tax funds of the Federal and State governments; its provisions are to be locally administered and call for aid only to those aged who qualify. He disapproves of the Kennedy administration's plan to pay for limited aid to all the aged under social security. Here, in question-and-answer form, Dr. Mallory gives his reasons.)

"THE PROBLEM OF MEDICAL CARE FOR THE AGED IS EXAGGERATED"

Do you feel that medical care for the aged is a serious national problem? I will have to give that question a qualified yes. I think we must assume there is a problem, although I'm inclined to the opinion that it has been exaggerated. Nevertheless, we must recognize that it is impossible for all families to take care of their aged members and impossible for some of the elderly to take care of themselves adequately. Many of them must have help beyond themselves and their families.

The question, then, is how we are going to provide the financial assistance these people require? That's the heart of the problem, right there.

The administration has proposed that health care for the aged be financed through the social security system. Why are you opposed to this approach? I can think of many good reasons. To begin with, the administration proposal—the King bill now before Congress—is based on a double error. It assumes that most of the aged are in poor health and that most of them need help to meet the costs of medical care. This just isn't true. Some of our elderly are in poor health, and some do have financial troubles, but most are healthy and in reasonably good shape financially. A number of surveys back this up.

Does this hold true in your community? Yes, and I suspect it holds true in most communities.

You said you think the problem is exaggerated. In what way? Well, just look around for yourself. Some older people are millionaires. Some are comfortably well off. Millions have some form of health insurance and private pension programs. Some, of course, are poor—just as some young or middle-aged people are poor. I truly believe that anyone who really needs medical care in this country can get it regardless of his financial status.

What about the health of the aged? Don't they require medical care more often than young people? Some do; some don't. I don't think the problem can be standardized to that extent. Some 70-year-olds play 18 holes of golf regularly; others are spry enough, but prefer checkers, and still others are bedridden. Many of the ailments of the elderly would disappear if society stopped looking at them as castoffs, if these older people felt they were wanted and had a mission in life. Older folks are individuals, and their problems have to be solved on an individual basis. You can't answer all of their problems with a single solution.

You obviously feel very keenly about this controversy over medical care. Why do you feel so strongly about it? For a number of reasons. Most important, I think, is that I sincerely believe that the free practice of medicine, which has given our people the best medical care in the world, is in jeopardy. A physician's first concern is for his patients, and that concern goes beyond the aches and pains of the people he treats. I'm convinced, along with most of my colleagues, that, unless the people really understand what's going on, we're liable to awaken some morning and find we've got socialized medicine.

A number of countries have socialized medicine in one form or another. Why do you feel it would be bad here? There isn't any question in my mind that socialized medicine would endanger the high quality of medical care we have been able to give our people in this country. If you want socialism, you've got to sacrifice much of your freedom. Government always exercises some kind of control any time it pays the bill. I think it is obvious the people's health would suffer under a system of political medicine. The greatest strides in medical science in recent years have been made in the United States, where the profession has been free to pursue its goals of better and better medical care for our people. In my opinion, we physicians owe an obligation to the American people to try to keep it that way. It's part of our duty as doctors.

WE OPPOSE THE KING BILL BECAUSE IT WOULD BE EXPANDED TO COMPEL EVERYONE TO BE COVERED

You see a threat of socialized medicine in the King bill. Sponsors of this Administration proposal deny that it is. How do you back up the charge? You have to understand what the King bill would do. The Federal Government, among other things, would make direct payments to hospitals for services to eligible patients, those over 65 on social security. But first, hospitals would have to agree to abide by rules and regulations established by the Secretary of Health, Education, and Welfare. And the Secretary would have the power to set "reasonable" compensation that hospitals would receive. It seems clear to me that when the Government forces every wage earner to pay into the scheme, when Government makes the rules for operating hospitals, sets the compensation and pays the bills, you've got socialized medicine for everybody who gets the service.

Former Representative Aime Forand saw his bill for social security medicine as "a foot in the door." He said, "We can expand the program after that." The Socialist Party has said that the social security approach for medical care is socialistic, and they're for it. They're for it because it could be expanded easily into full-scale socialized medicine for everyone.

Sponsors of the King bill have said it would guarantee free choice of physician and hospital. Do you disagree with that too? Yes, and I'll use my own community as an example to explain why. We have one hospital in Mattoon. Suppose, for some reason, any reason, the Secretary of Health, Education, and Welfare refused to approve our hospital. This would mean that everyone in Mattoon on social security who needed hospitalization would have to go to some other city to get it if he wanted the Government to foot the bill. Wouldn't that be a denial of free choice of hospital? And if the family doctor of one of these patients wasn't on the staff of the other hospital, wouldn't that deny the patient free choice of his physician? There are many one-hospital towns in this country that would be affected in the same way.

Why are doctors opposed to the King bill, when its sponsors say they are not included in it? My answer is that physicians are included, specifically pathologists, radiologists, physiatrists and anesthesiologists working in the hospitals, along with interns and residents and those doctors serving the hospitals' outpatient clinics. We realize that it would only be a short time until the program would be expanded to include all physicians and compel every man, woman and child, regardless of age, to come under the system.

You agree there is a problem in financing medical care for the aged. If you object to the social security approach, how do you propose to meet the problem? We already

have a better solution, the Kerr-Mills law for medical aid to the aged, passed by Congress last year. The medical profession supported this measure in Congress, and doctors are doing everything they can to get it into full swing in all the States.

How does the Kerr-Mills law work? Federal funds are made available to the States to pool with their own money to provide medical care to everyone over 65 who needs financial assistance. Each State, working with local communities, decides who needs help. I figure we know more about our own problems in Mattoon than some Government employee way off in Washington, D.C. The people who need our help are our neighbors. Their problems are our community's problems.

What benefits are available under the Kerr-Mills law? They are practically unlimited. It depends on what each State legislature wants to provide. Benefits can include physicians' services in the hospital, clinic, office, or at home; hospital services; nursing-home care; physical therapy; laboratory, diagnostic, and X-ray services; drugs prescribed by a physician; home nursing, and a variety of other things, such as glasses, dentures, and prosthetic devices.

Why do you say the Kerr-Mills law is better than the administration's social security approach to the problem of medical care for the aged? Kerr-Mills offers a full-range of medical benefits to the needy and near-needy over 65 under a program administered by those best able to judge the needs of the elderly—the people back home. It would be cheaper and would do a better job of protecting tax money.

The administration-sponsored King bill, on the other hand, would set up long-distance control in Washington. Tax money of the working people would be used for the benefit of the rich as well as the poor. The bill would be discriminatory, because benefiits would be available only to those on social security and denied to several million Americans who are not eligible for social security and never will be. The Kerr-Mills law, properly implemented by the States, would take care of everyone over 65 who really needed financial help.

What would the King bill cover? Benefits would be limited to hospitalization, nursing-home care, home nursing and outpatient diagnostic services. It is important to note also that those eligible for hospitalization would be required to pay $10 a day for the first 9 days in the hospital, a total of $90. That, along with other costs the patient would have to pay, would be a serious drain on the financial resources of many on social security. I think it should be clear that the King bill is not only inadequate, but unnecessary. Kerr-Mills will do the job if given a chance. Already, 15 of the 50 States have passed enabling legislation to participate in Kerr-Mills funds.

You say benefits would be available under the Kerr-Mills legislation to anyone over 65 who needed financial help to meet his medical bills. How would need be decided? Well, some of the legislation sets standards of eligibility based on income and liquid assets. Some people would be completely covered, and others would be able to get part of their medical expenses.

"IT'S NONSENSE TO CALL KERR-MILLS DEGRADING"

Eligibility would be based on a means test, then? Certainly. The idea is to help people who need help—not to waste the taxpayers' money paying medical bills for those who can afford to pay their own way. And millions of older people in this country can afford to do so, including a great many drawing social security benefits.

What is your answer to the charge that the Kerr-Mills law would force the older people to pauperize themselves before they could get help? I feel the charge is totally groundless. If anyone cares to study the plans already adopted by several States, he will find that there is protection of the assets of the people.

The means test has been called an affront to dignity, degrading to the individual. How do you feel about this charge? I imagine I feel the same way as any other American who gives the matter a little thought. To call the means test degrading is sheer nonsense. It has been an important part of the American economic and government system for a long, long time.

What examples of the means test in government and the economy do you have in mind? Public housing, for one. It is available only to those whose incomes are below a certain amount. Veterans must prove need before they can get free care in VA hospitals for nonservice-connected disabilities. The social security system for everyone under 72 links benefits to income. The means test in government is designed to protect against waste of tax money. You will find the means test in our private affairs too. Many labor unions base strike benefits on need. College-scholarship applicants must demonstrate need. Our entire system of credit in this country is grounded on a means test, as it should be. Credit is limited by the ability to pay.

The means test is neither degrading nor undignified. It is a wise protection for business, government and the individual.

In reference to the social security approach, don't you feel there is some merit in the argument that social security provides an insurance system enabling working people in their productive years to save for their old age? Sure, if it were true—but it isn't. It misrepresents the true nature of social security, suggesting that it is a program of prepayment of insurance costs, which it is not.

How do you back up that statement? Well, in the first place, the U.S. Supreme Court, among other agencies of the Federal Government, has said social security is not a prepayment plan. It is clearly a pay-as-you-go program. It is distinctly different from voluntary private insurance where reserves and income have to match benefit obligations.

Can you explore this subject a bit further? Gladly. I think it's extremely important for the American people to understand what social security really is and how it works. The fact is that the taxes taken from workers and their employers don't pay the worker's own benefits; they pay the benefits of the people now getting social security.

In other words, my generation will collect from our children and grandchildren, and they will collect from theirs. It's important that we realize that if the social security program were ended today and Congress said, "We'll pay off just what we owe to everyone who has paid into social security up to today," it would still cost more than $300 billion to pay off the debt. If that happened, men and women not even born yet would be taxed to help pay the bill, and they wouldn't be getting a nickel themselves. Does that sound like an insurance program?

What are you doing to get your message to your friends and neighbors in Mattoon? Well, I've talked to 20 or 30 different groups in the area, trying to impress on them the fact that any system of medical care financed through social security will inevitably lead to complete socialization of medicine in this country. And can there be any doubt in anybody's mind that once medicine is socialized, socialism will spread to every other aspect of American life? This is the insidious fact that must be brought home to every American. It is the reason I, along with hundreds of other physicians, am volunteering to speak out against this danger to our way of life.

Trade Barriers Against Export of American Jewelry Products

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks I include an editorial from the American Jewelry Manufacturer magazine which points out the unfairness of restricted trade barriers by some foreign countries against exports of American jewelry products.

"Now we encounter many countries which are absolutely closed to our type of products, or duties have been increased to such an extent that imports are almost impossible."

These are the words of a spokesman for a large American jewelry manufacturing firm, a concern that is diligent in promoting its export sales. He might well be speaking for the entire domestic industry, whose attempts to supply foreign markets with American-made jewelry are time and time again frustrated by trade barriers maintained around the globe.

U.S. policy has been to promote exports rather than to inhibit imports into this country. While decrying the flood of low-priced competitive products (the price of which reflects the low wages paid by many foreign producers) to our shores, the American jewelry manufacturer has not turned a deaf ear to our Government's admonition that exports can right the imbalance of our foreign trade picture.

We have tried and we continue to try to boost our sales abroad. But when a country bars our products outright, as does Indonesia, or imposes a tariff of 150 percent, as does Burma, it tends to discourage our efforts, to say the least.

The irony of it is that the United States and most of the nations with which we do business subscribe to the General Agreement on Tariffs and Trade. The aim of GATT, as it is called, is that member nations will progress through negotiations toward the elimination of international trade restrictions.

To help determine the restrictions imposed by GATT signatories against our products, the U.S. Government's Committee for Reciprocity Information is seeking facts on the experience of interested parties. The first phase of its study in preparation for GATT negotiations deals with six countries—Austria, Burma, Chile, Indonesia, Turkey, and the Union of South Africa.

The Manufacturing Jewelers and Silversmiths of America, Inc., forwarded to Washington a study of these countries' trade barriers against jewelry. Said the association's executive secretary:

"Most of these countries once represented good export markets for the American jewelry manufacturing industry. Austria, because of its own jewelry manufacturing industry and the proximity of the Czechoslovakian and German industries, did not. Chile, Turkey, and the Union of South Africa are among those that could once be termed principal export markets for American jewelry. In each case, however, in spite of a proven desire for American merchandise, shipments of jewelry to most of these countries have dribbled to a virtual standstill."

The association has asked repeatedly: "Do we as a nation continue to open our doors wider and wider to foreign merchandise while our global neighbors put a lock on their gate?"

As the association says in its latest brief, "We submit that many of these prohibitions, as in the case of South African quotas, discriminate against the importation of American products versus other products and that the majority of the countries involved in the current discussion are now using trade restrictions, originally set up under the pretext of exchange conservation, to protect domestic manufacturing industries, contrary to the basic precepts of the GATT agreement. We earnestly request that the U.S. Government demand the elimination of all import restrictions against jewelry products by these countries and that all tariff duties in excess of those imposed by the United States on like products be deemed excessive."

Public Funds for All Schoolchildren

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1961

Mr. McCORMACK. Mr. Speaker, the question of legislation in the field of legislation, particularly in the constitutional aspect in the field of private elementary and secondary schools, is a matter of important discussion and consideration in and out of Congress.

In my remarks, I include an analytical and interesting manuscript prepared by Dr. John A. O'Brien, Ph D., of Notre Dame University, Notre Dame, Ind.

Dr. O'Brien's opinion is of importance to Members of Congress and others interested in the subject covered by his manuscript.

UNIVERSITY OF NOTRE DAME,
Notre Dame, Ind., May 18, 1961.

DEAR CONGRESSMAN MCCORMACK: We are deeply appreciative of the ability, courage, and determination with which you are presenting the case for the extension of the benefits of the proposed Federal aid to education to all the schoolchildren of America.

We have made a careful study of this matter and in the enclosed manuscript we provide an answer to vitrually all the common questions asked on this subject. We are sending you a copy with the thought that it might be of some assistance to you in your leadership and gladly give you permission to make whatever use of the enclosed you deem suitable, even to the extent of providing copies to the other Members of Congress.

With deep appreciation and warmest good wishes,

Ever cordially,

JOHN A. O'BRIEN.

PUBLIC FUNDS FOR ALL SCHOOLCHILDREN—A FAIR SOLUTION OF AN URGENT PROBLEM

(By John A. O'Brien, Ph. D., the University of Notre Dame)

Why is the question of Federal aid to schools of such widespread interest and why has it provoked such controversy throughout the country?

It is of universal interest because it affects the education of all our children. It has stirred nationwide controversy because it is a revolutionary measure and represents a radical departure from the traditions of nearly two centuries of American life.

Is it fundamentally a religious issue?

No. It involves no dogma of religion and is solely a question of the most effective means of achieving the best education for all the youth of America. The discussion should be carried on in a calm, friendly, objective manner, appealing neither to religious sympathy nor prejudice. What is needed is light, not heat, to find the best answer for our Nation's educational needs.

Is that the thought of the Catholic bishops?

Yes. Speaking to 15,000 members attending the convention of the National Catholic Educational Association on April 4, 1961, in Atlantic City, Bishop John J. Wright of Pittsburgh, the president of the association, said: "The debate should not be permitted to degenerate in its philosophic premises into a debate between Catholics and Protestants any more than it should be represented in its political context as a debate between Catholics and the national administration, above all the President."

What is the Catholic reaction to President Kennedy's appeal for restraint in sensitive areas of the discussion of this subject?

It is one of complete agreement. Praising the President for making such an appeal, Bishop Wright declared: "He will receive the loyal agreement and unqualified support of everyone on every side in this aspect of the matter." In both utterances Bishop Wright reflected the mind not only of the hierarchy but also of Catholics generally.

Catholics are glad to see the President show such concern for the improvement of the education of American youth. Many question, however, the effectiveness of the proposed measure, Senate Bill 1021, to obtain the desired objectives. They do so on objective grounds and with no thought of impairing the separation of church and state, which they believe is the only reasonable and practical plan for our pluralistic American society.

Furthermore Catholics favor the appropriation of funds necessary to meet all the real needs of our splendid public schools, in which more than half of their own children are enrolled. They want to see public school teachers well paid and equipped with all the essentials to do an efficient and thorough job.

What is the basic problem of this discussion?

This whole discussion is on the central problem of public aid for the education of all school children, which the Senate bill simply renders more acute. The principles developed here have a validity that will endure long after the present measure has been disposed of, for the problem of public aid for the education of all of America's youth is likely to be with us for some time.

What is the gist of the proposed educational bill?

It offers a $5.8 billion program of Federal aid for improving education in the U.S.A. Nearly $3 billion would go for loans to colleges over a 5-year period, for construction of classrooms, laboratories, libraries, and student housing. An additional $577.5 million would be for 212,500 college scholarships over 5 years based on students' ability and financial need. Maximum scholarship would be $1,000 a year. Federal loans for such scholarships would be available to students in public and private colleges. This is an eminently just and fair arrangement and is in conformity with previous Federal aid enactments.

Would funds also be allotted to elementary and high schools?

Yes. States would receive grants totaling $2.3 billion over 3 years for public grade and secondary schools to be used for erecting school buildings and paying teachers.

What is the declared purpose of such proposed legislation?

"The maximum development of every young American's capacity," said President Kennedy, and "rich dividends in the years ahead in increased economic growth, in enlightened citizens and in national excellence."

Why has this measure provoked so much opposition?

1. Because for the first time it would put the Federal Government into the business of elementary and secondary education in a big way. With the exception of a few cases where the Federal Government has granted aid to federally impacted areas—localities with an unusually large number of Federal employees—it has left these two areas of education to the States and the local communities.

2. Because it would undertake for the first time to pay teachers' salaries.

3. Because it would for the first time discriminate between pupils attending public elementary and secondary schools and students enrolled in nonprofit private and church-related ones.

Should the Federal Government enter into the education of children on the elementary and secondary school levels?

Many do not think it a wise policy for the Federal Government to intrude into an enterprise which has traditionally been conducted by the State and the local school districts. The Federal Government, it is contended, has enough to do without taking on the business of the little red schoolhouse and the local high school. Citizens of the community best understand their own educational needs and the means of meeting them. They are in the best position to see that their tax dollar gets the best returns.

Millions of citizens think it is unfair and unjust to discriminate against children attending nonprofit private or church-related schools by depriving them of any of the benefits of the proposed legislation. These students are Americans. They are the children of American citizens and taxpayers. They attend schools which teach with equal competence all the secular subjects taught in the public school. In addition, these schools give instruction in the Christian religion and ethics. They inculcate love of neighbor (Protestant, Jew, Catholic, or unchurched) and of country: they set forth the highest ideals of American life and democracy. They develop a patriotism that has been tested and proven on every battlefield, on which American soldiers have fought and died. They are American to the core.

Their pupils have the same right to participate in the benefits of public welfare and education legislation as any other children. To ignore their rights and the rights of their parents is contrary to the traditions of America and the spirit of fair play and justice, which have always characterized our Nation.

What is the position of Catholics on the need for Federal aid?

Traditionally Catholics have held that education is the concern of the State and of the local community. In the present instance they are simply advised to study the facts and reach their own conclusions. Thus Archbishop Karl J. Alter of Cincinnati, chairman of the Administrative Board of the National Catholic Welfare Conference, said: "The question of whether or not there ought to be Federal aid is a judgment to be based on objective, economic facts connected with the schools of the country. Consequently Catholics are free to take a position in accordance with the facts."

What are the findings of disinterested research?

1. In Taxes for the Schools, published by the Institute for Social Science Research, Roger A. Freeman reaches the conclusion that all the needs of the elementary and secondary public schools can easily be met from State and local tax resources. He shows that public school enrollment in the last 20 years has gone up 42 percent, while public school expenditure has shot up 567 percent.

Even allowing for inflation, these figures show the ability of localities to support increases in school enrollment.

2. The alleged classroom shortage is also questionable. In December, 1959, Louis Conger, chief of the projection section in the U.S. Office of Education, estimated that 61,000 new classrooms would be needed annually during the ensuing 10 years. But without Federal aid classroom construction has been actually running at a higher rate than that for more than 5 years already.

3. The number of teachers and their salaries has also been increasing. Between 1953 and 1959, the certified staff in public schools increased 34 percent, while the number of pupils grew by only 25 percent. Teachers' salaries have increased 40 percent in constant dollars since 1950.

Hence the objective findings of disinterested research show that there is no need for the Federal Government to enter into education on the elementary or secondary school levels.

Who are the chief proponents of Federal aid?

Writing in the New Republic January 30, 1961, Christopher Jencks reports that the governors and legislators of the various States, who are in the best position to know their educational needs, have shown little, if any, enthusiasm for Federal aid. "The only people," he says, "who consistently favor Federal action are educators of various sorts—Federal support of the public schools could make private schools less able to compete in terms of teachers' salaries and school facilities, and might gradually tip the scales against them." Surely the latter is a motive which few fair-minded Americans would approve.

What is the position of Catholic bishops on nonprofit independent schools sharing in any Federal aid program?

Speaking in behalf of the bishops previously mentioned, Archbishop Alter said: "In the event that there is Federal aid to education, we are deeply convinced that in justice Catholic schoolchildren should be given the right to participate." Similarly remarked Cardinal Ritter: "If public funds are raised for the educational benefit of the children in America, then all children should share in that benefit."

Why do Catholics believe that all schoolchildren should share in the benefits of any Federal aid program?

"It is unthinkable," declared Cardinal Spellman of New York, "that any American child be denied Federal funds because his parents choose for him a God-centered education. * * * Under these proposals (of the original bill), parents would be compelled to surrender both freedom of mind and freedom of religion in the education of their children as a condition for sharing in Federal education funds, in direct violation of the liberties guaranteed by the first amendment to the U.S. Constitution." Such undoubtedly is the sentiment of the overwhelming majority of Catholics, though each is free to form his own judgment on this complex political issue.

What does the first amendment say?

It says: Congress shall make no law regarding an establishment of religion or prohibiting the free exercise thereof." By forbidding the establishment of a state church, it safeguards the religious liberty of the individual.

Do the nonprofit schools conducted by Protestants, Jews, and Catholics render a public service?

Yes. In addition to teaching religion, these schools teach, with a competence equal to that of the public schools, all the subjects taught in the latter. They thus render a valuable public service and should share in the benefits of Government aid. To deny them aid is to discriminate against them in favor of a religiously neutral school, of which the Founding Fathers of the Republic never dreamed. Such discrimination will frustrate the achievement of the proclaimed objective of Federal aid: "the maximum development of every young American's capacity."

How many students are enrolled in Catholic schools?

A total of 5,663,648 students in 13,961 schools. Of these, 321,000 are in 267 colleges and universities, 41,871 in 537 seminaries, 886,295 in 2,433 high schools, and 4,414,482 in 10,724 elementary schools. They are taught by 168,677 full-time teachers, and the operating costs per year amount to about $2.3 billion. Approximately the same number of Catholic students are also enrolled in public schools. In many large cities a substantial percentage of the total school enrollment is in Catholic schools: Examples: Chicago, 34 percent; Philadelphia, 39 percent; Pittsburgh, 42 percent.

What is the enrollment in other church-supported schools?

About 400,000 students. Lutherans have 180,000 students in approximately 1,500 schools, including 30 high schools. Episcopalians have 480 schools with a total enrollment of 37,000. Other denominations have about 200,000 students in their schools.

How many are enrolled in other private schools?

About 900,000 students. This makes a total of about 6.8 million students in parochial and other private schools, about one-fifth the number in public schools.

Do these private schools greatly reduce school taxes?

Yes. The average annual cost for the education of a pupil in a public elementary and secondary school is $496, and for a college or university student is $1,414.05. This means that Catholics alone, by bearing the whole cost of educating 5,300,777 elementary and high school pupils and 321,000 college and university students, reduce the public school tax by $3,083,095,442.

If we add the savings effected by the education of the 400,000 students in other church-supported schools and 900,000 in other private schools, the educational tax bill of the general public is reduced more than another billion—a total savings well in excess of $4 billion. This means that the educational outlay of the family sending its children to the public school is reduced about $100 per year.

Do parents who send their children to private, nonprofit schools pay a second school tax?

Yes. After paying for the education of their own children, parents are taxed for the education of their neighbors' children in the public school. This means that they carry double their share of the tax burden. But that is not all. On the $4 billion they pay for the education of their children in private nonprofit schools, parents are subjected to still a third tax: the income tax exacted by the Federal and State governments. Incredible as it seems, the payments made for the education of their children in independent nonprofit schools, though they save other parents more than $4 billion, are not tax-exempt. This means that they bear a triple tax burden for the education of the Nation's youth.

Is this fact generally known?

No. Comparatively few people are aware of the staggering tax burden placed upon parents who send their children either to a nonprofit church-related or other private school.

Is this triple taxation fair?

No. It is discriminatory, unfair, unjust and contrary to the constitutional guarantee of "equal treatment under the law."

What would the proposed Federal aid to elementary and high schools mean tax-wise to millions of parents?

It would mean that the parents who send their children to nonprofit church-related or other private schools are to be subjected to still another heavy tax—a fourth—from which their children would derive no assistance. They are expressly excluded from sharing in any of its benefits: a direct contradiction of the announced purpose of the bill—"the maximum development of every young American's capacity."

Have parents the right to determine the education of their children?

Yes. In 1922 in Oregon a law was enacted requiring all children beteen 8 and 16 to attend public schools. In a unanimous decision the U.S. Supreme Court declared it unconstitutional and contrary to the basic principle of liberty upon which our whole Government rests.

"The fundamental theory of liberty," declared the Court, "upon which all governments in this Union repose, excludes any general power of the State to standardize its children by forcing them to accept instruction from public school teachers only. The child is not the mere creature of the State; those who nurture him and direct his destiny have the right, coupled with the high duty, to recognize and prepare him for additional obligations."

What is one the most obvious and important implications of this decision?

It is that the exercise of a constitutional right must not be made excessively difficult or onerous. To grant a right and then make it intolerably burdensome to exercise is virtually to nullify it. A right is meaningless unless it is clothed with the means to practice it.

Thus the right to life in our economy really means the right to a job or to a livelihood provided by the Government. Otherwise the right is a merely verbal one, without substance or meaning. So likewise society must breathe the breath of economic and social reality into parents' constitutional right to determine the education of their children and send them to the schools of their choice.

How can the State implement the parents' rights?

By freeing parents from the burden of double taxation, to say nothing of triple and quadruple taxes. Parents who provide a suitable education for their children in a nonprofit private school should not be compelled to pay taxes for the education of their neighbors' children. The public school is not a sacred cow, before which all citizens must bow.

It deserves the support of those who choose to patronize it, and that constituency is ample to maintain it. As the great majority of our citizens are not sufficiently concerned to provide an education rounded out by religious and moral instruction, the public school will continue to educate most of the Nation's youth and receive the lion's share of tax funds.

Do church-related schools in other countries receive public aid?

Yes, in practically all the countries of Western Europe. Visitors from those countries are shocked when they are told that a great democracy such as, the United States, provides no aid. In the Netherlands, public funds provide the entire cost of the education of children in both church-related and public schools. Parents are free to send their children to either type of school.

In the primary grades Catholic schools enroll 43 percent of the pupils: Protestant schools, 27 percent; public schools, 28 percent; the remaining 2 percent are in nonsectarian private schools. The system is highly acclaimed by all citizens as eminently fair and just, and in accord with the spirit of a genuine democracy. Here freedom of education is not an empty phrase but a living reality.

What is the system in England and Wales?

Publicly financed schools are divided into the voluntary-controlled and the voluntary-

aided. The first are entirely supported by public funds, while the latter receive 75 percent of their funds from the government. The controlled schools follow a common religious syllabus, while the aided schools determine their own religious instruction.

The majority of Catholic and Anglican schools fall into the latter category.

How does Ireland meet this problem?

The Constitution of the Irish Republic provides that "the state shall not oblige parents in violation of their conscience and lawful preference to send their children to schools established by the state or to any type of school designated by the state." As a result of this enlightened and generous provision all schools are church-related: Protestant, Jewish or Catholic.

The state pays practically all the costs of teachers' salaries and school construction. Though the country is about 97 percent Catholic, it is careful to protect the rights of religious minorities and provides them with the same generous aid given to the majority. The Irish Republic thus sets an inspiring example of true democratic action for the rest of the world.

What about public aid in other European countries?

Public aid in some form is given to the church-related schools in France, Western Germany, Belgium, Switzerland, Sweden, Norway, Italy, and Israel. The general principle underlying the legislation in these countries is that such nonprofit private schools render a valuable public service for which the government should in justice render compensation.

What is the system in Canada?

The system varies in the different provinces. In the populous province of Quebec church-related schools are supported by public funds. The province of Ontario has a public school system and a separate school system, almost wholly Catholic. The separation is made at the tax level. The Catholic schools are maintained by the taxes on the real estate of Catholics and the public schools are supported by the taxes on the real estate of non-Catholics. In other words, the taxpayer designates to which school system his tax money is to be applied. This is an eminently fair and just arrangement and one that we in the United States might well follow.

How does the United States school arrangement impress most Canadians?

As anomalous, unfair and undemocratic. When an educator from Toronto was told that parents who send their children to a nonprofit, church-related school which teaches all the secular branches taught in the public school and does so with equal competence, and then are taxed for the public school as well, he was astonished and horrified.

"Why," he remarked, "that's like buying groceries for your own family and then being compelled to pay a large share of your neighbor's grocery bill. I had thought that the United States was friendly toward religion in general and appreciative of the religious and moral instruction of youth, instead of placing an exorbitant price tag upon it." How apt is his characterization of the present anomalous situation in our country. It is strangely out of keeping with the whole spirit of the Constitution and the traditions of American justice and fair play.

Why does a great democracy such as the United States lag so far behind virtually all the democracies of Western Europe and Canada in aid to nonprofit church-related or independent schools?

1. Because of the mistaken notion that such aid is forbidden by the First Amendment to the Constitution.

2. Because the complete case for such Federal aid has never been presented on a national scale.

3. Because of the failure to make unmistakably clear that no aid is asked by any Church for the teaching of religion in a nonprofit church-related school.

4. Because previously the discussion has centered around such fringe benefits of public welfare legislation as bus transportation, school lunch program, textbooks and medical and dental inspection of pupils, and not upon aid for the teaching of secular branches in nonprofit private schools.

Does the Constitution prohibit public aid to nonprofit independent schools for the teaching, not of religion, but of the same subjects taught in the public school?

There is no clear evidence that it does. The U.S. Supreme Court has never ruled directly on this issue. The first amendment precludes, of course, the use of public funds for the teaching of religion by any church or denomination. But nowhere does it forbid the use of public funds for the teaching of the secular branches of the curriculum by a nonprofit independent school, private or church-related.

What do outstanding authorities on constitutional law say on this point?

Many of them declare that there is no clause in the Constitution which prevents public compensation for a public service rendered by a nonprofit school. They point out that the first amendment was designed to protect and promote religious freedom, not to destroy it by erecting one single type of school into a State-supported monopoly of education.

The Founding Fathers were religious men. They brought God into the Constitution and spoke with reverence of religion. George Washington aptly expressed their sentiments when he said in his Farewell Address: "Reason and experience both forbid us to expect that national morality can prevail in exclusion of religious principle."

All the schools of the colonies and of the American Republic until about the middle of the 19th century were religious schools. The Founding Fathers knew nothing of the school from which all religious instruction is excluded and never envisaged it as the type that would become the most common. It is a late arrival on the American scene and totally alien to the religious traditions of the Founders of our Republic.

What does Professor Sutherland say about the constitutionality of public aid in the form of long-term loans to public and to nonprofit private schools for school purposes generally?

An eminent authority on constitutional law, Prof. Arthur E. Sutherland of Harvard, was asked by Congressman JOHN W. MCCORMACK for his judgment on this matter. After studying the matter with great care Professor Sutherland reaches the conclusion that there is no clear constitutional prohibition against such aid.

"Assuming," he concludes, "that the existing Federal aid to education is constitutional—which seems to me a reasonable assumption—the distinction between these existing programs and the proposal which I discuss is not sufficiently evident to persuade me that a measure providing for long-term loans of the character which I have described, to aid education in basic lay subjects, would conflict with the provisions of the first amendment."

What does Dr. Robert K. Hutchins say on this point?

The president of the Center for the Study of Democratic Institutions and the former chancellor of the University of Chicago and dean of the Yale University Law School pointed out that tax exemption is given private schools because they are performing a public service. "If they are," he said, "and if this is a service that would otherwise have to be performed by the public, then there is no reason why private organizations should not receive appropriate assistence from the Government."

Objections raised against extending federal aid to such schools, he characterized as "incompetent, irrelevant and immaterial." He cited the GI bill that gave thousands of service men Federal funds to attend the college of their choice, public or private.

Have other noted authorities expressed similar opinions?

Yes, hundreds have. Example: Twenty-one prominent jurists, including former Attorney General James P. McGranery, were requested to prepare an opinion on this subject. After painstaking study they reached the unanimous conclusion that there is nothing in the Constitution, which prevents public funds from being used to pay for the public service rendered by nonprofit schools in teaching pupils all the secular subjects taught in the public school.

"Once Congress decides that Federal aid is necessary," they say, "there should be full equality of treatment with respect to all children whether they be enrolled in public, private, or church-related schools." This is a matter of high principle. The parochial schools of this country are discharging a public service. They provide an educational program which fully satisfies present governmental standards for competence.

"The State and all the citizens thereof benefit from this educational effort. If massive Federal expenditures are to be made from the tax collections of all the people, this aid should not go only to a select segment, however large, of the population. To the extent that parochial schools provide a recognized and accredited secular education they are entitled to equal treatment."

Did not the first amendment erect a wall of separation, high and impenetrable, between church and state?

No. In the Zorach case Mr. Justice Douglas said: "The first amendment, however, does not say that in every and all respects there shall be a separation of church and state. Rather, it studiously defines the manner, the specific ways, in which there shall be no concert or union or dependency one on the other. That is the commonsense of the matter. Otherwise the state and religion would be aliens to each other—hostile, suspicious, and even unfriendly."

What do other eminent authorities say on this matter?

Wilbur G. Katz, former dean of the University of Chicago Law School and an expert on constitutional law, points out: "The basic American principle of church-state relations is not separation but religious liberty. * * * Separation ordinarily promotes religious freedom; it is defensible so long as it does, and only so long."

In his well-reasoned dissent in the McCollum case, Mr. Justice Reed suggests that the Court should return to the language of the amendment and interpret it rather than Jefferson's phrase, "wall of separation." It is a wise suggestion for the meaning of the metaphor has become so confused that many can't distinguish the figure of speech from the principles involved.

What does the first amendment really mean?

Simply that the Government may not directly and actively maintain or support any religion. Hence it prohibits any legislation designed to favor directly a particular religion. The key words are "directly" and "actively." The amendment doesn't forbid legislation which has only an incidental or secondary effect upon religious activity or which accords religious people the same benefits afforded the general public.

What is the danger in the proposed Federal aid to education bill?

It tends to achieve indirectly what is forbidden by the Constitution: compel attendance at public schools. By combining

its taxing power with its spending power, Government can force public education willy-nilly down the throats of all citizens just as surely as by a specific ordinance. "The power to tax," said Chief Justice Marshall, "is the power to destroy."

"The real threat," points out the commission of 21 Washington jurists, "lies in the unconstitutional threat posed by and inherent in any large scale spending program solely for the benefit of public schools. * * * We can justify a demand that publicly collected moneys be distributed to all those who participate in the task of education, not just those in secular schools. Otherwise Government is on the side of the secularists."

Who are to be the beneficiaries of the proposed legislation?

The schoolchildren of America. The Government subsidies are to be provided so that there will be achieved "the maximum development of every young American's capacity." Hence all pupils, regardless of the school attended, should share in these benefits. Otherwise the right of parents to determine the education of their children by sending them to schools of their choice will virtually be nullified.

What is the bearing of the U.S. Supreme Court decision in the Everson case upon the proposed Federal aid bill?

The New Jersey law reimbursed parents for the cost of public transportation of their children to and from school, regardless of the school attended. Its constitutionality was challenged on the grounds that the private schools were thereby benefited. Upholding the legislation, the U.S. Supreme Court ruled that the objects of the legislation were the taxpayers, not the schools themselves, which were only incidentally served.

What is the import of the decision in the Cochran case?

A Louisiana law provided that secular textbooks be furnished to all the children, whether they attended public or nonprofit church-related schools. Sustaining the legislation, the Supreme Court ruled that the books were primarily for the education of children not for the benefit of the schools. "It may be significant," points out Professor Sutherland, "that in those cases (Everson and Cochran) the aim of the legislation was not religious indoctrination but the safety and the lay educational advancement of the schoolchild—the aim which I assume the Congress would have if it were to provide for such loans," i.e., to nonprofit, private, or church-related schools.

What important distinction is brought out in both these decisions?

The distinction between the child, the immediate and direct beneficiary, and the school attended, which may or may not benefit incidentally or indirectly. What is decisive in such legislation is the method of providing aid. There is nothing in the Constitution prohibiting the use of public funds for the education of children in secular subjects, in transporting them to schools where those branches are taught, or in providing them with textbooks for the same. Hence if Federal aid were allocated to all parents of children in primary and secondary schools instead of to the boards of education in each State, then all children would receive equal treatment under the law.

What legislative enactments are based upon this principle?

The GI bill, the Federal scholarship plan, the College Housing Act of 1950, the War Orphans' Educational Assistance Act of 1956 and the National Defense Education Act of 1958. Under these laws students receive Federal grants to defray their tuition at colleges, public or church related. As the extension of Federal aid to students on the secondary and elementary level would involve only the same principle, it would be equally constitutional.

What then are some ways in which Federal aid may legally be extended to students in nonprofit church related or other independent elementary and secondary schools?

Lawrence X. Cusack, legal counsel for the New York Archdiocese and an expert on constitutional law, suggests the following four ways:

1. By providing such pupils with nonreligious textbooks and supplies, and by making available to them certain nonreligious educational services.

2. By some form of grant or benefit to the parents of all schoolchildren, including the parents of those attending nonprofit private schools. Examples: Parents might be reimbursed for tuition payments or Congress might provide them an income tax benefit in the form of a deduction, exemption or credit.

3. By a program of long-term low-interest loans in which nonprofit private and church-related schools would participate.

"While this," said Mr. Cusack, "might not itself be an adequate alternative to provide full equality of benefit for the children attending those schools, it might go part of the way, and other constitutional measures might be found by the Congress to furnish the balance of full equality."

Under this proposal there would be no grant of funds to the schools. They would merely be borrowers and would pay a fair rate of interest, although one perhaps somewhat lower than could ordinarily be obtained from commercial sources.

4. By Federal aid for the nonreligious facilities of church-related and other private schools and compensation of the teachers of secular subjects. Such a program might be sufficient to provide full equality of benefit. "The constitutional justification for this fourth approach," said Mr. Cusack, "is that the Federal aid would not foster or promote religion."

Does formal religious instruction in church-related schools occupy much of the teaching time?

No, only a small fraction—about 2½ out of 25 hours a week. Most all the effort, time and funds are devoted to the teaching of the secular subjects taught in the public school. In many of the facilities of the church-related schools, such as the gymnasiums, cafeterias, laboratories, and medical and dental offices, no religious instruction is involved. "There is a large gray area of constitutionality," concluded Mr. Cusack, "in which Congress is free to enact legislation to provide equal educational benefits to all, leaving it to the Supreme Court to render decisions on what are now constitutional imponderables." These four methods are eminently reasonable and worthy of careful consideration by Congress and indeed all citizens.

Are Catholics the only ones seeking to have their children share in the proposed Federal aid to education?

No. Members of other faiths are equally concerned. Speaking at the congressional hearing on this bill, Rabbi Morris Sherer, executive vice president of Agudath Israel of America, said: "Our organization of Orthodox Jews has chapters in every part of the United States and includes thousands of rabbis and communal leaders, amongst them the foremost Jewish scholars and religious authorities. We strongly favor Federal aid to parochial schools. * * * The Jewish parent who sends his child to a parochial school should not be unduly penalized for exercising the right of free choice, implicit in the American way of life, to educate his children in accordance with his religious conscience.

"The memorandum distributed yesterday to Congress by the administration's attorney against Federal aid to parochial schools, conversely tends to prove that there is no clear-cut 'black and white' thinking on this issue of constitutionality. The brief is so full of loopholes, and draws so many hazy distinctions between legal and illegal aid, that it actually serves to add weight to our contention that die-hard opposition to Federal aid to the secular programs of parochial schools is filled with inconsistencies."

What is the stand of citizens for educational freedom?

This is a national organization of citizens of all faiths. At a congressional hearing, its president, David L. LaDriere, reported that his organization favors tuition grants for children in both public and church-related schools. "Fair treatment of children in nonprofit schools," he said, "involves complete equality with those in public schools, so far as Federal aid is concerned."

What does Dr. Arthur S. Flemming, former Secretary of Health, Education, and Welfare, advocate?

A prominent Methodist and former president of Ohio Wesleyan University, Dr. Flemming urges Congress to approve a program of loans for nonprofit private and church-related elementary and secondary schools. He suggests that Congress put aside the controversial feature of the present bill giving Government aid for public teachers' salaries and concentrate on a program of school construction.

What does Life magazine recommend?

In an editorial on this subject in its March 17, 1961, issue, Life said: "Certainly education needs all the going concerns it can get; the greater variety, the better, and the more religious schools, the better, too. * * * Democracy depends on education; but does that mean it can depend primarily on nonreligious education, which is often in effect antireligious? Protestants, Catholics, and Jews have a lot more thinking to do on this subject."

What does Will Herberg say on this subject?

A distinguished author and professor of Judaic studies at Drew University, Dr. Herberg says: "Justice, I think, is entirely on the side of those who call for public support to parochial and other religious schools performing a public function; so also is the practice of other democratic countries, where almost without exception, religious schools meeting the set requirements are given public support as public institutions."

What does Prof. Henry Steele Commager propose?

In the New York Times magazine of February 26, 1961, the distinguished American historian of Amherst College, Dr. Commager, makes substantially the same recommendation: "Society requires education because it has a paramount interest in an educated citizenry. * * * The problem of reconciling the tradition of separation of church and state with public aid to denominational colleges and universities is more complex and perplexing. Perhaps it is sufficient here to note that our academic cousins, the British and the Canadians, seem to have solved the problem by giving state aid to both public and denominational schools without impairing either religious or intellectual freedom, and that the time may have come when we should rethink our own traditional and instinctive attitudes in this area.

"Taxes to support higher education are like taxes to support elementary education, strengthen national defense, build roads, maintain hospitals, safeguard the young, operate libraries and museums, and maintain public order. The principle that underlies all of these enterprises is that they are essential to the well-being of society."

What important truths emerge from this friendly discussion?

1. There is nothing in the Constitution that forbids the use of public funds, Federal, State or community, for the education of the youth of America in all subjects except religion, in public, nonprofit church-related or other private schools.

2. The method of allocating such funds must be worked out carefully, assigning them either to the students or their parents. The proposal of the citizens for educational freedom that tuition grants, equal in amount to the help made available to public schoolchildren, be given in certificates to all other students, negotiable only at the school of their choice, fits in admirably with all the decisions of the Supreme Court.

3. No public funds may be allocated for the teaching of religion. This reflects the common interpretation of the Constitution at the present time. Whether that is to be the enduring view, only time can tell. We agree, however, with Life's editorial that all of us, Protestants, Catholics, and Jews, have "a lot more thinking to do on this subject" before we settle permanently for an education that is entirely divorced from basic religious and spiritual values.

4. What is desperately needed to settle the issue of a just and fair use of taxpayers' money in the education of the youth of America is an open mind and a willingness to consider with sympathy and understanding the views on both sides of this important question. Where there is such an open mind, good will, a spirit of brotherhood and a sense of fairness will find a reasonable solution. It is the purpose of this friendly discussion to contribute to that solution and thus, to deepen our national unity and solidarity in spite of all our differences in race, color, and creed.

Against Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. SAMUEL L. DEVINE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. DEVINE. Mr. Speaker, under to extend my remarks, I am incorporating in the RECORD a resolution adopted by the board of education of the Upper Arlington City School District in opposition to the massive program of Federal aid to education.

UPPER ARLINGTON SCHOOLS,
Columbus, Ohio.

STATEMENT ON FEDERAL AID TO EDUCATION

We, the undersigned members of the Upper Arlington, Ohio, Board of Education, are of the unanimous opinion that there is no need for a massive program of Federal aid to education.

We believe that a massive program of Federal aid to education is contrary to the fundamental American tradition of home rule in education. We believe that local and State control of education best safeguards the liberty and freedom of the American people and best insures the sound education of our Nation's youth.

We believe that a massive program of Federal aid to education will inevitably result in Federal control over the policies and content of the American educational system.

Therefore we, all the members of the Board of Education of Upper Arlington, Ohio, wish hereby to make known our opposition to any form of extensive Federal financial aid to education.

Further, we feel this to be one of the most important issues facing the boards of education throughout this country and it is our hope that all board members after careful study of this issue will inform their Senators and Representative of their attitude toward Federal aid to education.

CLAIR FULTZ, *President.*
JOHN A. PRIOR,
Vice-President.
EDGAR E. BARNETT,
Member.
MARY LOU NIPLE,
Member.
BEN K. WILLIAMS,
Member.

Reasonable Skepticism

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. PUCINSKI. Mr. Speaker, as it is well known by now, I have persisted in my demand that the Soviet Union be forced to produce more scientific data before the world accepts its claim of putting Major Gagarin into orbital space flight on April 12. I am most gratified to learn that more and more people are taking a second look at the Soviet claim.

It gives me great pleasure today to introduce into the RECORD an editorial which appeared in Chicago's American, which raises some very pertinent questions regarding Gagarin's flight. It is encouraging to see responsible newspapers like Chicago's American take the cautious approach in accepting the credibility of the Soviet claim.

Mr. Speaker, the editorial follows:

REASONABLE SKEPTICISM

When Members of Congress were shown a motion picture of Comdr. Alan B. Shepard on his flight into space, which recorded his actions thruout the 15 minute journey, some Congressmen were moved to suggest that the Russians produce equally convincing evidence that they actually sent a man into space on April 12.

The motion pictures of Shepard were, as Representative ROMAN PUCINSKI, Democrat of Illinois, observed, "much more convincing than anything Russia has produced" in support of the Soviet announcement that Maj. Yuri Gagarin was sent into orbit around the earth.

All the Russian reports on the Gagarin flight have been sparse, and some have been conflicting. For instance, he was reported to have floated down to earth in a parachute, then this was changed to an announcement that he had landed the space ship.

Gagarin's own story of the landing, given Wednesday before a military audience in Moscow, sounds highly imaginative. He landed the space ship on a collective farm, he said, attracting no attention from anybody except a woman, a child, and a calf.

To believe that it happened that way, you must assume that the Soviet Government, having sent a man to ride around the earth in space, immediately lost interest in him, leaving him to get back to earth the best way he could, with nobody assigned to help him, to question him, or to take motion pictures of his landing. We can't imagine the methodical Russians doing it that way.

Some squeamish American writers say it is poor sportsmanship for Americans to discuss any lacks or discrepancies in the evidence the Russians have offered in support of their claim to being first with a manned space flight. We think it's simple good sense.

If the Russians really were first to send a man into space they can produce the evidence of it. Until they do produce the evidence, they can hardly blame Americans—in view of the astonishing uses which Russian propaganda sometimes makes of outright invention—for wondering whether a man really did ride around the earth in that space vehicle which the Russians sent up on April 12.

When York Was Ransomed

EXTENSION OF REMARKS
OF
HON. GEORGE A. GOODLING
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. GOODLING. Mr. Speaker, York, Pa., has always played a prominent role in the history of the United States. From September 1777 to June 1778, during the most crucial days of the Revolution, York's little brick courthouse served as the Capital of the American Colonies. During this period a printing press from the shop of Benjamin Franklin was brought from Philadelphia, and upon it were printed the public communications from Congress and $10 million in Continental bills. The Pennsylvania Gazette was also printed here for a time. At York furnace on the Codorus Creek nearby, iron was melted for cannonballs.

During World War I the diversified industry of the area played its part in helping bring the conflict to a successful conclusion.

During World War II the "York plan" was conceived, which became a pattern for industrial cooperation throughout the entire Nation.

The centennial of the Civil War in this area will be commemorated shortly. A prominent York attorney has recently written a very informative article on the trying days of that period.

I commend this article to the students of Civil War history and ask that it be made a part of my remarks in the Appendix of the RECORD.

WHEN YORK WAS RANSOMED—JUBAL EARLY THREATENED CITY WITH TORCH

(By John F. Rauhauser, Jr.)

Suspense hung as heavily as the dust-laden air when the clatter of hoofs came to a halt before the County Courthouse. The Confederate general and his staff had arrived to stipulate the conditions of occupation to the citizens of York, Pa.

The aide, Adj. John W. Daniel, was first to dismount with the agility of his 21 years. In later years, one leg having been amputated in battle, he would move more slowly, walking through the aisles of Congress as the Senator from Virginia.

His general, 47, tall, but not fully erect, dismounted with the determined slowness that belied his characteristic brashness as a military leader. He could have passed for a graduate of West Point, which indeed he was; and his countenance was as weathered as if he had been a seasoned veteran of Indian wars, which also was true.

The apprehensive townspeople did not need to refer to the faded gray uniform, broad-brimmed felt hat, disheveled beard nor to the "C. S. A." on his huge, black horse to identify Maj. Gen. Jubal A. Early of the Confederate Army.

While the community was apprehensive, there was not yet any reason for terror. The occupation had been without resistance. Indeed the greatest disruption thus far had taken place the day before, on Sunday, when Early's advance guard, led by the young Georgian, Gen. John B. Gordon, had entered the town to the strains of "Dixie," interrupting 10 o'clock church services.

Now, with his troops ringing the town, Jubal Early himself was in command. He entered the crowded courtroom, sword and field glasses dangling at his side. As a practicing lawyer before the war, he was not unaccustomed to his present forum. Ascending the steps to the judge's seat he faced the committee of safety: county commissioners, burgess, judge, leading citizens.

"I have taken possession of your town by authority of the Confederate Government," he began. "My soldiers are tired and worn out. They need food and clothing. They are not permitted to destroy private property nor to harm any citizen. You are living in a land of plenty and have not suffered from the results of war, like my own countrymen down in Virginia."

It was, of course, true that Pennsylvania was as yet unscathed by the war; that this was a land of plenty compared to the scorched fields in the South. But the mechanics of translating this plenty into benefits for his troops was another thing. That was the business at hand.

Warned of the advance of the Confederate forces by a stream of refugees pouring through their town and on across the Susquehanna River, 12 miles to the east, the citizens of York had secreted much of their material wealth. Livestock and horses were hidden in the dense woodland; silver and family valuables were buried; public and private funds, bonds and other negotiable instruments were transferred to Lancaster, Easton, and Philadelphia.

Consequently Early's requisition for food and clothing for his 6,000 troops was not easy to satisfy, but the town complied: flour, bread, sugar, coffee, molasses, salt, fresh meat, bacon, pork, shoes, stockings, hats—all this and more poured into the Confederate encampments now scattered around the city.

But when Early demanded $100,000 in Union greenback currency, the committee of safety produced only $28,000, whereupon Early commanded the county judge to surrender the keys to the courthouse, coupled with the threat of burning all public records.

"Barbarous," protested Judge Fisher.

"Barbarous, is it?" Early asked. "Then let's say that I want to burn the records of your county in retaliation for the burning of the deeds and records by the Federal Army in Fairfax, Va."

But the judge prevailed, due in part, no doubt, to Early's training as a lawyer and his respect for the courts. Furthermore he was not really interested in the charred court records; he was determined, however, to extract the Federal currency he demanded. Confederate script was nearly worthless, even in the South. For his planned sortie east to Philadelphia and north to Harrisburg he needed northern currency.

"Then is there any property in York that is contraband of war?" demanded Early.

"Nothing that I know of," responded the Judge drily, "unless it's cigars made from York County tobacco." This offer was summarily rejected by the general. These "Yankee cigars" were worthless to a southerner, accustomed to southern tobacco.

The following day Early again pressed his demand for the balance of the $100,000. Calling the town's chief burgess to his headquarters, Early advised him, "The money I have asked for must be raised. I will have it. If it is not furnished me. I will burn the car shops and railroad buildings, for I have discovered that cars have recently been made at this place for the Yankee government."

This was a serious threat. These shops and buildings were of wood. Setting them afire would envelop many private homes in flame. An unimpeded conflagration could destroy the entire residential section.

Protests were unavailing. When reminded of his pledge not to destroy private property, Early countered that he was within his rights in destroying shops producing war materials. "Call out your fire departments to protect your homes," he advised gruffly.

The scene was set. Confederate soldiers assisted in drawing fire equipment to the scene. A squad of 30 men applied the torch. The community was panic-stricken. Several railroad cars were first to go. The buildings and shops were to be next.

At the last moment, in desperation, a local merchant offered his draft on a Philadelphia bank for $50,000. The offer was rejected as being improbable of collection.

No melodrama was ever better timed.

At this exact moment, a rider, Capt. Eliot Johnson, aide to Gen. R. S. Ewell, Early's commanding officer then located 36 miles distant at Carlisle, rode up.

He handed a dispatch to Early. Written at 7:30 a.m., it had been sent from Chambersburg by its author to Ewell; and now, at 6 p.m. the same day the message was relayed to Early at York.

It bore the signature, "R. E. Lee, General."

Reading the dispatch, Early stayed his order to burn the buildings and, calling his men together, advised the terrified crowd that he would give further consideration overnight to the merchant's offer of a $50,000 draft.

The fire department was ordered to stand by. Townspeople continued to remove their possessions from the properties adjoining the buildings destined for destruction. It was a quiet, solemn night in York.

When morning came the citizens were prepared for the worst. During the night Union guards had burned the bridge at Wrightsville, thus cutting off Early's eastward route across the Susquehanna.

But to the amazement of everyone, the Confederate guards were no longer in front of the public buildings. Early had departed quietly during the night. The encampments were abandoned.

A printed handbill was left behind by Early:

"To the Citizens of York:

"I have abstained from burning the railroad buildings and car shops of your town because, after examination, I am satisfied the safety of the town would be endangered; and, acting in the spirit of humanity, which has ever characterized my government and its military authorities, I do not desire to involve the innocent in the same punishment with the guilty * * *."

The handbill added the hope that the citizens of York would shake off the tyrannical government under which they were groaning.

Early's farewell message, however, had left much more unsaid. It did not refer to Lee's message, just received, which carried the urgent command that Early's troops, as part of Ewell's army, should immediately countermarch westward to join Lee; nor the fact that the Army of the Potomac was advancing northward toward Lee's position, under its new commander, Gen. George G. Meade.

But the good people of York were content on this morning of June 30, 1863.

The rebels had departed. Their town had been ransomed by the payment of $28,000 and, though they did not yet know it, by a battle that would commence the next day near the village of Gettysburg.

To Build—To Serve—To Achieve

EXTENSION OF REMARKS
OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1961

Mr. HARRIS. Mr. Speaker, on the evening of May 10, 1961, the James E. West District, of the National Capitol Area Council Boy Scouts of America, held its annual meeting at the Naval Weapons Plant here in Washington. The Honorable Abraham Ribicoff, Secretary of Health, Education, and Welfare, was the speaker for the occasion and made an outstanding speech to several hundred scouters on the subject "To Build—To Serve—To Achieve." As a former Scout, the Secretary spoke to this fine group out of the abundance of experience. It was well received by the several hundred scouters in attendance. It is most appropriate that it be included in the CONGRESSIONAL RECORD with these remarks:

TO BUILD—TO SERVE—TO ACHIEVE

During the past half century, since the founding of the Boy Scouts of America in 1910, someone has estimated that the unique service rendered by the scouts in their splendid service-to-others program has been the 10 billion good turns—little ones and big ones—which have been done by members of the organization.

Your gracious invitation to me to speak tonight makes 10 billion and 1 such good turns. It gives me an opportunity to honor the adult leaders of the District of Columbia for their service to scouting and to speak on a subject which is very close to my heart. However, one good turn deserves another and as a former boy scout my good turn will be to try to keep my remarks brief and to the point.

It is always a privilege to speak in behalf of the boy scouts program; to recognize its high purposes; its unique opportunities and its mighty accomplishments. The needs of youth are many today. We live in a highly complex society with many pulls in many different directions.

The scouting program provides a balance of good citizenship, high character, and physical fitness. It is a program with a purpose. It is a program of depth not only in getting across to boys the skills and techniques necessary for maturity but in using the learning processes related to those skills. It develops character and citizenship of a high order.

We build finer youth through scouting. We build democracy through finer youth. We build understanding and well-being through democracy. And we build peace and progress through understanding.

The scouting program, dedicated to youth, is a program for the present and for the future. Its continued success will contribute much to the lives of countless individuals and to our progress as a Nation.

The James E. West District of the National Capital Area Council honors tonight the 1,100 area adult leaders of the Boy Scouts

of America. But with this recognition of your outstanding services there is an implied obligation and a challenge to continued effort. You are carrying forward the ideals of which our fathers dreamed. You are giving a bit of service to the sons of America. You are partners in building a finer Nation and a better world. You are guardians of the character of youth. In a very special way, you represent one of the great essences of Americanism. This Nation was built upon the willingness of men and women to give service on a voluntary basis. In scouting you have evidence of the positive result of this kind of service.

Today the scouting program reaches more than 5 million boys and adults. We can do still better. In the period ahead, none of us can do too much in relation to the need. In the face of great economic, social, and technological change, we are all called to new challenge, sacrifice, and dedication. "I will do my best to build, to serve, to achieve" is the theme of your program. The record of scouting in the past has been spectacularly outstanding. The record of scouting in the future is in your hands.

You cannot rest upon the achievements of yesteryear, no matter how tremendous they have been. You cannot be complacent in the face of the world situation, or happy in view of our nationwide problems of juvenile delinquency.

The Scouting program must go forward with increased vigor, new planning, and new ideas. Any program, no matter how purposeful or dynamic, can lose its freshness and vitality if the leaders are not continually rechallenged and reinspired.

The Scouting program could be reduced to routine, mediocrity, and boondoggling, to rote and repetition, if it were ever to lose its zest and zeal. It could become uninspired and stereotyped if it lost its sense of dedication. It could grow stale and indifferent if the leaders did not constantly reeducate themselves. You who work in Scouting would be the first to agree that kind hearts are not enough to waken young minds.

This, then, is the essence of your challenge: Scouting must continue to stress a rigorous, rugged program, rich in resources to keep alive the old fashioned virtues on which a pioneering democracy was built and which made America strong and have kept us free.

Scouting must continue to stress a program which will stir the imagination of our youth, demanding their finest abilities, enlisting their idealism, seeking their best efforts and accepting nothing less.

I would challenge you to keep that spirit of ruggedness always alive and growing. I would challenge you to new efforts in building boys who are well grounded in citizenship, well exposed to those ideals which go hand in hand with high moral character, well equipped with the physicial attributes that bespeak and reflect the energy, dynamism, and strength of true Americans.

Scouting must continue to emphasize individual initiative and resourcefulness. In a recent article by Gen. Alfred M. Gruenther published in Scouting magazine, General Gruenther said, "The competion is much more keen than it was in my day. I am not talking about the competition for a job—I am talking about the development of great individual responsibility." Today, when in so many parts of the world the freedom and dignity of man is being threatened, individual responsibility must be inculcated in our children as something they owe both to themselves and to their country.

Scouting must always be a purposeful program with serious intent in building well-grounded citizens for this Nation. I see it as a highly significant, vital program of informal youth education, due the highest priority in any community from the standpoint of obtaining understanding and support. It has that community support. It richly deserves it.

But Scouting is more than a community program. It is worldwide in application and it must reach out increasingly to touch and influence the whole world. Scouts are aware of their responsibility to the world community. They are conscious that out of every 200 boys in our world only 5 of them live in this country; that on these 5 rests a heavy responsibility for the peace of tomorrow's world. It is heartening to know that since 1944 more than $1¾ million worth of material help has been provided for the extension of Scouting in 90 countries, help in training adult leaders and increasing world understanding among youth. Much of this has been made possible by small contributions from individual Scouts and leaders. Since the beginning of the Boy Scouts of America, over 8,443 members have taken part in 10 world jamborees that have helped to promote world friendship and understanding.

It is particularly pleasant to note that the Boy Scout program during the coming year is placing special emphasis on health, safety, and physical fitness.

The need for physical fitness training for youth has been clearly established. Comparisons of the physical fitness ratings of children show that the average American boy or girl is not as physically fit as is a member of the same age group in many other countries. These fitness tests also indicate a downward trend in physical fitness in our own country in recent years. Working together, parents, schools, and youth organizations can do much to help solve this problem.

It was my great privilege, on behalf of President Kennedy and his Council on Youth Fitness, to preside at the recent Conference on Physical Fitness of Youth. The President's informal remarks at the closing general session are evidence of the concern with which the administration regards this problem.

"We do not want in the United States a nation of spectators," said President Kennedy, "we want a nation of participants in the vigorous life. . . . We want to make sure that as our life becomes more sophisticated, as we become more urbanized, that we don't lose this valuable facet of our national character; physical vitality, which is tied into qualities of character, intellectual vigor and vitality."

The Boy Scouts of America were represented at this conference by their leaders from all across the country. They and the other delegates were in agreement that we need to think and act in terms that will assure our young people healthy and vigorous bodies, alert and intelligent minds, and that degree of emotional stability required to live in an age of both promise and peril.

What part will Scouting play in this great effort in the years ahead?

Scouting must be the spearhead of our drive against juvenile delinquency. This does not mean that Scouting should modify its high standards or accept responsibility as a punitive agency. Scouting is one of the strongest forces in the Nation today as a preventive factor in juvenile delinquency, guarding against the disease before it starts, guiding before habits of delinquency are formed, building constructively before the forces of destruction become operative.

Scouting must lead in the search for talent which is so important to America today. It must do everything possible to stimulate the intellectual curiosity of everybody, to stretch his mind and imagination, to supplement the work of the school, to encourage the bright lad and to guide and counsel him toward the pursuit of excellence.

Scouting must emphasize the newer skills and understandings, recognizing the unlimited potentialities on the part of a boy for abstractions which we have previously considered beyond his grasp. We must awaken the mind of youth to new understandings, new concepts, new ideas, new inventions, new searchings, new challenges.

Only thus can we fulfill our obligations to our youth, and our responsibility to the society we live in.

Only thus can we meet the challenge of the days ahead.

Foreign Aid: A Form of Glorified Blackmail

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. RAY. Mr. Speaker, under leave to extend my remarks, I am glad to place in the RECORD the remarks of our distinguished colleague, the Honorable H. R. GROSS, of Iowa, made by him in his appearance on the Manion Forum on May 14, 1961. His discussion on foreign aid as it affects our national strength and therefore our national security is timely and valuable.

Mr. GROSS. Thank you, Dean Manion. I appreciate this opportunity to appear on the Manion Forum to discuss an issue which is of vital concern to all Americans—"foreign aid."

Frequently I have been labeled as being "negative," "an isolationist" and out of step with the times because of the warnings I have issued during my entire service in Congress that it was not within the capacity of the citizens of this country to finance the rest of the world and still maintain the integrity of the American dollar and this Constitutional Republic.

In my campaign for reelection last year, some of the assorted eggheads even asserted that I didn't know the world was round because of my refusal to imperil this Nation by dissipating the resources of our people—too often capriciously—in foreign lands.

It is reassuring to know that there are those in this country, like Dean Manion and those associated with him, who recognize that we cannot continue forever a reckless giveaway program and still, by some magic, avoid the day of accounting.

Since the end of World War II, the United States has spent the fantastic sum of at least $100 billion in some 70 countries of the world, and contributed heavily to the loading of a staggering Federal debt of $290 billion upon the backs of our children.

We have given economic and military aid to dictators who then used this aid to suppress their own people in the name of anti-communism. We have given to dictators, like Sukarno of Indonesia, who have indicated by word and deed their affinity for our Communist enemies.

And we have given to outright Communist dictators, like Tito of Yugoslavia.

A VERY SORRY SPECTACLE

Our aid has been used by our so-called allies and former foes to rebuild and modernize their industrial complexes in such a way that they are now this Nation's chief competitors.

Corrupt officials have used our aid to enrich themselves and their cronies, leaving little for the people we supposedly were trying to help.

And the waste, the extravagance, the outright corruption in this vast foreign giveaway program almost defies imagination.

What have we bought with this incredible outpouring of our treasure? The record is clear that the billions of dollars we have lavished on foreign governments has bought us neither friends nor respect. Neither has it fashioned a world that is peaceful, prosperous, or free.

We have only to look to Laos as an example of how dismally "foreign aid" has failed.

If all the figures could be brought together, the ledger would show that the United States has pumped more than $500 million into that little country in the form of economic aid, defense support and for military training and equipment.

And now comes word that the Laotian army is strong enough in point of numbers and well equipped to meet the attacking forces, but it lacks the will to fight.

It is interesting to recall that "foreign aid" was first sold to Congress as a strictly temporary program. The original purpose, we were told, was to assist war-devastated nations on an emergency basis so they would be in a position to buy needed American goods at the end of World War II when the United States had nearly all the gold in the world.

We spent money in all corners of the globe to close what was called the foreign "dollar gap."

Within 5 years, the tide started turning. Foreigners no longer were using their American dollars to buy our goods. Their factories, rebuilt with our tax dollars, were humming. Nations such as Great Britain, Japan, West Germany, France, and Italy prospered, but continued to demand and receive our aid. It has been in all too many instances a form of glorified blackmail.

Adding insult to injury, foreign beneficiaries of U.S. aid began to eat into the American market with imports of cars, cameras, steel, sewing machines, machine tools, textiles, and many other items. Today a flood of foreign merchandise is rising ominously in all American marketplaces—merchandise which was produced with low wages, new factories, American processes, and American money.

With this closing of the dollar gap, what we should have done was reduce substantially our spending overseas, but, unfortunately, the international do-gooders were in command and foreign-aid spending continued unabated. Attended with the same old specious arguments that peace in the world depends on the buying of friends, Congress has been stampeded each year, year in and year out, to appropriate billions of dollars to be added to an already clogged foreign-aid pipeline.

Now, as a result of our own consummate foolishness, the chickens are coming home to roost.

The outflow of gold from this country continues at an alarming rate. The peril to the stability of the dollar is obvious, and yet only halfhearted measures have been instituted to deal with the very real problem of heavy deficits in America's balance of international payments.

Well, half-hearted measures won't get the job done, and the time is long overdue for the eggheads and internationalist do-gooders to face up to the fiscal facts of life.

The first and most important step for our Government to take is to serve notice on our so-called free world friends that the honeymoon is over: that no longer can they expect lavish handouts from a generous, and often foolish, Uncle Sam.

Unfortunately, there is nothing to indicate that the new administration plans any such move. As a matter of fact, President Kennedy's foreign aid message—which could very well have been entitled "Foreign Aid Forever"—makes it clear that he wants to spend even more money overseas in the years ahead.

The consequences of such an unwise course are too frightening to contemplate. Perhaps the day will come when the American taxpayers, who must carry the foreign aid burden, will demand an end. At least I hope so, and let us pray that day does not come too late.

United States Would Speed Weather System

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, the United States scored an important first with the launching of Tiros I, the world's first weather satellite, on April 1, 1960. Later, we launched Tiros II on November 23, 1960, and this satellite is still transmitting a staggering amount of meteorological information. Now we are preparing to take advantage of the knowledge gained from these two satellites by establishing a global weather satellite system by 1962–63. An article entitled "United States Would Speed Weather System," written by John Finney, appears in the New York Times of Sunday, May 21. Since long-range weather forecasting would prove of tremendous benefit to our lives, I believe the plans now being formulated to bring this about will prove of interest:

UNITED STATES WOULD SPEED WEATHER SYSTEM—KENNEDY TO ASK MORE FUNDS FOR FORECASTING SATELLITES

(By John Finney)

WASHINGTON, May 20.—The administration is drafting plans to accelerate development of a global weather satellite system and to make the meteorological information available to other nations.

The objective is to start using satellites for forecasting the world's weather on a limited basis by 1962–63, several years ahead of the original schedule.

Meanwhile, other nations would be invited to join the United States in utilizing the vast and revolutionary amount of meteorological information obtained from the satellites, even to the extent of obtaining local pictures of the weather over the territory.

The move represents one of the administration's answers to overcoming the world psychological advantage now enjoyed by the Soviet Union in the space program.

It is believed that a pioneering effect in putting satellites to the practical use of forecasting weather on all parts of the earth would bring immense credit to this country.

A proposal to accelerate the meteorological satellite program is expected to be included in the enlarged space program to be submitted to Congress by the Kennedy administration probably next week.

SIX HUNDRED MILLION RISE EXPECTED

The President is expected to ask for an additional sum of $600 million for the military and civilian space budgets for the coming fiscal year, which starts July 1. This would be a 25 percent rise in the original space request for that period.

The increases will be used to accelerate work in two main space fields—the man-in-space program and the development of practical uses of satellites for weather communication and navigation.

In addition, increased emphasis will be placed on attempting to close the Soviet lead in development of the larger rockets of the type needed to send manned expeditions to the moon.

The enlarged space program is not predicated on any specific decision to try to beat the Russians to the moon, officials said, although they believe there is a chance that with an accelerated effort the United States could score this important first. The underlying pressure behind the increase is to speed up U.S. space efforts generally.

On the international front, the administration is planning to call a scientific conference, probably early next fall, to acquaint other nations with what the U.S. weather satellite program is and how they can take advantage of the information obtained.

STUDY FOR WHITE HOUSE

The framework for the weather satellite program was presented to the White House this week by a special panel of the National Coordinating Committee for Aviation Meteorology.

The panel, composed of representatives of the National Aeronautics and Space Administration, the Weather Bureau, the Federal Aviation Agency, and the Defense Department, was given the assignment of drafting a plan for putting a meteorological satellite system into operation at the earliest possible time.

The panel's report, now being studied by the Budget Bureau and the National Space Council, recommends that the Weather Bureau be given about $175 million over the next 3 years to step up development of weather satellites and to construct the communication network and processing centers to handle the huge flow of information from the satellites. The first installment on this would be $53 million for the coming fiscal year.

With this program, the panel estimates that a weather satellite system could be placed on "operational status" by 1964.

Even before then, however, some practical forecasting use could be made of the developmental Nimbus satellities, which the Space Agency plans to launch starting next year.

Unlike the two Tiros meteorological satellites launched thus far, the nimbus would be stabilized so the television cameras for photographing, cloud formations would always be pointed toward Earth.

To make the earliest practical use of the first Nimbus satellites, the panel recommends immediate construction of two ground stations for receiving pictures from the satellites—one in Fairbanks, Alaska; the other on the east coast—and a communications network to relay the meteorological data to a new processing center located at the Weather Bureau's National Meteorological Center in Suitland, Md.

Once in operation, the satellite system would be capable of providing both day and night pictures of the cloud covers, and measurements of the heat being absorbed and emitted by the Earth and the clouds.

As the operational capabilities of the system improves, it is expected that the satellites will be able to furnish pictures of local cloud-cover formations directly to local stations.

Thus, for example, India might request a reading on the cloud formations over the Indian Ocean and a satellite would be instructed to take a picture and transmit it to a station in India.

George Washington Memorial Parkway

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1961

Mr. LANKFORD. Mr. Speaker, in the near future, the Senate Appropriations

Committee will be called upon to provide right-of-way acquisition funds for a 7½-mile stretch of scenic and historic land along the Potomac River in Prince George's County, Md., which will insure the completion of the George Washington Memorial Parkway.

I would like to include in the RECORD an editorial appearing in the Washington Post on May 19, which points out the importance of preserving this land for park purposes. Unless the 87th Congress takes prompt, positive action, commercial and real estate development will prevent the realization of the memorial to George Washington envisioned by the enactment of the Capper-Cramton Act 31 years ago. The editorial follows:

SAVE THE POTOMAC SHORE

Secretary Udall's request for funds to save the Potomac shore between the District line and Fort Washington once more focuses attention on the grand design that Congress long ago approved in passing the Capper-Cramton Act. It visualized park lands on both sides of the Potomac from Great Falls to Mount Vernon, traversed by scenic parkways on both sides. Land for the Virginia and Montgomery County segments of this magnificent park in memory of George Washington was long ago acquired, but a block has been repeatedly thrown up against acquisition of the necessary riverfront in Prince Georges County.

For several years commercial and real estate interests in the area have been demanding clearance to proceed with construction projects in the area designated for the park. Their impatience is understandable. Congress has been inexcusably dilatory in providing funds to buy the land after indicating that it would some day be taken. Now it is feared that the bulldozers can be held back no longer.

Prince Georges County is ready to provide half of the $2 million believed to be necessary to buy 1,100 acres for the parkway. Even if Congress is unwilling to provide funds for the proposed parkway in the near future, the least it can do is to join with the county in acquiring the land before its value for park purposes is forever destroyed. It would be incredibly short-sighted to allow a few stubborn Congressmen to close the door to realization of this memorial park for want of $1 million.

Michigan Resident Urges Continuation of Panama Line

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mrs. GRIFFITHS. Mr. Speaker, one of my constituents, a frequent visitor to Haiti, is vitally concerned over the discontinuation of the Panama Line. The following is a letter I have received in which she states her views on this matter:

Hon. MARTHA W. GRIFFITHS,
House Office Building,
Washington, D.C.

DEAR MARTHA: Bill and I have just returned from a 24-day visit in Haiti, and I do want to give you some idea of the important role the two ships (owned by the Panama Canal Co.), play in the daily lives of the "middle class," that is emerging in this country.

We stayed in the home of one of our Detroit-educated Haitian friends, and had a first-hand opportunity to participate in their daily lives. I went shopping for Mrs. Lauture, and met many other housewives in the stores. In every one, the supply of apples, pears, potatoes, baby food, special dietary canned goods, powdered milk, etc. was dependent upon the next arrival of the Panama Line. As far as I could find out, the only items the other U.S. steamship lines bring are tourists and nondomestic items.

In a country that is right at Cuba's back door, this type of service is, to me, just as important as monetary loans. And, the hard facts are that, if the Panama Lines doesn't bring these badly-needed items to Port-au-Prince, some foreign country will.

This was our sixth visit to Haiti since 1956. In spite of the difficult political situation, we have found that educational standards are progressing slowly, to be sure, but gains are being made. There are no longer two kinds of people—rich or poor. There is an in-between group of professional white-collar employees, with a majority of U.S. educated persons, as opposed to the European-educated "upper class."

Finally, you will be glad to know that the present U.S. joint military mission is highly respected in Haiti. I don't know any of the persons involved, but, obviously, they have been carefully selected and are doing a good public relations job everywhere they go. I can't help but wish that this caliber personnel had been prevalent during the American Occupation, from 1915–34. If so, this little country might be in better shape today, in many respects.

Thanks again, and my warmest personal regards.

Sincerely yours,

CAROLYN SEEFELDT.

National Salvation Army Week

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. PELLY. Mr. Speaker, this is National Salvation Army Week.

It is universally recognized that the Salvation Army has brought inspiration and countless blessings to millions of people and given to posterity a rich heritage of loving and of effective service to mankind.

For more than 74 years, for example, in my native city of Seattle the Salvation Army has continuously carried on its crusade against misery and has increasingly amplified its endeavors for humanity. The Seattle Times recently expressed for our community the recognition and appreciation which has been so well earned during the years.

I think, Mr. Speaker, the editorial in question is appropriate for printing in the CONGRESSIONAL RECORD and, accordingly, under unanimous consent include it for printing at this point:

A SALUTE TO THE SALVATION ARMY

A plaque embedded in the sidewalk at 115 Washington Street, in Seattle's Skid Road area, bears this notation: "On This Site the Salvation Army Commenced Work in Seattle 6–5–1887."

In the intervening years, Seattle's principal business district has moved north, and what then was a small city has become a very large one.

The Salvation Army has kept pace, and now has centers in several parts of the city offering a wide range of services—including alcoholic rehabilitation, help for locating missing persons, disaster assistance, and work with emotionally disturbed persons and delinquent juveniles.

The Salvation Army likewise has expanded in many other parts of the world since it was founded in 1865, in England, and now has some 20,000 centers in 86 countries.

National Salvation Army Week will be observed May 21–28, and it is fitting that the organization be saluted.

Kennedy Administration Fights Organized Crime

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. ROGERS of Colorado. Mr. Speaker, the Kennedy administration is interested in curbing organized crime and racketeering. The Honorable Robert F. Kennedy, Attorney General, has appeared before the Subcommittee of the House Judiciary Committee and urged enactment of legislation that will accomplish this purpose. I know there is great interest in preventing crime and racketeering and the Attorney General has proposals to meet this problem as is evidenced by his statement, and under unanimous consent, I insert his statement in the Appendix of the RECORD. The statement is as follows:

Mr. Chairman, I am here today supporting proposed legislation which we, in the Department of Justice believe can be extremely effective in combating organized crime and racketeering. These proposals have been developed in the Department over a period of time to aid and assist local law enforcement officers in controlling hoodlums and racketeers, who in many instances have become so rich and so powerful that they have outgrown local authorities.

Some of these proposals are new. Others are revisions of proposals submitted by the prior administration. Still others were submitted by my predecessor and I have endorsed them.

There have been large scale investigations into this problem on both the national scene and at the State level. You are all familiar with the Kefauver investigation and its disclosures which shocked the Nation. In the Senate Rackets Committee's investigations into improper conduct in the labor-management field, we found organized crime and racketeering moving into that field. Both investigations highlighted problems existing in the larger cities.

Sometimes we get the impression that the general public believes that organized crime is a problem for the big cities, alone. If any one is under that misapprehension he can be corrected very quickly by reading the report of the New York State Commission on Investigation issued in February of this year. It deals with organized crime in central New York State. Then there is a report by the General Investigating Committee to the House of Representatives of the 57th Legislature of Texas. The latter report details what

I can describe only as the rape of the city of Beaumont by organized crime. What the Texas committee found to be the results of organized crime having gained control of the town, will be of interest to you.

The investigation found houses of prostitution, gambling clubs, punchboards, pinball machines, slot machines, numbers, and bookmaking widely distributed throughout the city. Liquor was sold to teenagers and 45 pounds of raw opium worth $500,000 was seized. As has been pointed out so often, gambling, liquor violations, narcotics, bribery and corruption of local officials and labor racketeering and extortion go hand in hand.

The Texas report details the effects of organized crime as follows: The crime rate of the city rose 22 percent in 1960; desirable citizens left town; the city is in the red by $1,125,833; $350,000 in current checks were issued with no covering funds in the bank; within 3 years two water improvement projects ran out of money; the city is deficient in neighborhod parks and supervised recreation facilities; municipal bonds are difficult to sell; the city records were in such bad shape that independent auditors refused to certify an accounting rendered by them; and finally the efforts to attract industry to the city were sabotaged by the corrupting influence.

This appalling story has not had its ending recorded yet. An aroused citizenry currently is conducting a clean-up of what they rightly consider to be a local problem. However, we in the Federal Government can be of great assistance to them and other honest citizens.

The opium seized in Beaumont was not grown locally in Texas. The pinball machines and other gambling devices were not manufactured there. The profits from the activities did not remain in Texas. The information so necessary to the conduct of gambling operations did not originate locally. All the information and implements flowed into Beaumont through the medium of interstate commerce. Our package of bills is designed to prohibit the use of interstate facilities for the conduct of the many unlawful enterprises which make up organized crime today.

I now would like to discuss these bills in some general terms.

I will turn first to H.R. 6572, which would prohibit travel in aid of racketeering enterprises.

Organized crime is nourished by a number of activities, but the primary source of its growth is illicit gambling. From huge gambling profits flow the funds to bankroll the other illegal activities I have mentioned including the bribery of local officials.

The main target of our bill is interstate travel to promote gambling. It also is aimed at the huge profits in the traffic in liquor, narcotics, prostitution, as well as the use of these funds for corrupting local officials and for their use in racketeering in labor and management. Thus, when we speak of unlawful business it is business engaged in the aforementioned improper activities.

A brief explanation of the method by which the funds are obtained by the bigtime gambling operators may be useful at this time.

Many persons think of the corner handbook operator or the neighborhood merchant, who sells a numbers ticket to him, as the person to whom we refer when we talk of the gambling racketeer. This is about as accurate as describing an iceberg as a section of ice floating on top of the water. As with the iceberg the danger and the size of the problem can only be fully appreciated if we go below the surface.

On the surface is the handbook operator. He makes a profit from the persons who place bets with him because he has an edge on every bet. He pays track odds but usually not in excess of 20 to 1. The odds at the track are calculated after deducting the 15 to 18 percent of the total betting pool which goes to pay taxes and other expenses. The bookmaker pockets that amount. However, he is not a man of unlimited resources. He must balance his books so that he will lose no more on the winner than has been bet on the other horses in a race, after his percentage has been deducted. He cannot control the choices of his customers and very often he will find that one horse is the favorite choice of his clientele. His "action," as he calls it, may not reflect the action of the track. Therefore, he must reinsure himself on the race in much the same fashion that casualty insurance companies reinsure a risk that is too great for it to assume alone. To do this the bookmaker uses the layoff man, who for a commission, accepts the excess wager.

The local layoff better also will have limited funds and his layoff bets may be out of balance. When this occurs he calls the large layoff bettors, who because of their funds, can spread the larger risk. These persons are gamblers who comprise a nationwide syndicate or combine. They are in close touch with each other all the time and they distribute the bets among themselves so that an overall balance is reached on any horserace.

With a balanced book at the handbook, layoff or syndicate level the edge is divided and no one loses except the man who placed the original bet. As an indication of the volume of business I am talking about, one of the largest operators in the combine does a layoff business of $18 million a year. His net profit is $720,000 a year. This is a 4-percent return on volume with relatively no risk as a result of the balancing of his books on each event.

The term "gambler" is a misnomer for these persons. They accept money that the small gamblers wager but they do not gamble at all. This is further illustrated graphically by what we know as the numbers racket.

A man purchases a ticket with three numbers on it, paying a dollar for the ticket. Since there are 999 such numbers he should reasonably expect the odds to be 999 to 1. The numbers bank usually pays 600 to 1 on such a wager—or less—so you can see that the only gambler in this situation is the man making the bet. The operator pockets 40 cents on every dollar bet. That is if the game is run honestly. That, however, is too much to expect from this group. If the play is too high on any one number they manage through devious means to insure that a number on which the play has been small will be the winner.

With that background on the type of business done by these persons, let me now move to their interstate travel activities to show how we hope to be of aid and assistance to local law authorities.

The examples I am going to give have a factual basis, but I will speak mainly in generalities in open session for obvious reasons.

Our first example is as follows: Some notorious individuals, whose names you would immediately recognize, had interests in a numbers bank but lived in a resort town far from the scene of operation. Every month a messenger carried the profits of the numbers racket from the scene of operations to the resort town. One of the payments was in excess of $250,000. Thus, the persons reaping the profit from the illegal activity remained beyond the reach of the law enforcement officials at the place of operation and committed no crime in the State where they lived. Only the Federal Government can curtail the flow of funds which permit the kingpins to live far from the scene, preventing the local officials, burdened by the gambling activity, from punishing him.

If our bill is enacted we will be able to prosecute the courier who carries the funds across State lines and in conjunction with the aiding and abetting statute (18 U.S.C. 2) we will be able to prosecute the person who caused the courier to travel—the kingpin. This example illustrates what we have found to be a pattern around the country where the apparently innocuous 10-cent numbers bet in a large city turns into tremendous profits in the hands of bigtime hoodlums.

Another example involves the frequent travel from a middle Atlantic State to a New England State by the operator of a lottery—and/or members of his family—to make payments to winners or pick up money wagered. Our information reveals that, in order to avoid the statute proscribing interstate transportation of lottery tickets (18 U.S.C. 1301), the individual carried the plates for printing the tickets to the various States. He did that so the tickets could be printed locally.

In another instance in a Midwestern State, the scene of illicit operations is close to the border of the State. One individual travels daily between the two States. He conducts his layoff business in the one State and lives in a $200,000 house in the suburbs of a large city across the border in the other State.

Let me cite another example. The layoff men at the top of the bookmaking organization are in daily contact with each other to reinsure their bets and divide the action, thus assuring that all make a profit and no one takes an exorbitant risk.

These people can conduct their businesses by telephone. When local authorities get close to them, they merely pick up stakes and move to another jurisdiction. The best example of this moving to frustrate local police, is the case of a man who started operations as a layoff man in the Midwest in 1946. He moved to another town in 1949 and then to Newport, Ky., in 1950. In 1952, under pressure of the Kefauver investigations into organized crime, he moved to Montreal, Canada. When the Royal Canadian Mounted Police raided his establishment he moved back to Newport, Ky.

We can follow these people from State to State and prosecute them for the very activities which now make a mockery of local law enforcement if this travel bill is enacted.

The layoff men, who comprise the gambling syndicate, must settle their accounts periodically for they do not trust each other any more than they trust the average bettor. They settle the accounts by having a bagman travel throughout the country picking up and depositing funds to balance the books. He receives reports of balances due from each of the layoff men. He acts as a clearinghouse and accountant for the group—settling the accounts in accordance with good accounting practice—in much the same manner that our banking clearing houses operate. The only difference is that the banking houses are not afraid of divulging their incomes through the use of banking channels. The gamblers use cash and a messenger to clear the daily balances.

When a Braniff airplane crashed at Buffalo, Tex., on September 30, 1959, a collection man for a prime subject of the Kefauver investigation, was killed. The collection man was enroute to New York with his boss's share of profits from gambling operations in Texas. With the enactment of this bill, prosecution may be undertaken in future situations against men like this and the persons who send them to collect the proceeds.

In summary, our information reveals numerous instances where the prime mover in a gambling or other illegal enterprise operates by remote control from the safety of another State—sometimes half a continent away. He sends henchmen to the scene of operations or travels himself from time to time to supervise the activity and check on his underlings. As for the profits, he receives his share by messenger.

Another example of the type of situation which we are trying to curb in proscribing the interstate travel in furtherance of an unlawful activity is the situation which arose in Hot Springs, Ark., in 1960. A printing company in Jefferson Parish, La., receives race wire information from Chicago bookmakers and disseminates the data to gambling establishments in sections of the South and Southwest. The company is owned by a racketeer, since deported, and his race service manager, of New Orleans. The manager, while in Hot Springs in March of 1960 got into a violent argument with the owner of the race wire service there. The Hot Springs man told the New Orleans man to stay in New Orleans as he could operate his business without help.

In May of 1960, the owner of the Hot Springs service traveled to Chicago and visited a Chicago rackets overlord. The Hot Springs man sought assistance in curtailing the activities of the New Orleans group in seeking to take over his race wire service. If we could show the existence of race wire services in New Orleans and Hot Springs and the travel on the part of the New Orleans man to expand the New Orleans service and the travel of the Hot Springs man to protect his interest in the Hot Springs service we could prosecute both of these top racketeers with the enactment of the proposed bill.

A race wire service has been provided in Wisconsin by Chicago hoodlums. In return for allowing the race wire service to prosper in Wisconsin, a person, who is now the subject of intensive investigations, has been allocated a portion of Antioch, Ill., for the conduct of gambling. This individual apparently has trained his housemen at Kenosha before they traveled to Antioch to run the gambling operations. Such travel as by the Chicago people to Kenosha and the Kenosha hoodlums to Antioch would violate the bill as travel to promote an unlawful business, thus permitting the interruption if not the destruction of the gambling empires.

There is wide open gambling in Newport, Ky., adjacent to Cincinnati, Ohio, and Covington, Ky. A review of the financial statements of four Newport gambling casinos in 1957 revealed that 11 persons, who reside outside of Kentucky, participated in the casino profits. With this bill we would be able to move against interstate travel to distribute the profits of these casinos to the out-of-State owners.

Edward Silver, the district attorney of Kings County, testified before the New York State Commission of Investigation that there have been several unsolved gangland homicides connected with gambling in recent years in his juirsdiction. It would be in keeping with past practices of this element if the perpetrators of the crimes had come from out of State. This practice was amply illustrated by the disclosures in the trial of the members of the notorious Murder, Inc.

None of the activities of which I have just spoken, that is, interstate travel to carry on a racketeering enterprise, travel to deliver the profits of an illegal enterprise, or travel to commit a crime of violence in furtherance of the activities of an illegal business is now per se, a violation of State or Federal law. The travel is performed by these persons with impunity, but because of that travel and the interstate aspects of the activities, the task of the local law enforcement officials is staggering.

I am not discussing isolated instances but what we have found to be a pattern of behavior in a number of geographic areas.

We have skirted the area of social gambling by limiting the proposed statute to gambling, as a business, which violates State or Federal law. In this limited aspect, the enactment of the bill will be a tremendous tool for stamping out the vicious and dangerous criminal combinations.

Mr. Chairman, this bill is vital. We need it. Local law-enforcement officials need it. The country needs it.

The second bill I wish to discuss, H.R. 7039, amends chapter 50 of title 18, United States Code, with respect to the transmission of bets, wagers, and related information. Its purpose is to assist the various States in enforcement of their laws pertaining to gambling and bookmaking. It would prohibit the use of wire communication facilities for the transmission of certain gambling information in interstate and foreign commerce.

Gambling in the United States, we estimate, involves about 70,000 persons and a gross volume of $7 billion annually.

The most diligent efforts of local law enforcement officers are often frustrated by the ease with which information essential to gambling operations can be disseminated in interstate commerce.

Bookmaking bases its operations upon races at about 20 major racetracks throughout the country, and requires rapid transmission of the results on each race. Usually there are only a few tracks in operation at any given time and the average bet placed with a bookmaker is a small one.

In order to run a successful book that pays a good return, the bookmaker needs a volume of business. This volume is usually obtained by the fact that bettors can play their money and any winnings upon the whole card of daily races reported from one or more tracks, if they know their standing from race to race. Thus, information almost simultaneously transmitted prior to, during, and immediately after each race on such items as the starting horses, scratches of entries, probable winners, betting odds, results and the prices paid, is essential to both the bookmaker and his clientele in order to insure any sizable gambling.

Furthermore, let me emphasize that no matter by what means the bookmaker and his clients receive this in-bound information—whether by telegraph ticker tape, by telephone, or even by radio or television broadcast—the bookmaker needs a means of rapid out-bound communication. This usually is by telephone—with other bookmakers. the purpose is to balance his book and protect against a severe loss when the betting becomes heavy on any particular entry. I have explained this hedging process, known as layoff betting, in my earlier testimony on the interstate travel bill.

The rapid gathering and dissemination of trackside information is a highly profitable and integral part of commercialized gambling on horseracing. This information can be obtained by stealth and use of various ingenious devices, such as the pitch-catcher type operation where a man at the track flashes the result of a race by a hand signal or other device, to a confederate at an open telephone line. The confederate then gives the result to a central point of dissemination. The information is placed upon leased telegraph circuits or long distance telephone lines running to the major cities of the country from which it is further fanned out on other leased circuits or telephone lines, or in some cases by radio broadcast, to the ultimate subscribers, the bookmakers, who pay a substantial fee for this vital service.

The rapid results provided by this wire service are indispensable to all bookmakers operating on any but the most modest scale. They are a means of expanding the play and stimulating further betting from race to race. They protect the bookmaker from the dilemma of either refusing bets which are placed about the time a race is scheduled to start, or of accepting a bet on a horse which has already won the race.

Equally essential to the bookmaker is the local telephone service which he must have to avoid the risk of arrest for running an open betting room. He needs the telephone to take a substantial portion of bets; and, of course, the betters also will use the phone to be informed of the results. Furthermore, telephones provide auxiliary service for rapid results where telegraph tickers or speaker circuits fail. In areas where ticker or speaker service is not available, the bookmaker must have at least one telephone for the exclusive purpose of receiving service from the subdistributor who supplies him with the trackside information.

In addition to the unique transmission situation in the field of commercialized horserace betting, the gamblers also have moved into large-scale betting operations in such amateur and professional sports events as baseball, basketball, football, and boxing.

This has been highlighted recently by disclosures that for the second time in 10 years, gamblers have bribed college basketball players to shave points on games. In this situation the bookmaker needs telephone communication to get the latest "line" on the contest. This is the handicapped prediction of the probable results and the point spread in basketball and football. Without the latest information as to the condition of the team, and the happening of such things as late injuries to key players, the bookmaker is the victim of fate. He cannot permit this to happen, so he subscribes to a service which gives him and his confederates the latest up-to-the-minute information which may bear on the result.

It is quite evident that modern, organized, commercial gambling operations are so completely intertwined with the Nation's communications systems that denial of their use to the gambling fraternity would be a mortal blow to their operations.

This is the precise purpose of the proposed legislation. It would be an exercise by the Congress of its plenary power over interstate communications to aid the States in coping with organized gambling, by denying the use of interstate communication facilities for such activities.

It cannot be overemphasized that this bill is designed, first to assist the States and territories in the enforcement of their laws pertaining to gambling and like offenses. Second, the bill would in that regard help suppress organized gambling by prohibiting the use of wire communications for the transmission of gambling information in interstate and foreign commerce.

The word "organized" is underscored because it should be clear that the Federal Government is not undertaking the almost impossible task of dealing with all the many forms of casual or social wagering which so often may be effected over communication facilities. It is not intended that the act should prevent a social wager between friends by telephone. This legislation can be a most effective weapon in dealing with one of the major factors of organized crime in this country without invading the privacy of the home or outraging the sensibilities of our people in matters of personal inclinations and morals.

The next bill I would discuss is one we sent to the Congress, but which has not been introduced in the House. At this time, I would like to speak in support of subsections (a) and (b) of our draft. Subsection (c), dealing with false and misleading information will be presented as a separate bill. The bill would amend chapter 73 of title 18, United States Code dealing with the obstruction of justice. Its purpose is to prohibit the intimidation of witnesses in administrative investigations.

The need for this legislation stems from the language of the existing obstruction of justice statutes (18 U.S.C. 1503 and 1505) which prohibit the intimidation of witnesses in matters pending before a court or an

administrative agency. Section 1503 prohibits the intimidation of any witness in any court proceeding. Section 1505 prohibits the intimidation of any witness in any proceeding pending before any department or agency.

Section 1503 has been construed in *United States* v. *Scoratow* (137 F. Supp. 620) as not applying to the intimidation of a witness in an investigation by the Federal Bureau of Investigation until a complaint is pending in a Federal court. As so construed, the section leaves a gap in the law which permits the intimidation of witnesses in preliminary investigation. This withholds sanctions against persons who may by their actions forestall the commencement of criminal proceedings in the Federal courts. The gap was recognized in the 85th Congress and remedial legislation was recommended by the Senate Subcommittee on Improvements in the Federal Criminal Code.

You will, of course, understand that in very many cases investigations are conducted in order to ascertain whether a complaint should be filed or a matter referred to a grand jury. If this preliminary investigation is frustrated by the intimidation of witnesses, the investigation may be brought to a halt before evidence sufficient to warrant the filing of a complaint or the referral of the evidence to a grand jury has been ascertained. Intimidation at this point, therefore, is more effective than it would be at a later point when there may be other evidence upon which to proceed.

Some examples of this intimidation are as follows. In the *Scoratow* case, the defendant threatened to kill a Mr. and Mrs. Friedman if Friedman gave any information to the FBI. Friedman was being interrogated by the FBI in an investigation of a possible false statement to the FHA involving a nephew of Scoratow. The court held that such intimidation was not within the purview of existing obstruction of justice statutes and dismissed an indictment against Scoratow.

Another case such as this involved a man named Lloyd Scuttles. Scuttles had been interviewed in connection with a stolen automobile. When the man who sold Scuttles the automobile got out of prison, he threatened to kill Scuttles because he believed that Scuttles had given the FBI information leading to his conviction. Scuttles was never a witness at the trial of the man who threatened him. Therefore the case was not within the purview of the obstruction of justice statute.

In still another case, a man who had been interviewed by FBI agents in a white slave case was accosted by another man who displayed a knife and threatened to kill our witness if he gave any information to the FBI, or the police. Again, since the man threatened was not a witness in a proceeding, no action could be taken against the threatener.

These are some of the cases we know about. We don't know, of course, the number of cases where the intimidation has been wholly effective.

We are asking for an expansion of the obstruction statutes to cover this situation. It is particularly necessary in view of the other bills I am discussing today.

If those bills are enacted the Department of Justice is going to be involved in large-scale combat with the forces which use interstate commerce to conduct their criminal activities. The persons who make up this element are tough and ruthless. They also are shrewd enough to be aware of the need of secrecy in the conduct of their activities. They know the dangers to which they will be subjected if witnesses talk freely to our investigators. Therefore, we expect attempts will be made to mislead us through intimidation of witnesses by threats or by violence.

I am sure that the gap of which I spoke previously is known to the leaders of organized crime. They are made well aware of the laws' limitations and the opportunities for forestalling investigations. This loophole permits the use of threats and violence in the first stages of an investigation thus preventing the development of a case.

Our opponents are ruthless, vicious, and resourceful. I cannot stress this too much. They will use every weapon at their command to prevent our discovery of incriminating information. The present state of the law is an open invitation to them to cripple our efforts and prevent our inquiries at the very point where witnesses need protection the most. The need for this bill seems to me to be self-evident.

The next bills are H.R. 468 and H.R. 3023 to amend the Fugitive Felon Act. They are identical. This amendment was introduced in the 86th Congress at the behest of my predecessor as H.R. 11897. It passed the House on August 23, 1960, but no action was taken on it in the Senate. It was again introduced at the beginning of this session of the Congress at Mr. Roger's recommendation. I endorse this proposal and urge its enactment.

The purpose of this proposal is to expand the coverage of the Fugitive Felon Act (18 U.S.C. 1073) which now makes it a Federal offense to flee a State jurisdiction in order to avoid prosecution or confinement for certain crimes of violence. These crimes include murder, kidnaping, burglary, robbery, mayhem, rape, assault with a dangerous weapon, arson punishable as a felony, extortion accompanied by threats of violence or attempts to commit those offenses.

Although the law only applies to fugitives, who have committed these crimes, this section has been extremely useful in strengthening local law enforcement. It has enabled the FBI to arrest fugitives fleeing a State jurisdiction and turn them over to the State in which they are arrested to await extradition by the demanding State. In 1960, the FBI apprehended 1,361 fugitives under the provisions of this law. Only two were tried in Federal courts. The rest were turned over to local authorities.

We can understand the limited scope of the section if we go back to the time of its enactment in 1934. Local law enforcement officials were troubled then, as they are today, with the ease with which fugitives could escape their jurisdiction by crossing a State line. The local officials could not follow, find, and return the criminals. It became apparent that the Federal Government had to assist those officials by apprehending fugitives in other jurisdictions and returning them for prosecution.

The nature of the publicized crime of that era was, however, different than it is today. At that time, the Congress and the public were greatly disturbed by widespread crimes of violence. Names like Capone, Dutch Shultz, Mad-dog Coll, Dillinger, and Karpis were on the front pages of the newspapers of the country.

Today, as in 1934, the major responsibility for the combating of crime and the prosecution of offenders rests with the States. Today, however, the face of organized crime has changed. While there still are crimes of violence, the modern criminal has become somewhat more sophisticated in the planning and perpetration of his activities in gambling, prostitution, narcotics, bribery, fraud and larceny. He has moved into legitimate businesses and labor unions where he embezzles the funds and loots the treasury. He has much more rapid means of escape from the jurisdiction of the local law enforcement. Unless his offenses also are Federal offenses, the Federal Government may not through the means of this section enhance the power of the State officials to apprehend racketeers and hoodlums.

If the Fugitive Felon Act is expanded, as proposed by this bill, the FBI will be able to put into operation the first of the necessary steps leading to the return to the proper jurisdiction of any person who has committed a crime punishable by death or imprisonment for more than 1 year. In such an expanded scope, we in the Federal Government can be of the greatest aid and assistance to the States.

Another area of gambling which needs attention, if we are to make a coordinated and successful attack on organized crime, is the easy interstate transportation of wagering paraphernalia. This was highlighted by the report of the Texas commission mentioned in my earlier testimony. That problem is the subject of H.R. 6571.

Federal laws, designed to suppress the lottery traffic in interstate and foreign commerce, have been on the books since 1895 (28 Stat. 963, act of March 2, 1895, ch. 191). The present statutes are found at 18 U.S.C. sections 1301 to 1305. In summary, these statutes make illegal the transportation in interstate or foreign commerce of "any paper, certificate, or instrument purporting to be or to represent a ticket, chance, share, or interest in or dependent upon the event of a lottery * * *" (18 U.S.C. 1301).

From the very beginning the courts narrowly have limited the scope of these statutes. In 1897, the Supreme Court held that the statutory proscription against interstate transportation of lottery paraphernalia applied only to writings, instruments, or tickets representing chances on an existing lottery and not an already completed one (*France* v. *United States*, 164 U.S. 676 (1897)). The 1903 decision in *Francis* v. *United States*, 188 U.S. 375 (1903), further limited the scope of the statute by holding that a duplicate slip, retained by the agent of a numbers lottery to indicate the number played, is not a paper "purporting to be or to represent a chance, share, or interest in a lottery." I have previously told you of the shipment of the plates for printing numbers tickets. That shipment will violate this section whereas the travel to deliver the plates will also violate our travel proposal.

Finally, it has been held that the use of the mails in advertising and conducting a bookmaking business does not violate the present statutes because the selection of winners may require some skill or knowledge rather than mere chance (*United States* v. *Rich*, 90 F. Supp. 624 (E.D. Ill. 1950)).

Since the classic definition of a lottery is the payment of consideration for a prize to be awarded by chance, this intepretation excludes sport betting slips from the existing statutory prohibition against interstate transportation.

The proposed statute is designed to close the most important loopholes resulting from the above decisions. This measure would make it a felony to send, or knowingly carry in interstate or foreign commerce, any wagering paraphernalia or device used, adapted, or designed for use in bookmaking, wagering pools with respect to a sporting event, or numbers, policy, bolita, or similar games. This language makes clear its applicability to slips, papers, or paraphernalia wich may be used in a lottery scheme not yet in existence or already completed. It also specifically prohibits the interstate transportation of slips recording the amounts and numbers bet in a numbers lottery and betting slips and other materials of a bookmaking operation.

In addition to the example I have previously cited there is considerable evidence that the operators of certain types of lotteries—which are undeniably interstate in character—have adopted various ways to avoid violating the narrow prohibitions of existing law. For example, lottery tickets may be printed in blank at a central point in one State, then transported to other

States where the so-called playing numbers are overprinted. Without these numbers the blanks are not within the statutory definition of lottery tickets an dtheir interstate transportation is not prohibited. Under the proposed measure, the blank tickets would be prohibited from interstate shipment as paper designed for use in a numbers or similar game.

The so-called numbers lottery, or one of its infinite variations, operates in virtually every major metropolitan area. Particularly where such a metropolitan area covers part of several States, it is not unusual that the numbers seliers in one State turn over their play to runners who report at a numbers bank in another State. The interstate carrying of slips or writings, indicating the amounts of bets and the numbers played, is essential to this type of operation. The proposed statute would prohibit the interstate carrying of such numbers slips.

The fear of a raid by Federal or local police has turned the attention of the numbers operators and the bookmakers to the problem of quick disposition of the records used in the conduct of the business. This would include the papers used to record the bets of the numbers played by the individual bettor. The operators are making our task more difficult through the use of flash paper for the quick disposition of the records. This paper is highly inflammable and will burst into flame if a cigarette is placed on it. In less time than it will take a law enforcement officer to cross the room, a bookmaker can turn his records into a pile of ashes of no use as evidence against him.

We wish to curtail the interstate transportation of this type of equipment. If we do so, the bookmaker and numbers operator is going to find another specialized type of equipment to frustrate our efforts. We thus are asking for this bill to curtail the interstate shipment of paraphernalia that is used, intended or designed for use in their activities. With this broad prohibition we hope to be able to keep step with the criminal element as it tries a different approach to the problem.

The last bill I will comment upon is H.R. 3021, which would amend chapter 95 of title 18, United States Code, to permit the compelling of testimony under certain conditions and the granting of immunity from prosecution in connection therewith. This proposal was first submitted to the Congress on May 25, 1959, by my predecessor. The bill was introduced as H.R. 7392 but did not pass. It was resubmitted to the Congress on January 18, 1961. In our examination of the program submitted by the previous administration, we found that the bill will perform a necessary function and I recommend its enactment.

The experience of the Department has shown that there are difficulties in obtaining proof of violation of the Taft-Hartley Act and the Hobbs Act because certain portions of those acts overlap. For example, an employer may have been the victim of labor extortion, which is prohibited by the Hobbs Act. However, because he has made payments to the labor racketeer, he may fear that the payments will be construed by prosecutive agencies or a grand jury as a payment to the labor leader in violation of the Taft-Hartley Act. Thus, the employer understandably is reluctant to testify about transactions that are not clear-cut violations of the Hobbs Act. In this gray area of activity our difficulties in obtaining proof are substantial.

This proposal will permit us to call the buinessman before the grand jury, compel him to testify as to the transactions. If he first refuses to answer the questions on the basis of his constitutional privilege, he could be given immunity against prosecution for any matter, thing, or transaction about which his testimony is compelled.

We will then be able to obtain the evidence we need against the person who is most culpable in the matter while relieving the fears of the person who has been wronged.

In addition, in Hobbs Act violations, we very often run into a situation where a person is a conduit for funds from an employer to a labor racketeer. The conduit, while not the most culpable person involved, is nevertheless able to and under the present law justified in refusing to answer any questions about the transaction on the basis of his constitutional privilege. If the present bill is enacted we will be able to require testimony from the least culpable of the conspirators and obtain the proof we need for conviction of the real offenders.

In summary this bill will enable the Department to prosecute with more effectiveness the persons engaged in labor racketeering which is tied into the rest of organized crime and has become such a blight upon the business community.

Mr. Chairman, in conclusion, I would like to read into the record the comments of Mr. J. Edgar Hoover, Director of the FBI, about the bills I have discussed. Mr. Hoover's statement is as follows:

"Your legislative program as to interstate crime currently pending in Congress should receive the wholehearted endorsement of law enforcement at Federal, State and local levels. As we are all aware, the growing seriousness of the Nation's crime problem presents an increasing threat to the safety and welfare of the Nation. Today its severe effects are felt directly or indirectly in every home in America. In terms of dollars and cents alone crime imposes a tremendous burden upon us all. Our annual cost of crime now totals $22 billion—the equivalent of $128 for every man, woman, and child in these United States.

"One of the most deeply entrenched segments of crime is represented in the underworld activities of racketeers and professional hoodlums. I refer to the vice barons, those engaged in illegal gambling, commercialized prostitution, and illicit liquor operations as well as the narcotics peddlers and the strong-arm racketeers whose lucrative illicit profits are derived from every stratum of our society. Many of these racketeers utilize interstate facilities and operate with impunity, if not in open defiance.

"The ranks of law enforcement are closing against the challenge of hoodlum lawlessness. As an example, on a day-to-day basis the FBI exchanges information with other law enforcement agencies at the local, State, and Federal levels concerning the operations and activities of professional hoodlums. During the past 6 months the FBI has disseminated over 53,000 items of a criminal intelligence nature to other law enforcing authorities.

"In addition, the scientific facilities of our laboratory and the fingerprint services of our Identification Division have been fully available to all agencies which are joined in the fight against crime. In return the FBI received invaluable assistance throughout the year from other members of the law enforcement profession in all parts of the Nation.

"These important weapons, science and cooperation, are successfully meeting the hoodlum challenge of lawlessness every day in the areas where we are now empowered by law to use them. These can be made even more effective if the law enforcement profession is given authority to bring these facilities to bear on those present voids in the law which allow organized crime and racketeering to operate on an interstate basis.

"This new and vitally needed legislation, which you have proposed, will strengthen the Federal Government's hand and will provide it with additional effective weapons in stamping out the evil of organized crime. If enacted into law, these legislative proposals would certainly enable the Government to proceed more effectively and vigorously against the well-entrenched interstate racketeers who are beyond the reach of local law enforcement."

Accomplishing American Goals Through Radio

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1961

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the statement of M. S. Novik, radio consultant, delivered by him recently at the 31st Institute for Education by Radio-TV in a panel program entitled "Accomplishing American Goals Through Radio." Mr. Novik's remarks follow:

We are gathered here this year to praise radio—not to bury it. This is quite a difference from 4 or 5 years ago, when many in the industry thought we were at a wake. We know that television didn't kill radio—just as radio didn't kill magazines and newspapers.

It is true that radio today is alive and kicking. It is true that there are more radio stations on the air today than ever before. But it is also true that every radio station is in danger of remaining only so good as its competition. And the level is set by the worst of its competitors.

Radio today with some notable exceptions, is a business of broadcasting recorded music and news. The live programs, the talk, forum, discussion, comment and controversy programs that made radio the dominant medium of communication in the country—all of these programs are just about gone today.

Radio today is making more money, and has more listeners and more commercials; and it also has less public service programing, less community action programs, and less standing in the community.

It seems to me the time has come to take a sharp look at radio as it is today.

What I've just said may have a familiar sound. The thought has been expressed by many. I said it on this platform 4 years ago.

In those 4 years what has happened? The networks faded to where evening network service has practically disappeared.

Today, with over 3,500 commercial radio stations on the air, even the network-owned stations—once called the flagship or powerhouse stations—are turning into independent operations. And just as the independents now dominate radio, just so do music and news now dominate the independents.

Don't take my word for it. I quote from a definitive handbook, based on actual station logs, and released this month by B.B.D. & O., "there has been a basic change in radio programing since 1954. Music and news formats have risen to complete dominance. Almost 75 to 80 percent of the programing of most independent stations is now composed of music and news."

In my opinion the music and news format is not the best vehicle for "Accomplishing the American Goal Through Radio."

There are as many ways of reaching the American goal as there are people sitting here today. These are no clear-cut directions for what the broadcaster should do to reach that goal.

But there are some roads that radio should not be traveling.

Let's look at the Kennedy-Nixon debates; a notable first in modern political history. These were created and produced by the broadcasters. Did every station carry them?

They did not. According to an FCC report to Congress, 35 independent TV stations in major cities and 10 network affiliates did not carry the great campaign debates. In radio the first debate was carried by 851 stations, the fourth by only 800 network affiliates, and not carried by 300 affiliates. But among the 2,500 nonaffiliates only 45 carried this unprecedented and important series. Obviously radio ran into a detour on that road.

Let's look at the subject of political broadcasting. Before the last presidential election the U.S. Senate held hearings on and finally amended section 315 to make the presidential debates possible. The U.S. Supreme Court rendered a decision, and Commissioner Ford, then Chairman of the FCC, spoke out on the need for making time available during political campaigns.

This matter of political broadcasts was serious enough for the Senate to ask the FCC to send each licensee a questionnaire, to determine their broadcasting policy. Certainly that should have alerted the radio station operators to the intent of the law. But it didn't. Many, if not the majority just wouldn't make time—other than spots available, for local or national candidates.

Here again radio was on the wrong road. Not because of political prejudice; of that I am certain, but because these programs did not fit station policy—the policy of music and news, the policy of no talk.

Finally, let's look at the recent presidential press conference broadcasts. For years radio and television had asked for equal treatment with the press in covering municipal, State, and Federal news.

President Kennedy, faced with many crucial national and international problems, which required a knowledge and understanding of the public, made precedent by permitting the presidential press conference to be broadcast live.

Logically we might assume that this coverage would be given maximum distribution. Instead we find President Kennedy's press secretary, Pierre Salinger, only last week, telling broadcasters that the White House is getting mail complaining that local stations no longer carry the press conferences. Mr. Salinger said: "I have a feeling the people who talk about overexposure of the President are falling back into show-business terms. They're talking maybe about overexposing a juggler, or a comic."

There again radio broadcasting trapped itself on a dead end street.

Who gave the broadcaster the right to decide that the people do not want to hear the great debates or local politics, or the Presidential press conferences? Who gave any broadcaster the right to decide that the people want only music and news?

Who had the right in Atlanta, Ga., and in other cities, to decide that the people did not want to hear the Metropolitan Opera broadcasts? They were strong enough—in enough towns—to keep CBS from being able to deliver enough affiliates to keep the opera on the CBS network. Yet enough listeners really wanted to hear the opera so that a specially tailored network had to be provided.

The end result of this policy of music and news and no talk is a generation who never heard of the "Town Hall of the Air," or the "American School of the Air." To this lost generation radio offers no choice unless they turn to FM.

The newspapers, bad as some of them may be, offer a choice; a choice of the news or comics or columnists. The reader of magazines has a choice, and so do the readers of pocket books. Even the hi-fi fan has a choice in the records he may buy. Only the radio listener has little choice.

The music and news formula changed the standard of good radio news programing, so that the background news program is now the exception; and the news bulletin, once the exception, is now the standard.

Somebody pulled the plug on public service programing.

The time has come for all broadcasters to face reality. It is time for radio to realize that television is no longer a threat. Radio has learned to live with television—and lived well. Radio can no longer excuse its program deficiencies by leaning on the crutch of television.

It is time for radio either to live up to the law or to ask that the law be changed. And the law for the broadcaster is the Communications Act of 1934. That Communications Act sets the rules under which the broadcaster operates. And that Communications Act didn't just happen; it wasn't born over night. Congress spent years debating the kind of broadcasting system the country should have.

Congress argued about having Government radio like the BBC; they discussed putting a ceiling on profits; some favored a reservation of time for noncommercial public service programs. Herbert Hoover, then Secretary of Commerce, suggested it be 25 percent of broadcast time. And Congress finally decided on our present system of commercial broadcasting with the conviction that the American businessman could be entrusted to operate both for profit and in the public interest.

The basic rules in the Communications Act of 1934 have not changed. Times have changed; people have changed; values have changed. No one changed the rules, but the emphasis has shifted from performance to profit.

It was inevitable therefore that programing would change to music and news and no talk. This is the modern-day formula for success in radio—a formula for greater profit.

The great majority in our industry mean well, and all want to keep their licenses. But there are blind spots in some of the most unexpected places in broadcasting.

Many of the music and news stations are owned by newspapers and magazines; others by leading citizens, corporations, and nonprofit organizations. All of them are highly respected for their public service in everything but their radio operations. Perhaps they don't even realize that they are contributing to the delinquency of broadcasting.

Caught in this quicksand of a quick buck are those broadcasters that are aware of, and try to measure up to their public interest obligations. But how long can we expect so few to carry the burden for so many?

The news and music stations are not looking ahead—are not keeping an open eye and mind on the demands of our time and do not even seem to be aware of what the FCC is doing. Indeed, the promotional efforts of some so-called independent broadcasters to create a favorable image without doing anything about their noisy programing is not so much of an image as a mirage and will fool no one.

Nine months ago, July 29, 1960, the FCC, after extensive hearings, issued a most significant Report and Statement of Policy in programing. That statement listed 14 major points which it declared essential to the public interest needs of a community. Yet there was not a ripple along radio row—not a change in programing format.

Recently the Commission served notice of its interest and concern in the promises of a licensee and how those promises stack up after the licensee gets on the air. Again there was little reaction in the trade, and no change in programing format.

To continue programing music and news only in the face of the FCC Report and Statement of Policy can only be explained by blindness or lack of information.

The promise versus performance hearings which the Commission has scheduled will bring the programing issue to a head. But it is inevitable that there will be long and involved court action wihch will take a great deal of time.

And time is now more precious than ever before for all America.

Therefore I respectfully suggest that a great deal can be gained if the Commission and the broadcasters jointly shall assemble for a national goals conference to examine and evaluate 1961 radio and the 1934 Communications Act. Such a conference will benefit the broadcaster, the public, and the Commission. The conference could:

(a) Review the original intent of the Communications Act of 1934.

(b) Define public service convenience and necessity.

(c) Examine present public service techniques; is the spot announcement adequate? Is it equal to a program?

(d) Shall there be a minimum on public service—how shall it be measured; by minutes, by number, by dollars expended?

Such a conference could conceivably determine that 1961 radio requires revision of the 1934 Communications Act.

But most important of all, such a conference, would result in guideposts that everyone in the industry would understand and recognize and follow.

We live in a time of confusion and danger. The American public needs to be informed, not tranquilized. The age of complacency, to which the communication media has contributed, must come to an end, for the complacent man is no match for the Communist.

This industry can—and must—fulfill its responsibility not only to communicate but to inform, not only to entertain but to educate.

The first step, in my humble opinion, is to end the confusion over public service broadcasting, and restore radio to its rightful role as the key medium of communication in America.

Warren Brock's Dream: To Make Desert Bloom for Mankind

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1961

Mr. WILSON of California. Mr. Speaker, it has been my privilege to know for several years a very dedicated American, who has contributed a substantial amount of his time, energy, and money to the improvement of our whole agricultural system. His work, particularly in the Imperial Valley of California, has been most significant. A recent article in the Los Angeles Times of April 23, 1961, sets forth a few of his accomplishments.

Mr. Speaker, Warren Brock is a humble and dedicated farmer. It gives me a great deal of pleasure to include herewith in these remarks the published news story so that all America may have the benefit of his unselfish example. The article follows:

WARREN BROCK'S DREAM: TO MAKE DESERT AREA BLOOM FOR MANKIND

(By Norris Leap)

EL CENTRO.—In Los Angeles a banker said "Warren Brock is an El Centro farmer, one of the big ones. He is the significant man in desert agriculture."

A reporter said, "Warren Brock is a visionary as starry-eyed as a poet and as practical as a plumber. He has looked at tomorrow and he is getting ready for it. It is costing him a fortune; and it is a tomorrow so far away he will be an easy 70 before he sees much of it; and he is 44 now. It is all wacky and wonderful. The way I see him, he is a giant."

In the Barbara Worth Hotel here a man said, "Sure, I know Warren Brock. Everyone in El Centro knows Warren. He is a little guy. Wears glasses. I will point him out."

When he turned up, Warren Brock was not a little guy, but neither did he look like a giant, any way you saw him. Not at first.

But if what counts is what is in a man's heart and in his dreams, then Warren Brock stands 12 feet tall.

Actually, he is 5 feet 10 inches, but he looks smaller because he weighs only 145. He does wear glasses, and there is nothing about him of the horny-handed son of the soil. He even lacks a farmer's tan. At first meeting he looks like the Methodist church official he is.

"The story seems to be," the questioning started, "that you are one of El Centro's millionaire farmers and that you are spending a fortune going around the world trying to find new crops for the desert."

"Oh," he said, "I hope you will not think I am one of those."

The "those" were the millionaire farmers. He said he wasn't one, but admitted with his diffident grin that it would be nice to be one.

He said he is president of Brock Ranches, Inc., that the company owns only 600 acres and leases another 3,900, including 500 in Mexico.

His diffidence masks strength, for only the strong survive in his kind of Imperial Valley operation. Actually, he is nationally respected as a farmer—the new-type-everything-mechanized farmer who grows, processes, packs, and ships his products.

With that kind of farmer, every season is a gamble that makes the Las Vegas plungers look like pikers. It's gambling at which Warren Brock is good because he has spent his life training for it and working at it.

BIG GAMBLE, BIG DREAM

However, the gamble that for a dozen years has held his imagination captive is his big dream. He told about it in his hesitant, almost bashful way.

It starts with the day not far off when this country will be teeming with countless new millions of people. They will need more of the things the desert grows, more of the things that can be trained to grow in the desert and more desertland suitable for the growing.

And that is his dream and his project.

You can say it too fast to get its meaning.

FOUR TRIPS AROUND WORLD

For instance, since 1948 he has made seven trips to the world's deserts—four of them around the world because it was shorter doing it that way. He went to search out the plants and seeds that held the promise of some day becoming the substance of his dream—the new delights in fruits and vegetables that will flourish in what now are called sterile areas of desert.

The best example of that kind of desert is what is called the Imperial East Mesa.

That's where he has under lease a square mile—640 acres.

It seems it would take a visionary to dream of making the East Mesa grow anything worth harvesting.

The East Mesa is a little Sahara of endless sand dunes—often seen in movie desert shots—faintly speckled with greasewood. Sometimes it's called the Imperial's branch of hell. Summer heat hits 130°.

The mesa is 222,023 acres of Government land stretching 24 miles along the Mexican border midway between Yuma and Calexico. It reaches north 45 miles in a westering triangle that peaks out east of Salton Sea.

POOR FARMLAND

Most of the mesa has been seen as doubtful farmland, even if watered; and under standably so. Thousands of soil tests have been made. A study of them would chill the heart of even a glassy-eyed farming optimist.

To know why, you must understand something of soil classification.

On what is called the Storie scale, California's richest farmlands rate up to 100, the hopeless and impossible down to zero. That scale has 6 grades, starting with grade 1 at 80 to 100. Grade 2 is 60 to 79, meaning yields generally should be good to excellent.

At the bottom, grade 6 rates below 10. It includes sand dunes, riverwash, high alkali content, and broken land. That puts grade six about on a par, agriculturally, with the top fourth of Mount Whitney.

This is a point Warren Brock makes worth remembering.

LONG DRY SPELL

Of course, all of the mesa is as dry as it could be made by a 10,000-year thirst. Theoretically, that could be corrected. One branch of the All American Canal runs up the mesa's eastern side, the other through the southern edge.

The trouble is, much of the mesa land is as porous as a sieve. It's built that way—sand on top, then rough sand, and below that, gravel.

This general picture is so dismal agriculturally that the third of the mesa that ordinarily would be in grades 1 and 2 has been downgraded to 45 on the Storie scale—a poor grade 3.

So now we come back to Warren Brock and his big dream and what he is doing about it.

ODDITY OF NATURE

It takes us, also, into the world of botany and one of its oddities.

It seems that originally most of the fruits we eat came from the hot lands from Instanbul to the Indus—such places as Iraq, Iran, and Syria, with some from north Africa.

Of course, they evolved in frost-free climates. But their European descendants have an oddity. They grew to tolerate frost; now they demand it. This was found out in plantings here where frosts are rare.

FEW FLOURISH

"They suffered," Brock said, "from delayed foliation."

They not only refused to leaf out properly, the fruit didn't set.

Few even of citrus fruits flourish here. Grapefruit does best.

"The problem," Brock said, "is to breed fruits back to their liking for mild winters while keeping their better flavors and other qualities."

Also, they must learn to live in the East Mesa's porous soil.

All this explains Warren Brock's 13-year search of the world's other deserts. His richest hauls came from Pakistan, India, Iraq, Iran, and Syria, but he got some seeds and plants from Kenya, Egypt, the Union of South Africa, South America, New Zealand, and Australia.

From the Middle East he brought back ancient-stock peaches, apricots, plums, citrus, cherries, and grapes, and vegetables from many places.

FAVORS CITRUS TREES

Strangely, although row crops are a big item in his business, Brock's heart seems to be in creating the new fruit trees, especially citrus.

"We've found," Brock said, "that some citrus trees seem to grow better in grade 6 soils than in grades 1 and 2 soils."

Even to the eye the mesa project is startling, that square mile of patchwork green so unbelievable in all that thirst—a country so dry that overhead sprinkling loses up to 40 percent of the water to evaporation and feeder canals are concrete lined so the water won't vanish into the sand en route.

Many of the plantings those canals feed are unique.

Altogether there must be thousands of varieties of plants there in plot after plot of row after row of densely planted seedling trees and vines—pecans and peaches, apricots and plums, citrus and cherries, and all the other fruits first found in hot lands; and endless kinds of vegetables, even a golden-fleshed watermelon that was wonderfully flavored in Iran but a disappointment on the mesa.

There even are hundreds of kinds of eucalyptus from Australia, from bushes to trees, all in their babyhood and all planted in Brock's search for ornamentals and windbreaks to grow on farms of men who up to now likely never have heard of the East Mesa or Warren Brock.

All this only hints at the story, and Warren Brock will be first to deny that the story is all his.

GOVERNMENT PROPERTY

After all, its Government land and Government water, and the Imperial Irrigation District started the project with alfalfa planted on the mesa for 10 years; and scores of Government and UC agriculture specialists have done their part, a great story in itself.

What makes Warren Brock look 12 feet tall is his dream and the way he is working to make it come true, pouring time and energy and thought and his own money back into this desert land that has nourished him all his life—he was born near here, virtually in the shade of a date palm—for the benefit of generations unborn.

It seems he has no expectation of the dream ever doing anything for Warren Brock but to give him satisfaction and cost him money.

He never has told the cost of his seven trips in search of desert plants, but his mesa costs are public. In the first 18 months from November 1958, the mesa project cost him $96,705.57. The irrigation district contributed $39,544.92, all but $4,575.42 of that for water and power.

He expects his long-range dream to mature with citrus groves on the mesa under full commercial production in 1986. He'll be 70. And he doesn't expect to own an inch of the land. If and when the huge mesa is opened to entry, he will be ineligible, for veterans will get first shot at the land, and he's not a veteran.

SONS WON'T BENEFIT

Neither does he expect any of his three sons to benefit.

"The two oldest, Don and Jim, are interested in agriculture," he said, "but not so much in production as in the science end. Don is 19 and a sophomore at Davis."

So why does Warren Brock spend his time and his money on something that can bring him no profit in money or wealth? His fondest hope for the mesa project is that it will break even on costs about 1971. But even then, if it should pay a profit, his contract won't permit him to offset past losses with any profits he might make.

The question of why was asked him.

"Well," he said, "the country is going to need more of what we can grow here.

That's one way, it seems, of expressing single-minded, relentless pursuit of a dream.

Perhaps that's the way men speak who look 12 feet tall. It's hard to say. It's hard to find enough of them to be able to judge.

What Can I Do for My Country?

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. MASON. Mr. Speaker, President Kennedy in his inaugural address struck a note that rang a bell in the heart of every real patriotic American when he said:

Ask not what your country can do for you. Ask rather what you can do for your country.

Mr. Rogers C. Dunn, of the Dunn survey, has pointed out a very definite way in which President Kennedy's appeal can be carried out. I submit his suggestion to my colleagues and to the country for earnest consideration:

WHAT 41 MILLION EMPLOYEES AND THEIR EMPLOYERS CAN DO FOR THEIR COUNTRY

President Kennedy has made a stimulating appeal for all Americans to think in terms of—what can I do for my country, rather than what can my country do for me. This applies equally to those who favor and those who oppose a welfare-socialist state. It applies to those who favor and those who oppose spendthrift administrations, bigger national debt, stifling or punitive taxes.

Those who seek to serve their country by opposing the welfare-socialist movement, bigger Government expenditures, etc., have overlooked the opportunity to gain the support of about 41 million men and women. For this number is required to support the welfare-socialist movement without an acute awareness of the personal and family sacrifices imposed upon themselves.

Most Americans like the idea of helping others and themselves, particularly when they don't have to dig into their own sock to pay for it. When they have to dig for the cash people consider: Is this necessary? Is it reasonable and desirable to spend this for myself, my family, my community, my country? Is it better to restrain my generous impulse or leave my family demoralized and battling over the burdens of heavy debt?

But when it comes to the Federal Government spending the people's money for welfare-socialist policies, "nice ideas," or for bureaucracy itself, there is only a small restraining hand by the people. Because only 5 million persons are acutely aware of the personal and family sacrifices which must be made to pay for the nice ideas and bigger government promoted by political administrations.

Five million people is 7 percent of the number who voted for President in 1960. But 41 million people, without an awareness of personal sacrifice, is 60 percent of the number who voted for President in 1960 (68 million votes).

This is license under which both Republican and Democratic administrations have built and extended welfare-socialist policies, bigger spending, bigger debt, and bigger government—without fear of strong public reprisal. (The Republican administration increased domestic civilian expenditures over 80 percent in the 8 years of 1953–60. This does not include the increases in military and foreign expenditures.)

THE 41 AND 5 MILLION

The 5 million people who have an acute daily awareness of the personal and family sacrifices required to support the welfare-socialist movement are those who dig into their own pocket to pay their personal Federal income tax directly to the Government. They paid $7.4 billion in 1958 (last available figure).

The 41 million people who have little or no acute awareness of personal and family sacrifices required to support the welfare-socialist movement are those whose Federal income tax is, by law, withheld from their pay by their employer. They paid $27 billion, or 78 percent, of the total personal income tax.

To illustrate. John Smith gets a job paying $100 a week. Smith's income tax rate is 20 percent. His employer deducts the $20 tax and Smith gets $80 each week. To Smith, his family, his neighbors, his creditors, $80 a week is his income. He loses all practical interest in the $20 a week he never receives and, never having been his money, why should he voice objection to its use for any nice idea from Washington?

The power of government to invisibly pick the pockets of a people gives government the power to be master of the people.

Our two party system of government can afford the people a means to control their government, but it has not. For national leaders of both parties have embraced the same policies and led toward the same destination, affording only a partisan difference as to speed.

A GREAT NEW VOICE

The 41 million employees and their employers can serve this country by making each one constantly aware that out of his pocket and through his family sacrifices comes the money to pay for every necessary or nice idea out of Washington, plus all other government activities.

To this end, attention is called to the following simple formula which could be adopted by each employer, or with variations which best suited each employer and his employees:

The employer gives John Smith a job paying $100 a week. The first, second, and third week of each month Smith is paid his full earnings of $100. The fourth week the employer sets aside the money required for Smith's income tax and pays Smith what is left over. If Smith's tax rate is 20 percent, the employer withholds Smith's $80 tax money and pays Smith the balance of $20.

Smith, his employer, the Government, lose no money. But 41 million more people will be constantly aware that they are sacrificing to pay the cost of government. We have no doubt that political leaders would feel a vast new voice on such subjects as giveaway and welfare-socialist policies, and the free-wheeling expenditures of do-gooders and bureaucracy.

We believe every President would welcome such a voice.

How Not To Win Friends

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. DEROUNIAN. Mr. Speaker, the following editorial in today's Wall Street Journal indicates how consistently the Kennedy administration tries to travel, on the same horse, in two different directions. The minority report on the legislation reducing the tourist customs allowance, which I signed, is squarely to the point:

WELCOME MAT AND WET BLANKET

To press its attack on the U.S. international payments deficit, the administration expects to get a pair of weapons from Congress: One bill would create a tourist-information agency within the Commerce Department, another would reduce from $500 to $100 the amount of duty-free goods American tourists may bring home from abroad.

We doubt these measures will have much effect on the payments deficit, but attracting foreign tourists to this country is a sensible idea on its own. Compared to that of foreign governments and airlines, our Government and private drum-beating for tourism has been inaudible.

But a lack of advertising isn't the only cause of the sluggish tourist traffic here. Until quite recently, the U.S. Government's entry requirements for foreign visitors were notable for complexity and bureaucratic stupidity. (Tell us, young lady, are you seeking a visa in order to come here for immoral purposes?) Beyond that, some foreign governments remain remarkably stingy in the travel allowances permitted their citizens. A Frenchman, for example, gets an annual allowance to $300 to spend abroad; an Englishman $700.

Hence, while travel-promotion may get results, even better ones might be produced by trying to persuade friendly governments to bring travel regulations into line with their citizens' present prosperity. But how persuasive can our argument be when Washington is poised to clamp a new and unnecessary customs control on American spending abroad? Chopping the tourist customs allowance by four-fifths will mean reduced income and lost jobs in those countries which rely heavily on the American trade.

Laying out a shiny welcome mat on these shores could make us friends and money. But it won't work very well if we're also throwing a wet blanket on the business of those we're trying to woo.

Speech Delivered by Alfred E. Santangelo, of New York, Before the American Committee on Italian Migration in New Haven, Conn., May 15, 1961

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. GIAIMO. Mr. Speaker, on May 15, I had the pleasure of welcoming our colleague from New York, Congressman ALFRED E. SANTANGELO, to my district in Connecticut. Representative SANTANGELO spoke at a meeting of the American Committee on Italian Migration at the Waverly Inn in Cheshire. In commending his speech to the attention of our colleagues, I respectfully ask that they examine Mr. SANTANGELO's bill, H.R. 37, and my own bill, H.R. 5201; both of these measures provide for greatly needed changes in our basic immigration law. Congressman SANTANGELO's talk follows:

My colleague, ROBERT GIAIMO, thank you for such a glowing introduction. Reverend Fathers, Lt. Gov. Anthony Armentano, Mayor Dick Lee, Vice Consul, Dr. Emanuele Scammacca De Murgo, Mr. Ciro Paolella, Judge Alfred Toscano, Mr. William De Tullio, distinguished guests on the dais, members of the American Committee on Italian Migration, Connecticut Italian Yankees, I am pleased to visit your fair city of New Haven to discuss a subject which is of vital importance, not only to you, but to all America. On May 24, 1957, I delivered a speech in Congress which appeared in the CONGRESSIONAL RECORD under the heading, "How Long Quotas?" As a consequence, one of the readers, named Oscar Dam from Seattle, Wash., wrote to me criticizing me for my position on immigration and stated that we should keep out the southern Europeans, especially the Italians, the Greeks and the Spaniards, that the native-born Americans of many generations do not want the immigration law changed. He stated further that his family had come to America in the 17th century and his ancestors had helped to develop the wilderness of America. One of his forebears was killed by Indians on a trek to California. He proudly stated that the Anglo-Saxon people had made this country great and not only must we keep out the southern Europeans, and especially the Italians, but also we should deport many who are here. I told him that he did not understand the contribution which the Catholics, the Spanish, the French, the Poles, the Hungarians and other ethnic groups have made to the development and growth of this country and the sacrifices that they have made to preserve its freedom and liberties.

I answered him and said that if the restricted immigration laws were in effect when his forebears came to America, I was certain that the whole Dam family would have been excluded. The attitude of Mr. Dam is shared by many people in the United States. If we take as a measuring rod the number of appointments of persons of Italian ancestry to high Cabinet office, one can infer that those in control of our Government today believe that the Italians have just gotten off the boat.

Yes, my friends, people forget that there was no restricted immigration law before March 3, 1875. If this country in its beginning had a restricted immigration law, Giovanni Cabot would not have been permitted to plant the Union Jack on American soil; Francis Vigo would not have been permitted to explore the Northwest with Rogers and Clark and could not have helped George Washington, after the American Revolution, with the Northwest Indians; 16 Venetians would not have built the first glass works in Jamestown, Va., in 1622; 300 Piedmontesi would not have settled in New Castle, Pa. at the invitation of the Dutch; Alfonso Tonti would not have founded the city of Detroit, and his daughter would not have been the first white woman to be born in that city; 50 Italians would not have gone to Georgia to set up the mulberry plantations and construct a silk factory; William Paca would not have signed the Declaration of Independence and then become the third Governor of Maryland; Caesar Alberti would not have planted his roots and trees in Brooklyn, N.Y.; and in your own State of Connecticut, they would not have had men like Deodati, Rossetti from Hartford, and Benzi, who came in the early 18th century.

We have mentioned only persons who were immigrants in the strict sense of the word. We do not speak of men like Christopher Columbus who discovered America; nor do we speak of Amerigo Vespucci, after whom this continent is named; nor of Giovanni da Verrazano, who discovered the Hudson River. They were explorers who came here but did not settle here. Not only did persons of Italian origin help to discover and explore America, but they helped in its early development in colonial times, and also in its development throughout the country in its early years.

From 1700 until the beginning of the 20th century, artists and craftsmen migrated to this land from Italy. The first decade of the 20th century show the peak of this migration. At that point in time, the Italian peasant farmer began to outnumber the craftsman. They were poor indeed and were attracted to this land of opportunity, and when they came to America, they could qualify only for the most menial and humblest kind of labor—ditch digging, hod carrying, carpentry, and similar occupations.

Despite this humility and menial toil, within one generation the Italian immigrant and his offspring has repaid America for the opportunity more than a thousandfold by his contribution to the social, cultural, and economic development of our land and also in the preservation of its institutions and liberty.

Millions of people view with pleasure the beauty and the artistry of Constantine Brumidi on the frescoes in the rotunda of the U.S. Capitol. Arturo Toscanini, Enrico Caruso, Tommaso Salvini, Ernesto Rossi, gave pleasure to opera lovers throughout the land. When war came, 1,400,000 boys in World War II joined the services in defense of our country, and while newspapermen may assert that many Italian-Americans belong to the "big M," we can say with pride and with truthfulness that no one of the 1,400,000 servicemen belonged to the "big C" (communism).

During the war there were many heroes. We proudly recall the exploits of John Basilone, of Raritan, N.J., the country's only two-time Medal of Honor winner. We rejoice at the aerial exploits of Don Gentile, known as the eagle of the skies. We take pride in the valor of a New York State Senator, Peter Dalessandro, who earned the Congressional Medal of Honor, two silver stars, and the Distinguished Service Cross. Many others could be mentioned, such as Gino Merlo, Bianchi, and Bangor, etc.

Persons of Italian ancestry have made their contribution, and we will not permit any Oscar Dam or a Walter Winchell to denigrate, blacken, or destroy the reputations of Americans of Italian origin or stereotype our people as gangsters.

The first restrictive legislation excluding entry into the United States of certain classes of immigrants was the act of March 3, 1875. On August 3, 1882, further legislation was passed which excluded paupers and criminals. That same year saw the enactment of the first Chinese exclusion law which remained in effect until its repeal in 1943.

Thereafter, other attempts were made to curb immigration, but it was not until 1917 when to quiet the demands for restrictive and selective legislation that a law was passed on February 5, which codified and grouped together all laws affecting immigration which has previously been in effect.

The post period of World War I witnessed a radical change in our national immigration policies. The result was that on May 19, 1921 our country effected a change to a policy which restricted the number of imgrants who could enter. It limited the number of any particular nationality to 3 percent of foreign-born persons of that nationality who lived here in the year 1910. This, in effect, permitted about 350,000 immigrants to come here who originated mostly from northern and western Europe.

On May 26, 1924, further legislation was passed which changed both the base census year and the method of calculation. It was then changed to be based upon the 1890 census and the rate was lowered to 2 percent. Under this law until 1929, the total quota became 164,600.

The 1924 act was a farreaching change during that quarter century in that it restricted any change in the basic composition of the American makeup. Thus these two basic acts—of 1917 and 1924—qualitatively and quantitatively operated to regulate the flow of immigration to this country.

In 1952, the Immigration and Nationality Act was enacted. This—the McCarran-Walter Act—pooled together all existing laws and regulations dealing with immigration and to this day it is the law which governs the immigrant. Under current law the total quota is 154,887 and the quotas are allocated to each area on the basis of one-sixth of 1 percent of the number of such nationals in the United States in 1920.

These laws are based on the absolute principle of national origin. The theory of national origin upon which the allotments of immigration quotas is based was developed in the early part of the 20th century when, following World War I, this country dug its head into the sands of isolationism with its xenophobic fear of aliens who were not of Anglo-Saxon stock. Northern Europe was favored over southern Europe, the Nordic races above the Slavic and Mediterranean peoples.

We see that the whole pattern of the national origins fabric has been shredded since the 1924 act. We have tried to put the cloth together by enacting special refugee legislation, by enacting special nonquota legislation relating to the principle of reuniting of families and by nonquota immigration from the western hemisphere. The national origins theory has lost all its practical meaning. It stands as an indictment not only as against American tradition, but also American logic. It mocks our Declaration of Independence and statement that all men are created equal. Special legislation was enacted for refugees, escapees, spouses, etc. who came from such countries as Cuba, Italy, Spain, Poland, Czechoslovakia, all countries whose quotas, under the law, are severely restricted. While our immigration laws close the front door, the back door is left wide open. We know, too, that much immigration from the western hemisphere, particularly from Canada, is not of Nordic origin. Mexican nationals come into the United States by the hundreds of thousands under a bracero program, under a special program, or as resident aliens. Many people who fled persecution in the last 20 years have settled in Canada, Brazil, Argentina, and their children as native-born citizens in the western hemisphere enter the United States without regard for quota allotments. Puerto Ricans, as well as Mexicans, have entered in large numbers. The spirit which Emma Lazarus captured in her stirring words should be repeated despite the fact that in practice the Statute of Liberty does not offer a wide open door to democracy. I quote her words:

"Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore.
Send these, the homeless, tempest-tost, to me
I lift my lamp beside the golden door."

Some of us in Congress, including your Representatives, ROBERT GIAIMO and EMILIO DADDARIO, have fought together for a realistic immigration law. In the midst of the last presidential campaign, on September 20, 1960, I proposed a four-point program, which in many respects conforms to the program which your organization has been advocating for a long time. I proposed at that time four points:

1. That the United States update the quota based on 1950 figures instead of 1920 figures.

2. A redistribution and a reallocation of the unused quotas which annually total about 55,000.

3. That the Attorney General be authorized to admit 60,000 refugees.

4. A reuniting of families by converting the preferential quotas to a nonquota status.

Both presidential candidates responded. On October 8, 1960, President John F. Kennedy, despite the demands of his campaign, replied to my solicitation. For his comments on my proposals, I quote in part from the President's reply:

"I believe that the most important immediate objective of immigration reform is the reuniting of families. There are many new citizens in America whose immediate families are in other lands, waiting patiently to join them. In countries which oversubscribe their quotas, they have been waiting for many years. We have a social obligation to bring these families together. For this purpose, I have suggested that nonquota status be granted to parents, minor children, and spouses of citizens and resident aliens, provided they are otherwise eligible under the law.

"I believe that each of the other proposals you set forth in your letter also provides a sound basis for legislative action. Updating our present quotas, and pooling unused quotas, are sound methods of assuring that present authorizations are used up in an equitable manner. A flexible formula for admission of refugees should be devised so that our country can act more speedily in meeting our share of the world's responsibility to the victims of oppression. But I also feel that we should look beyond these proposals to the abolition of the national origins quota system and its replacement with a more equitable method of regulating the inflow of immigrants."

On January 3, 1961, the first day of the congressional session, I introduced H.R. 37 to amend the Immigration and Nationality Act.

No action on legislation can be taken without the support or the approval of a man who considers himself the father of the immigration law, FRANCIS WALTER. Finally, on April 13, 1961, FRANCIS WALTER introduced H.R. 6300 revising the immigration law in which he gives a little with his left hand and takes away with his right. If we complain about the insufficiency, he threatens to take away what he offers to give. The major proposal is the reallocation of the unused quotas. Congressman WALTER proposed that of the approximately 150,000 quotas, those nations which have a quota of less than 7,000 should share the unused qoutas in the proportion that the particular nation's quota bears to the total quota numbers of all countries, excluding Germany, Ireland, and Great Britain. You are aware, of course, that Germany has a quota of approximately 25,814; Great Britain, a quota of 65,361; Ireland, a quota of 17,756; and approximately 55,000 annually are unused; whereas the quotas of other countries have been mortgaged for many years to come.

These unused quotas, according to the Walter bill, shall be allocated 40 percent to those in second preference status; 30 percent to those in third preference status; and 30 percent for those in fourth preference status. This quota will vary from year to year, and the relatives who will benefit from the quota reserve include (1) parents and unmarried sons and daughters over 21 years of age of U.S. citizens, (2) spouses and unmarried sons and daughters, minors or adults, of lawfully resident aliens, and (3) married sons or daughters or brothers and sisters of U.S. citizens and their spouses, and minor children if accompanying them. Under this formula Italy will get about 2,500 more. The remainder of the Walter bill is, in my opinion, more restrictive than beneficial. Some of the provisions are designed to facilitate the deportation and denaturalization of lawfully resident aliens and naturalized citizens. Some provisions make easier the waiver of obstacles, such as sickness, TB, and other contagious diseases. There is some good to this legislation, but I believe that some of the provisions have such harmful procedures that the bad outweighs the good and one is tempted to oppose such legislation.

What has happened to the President's promise? Why has he not acted? I can understand his thinking. I believed the President when he wrote to me and I believe that he intends to carry out his promise, but we get awfully annoyed at the long wait, not only for his recommendations in the immigration field, but also in his delay in appointments of persons of Italian ancestry. For practical political reasons, I believe, the administration has not sent a message to the Congress asking for a revision of the immigration laws as was promised.

The many measures which the President has recommended relate to legislation for the improvement of the economic position of the people of the United States—the minimum wage law to increase the earning capacity of the workers of America, the aid to depressed areas, the extension of the unemployment insurance law for dependent children, the social security increases, are all designed to help a struggling people where unemployment is high and misery is rampant. The climate for opening the doors to permit a larger number of immigrants to enter our country would not sit well with a Congress or a people who claim that they cannot obtain decent wages and a good standard of living. Last week we voted and passed in the House of Representatives the Mexican national or bracero program which permits the entry of Mexican workers, approximately 400,000, to work on American farms. The paradox is that while we claim that we must keep out immigrants because there is unemployment, we permit the entry of 400,000 Mexicans because we need farmworkers throughout the Southwest and the South of our country. It might be wiser for us to revise our immigration laws to permit farmworkers from Europe who are not specialists to come to work on the farms of America which are feeding not only the 180 million people of the United States, but practically all of the peoples of underprivileged nations.

For us to maintain our image to the peoples of the world, we must have a fair and realistic immigration law. We cannot say to the people of the Mediterranean, Africa, and Asia that we are interested in your welfare and yet when they come to our doors we raise our hands and say, "Thou shalt not enter here." Our Nation had the respect of the world since 1776 because the people felt that ours was a land of opportunity, we proclaimed that all men were created equal and that we welcomed in friendship the homeless, the tempest-tossed to our shores. The Statue of Liberty, which stands high on Bedloes Island in New York, is still a magnet to the homeless and the refuge of the teeming shores of the peoples of the world. We must continue to keep its light bright, reflecting glory not only in the East but also in the West. We must give encouragement to those, who like our forefathers, have a contribution to make and we must open our doors wide once again to let democracy in.

Annual Sudeten German Day

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. FRIEDEL. Mr. Speaker, it is quite natural for us as liberty-loving Americans to join in spirit with those who celebrate the annual Sudeten German Day in Cologne, Germany.

First of all, the over 2 million Sudeten German expellees and refugees from the stark terrors of ruthless communism have reaffirmed their dedication to the cause of freedom, democracy and peace. These ideals are more precious to us than life itself, therefore, we desire them for all people.

Second, the United States became the great nation it is largely as a result of the invaluable contributions of men, ideals, culture, and knowledge, from Europe. We all acknowledge that the Germans played a leading role with their natural scientific and technical genius, love of music, and deep religious faith.

Every American is to some degree influenced for the good by the Germany of the past. The present Chancellor, Dr. Konrad Adenauer, has given concrete evidence to the entire world that he sincerely works for a return of what was best in the past and that the lessons of history and of Germany's tragic era are not forgotten.

The free world desperately needs a strong and democratic Germany to face the evil forces in the Kremlin. We must be realistic. A new and united Germany, reborn with its prior thirst for knowledge and learning, having a democratic republic as its form of government, merits the full support of the West.

All of us fervently pray that the day is not too distant when the many enslaved people and nations under the Communist heel behind the Iron Curtain will become free, and that liberty, toleration and the right to worship God as one wishes, will be respected everywhere.

It is in that spirit that I convey my sincere greetings and good wishes to those who commemorate the Sudeten German Day.

House Resolution 211—Special Committee on Captive Nations

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. FLOOD. Mr. Speaker, on March 8, 1961, I introduced a measure calling for the establishment of a Special Committee on Captive Nations in the House of Representatives. This measure is now House Resolution 211. There are not sufficient words to express my profound gratitude and personal delight to the more than 20 Members of the House who joined with me in that most stimulating and very enlightening discussion which took place then on the subject of the captive nations—CONGRESSIONAL RECORD, March 8, 1961, "Russian Colonialism and the Necessity of a Special Captive Nations Committee," pages 3286–3311.

The popular response to House Resolution 211 has been so enthusiastic and

impressive that I feel dutybound to disclose the thoughts and feelings of many Americans who have taken the time to write me on this subject. These citizens are cognizant of the basic reasons underlying the necessity of the proposed committee. They understand clearly the vital contribution that such a committee could make to our National security interests. In many cases, they know that no public or private body is in existence today which is devoted to the task of studying continuously, systematically, and objectively all of the captive nations, those in Eastern Europe and Asia, including the numerous captive nations in the Soviet Union itself.

Because their thoughts and sentiments are expressive and valuable, I request that the following responses of our citizens to House Resolution 211 be printed in the Appendix of the RECORD:

BREMERTON CAPTIVE NATIONS COUNCIL,
Bremerton, Wash., May 12, 1961.

Hon. DANIEL J. FLOOD,
Member of Congress,
House Office Building,
Washington, D.C.

DEAR MR. FLOOD: On behalf of the members of the Bremerton Captive Nations Council, we wish to commend you on your forthright and sincere stand against imperial Soviet colonialism as evidenced by your introduction of House Resolution 211.

The free American people are in dire need of the services which could be rendered by a Special Committee on Captive Nations. Publications of such a committee would be invaluable to organizations such as ours, which are attempting to spotlight the modern day "empire builders" lurking behind the Kremlin walls.

We shall bend every effort in support of this resolution. Again we render our sincere congratulations and eternal thanks.

With kind regards, we are,

Respectfully yours,

JAMES K. MORGAN,
Chairman.
DELMAR G. LANE, Jr.,
Vice Chairman.
RAYMOND NORTON, *Counsel.*

AMERICAN COUNCIL FOR
INDEPENDENT IDEL-URAL, INC.,
New York, N.Y., May 16, 1961.

Congressman DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: Our organization, the American Council for Independent Idel-Ural, Inc., wholeheartedly supports Resolution 211, which you have introduced for consideration by the Congress of the United States. If this resolution is approved, and we hope that it will be, it will provide great possibilities for the United States of America to intensify its efforts in the psychological warfare against Communist world aggression.

As we all know, in the ideological struggle between democracy and communism, that is between the United States and the U.S.S.R., Soviet leaders always present themselves as the defenders of nationalism, and condemn all forms of colonialism in the areas of Asia, Africa, and South America. In doing this, the Soviet Government has established a colonial overlordship, concealed by the phraseology of socialism and the so-called international unity of the proletariat, over tens of nations, nations which have their own developed culture, intelligensia, and their own history.

The peoples of Idel-Ural, the Tatar-Bashkir people in particular, are the victims of Communist imperialism. We, Americans of Tatar-Bashkir background, just as you do, consider our Government and our legislators to have a greater moral right to come to the defense of peoples' right to self-determination, than the Soviet Government, since American democracy and American history are founded upon the principles of freedom for the individual as well as for nations. Besides this, the conscience of our Government and of our people is a clear one, since we do not attempt to create an empire for ourselves, or to force our political and social system upon other peoples.

The Soviet government is responsible for such crimes as genocide. Moslem nations such as the Crimean Tatars and several peoples of the northern Caucasus have been subjected to total deportation from their lands by the Russian Communists for the sole reason that they spoke out in favor of their national freedom.

There are people who oppose the resolution on the Captive Nations Week in general, and in particular on the ground that Idel-Ural is included in it. In doing this, they resort to all types of falsification up to and including their assertion that there is no such country on the earth. We, the escapees from Idel-Ural and political refugees from the U.S.S.R. are ready to appear before you to present all proofs necessary in order to repudiate the assertions of these critics. Today, there are six "autonomous Soviet Socialist Republics" on the territory of Idel-Ural. Three of them are Turko-Tatar the Tatar A.S.S.R., the Bashkir A.S.S.R. and the Chuvash A.S.S.R.; and the other three are Ugro-Finnish: the Mari A.S.S.R., the Udmurt A.S.S.R. and the Mordva A.S.S.R. All of them are inhabited by the indigenous population of the Idel-Ural. According to the population census of 1959, the Tatars alone comprise 5 million and they are among the five most numerous peoples of the U.S.S.R.

The Turko-Tatars call their country Idel-Ural. Idel is the Turko-Tatar name for the Volga River. Until their inclusion in the Russian Empire, the Turko-Tatars had their sovereign states in this territory. From the 5th to the 13th century, there existed the state of "Bulgar." The Kazan state existed there until the middle of the 16th century. During the period of the 1917 revolution, the Turko-Tatars proclaimed their own democratic state called Idel-Ural. The preceeding information may be found on page 646 of the 1956 edition of the Great Soviet Encyclopedia, volume 41. The same page contains the information that the Idel-Ural territory was conquered by the Red army, dispatched from Moscow. The Idel-Ural (Tatar A.S.S.R. and the Bashkir A.S.S.R.) is today the primary center of oil drilling operations, and has been dubbed "The Second Baku." The Tatar-Bashkir people, the indigenous population of Ideal-Ural, is one of the culturaly strongest parts of the Moslem and Turkish world. If the Russian people demand freedom for themselves, which we would wish for them to achieve, then the Tatar-Bashkir and Ugro-Finn peoples have an equal right to do the same. They are not only deprived of their individual rights and freedoms, but the Communists have also deprived them of their national rights of free development as nations.

The resolution on the Captive Nations Week has raised the prestige of the United States in the eyes of the captive and freedom-loving nations. Your resolution, Congressman FLOOD, gives new means and possibilities to the United States of America in its struggle against Communist tyranny, the tyranny which chameleon-like adapts to the ever changing conditions of contemporary life.

Sincerely,

RAIS DALMAS,
Chairman.

CHEVERLY, MD., *May 11, 1961.*

Congressman DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: As a former resident of Buffalo, N.Y., with its large population of Polish descent, and as a descendant of people who left their mother country due to oppression, I read with great interest and heartily approve your resolution, H. Res. 211 which you submitted to the Committee on Rules. Needless to say, your representing the many people of Polish origin living in and around Wilkes-Barre acquainted you well with their feelings regarding the captivity of the nation from which their heritage and cultural background sprang. Your work on the Committee To Investigate the Katyn Massacre was very much appreciated by those of us who were interested in the truth.

As the years slip by, the people are yet inured to the problems besetting the various nations of the world. It is only thru the services of such committees as the House Un-American Activities Committee and in the future the Special Committee on Captive Nations that the citizenry can be constantly made aware of the insidious ways of the Communists. The captive nations can and do gain strength to continue with their struggle when they read and hear of measures such as yours.

I wish to thank and congratulate you upon the sponsorship of such a worthwhile measure.

Very truly yours,

STEPHEN J. KOSCIANSKI.

BOSTON, MASS., *May 11, 1961.*

Hon. DANIEL J. FLOOD,
U.S. House of Representatives, House Office Building, Washington, D.C.

SIR: I wish to take this opportunity to thank you for the material concerning your proposed House captive nations resolution and committee.

May I again congratulate you and other Members of the Congress for their support.

With best wishes, I remain,

Sincerely yours,

SAMUEL RYDER.

AMERICAN SOCIETY FOR
CROATIAN MIGRATION, INC.,
Cleveland, Ohio, May 8, 1961.

Hon. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR SIR: The American Society for Croatian Migration, Inc. enthusiastically supports House Resolution 211 which you have submitted to the House of Representatives on March 8. We would further urge that you include the Croatian nation as a captive nation since the totalitarian imperialism of Belgrade communism is no different than that of Moscow communism.

According to statistics, fully 80 percent of new European refugees under the Mandate of the High Commissioner for Political Refugees are from the multi-national state of Tito's Yugoslavia, and fully 80 percent of these "Yugoslav" refugees are of Croatian origin. Judging from the figures, then, the Croatian nation is the most persecuted nation in Europe under Communist domination because of the Croatian peoples opposition to both godless communism and Yugoslav imperialism; yet, the American public never hears about this. We hold that it is time the American people became acquainted with the facts, and it is only through sincere, dedicated public officials like yourself that this will ultimately come about.

May God bless you in your noble, patriotic endeavors.

Sincerely,

JOSEPH V. BOSILJEVIC,
President.

LONG ISLAND STAMP & STATIONERY,
Jamaica, N.Y., May 15, 1961.

Hon. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN: Through a discussion with business associates I learned of your resolution calling for the establishment of a special permanent Committee on Captive Nations in Congress. I was so impressed with its importance that I have written Hon. STEVEN B. DEROUNIAN, Congressman of my district, requesting he support your resolution.

I would also like to take this opportunity to compliment you on your initiative for introducing the resolution.

With best wishes for the future, I remain,
Respectfully yours,

WALTER KLAWSNIK.

Address by Berl I. Bernhard, Staff Director-Designate, Commission on Civil Rights, at American Veterans Committee Convention, May 20, 1961, New York, N.Y.

EXTENSION OF REMARKS
OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1961

Mr. BRADEMAS. Mr. Speaker, I should like to insert in the CONGRESSIONAL RECORD the text of an excellent address that was delivered on May 20, 1961, in New York City at the American veterans committee convention by the able staff director-designate of the Commission on Civil Rights, Berl I. Bernhard.

Mr. Bernhard's remarks deal particularly with the problems of racial segregation in housing and I commend what he has to say to the attention of Members of Congress.

The text of the address follows:

REMARKS BY BERL I. BERNHARD, STAFF DIRECTOR-DESIGNATE, COMMISSION ON CIVIL RIGHTS AT BANQUET SESSION, AMERICAN VETERANS COMMITTEE CONVENTION, MAY 20, 1961, PARK SHERATON HOTEL, NEW YORK, N.Y.

On Law Day, May 6, the President stated "Law is the strongest link between man and freedom." The Commission on Civil Rights was assigned by the Congress in 1957 to investigate deprivations of the right to vote because of race, color, religion, or national origin, and to study problems of equal protection of the laws. It forges part of this link.

The fiery end of the freedom ride in Alabama, just this week makes it all the more important to reiterate that ours is a government by law, not by men, and this is something for which we should be thankful; that ours is a land where the concept of the rule of law is held in highest regard, and this too is something for which we should be thankful. Above all, ours is a heritage of law and order, and for this we should be exceedingly thankful.

As the American Veterans Committee know only too well, however, the full measure of citizenship, under law, is not available equally, at times is restricted artificially, and denied arbitrarily. To the extent that this is so, to the extent that law is not applied uniformly, the link between man and freedom is weakened.

"WHEN THE RIGHTS OF ONE ARE THREATENED * * *"

Dr. Hannah, chairman of our commission and president of Michigan State University, put it a little differently. He stated: "when the rights of one are threatened, the rights of none are safe. In time, our people will come to believe as one that when a synagogue is bombed, no Christian church is safe; that when one public school is bombed, no school is steady on its foundations; that when one man is lynched, the security of each of us is diminished by so much; that when one man is denied the right to vote, our own freedom of decision is compromised."

When Congress established the Commission in 1957 as part of the first civil rights bill since 1875, it was seeking to find ways and means of bringing into closer harmony our precepts of equality and our everyday performance. Congress wanted facts—not dissertations on morality or on world affairs. Congress wanted a fair and objective evaluation of the facts as found. It wanted guidelines for remedial action.

I have long felt, however, that in establishing the Commission, Congress did more than come to grips with our most thorny domestic problem. It reinforced a national commitment to self-criticism. It adhered to the tradition that nothing commands higher loyalty from men than the truth; that the only way in which fallible men and an imperfect society will improve is where the process of inquiry remains open—where progress is bottomed on hard facts, painstakingly gained, and courageously faced.

PROGRESS CONSIDERABLE

As you know, from the generous treatment accorded the Commission's findings by the press, the Commission issued a major report in September of 1959 covering the fields of voting, public education and public housing. In January of 1961, it issued a report on public higher education. These reports reflect the disparity between our promises and performance in the civil rights field. They reflect, likewise, the extent of progress made, which is considerable.

I have observed some tendency among some civil rights advocates to shun or ignore progress when it is made. The fear must be that concentrating on progress will devitalize the drive for even more progress. There may be a certain truth in this. But I maintain that advances made, intelligently documented, help to demonstrate what can be done and afford helpful lessons for future action.

Our own reports have not received uniform approbation. Some have been dismayed at the breadth of the existing gap between our national proclamations and our deeds. Others felt that the reports reflected an unhealthy penchant for self-criticism; that it held us up to world consure unnecessarily, and that it played into the hands of our detractors at a time when we could least afford it. I am satisfied that what America showed to the world was honesty and a willingness to proclaim: "We have problems, we are facing them, we will solve them. You can see the entire process and you may judge us accordingly." Beyond that, I believe America was saying to the world: "We know, and we know you know, that progress does not come by self-hypnosis. It comes by honestly facing up to reality."

VOTING RIGHTS

In September of 1959, when the Congress determined to extend life of the Commission for 2 more years, the subject areas covered in our first report were reevaluated. Once again the Commission tackled voting deprivations—I might add with vigor. The Commissioners have been unanimous in their conviction that the right to vote is the cornerstone of the Republic and the key to all other civil rights—that if democracy is a powerful idea, the power emanates from its healthy respect for the desire of every man to share in his own rule. Beyond this the Commission has felt to a man that the existence of a free and unfettered electorate speaks to the deepest and most pervasive aspirations of man. In its absence, the word democracy is a masquerade for the real thing. Our findings and recommendations in voting will constitute a major portion of our report to the President and the Congress, due in September of this year. Just last week we concluded a major voting hearing in Louisiana.

Additionally, the Commission determined that the problems arising out ofthe Supreme Court ruling of 1954 have not been resolved. We have continued to study how the desegregation ruling is in fact being implemented. We hope to be in a positon to make a detailed status report and provide some insight as to why there have been successes and failures. Without giving way to distortions of over-optimism, progress, albet limited, is being made. To the extent that the stories of New Orleans and New Rochelle have captured the public's attention, they tend to overshadow significant advances made in such cities as Louisville, Nashville, Baltimore, Charleston, W. Va., and San Antonia, Tex.

SCHOOLS IN NEW YORK CITY

New York City, itself, has done an effective job in seeking to alleviate the racial and ethnic concentrations in its schools through rezoning of school attendance areas and its free transfer policies. The steady increase in the number of Negro and Puerto Rican pupils is making the city's task one of continuing difficulty. Nevertheless, it is anticipated that the expansion of the open enrollment program next fall will show beneficial results.

Many of you are familiar with the Higher Horizons program in New York City which, I understand, now includes 54 elementary schools and 13 junior high schools. It is a notable attempt to provide an equal educational opportunity for socially and economically deprived children, most of whom are members of a racial or ethnic minority. It has been truly said that "we have to do a lot more for some children just to give them the same chance to learn."

It is heartening, too, that 10 other great cities of the North and West have undertaken programs similar in purpose to the New York Higher Horizons program.

RACIAL SEGREGATION IN THE NORTH

These efforts, laudable though they may be, are miniscule compared with the existing problem. It is common knowledge that racially segregated schools exist in all of the great cities of the North and West where large concentrations of Negroes and other minorities are found. These schools are overcrowded, often to the point of double shifts. Other schools in the same system may have empty classrooms. Additionally, these schools serving minority groups often are staffed by inexperienced or insufficiently trained teachers. The net result is an inferior second-class education. School boards by inaction can create problems of unequal educational opportunity in the North and the West as well as in the South.

There is a paradox here. In the South segregation of schools was established and maintained by State law. For this reason it was reached directly by the Brown case which held that compulsory racial segregation in public schools was of itself a denial of equal protection of the laws. All provisions of Federal, State, or local law requiring or permitting such discrimination were struck down. Thus, in the South, the separateness of schools created by State action, not the equality of these separate schools was at issue. This, of course, requires proof merely of official State action to maintain segregation. By contrast, in the North, proving that segregation is the result

of official action is difficult indeed. Rarely have compulsory segregation laws been in effect. Thus, in the North, unless one can show a covert action, the only way to reach segregation is to prove specifically the inferiority of the segregated school in teacher-pupil ratio, teaching staff or other tangible factors. This is another way of saying that while we are moving toward desegregation in the South we are still fighting the battle of the Plessy doctrine of separate but equal in the North. I will say no more except to note the overstatement of one wag that "Brown may be the law in the South, but it's still *Plessy* v. *Ferguson* in the North."

HOUSING THE NEW FRONTIER OF CIVIL RIGHTS

The Commission continues to study the complex subject of housing. This, like other subject areas within the Commission's scope, is not a regional problem. It is national. We are studying Federal programs affecting private or public nonfarm housing, with special emphasis on urban renewal. State and local antidiscrimination housing laws are being analyzed. The results of this study will likewise be included in our final report.

Let me add before leaving housing that the urban areas of the North are a crucial "new frontier" of civil rights. In 1960 for the first time a northern State—New York—has a larger Negro population than any southern State. Within the next few years, it is expected that more than half of our nonwhite population will be in the North.

The rapid increase in the proportion of nonwhite population in most of our major northern cities has been accompanied by the exodus of younger white families from the cities to the suburbs. Significant exclusion of nonwhites from the burgeoning suburbs has heightened their disproportionate concentration in the cities.

The plight of the urban area is not simply a problem of housing. There is little doubt but that civil rights restrictions in employment, education, housing, and other areas of urban life produce a powerful interaction upon each other. Piecemeal approaches, aimed at eliminating discrimination in any one area exclusively, will not meet with success, particularly in the urban areas.

This much can be said: Unless there can be freer movement of the growing nonwhite population throughout entire metropolitan areas, cities will continue to undergo rapid, often deteriorating racial change. They will experience further loss of middle-income population. Unless nonwhites have opportunity for equal educational training and substantial economic advance, they will continue to contribute to city slum development and other social ills. Their potential contribution as useful and informed citizens will be lost. This cannot be allowed to happen. It is not a matter of a do-good philosophy, but rather a philosophy of decent living and even survival.

NEW COMMISSION STUDIES

In addition to voting, public education, and public housing, the Commission in September of 1959, decided to embark on two new study areas. The first deals with the administration of justice. We are seeking answers to the problems of interracial police brutality, private intergroup violence, discriminatory exclusion from juries, and the effectiveness of Federal laws applicable to each of the above stated problems.

In this area we are deeply interested in a program presently being sponsored by the police department of the city of New York. I refer to the 4-year research project on psychological testing. The object of this study is to develop effective psychological tests for policemen. It is far-reaching. Since much police brutality seems to erupt out of tense situations which arise when a policeman comes in contact with a citizen, the attitudes and psychological makeup of the individual policeman are crucial. If that very small percentage of policemen who have unstable personalities are not cavalierly handed pistols and billy clubs, a significant advance will have been made in the practical realization of everyday civil rights.

EQUALITY OF JOB OPPORTUNITY

Our last major area of endeavor at the present time is the study of employment, particularly related to the Federal Government's role in providing equal job opportunity. We are attempting to ascertain the legal aspects of the Federal Government's involvement. We have made intensive studies in Baltimore, Detroit and Atlanta, and less intensive studies in New York, Chicago, St. Louis, Fort Worth-Dallas, and Los Angeles. We are seeking to appraise the Federal Government's role as an employer, as a creator of employment opportunities through Government contracts, various grants-in-aid, and as it participates in training and placement through various vocational and apprenticeship training programs. We are also studying subsidization of State employment services. While we have bitten off a mighty chunk we are studying and hope to be able to report on the role of labor unions and their relationship to the Federal Government in promoting or preventing equality of employment opportunity. It is hardly necessary to remind this group that talents unused lead to personal frustrations. They also deprive our society of the mainspring of its vitality.

My comments about the Commission have necessarily been abbreviated. Oversimplification can result. I trust that you will be sympathetic in this regard.

"TO PREACH DISTANT REFORM IS VERY CHEAP PHILANTHROPY"

If I have spent what appears to be an inordinate amount of time on civil rights in the North, I have done so deliberately. Pointing fingers at a distance adds neither to understanding nor progress. There is much in what Julius Pringle of South Carolina said to his Northern countrymen in the days just before the Civil War:

"To preach distant reform is very cheap philanthropy—the cheaper in proportion to the distance. The feeling of self-satisfaction exists without the necessity of personal sacrifice."

If it appears that I have failed to discuss civil rights in the context of international pressures or the dictates of morality, I have done this deliberately. While it is foolish to act as though the Commissioners and the staff operate in a vacuum, foreign affairs and morality are not our business. If these influences are preesnt in our minds and actions they must be accommodated to the professional standards of objectivity in fact finding, for that is our assignment. We must locate the problem, document it factually, study the law surrounding it and recommend remedial action where necessary.

I would not come before you, outstanding citizens and veterans, and seek a dishonorable surrender. There can be, however, a surrender of one's self—a rededication—to basic principles. As this is done our society will be invigorated. A richer life will be closer for all our citizens. I think this type of surrender, this form of sacrifice, was in the mind of Robert Frost when he wrote:

"Something we were withholding made us weak
Until we found out that it was ourselves
We were withholding from our land of living,
And forthwith found salvation in surrender."

Light a Candle

EXTENSION OF REMARKS
OF
HON. TOM MURRAY
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1961

Mr. MURRAY. Mr. Speaker, the very able and gracious gentlewoman from Pennsylvania, Representative KATHRYN E. GRANAHAN, has served with distinction for over 2 years as chairman of the Postal Operations Subcommittee of the House Post Office and Civil Service Committee. During this period Representative GRANAHAN has contributed immeasurably to the public welfare through her vigorous and effective subcommittee program to rid the U.S. mails of traffic in obscenity and pornography.

I commend to the attention of the Congress a recent article by Representative GRANAHAN on this important subject. The article, most appropriately entitled "Light a Candle," and printed in Men of Malvern, a monthly publication of the Laymen's Weekend Retreat League at Malvern, Pa., follows:

LIGHT A CANDLE

(By Representative KATHRYN E. GRANAHAN, of Pennsylvania, chairman, Subcommittee on Postal Operations)

"It is better to light just one little candle
Than to stumble in the dark;
Better far that you light just one little candle—
All you need's a tiny spark."

The words of this beautiful song, so gloriously sung earlier in the evening by the famed Justin Lawrie Choral Group, stayed with me as I returned to my Washington hotel room. Another day's work was behind me and another night's official functions were over. Now was the welcomed moment for reflection.

In pondering Joe Tinney's request that I do a short article for Men of Malvern on my pet project—the work of my Subcommittee on Postal Operations in exposing and combating the traffic in obscene and pornographic literature—I couldn't help but think that here, beautifully expressed in poetry and music, was exactly what we are trying to accomplish.

It was not until I became chairman of this important investigating subcommittee that I began to understand the enormity of the problem of pornography. I was shocked when I learned of the depths of depravity to which filth merchants will resort. I soon came to realize the type of subhuman venality we are up against.

I quickly found out that one of the basic reasons for the growing volume of indecent matter in the mails and on the newsstands was the fact that the average decent citizen is entirely unaware of the nature and extent of this scourge.

So, in 2 years of extensive hearings on this problem, which took my subcommittee to most of the major cities of the country, in the report which we later issued, and in all my own speeches and personal contacts with citizen groups everywhere, our purpose has been to establish an aroused community conscienceness to this vital problem.

We have, if you please, been trying to light just one little candle and to help provide the tiny spark for other such candles, so that we may not stumble in the dark over this

cancerous growth which, if unchecked, will insidiously destroy the moral tissue of our Nation.

FILTH PEDDLING IS BIG TIME

Pornography today is big business. The peddling of obscene and pornographic literature is no longer confined to the backrooms of pool halls. It has become a lucrative business with wide and varied sources of distribution. According to reliable estimates, filth peddling brings in from $½ billion to $1 billion a year.

Besides the fact that the average citizen is unaware of the extent of this problem, I believe there are two other basic reasons for the increased traffic in obscene literature. The first is the fantastic profits which can be derived with a relatively small capital outlay. The second is the difficulty of prosecuting offenders, especially in the jurisdictions where most of the mail-order business in pornography originates.

But, primarily because of public unawareness of this creeping menace, printed filth now appears in drugstores, supermarkets, and newsstands in addition to widespread distribution through the mail (which, actually, is the primary jurisdiction of my subcommittee). Too often it stands indiscriminately on the magazine rack next to respectable family magazines dedicated to the improvement of the American home.

Here, I fear, its ready accessibility to our young ones imparts a flavor of acceptability, with the result that they are gaining dangerously false impressions of the moral foundations of our society. For the fundamental unit of that society—the family—is challenged in the mind of every adolescent with each distorted idea he acquires regarding the true meaning of natural sex instinct.

SMUT AND DELINQUENCY

The evidence that juvenile delinquency is sharply increasing with each year; that it is more commonly concerned with acts of violence, and that it is appearing in the suburbs as well as in the slums, is unmistakable. In the 9-year period, 1949 through 1957, the number of appearances before juvenile courts for delinquency increased two and one-half times, while the child population increased by only one-fourth.

The direct relationship between obscenity and this rising incidence of juvenile delinquency was clearly pinpointed by many distinguished witnesses who appeared before my subcommittee—among them, the Rev. Father Terrence J. Murphy, of the Loyola University Law School; Dr. Nicholas G. Frignito, chief neuropsychiatrist and medical director of our own Philadelphia municipal court, whose position affords an unusual opportunity to study and evaluate the effects of obscenity and pornography on the conduct of youthful law violators; and Mr. John Cornelius Hayes, president of the National Council of Catholic Men and professor of law at Loyola University.

I know there are psychiatrists who hesitate to relate publications devoted to distorted sex, terror, sadism, and crime with juvenile delinquency. However, after having listened to many authorities and worked closely with this problem for over 2 years, I find myself in complete agreement with J. Edgar Hoover, Director of the Federal Bureau of Investigation, who recently wrote:

"I say that we can no longer afford to wait for the answer. What we do know is that in an overwhelming large number of cases sex crime is associated with pornography. We know that sex criminals read it, are clearly influenced by it.

"I believe pornography is a major cause of sex violence. I believe that if we can eliminate the distribution of such items among impressionable school-age children, we shall greatly reduce our frightening sex crime rate."

KNOWLEDGE WILL BRING ACTION

More than ever, I am firmly convinced that only when the public is fully enlightened—when enough "candles" are lit—will we be able to stem the ravages caused by filth and smut. The "light" of knowledge will surely be followed by determined action. I have enough faith in the moral and spiritual backbone of this Nation to know that when thinking men and women get to know the whole sordid story of pornography, they wil not long stand by and do nothing. They do not need to be reminded of Edmund Burke's admonition: "All that is necessary for the triumph of evil is that good men do nothing."

Fortunately, good men are doing something about the evil of pornography. Civil and church leaders in many cities and towns, large and small, throughout the country are demonstrating the effectiveness of organized committees and groups in combating and cleaning up the traffic in filthy publications in their own areas. Moreover, action in one community helps provide the tiny spark for similar action in other communities and these shared experiences yield large rewards.

In helping to encourage this kind of action by individuals and groups, my subcommittee's report summarized what the situation is both as to obscene matter sent through the mail and the increasing prevalence of smutty publications on the newsstands. We describe the efforts being made in some communities to combat the spread of this evil among their youth. We also suggest a program of community action and list recommendations to help stamp out the nationwide traffic in indecent publications.

Copies of these report, entitled "Obscene Matter Sent Through the Mail," may be obtained from the Government Printing Office, Superintendent of Documents, Washington 25, D.C., for the nominal charge of 20 cents per copy.

As I indicated earlier, the basic unit of our society—the family—is most seriously in danger from the pornographic attack. The family must, therefore, be the center of the counterattack against this festering disease. Additional laws, community action, and other group efforts—while valuable—are no substitute for the "light" of parental guidance. They cannot absolve fathers and mothers from their obligation to know their children, to understand their thinking, to lead them onto paths of better reading, and to guide them by appealing to their interests at least as forcefully and attractively as the "dirt peddlers" are doing.

Truly, the brightest "candle" of all is the one that shines in the home.

The Expanding World Economy

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 22, 1961

Mr. HUMPHREY. Mr. President, in the coming years the United States must seek an expanding world economy, and in doing so, we must maintain full employment and high production within our own American economy.

But we also have a responsibility to help low-income countries speed their economic development. We must help them to help themselves. We must help them to meet the revolution of rising expectations—not simply because we want them to resist the insidious promises of communism but also because we want to help them in the common battle of mankind against poverty, hunger, disease and despair.

We can and should channel more of our economic and technical assistance through the United Nations. In spite of Soviet efforts to weaken the United Nations, the less-developed and uncommitted nations of the world still look to the U.N. as their best hope for action on the international scene.

The best way for us to strengthen the United Nations—and the best way to help the people of underdeveloped areas toward a better standard of living with greater freedom and human dignity—is to channel more of our economic and technical assistance through the United Nations which can enlist substantial contributions from other free nations.

One of America's outstanding statesmen has presented the challenge and the opportunity before us. In a penetrating speech to the Chicago Council on Foreign Relations on March 30, Paul G. Hoffman, now managing director of the United Nations Special Fund, made excellent suggestions on the approach we should take in the great humanitarian undertaking of speeding economic development in the low income countries within the framework of an expanding world economy.

Mr. President, I ask unanimous consent that Mr. Hoffman's remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE EXPANDING WORLD ECONOMY—AN ESSENTIAL GOAL

(Address by Paul G. Hoffman)

In January of 1959 I became the managing director of the United Nations Special Fund, which is one of several United Nations agencies concerned with assisting underdeveloped countries to speed their development. When I took on this new assignment I was told that we were face to face with a "revolution of rising expectations." I recall thinking that the phrase "face to face" and the word "revolution" were overdramatic when used to describe a state of unrest among peoples comfortably remote from our shores. But then came the turmoil in the Congo, the uprising in Venezuela, and finally the revolution in Cuba, which persuaded me that in this compact and shrinking world no country can be an island unto itself; or, as someone put it rather picturesquely, the Rhine and the Volga, the Yangtze, the Niger and the Amazon all overflow into the main streets of the cities, villages and towns of the United States of America.

My present awareness that we cannot turn our backs on this revolution is, I believe, shared by most people in the United States today. I am not sure, however, that there is any general understanding of its dimensions. There are approximately 100 countries for which the United Nations has some responsibility, most of whose billion 3 hundred million people are dreadfully poor. In addition to these people, there are between 600 and 700 million people living in mainland China, North Vietnam and North Korea who are also povertystricken. All in all, close to 2 billion people are in active revolt against the continued acceptance of poverty, illiteracy and chronic ill health.

Not only is this the most pervasive revolution in human history, but it came upon us rather suddenly. In fact, it is only since the end of World War II that we have faced the seething unrest presently assailing us from all sides. Up until then, most of the people in these poorer countries accepted lives of misery because they could imagine nothing better. Part of the responsibility for their awakening rests upon World War II itself, because millions of young men left their villages and went into distant lands to fight. They learned that people like themselves in the more advanced countries—villagers, if you please—were well nourished, well educated, and enjoyed good health. When they returned home, they told their neighbors. However, it is modern communications, and principally the radio, to which most credit must be given for the sudden awakening of these people. There is hardly a village anywhere that doesn't have its radio; and hardly a villager who isn't now convinced that a better life and a better living are possible for him and his children.

The cold figures on the dimensions of the problem of speeding development reveal its true magnitude only when coupled with a knowledge of its complexity. Involved are economic, political, religious, legal, educational and social factors; taboos, mores and too often quite incomprehensible attitudes of peoples and their governments. To add to the difficulties, the situation in no two countries is exactly similar. The programme of economic development for each of the 100 countries must be hand tailored.

As an illustration of the complexities with which we are faced, let's take the attitude of people in some of the low-income countries toward work and saving. In many countries physical labor is considered beneath the dignity of men; women do all the work. A couple of weeks ago in Africa, in a country I won't mention, one of the familiar sights was a man walking down the road twirling his cane. In the dust behind him walked his wife, carrying on her head an immense load, and a baby on her back. This may be an idyllic situation so far as men are concerned, but the economic development of that country will be handicapped until the men go to work.

When it comes to savings—for many people in the low-income countries, the idea of postponing consumption today for a better tomorrow is presently beyond their comprehension. Admittedly, it is difficult for someone whose belt is already at the last notch to tighten it further. Yet, as every farmer instinctively knows, even out of a small harvest sufficient grain must be saved for a new and larger planting.

The problem of status also enters largely into the problem of development. In many countries the only groups which enjoy prestige are the government employees, the lawyers, the doctors, and the priests. Men engaged in trade are looked upon as third-class citizens. Only when proper recognition is given to the significant contribution which entrepreneurs, industrialists, and businessmen must make toward building a country will there be attracted into these pursuits the talent so much needed.

There are many other psychological factors which must be taken into account. In some countries you have rigid taboos that must be considered. In parts of Africa fetish priests retain powerful holds on people and sometimes do their wily best to frustrate necessary change.

There is also the question of incentives. People will work hard if it helps to get them what they want. That may be a better home, education for their children, a radio, a bicycle or what have you. In too many countries materials for building a better home are not available, nor are the teachers to teach the children, nor the household and other goods for which they may long.

I could go on indefinitely giving illustrations of the kind I have mentioned, but I am sure that we are already aware that the job before us is one not only of huge dimensions, but also of bewildering complexity. But it isn't insuperable. There is no question in my mind that at least 90 of the 100 low-income countries have the resources—physical and human—to provide in reasonable time decent living standards for their people. The underlying reason for underdevelopment is underutilization of these resources.

Fortunately, the discovery and evaluation of the physical resources of a country are not too difficult. Whether it is soil, water, minerals, petroleum, fisheries or timber that is to be investigated, techniques are available and constantly improving. Take mineral investigation, for example. Today with low-flying airplanes and modern equipment it is possible to prospect 100 square miles in less time and more thoroughly than it would have taken to prospect 1 square mile by traditional methods.

Each day at the United Nations brings new evidence of the richness of the physical resources of many of these countries. Some hint, for example, of the untapped agricultural potential lies in the fact that farm output in metric tons per person on the North American Continent exceeds the average of Asia by tenfold, and of Africa by twentyfold.

As a specific example of a rich but little used resource I cite the Niger River. A study for the development of that river has been underway and is, in fact, just about completed. There is every evidence that, with the construction of a 150-foot dam, the waters of that river will be available for the irrigation of thousands and thousands of acres of potentially rich land, for the generation of millions of kilowatts of cheap power, and navigation on the river will be greatly improved.

Let me give another specific example from another country—Ethiopia. One of its principal rivers is the Awash. Here again, its waters have been used but little and yet preliminary studies indicate that, with control of the waters of that river, the Awash Valley can become one of the most fertile valleys in all of Africa. In fact, the prospects of this are so bright that a British syndicate signed an agreement with the Ethiopian Government to supply $35 million of capital for a settlement project in the valley, provided the intensive survey, now underway with United Nations assistance, measures up to the preliminary findings.

The agricultural situation in India is another case in point. India is presently importing a vast amount of food. And yet a group of leading agronomists, sent to India 3 years ago under a Ford Foundation grant, concluded that India had sufficient land and water to feed not only her present population but a population twice its size. What was lacking was fertilizer, better seeds and the employment of more modern farming methods. I should add that India's third 5-year plan includes substantial allocations for the construction of fertilizer plants and for the expansion of agricultural institutes.

During the decade of the 1950's many countries, including the United States, gave valuable assistance to the low-income countries in making more effective use of their physical resources. As for the United Nations, ever since it and the specialized agencies joined together in the expanded program of technical assistance in 1950 there has been a steady stream of international experts going out to help the less developed countries, and an even greater number of fellows from these countries going abroad for study under United Nations grants. By the end of 1960, over 10,00 experts of 78 different nationalities had been sent on technical assistance assignments in 105 countries and territories. In the same period, 18,000, United Nations fellowships were awarded to men and women from over 110 countries allowing them to improve their skills by training in more advanced areas.

U.N. SPECIAL FUND

The Special Fund of the United Nations started operations in January 1959. Its special field is assisting the low-income countries in resource surveys and in establishing applied research institutes and training institutes of various types. It has underway at the present time 32 resource surveys in 23 countries involving Fund expenditures totaling $19.5 million, the total cost of which is estimated at approximately $37 million.

These modern resource surveys have a vital role to play in laying the groundwork for substantial investment. As an example I would like to tell you of a United Nations Special Fund project which has recently been completed. This was a survey of the needs and resources for electric energy in Argentina. This investigation cost the Special Funds under $300,000. In the completed report of the survey, the hardheaded engineers and economists recommended a total investment of some $735 million over the next 10 years for facilities to provide the electric energy Argentina needs for industrial development and domestic use. The report shows that prospective revenues will fully support this investment.

Certainly, this 2,450-to-1 ratio between "seed money" and potentially sound investment opportunity is much, much higher than normally can be expected. It is fair, however, in my opinion, to estimate that every $1 of resource survey expenditure may reveal an opportunity for $100 of sound investment.

The task of making more effective use of the human resources of the low-income countries is infinitely more difficult and more time consuming than is that of better utilizing physical resources. Of the 1,275 million people in the 100 underdeveloped countries associated with the United Nations, I would guess that around three-quarters of a billion persons at or over school age still cannot read or write. It would be good if they could, but even that would be far from enough. Millions upon millions of these people must be given secondary education as well. There are also immense needs for vocational training. And finally, as a critical factor in economic development, we have the necessity of training vast numbers of higher and middle-level administrative, scientific and technical personnel.

Fortunately, the needs of a few of the underdeveloped countries for this skilled manpower have been estimated rather carefully. Thus, Nigeria will need to train, over the next 10 years, 20,000 top-level administrators, professional technicians, managers and business executives. It will also need some 40,000 middle-level technicians—for building and industrial programs, for health services, teaching, and for supervisory positions in Government and business. A rough projection of these requirements would suggest that our 100 underdeveloped countries would need to train in the decade ahead at least 700,000 top-level administrative and professional personnel, and over 1,400,000 middle-level technicians. Let's reduce this projected figure by more than 50 percent and say that 1 million people must be trained as rapidly as possible for highly skilled occupations. This is a staggering job, one that is impossible with the resources currently available for it. But there is no time to lose in getting on with the task, for education and technical train-

ing must go in advance of significant economic development.

The United Nations, the Food and Agricultural Organization of the United Nations, the International Labour Organization, and UNESCO have, over the last decade, carried on a number of projects in the training field and are now engaged, with the assistance of special fund financing, in a great expansion of these activities. These new projects range from assistance in establishing engineering departments in universities, such as the University of Concepcion in Chile, to assistance in establishing institutes for the training of vocational teachers in India. Included also are a large number of institutes in the agricultural field. At the present time some 17 such major training projects are underway, and more will follow.

SUGGESTIONS

Earlier I said that despite the huge dimensions and complexity of this task of assisting the low-income countries in speeding their development it was not insurmountable. It isn't, provided we take full advantage of what we should have learned from the experience gained in the 1950's, and provided adequate financial support is made available both for preinvestment activities and for investment.

First

I suggest, first, that we accept without reservation an expanding world economy as an essential goal. Certainly with over half the people of the world still undernourished and without the bare essentials for decent living and with the world's population increasing steadily, there is a desperate need for a vastly increased production of the world's goods. The first responsibility of each country is to speed its own development. Its second responsibility is to assist other nations in accordance with its means. No nation is so rich that it cannot profit from an expanding world economy and no nation is so poor that it cannot help other nations.

Second

Second, that we must put an end to all talk that implies that assistance from one nation to another is an act of charity. Such an approach is paternalism, and paternalism has no place in relations among sovereign nations. There is only one relationship that is sound—and that is one of partnership. The moral reasons for nations assisting each other are profound, the political reasons are compelling, but there are also solid business reasons—the less developed countries are the new economic frontier. The advertising council, in its current campaign on the theme "Confidence in America," puts the case this way: "Today 1 in every 20 American workers owes his job to foreign trade. With a billion customers for the output of our factories, we can look forward to a long period of growth and development."

Third

Third, I suggest that helping low-income countries speed their development should be accepted as an objective worthy to be pursued for its own sake. Economic aid should not be thought of as an instrumentality of the cold war nor one for obtaining a preferred position commercially for a donor country. There are practical as well as ethical reasons for concentrating on the one goal of economic development. The practical reason is that without such concentration the chance for success is remote. We all know that speeding development is much more difficult than promoting recovery. Nevertheless, I do not believe that the Marshall program would have been successful if it had not been for our concentration on the one goal of recovery. We refused to become involved in the cold war and never sought a commercial advantage for the United States. We adhered strictly to the guidelines laid down by General Marshall in his commencement address at Harvard University in June 1947, when he stated:

"Our policy is directed not against any country or doctrine but against hunger, poverty, desperation, and chaos. Its purpose should be the revival of a working economy in the world so as to permit the emergence of political and social conditions in which free institutions can exist."

Fourth

Fourth, I suggest that much greater emphasis should be placed on preinvestment activities. Billions of dollars of investment have been lost because millions were not spent in adequate preparatory activities.

Fifth

My fifth suggestion is that a very pragmatic approach be employed in determining whether aid should be given through the United Nations, through regional organizations, or on a bilateral basis—namely, on the basis of which channel will yield the most development per dollar. I would be less than frank if I did not say that if this test is applied the result is certain to be a substantially increased use of the United Nations. There are several reasons.

First, because in the U.N. and its 13 specialized agencies reposes the richest experience that can be found anywhere in virtually every field of developmental activity. The U.N. draws on the whole world for its technicians.

Second, assistance through the U.N. guarantees that there is no paternalism. U.N. assistance is a completely cooperative endeavor with a voice given to countries whatever their size or wealth and with all countries contributing to the cost.

Third, because the low-income countries prefer assistance through the U.N., it is possible for the U.N. to insist upon the recipient countries putting forth a maximum of self-help. As proof that this can be done, I cite the fact that the special fund's contribution to the 115 projects approved by its governing council is $96 million, and that of the recipient countries, $131 million, for a total of $227 million.

Sixth

Sixth, I suggest that new emphasis be given to adjusting the educational programs of the less developed countries so that they will make a maximum contribution to the achievement of their economic goals. This means that primary, secondary, vocational, technical and university education must have their appropriate share of whatever educational funds are available. In most of the less developed countries of which I have knowledge, far too little attention has been given to secondary school education. The need is for a balance program in education and training.

And now as to the additional financing which is needed in the preinvestment field. Leaving aside for the moment the cost of assisting in the financing of educational institutions, the amount is rather modest. Speaking of the United Nations which, together with its specialized agencies, has available at the present time something in the neighborhood of $150 million per year, an additional $100 million would take care of the increasing demands for technical assistance and resource surveys.

When it comes to capital, by far the larger part of the responsibility rests with the poorer countries themselves. Even though their incomes are pitifully low, a substantial percentage must go into savings to finance the major parts of their development programs which can be financed with local currencies. However, they are going to require a substantial amount of foreign exchange to pay for equipment from abroad, the services of outside experts, and also to cover other costs such as debt service and transportation charges. Averaged over a 10-year period, my guess is that this foreign currency requirement would amount to $45 billion annually. If we assume an expanding world economy, these low income countries should be able to earn $38 billion of this amount through their exports leaving a gap of $7 billion annually which would have to be covered by investments, loans and grants from the outside.

In the year 1960 approximately $4 billion flowed from the advanced countries to the less developed countries. This leaves $3 billion a year for which new financing will be required. I believe, again averaging over a 10-year period, that $1 billion of this amount can be taken care of by private investment and sound bankable loans.

The remaining $2 billion of annual financing required is the problem, because for the most part it is not needed for revenue-producing activities but for public facilities and services which can pay back their investment only through generally increased output of the entire economy. Such facilities and services include first of all, education and training, and then roads, communications, health improvement, housing and administration. These loans, if they are not to overburden the struggling economies, should be long term, carry low rates of interest and probably have the beginning dates of repayment deferred for a considerable period, perhaps as much as 10 years. In banking parlance they may be "soft" loans—but from the point of view of economic growth they are the most important investments of all. It is my hope, that through the International Development Association and regional development associations such as the Inter-American Bank, most of this capital will be forthcoming.

The advanced countries of the world have every right to seriously consider whether loaning $2 billion per year to the newly emerging countries is a risk they should take. I suggest that it is, and for a number of reasons.

First, because it is good business. These emerging countries are the new economic frontier.

Second, for compelling political reasons—we can't afford any more Cubas or Congos. Progress should come through evolution and not through violence.

And third, because it provides the one best way to make constructive use of the time we are buying at so heavy a cost through our defense expeditures. The member nations of the United Nations are spending $100 billion per year for defense and all it buys it time.

If we are going to get out from under these terrific costs we must move toward peace. And that is what the $2 billion per year will do for us. Why? Because out of the yearnings of the hundreds of millions of people for a better life will come, if those yearnings are ignored, one explosion after another in this troubled world. But if heed is given to these yearnings, if we can give the assistance we should, then there can come a better world than we have ever dared dream of.

In closing, may I recall some words used by the Honorable Lester Pearson of Canada: "The grim fact is that we prepare for war like precocious giants and for peace like retarded pigmies."

It is time we began acting like giants in waging peace.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Newsletter of May 20, 1961:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Tex.)

MAY 20, 1961.

Fear: (Noah Webster) "Painful emotion marked by alarm; dread; disquiet; also, an instance of this feeling."

Fear can be good or bad. It can be a protection (fear of fire and other bodily harm) or a weakness, as when dread or disquiet prevents the right action or provokes the wrong action. Examples of fear that tend toward weakness are found alternately in the fear of people of their government leaders, elective or appointive, and politicians' fear of their constituents. It is an interesting phenomenon to me that because of unfounded fear some Members of Congress and some people wanting Federal aid or a special concession from government are willing to trade out their conviction and principles for a harbor, a lake, a bridge, or a Federal building. Is it possible for a Member of Congress to equate a public works project against his vote for or against civil rights, aid to education, foreign aid, minimum wages, a judgeship, tax legislation or social security benefit changes? Is it possible for citizens, businessmen and laboring men to abandon or accept a position on a controversial matter contrary to their own view to secure some political or government aid? Yes, these things are possible and are occurring in our country today.

The next question might then be, how much is our country weakened by fear of political reprisal, of insecurity, of communism? In an earlier day, men of stature laid peoples' fear to rest by saying,

"These are the times that try men's souls. The summer soldier and the sunshine patriot will, in this crisis, shrink from the service of their country; but he that stands it now deserves the love and thanks of man and woman. Tyranny, like hell, is not easily conquered; yet we have this consolation with us, that the harder the conflict, the more glorious the triumph."

"You ask, what is our aim? I can answer in one word: Victory—victory at all costs. victory in spite of all terror, victory however long and hard the road may be; for without victory, there is no survival."

"We have nothing to fear but fear itself."

Indeed, these powerful statements in their times resolved doubts and anxieties and resulted in a rebirth of confidence.

Today we need a reawakening and a rededication to our way of life and the reasons underlying a society designed to respect the freedom, the dignity, the happiness of human beings. We have so much to be thankful for, so many spiritual and material blessings, we should face every day confidently. There should be no groundless fear, no dread, no anxiety; rather, a zeal to protect, enjoy and perpetuate our heritage. Instead we see people cowed by government power, by political reprisal or the threat of it, by communism's sterile philosophy. Such conduct is not worthy of U.S. citizens, as I see it. Obviously it is both a matter of ideals—that is, a dedication of purpose, a depth of feeling—and of attitude. Generally when fear is recognized (as cited above) and brought to light, groundless and unnecessary anxiety can be replaced by confident activity. This is what we need today in all walks of life in the United States. Indeed, our form of government is intended to rest upon and maintain its vitality by the unfetted exchange of controversial differences of viewpoint by men of good will. It is the difference of opinion, based on facts, evolving into a later compromise that fuels the engine of a "republic in a democracy". Any capitulation of viewpoint, not warranted by the facts and adherence to high principle, weakens our system of government and society. For my part, I am totally unafraid of political pressure or reprisal and will never be so intimidated.

On several significant issues this week the House took action which could have far-reaching effect: (1) H.R. 4641 to establish an office of International Travel and Tourism. In my opinion it is unnecessary to establish another Federal bureau and bring the Government into yet another facet of our personal lives. (2) House Concurrent Resolution 226 expressing the sense of Congress in encouraging the Organization of American States to institute action against Cuba. We should not rule out unilateral action by the United States against Castro if such a move becomes necessary to protect our country. (3) House Concurrent Resolution 209 authorizing the President to provide assistance to Cuban refugee students. This was another instance of Congress waiving its authority to safeguard the peoples' money. Also, it is no more constitutional, in my judgment, to give Federal aid to foreign students than it is to our own. (4) Appropriations for Department of Labor and of Health, Education, and Welfare. I opposed the expenditures called for in the bill because in it we continue to increase our welfare spending two to one over our defense expenditures.

Thank you: To so many of you who have sent contributions to help defray the cost of this newsletter, my heartfelt thanks.

Address by Assistant Secretary of the Interior John A. Carver, Jr., at the Annual Dinner Meeting of the Carl Schurz Memorial Foundation, Inc., in Philadelphia, May 12, 1961

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. ASPINALL. Mr. Speaker, on May 12 in Philadelphia the Carl Schurz Memorial Foundation met to honor the memory of a great American.

History has enhanced the greatness of Carl Schurz, but the passage of time has dimmed public recollection of his name and his deeds.

Assistant Secretary of the Interior John A. Carver, Jr., delivered the principal address at the memorial foundation meeting in Philadelphia and he told the gathering that his study of the life of Carl Schurz provided a rare and unexpected intellectual uplift.

Mr. Speaker, I would like to quote one paragraph from Mr. Carver's talk and, under unanimous consent to revise and extend my remarks I include the full address in the RECORD. Mr. Carver said:

I confess that although I have walked many times by his picture, which hangs in the long hall that leads to the office of the Secretary of the Interior, I did not, until I began to prepare for this talk, know more than the name, and certainly not the remarkable conservation contribution, of this newspaperman, revolutionary, patriot, orator, U.S. Senator from Missouri, Civil War general, scholar, musician, and pioneer in civil service reform, who also served as Secretary of the Interior from 1877 to 1881. I take nothing from the luster of the memory of Gifford Pinchot when I say that Schurz, in my opinion, was as great.

Mr. Carver's address follows:

ADDRESS BY ASSISTANT SECRETARY OF THE INTERIOR JOHN A. CARVER, JR., AT THE ANNUAL DINNER MEETING OF THE CARL SCHURZ MEMORIAL FOUNDATION, INC., IN PHILADELPHIA, MAY 12, 1961

I am genuinely pleased to have been asked to speak to you tonight on the occasion of the annual dinner of the Carl Schurz Memorial Foundation. I love the opportunity I have as an Assistant Interior Secretary of working with the National Park Service; the rewards of this association include meeting and coming to know groups, like your own, motivated to assist government to reach objectives which government may be too impersonal, too large, or too slow to achieve alone. We are grateful, officially and personally.

The generous contributions made by the Carl Schurz Memorial Foundation in the initial rehabilitation and subsequent maintenance and preservation of this building, the Second Bank of the United States, are deeply appreciated. The veterans of the Service tell me that it would have been difficult, if not impossible, for the Park Service to have preserved this building for the American people without the timely cooperation of the foundation in 1939.

And there is another fringe benefit to my work. The Park Service and organizations like yours so frequently are delving into our history and our heritage, and sometimes I have the chance to have some of the thrill of it rub off on me. Recently, I attended a National Parks Conference at Grand Canyon, and for two wonderful days, I could absorb the legends, the lore, the wonder of America, as I visited with the superintendents of battlefield parks of our Revolutionary and Civil Wars, of great national parks, and jewels of national monuments. These men were historians, naturalists, students, even poets, and the experience was rejuvenating.

I've had an experience of uplift such as I had at the Grand Canyon in the exposure I've had to the life of the great adopted American whose memory you honor in your continued good works.

I confess that although I have walked many times by his likeness, which hangs in the long hall which leads to the office of the Secretary of the Interior, I did not, until I began to prepare for this talk, know more than the name, and certainly not the remarkable conservation contribution, of this newspaperman, revolutionary, patriot, orator, U.S. Senator, Civil War general, scholar, musician, and pioneer in civil service reform, who also served as Secretary of the Interior. I take nothing from the luster of the memory of Gifford Pinchot when I say that Schurz, in my opinion, was as great.

The wisdom of Carl Schurz in the resources field is as fresh as tomorrow. President Kennedy's recent message to Congress warned that our forest lands present the sharpest challenge to our foresight because we are using up our old growth timber at an alarming rate, and consumption will double in the next 40 years.

Schurz put it this way in 1877: "The rapidity with which this country is being

stripped of its timber must alarm every thinking man."

Secretary of the Interior Udall organized a task force to study the distressing state of American Indian affairs. Back in the seventies, Secretary Schurz advised the President that "the general condition of our Indian affairs is by no means satisfactory." And, he said later, "the Office of Commissioner of Indian Affairs is one of the most arduous places in the Government." Amen to that.

Today, Secretary Udall is pushing the most ambitious national park program since the National Park Service was founded 45 years ago. He is appealing for enough money to do the job. Eighty-four years ago, Secretary Schurz was appealing for money enough to pay the salary of the first superintendent of the first park, Yellowstone. The superintendent had been appointed but since Congress had made no appropriation to pay him, he was working for free.

Schurz was concerned with the desert land laws and the problems of the arid Western States. I spent many hours this week working with the Director of the Bureau of Land Management on proposed revisions and improvements of these laws.

This forthright and outspoken man, like an Ickes much later, could castigate the Congress for passing a bill he had opposed. He read them a lecture: "We are now rapidly approaching the day when the forests of this Country will no longer be sufficient to supply our home wants, and it is the highest time that the old notion that the timber on the public lands belongs to anybody and everybody, to be cut down and taken off at pleasure, should give way."

Action followed. He whipped up public opinion, and he stopped the export traffic in logs from the public lands by administrative action, continuing to apply the needle to Congress. "* * * I regret to say that in spite of the repeated recommendation of the passage of a law to facilitate the prevention of the wasteful devastation of the public timber lands * * * almost all the legislation that has been had upon this subject consisted in acts relieving those who had committed depredations in the past of their responsibility, and protecting them against the legal consequences of their trespasses."

He told Congress bluntly that it was falling down on the job of protecting Yellowstone. He reorganized the Bureau of Indian Affairs. He told the white people in the West they had to stop stealing Indian land. And while he was busy going around the country creating enemies by the hundreds, he was in the first rank of the conservation movement. "The waste and destruction of the redwood (Sequoia sempervirens) and 'big trees' (Sequoia gigantia) of California have been, and continue to be, so great as to cause apprehension that these species of trees, the noblest and oldest in the world, will entirely disappear unless some measure be soon taken to preserve at least a portion of them," he wrote, following his comments with specific recommendation for Presidential action.

Gifford Pinchot found inspiration in Schurz' lonely battle, and gave him credit as the only Secretary of the Interior who had sensed the forest problem and tried to do anything about it.

This is heady wine. It is a tonic to a bureaucrat buried in papers to find the issues stated with such clarity and brevity. His annual reports bear his mark, and each is only 50 or so pages in length.

But I am indebted to my wife, the scholar in my family, for the inspiration to leave this exciting facet of his life in pursuit of another equally fascinating one—his friendship with Abraham Lincoln.

This friendship must have been the richest experience of his life. It was a friendship based upon profound mutual respect; no fawning or cheap adulation marred it. It was an active, give-and-take, useful friendship.

Lincoln found in the fugitive German firebrand an entree to the German vote in the 1860 election. He discovered soon that the 31-year-old from Wisconsin was scholar, poet, and idea man, and then, as now, public figures were on the lookout for competent speech advisers.

So Schurz was one of the inner circle in the drafting of the first inaugural; like an early version Harry Hopkins, within a few years he was on the stump himself. By the time the 1864 reelection campaign came round, the matured Schurz (by then 35, a major general in the Army and an ex-Minister to Spain) was doing an Ickes-type hatchet job on the Democrats and George McClellan in this very city.

But let's return to the first inaugural, when the new administration was being formed. Schurz, like many campaign workers after a successful election, must have had a dual role in this process—to give his advice on the deserving, the able, and the politically potent aspirants; and to worry quietly about what was in the Chief's mind for him.

Schurz wrote to his wife: "As I was leaving him after this long conversation (on the draft of the first inaugural) in which he explained his opinions and plans with the greatest frankness, I told him I should ask his administration for a few offices for my friends." He answered: "You write to me and you may be sure that I shall attend to everything you may ask for; and as for your own case, which you have not spoken of to me, I shall never forget you."

Lincoln expressed a distaste for the business of finding the right man for each job. On one occasion he said the process itself was like a landlord letting rooms in one part of the building, while a fire raged in the other part. At another time he said: "I have discovered a good way of providing officers for this Government: put all the names of the applicants into one pepper box and all the offices into another, and then shake the two, and make appointments just as the names and offices happen to drop out together." As to Schurz, it turned out that Mr. Lincoln had ideas different from the prevalent one that Carl would be just right for the Kingdom of Sardinia as Ambassador. Instead, he was offered the post of Minister to Spain.

Like Adlai Stevenson, much later, he asked time to think; and then he accepted. But the intervening period of rumors and clearances were stormy.

His case was argued up and down in the Cabinet. Seward declared that Schurz's record in violent, insurrectionary, red-republican movements in Germany in 1848 would be frowned on by the Spanish monarchy. Lincoln replied that Schurz would be discreet; it ought not to be held against the man that he had made efforts for liberty; and it might be well for European governments to realize this.

Schurz had the human touch, which requires a talent for making mistakes and changing opinions. He could and did bawl out the President of his country for not eradicating Democrats and replacing them with Republicans—yet he could, and did, become a leader in the reformation of the spoils system and the institution of the civil service merit system in the Federal Government.

I've said that Schurz took the stump in this city—his speech here reminds one of a later Secretary of Interior who mastered the high art of invective on a public platform.

The country was in a divisive campaign, and McCLELLAN, a man for whom Schurz never had any use, was the Democratic nominee on a platform which called for a convention to restore the Union. McCLELLAN had ducked that issue, and Schurz called him on it: "He ignored the platform and took the nomination, wrote a skillfully worded political letter showing that the art, How not to say it, can be brought to as high a degree of perfection as the art, How not to do it."

Schurz sounds like an early Alben Barkley when he sets out to remind his opponents of earlier administration of their party: "Although Buchanan is dead and buried, those who indulged in the soothing delusion that such a man could leave no progeny, find themselves mistaken. Behold, a whole brood of young Buchanans has risen up and met in convention in Chicago. The laurels of their father do not let them sleep. I see again the cunning twinkle of the eye, I see the white necktie again; they try to adjust it like a halter around the throat of the Republic, to throttle her to death. Truly the sons are greater than the sire. For what he did, we may say he did as a weak old man, whose life had been spent in a constant exercise of his knee joints; and who, when the rebellion first raised its Gorgon-head, had neither the firmness of a patriot nor the courage of a traitor. But what they do, they do after thousands have stained battlefields of their country with precious blood, after the people have poured out money like water to save the Republic, when the hero of Vicksburg is thundering at the gates of Richmond, when our flag waves over Atlanta, and Victory is the cry."

It was Schurz who said: "Our country, right or wrong. When right, to be kept right; when wrong, to be put right."

Later:

"Ideals are like stars; you will not succeed in touching them with your hands. But like the seafaring man on a desert of waters, you choose them as your guides, and following them you will reach your destiny."

The shaping of the statements, as well as the thought behind them, have the ring of Lincoln's prose. Some of his speeches were so markedly in Lincoln's flair, so Sandburg tells us, that it seems sure Lincoln wrote parts of them.

Sandburg says that Carl Schurz's private letters held opinions about Lincoln that he could not fully and conveniently have given in his orations to the immense metropolitan audiences that heard him in the autumn of 1864. To Theodor Petrash, a newly arrived emigrant, once a schooldays chum of Schurz in Germany, went a letter in 1864. "I wish to enlighten you on two other points. You are underrating the President. I grant that he lacks higher education and his manners are not in accord with European conceptions of the dignity of a chief magistrate. He is a well-developed child of nature and is not skilled in polite phrases and poses. But he is a man of profound feeling, correct and firm principles and incorruptible honesty. His motives are unquestionable, and he possesses to a remarkable degree the characteristic, God-given trait of this people, sound common sense. Should you read his official documents and his political letters you would find this verified to a surprising extent."

At another time he said:

"I will make a prophecy that may now sound peculiar. In 50 years, perhaps much sooner, Lincoln's name will be inscribed close to Washington's on this American Republic's roll of honor. And there it will remain for all time. The children of those who persecute him now, will bless him."

Studying his life and times has been fascinating fun. I think he would enjoy the peculiar situation that now exists between your organization and the National Park Service. As I said before, without your timely cooperation in 1939, it would have been difficult for the Service to preserve this building. Your generous contributions in rehabilitating and then maintaining the

Second Bank of the United States made it possible to save the place. Now we tell you that we appreciate it so much we are going to evict you.

Naturally we are pleased to have his memorial foundation working so harmoniously with our Park Service. And while this building is nearing the time when it will have to be devoted wholly to public use, we are glad that it will be possible to accommodate your organization in other quarters in the park.

We plan to restore, or recreate as authentically as possible, the entire row of houses on the north side of Walnut Street between Third and Fourth Streets. Your new home will be located there. It will be a strategic headquarters site from which to tell your story and his story.

The heart of old Philadelphia has the Nation's greatest concentration of physical reminders of the story of independence and the establishment of the United States as a free country.

Urban blight caused this neighborhood to degenerate, but the move to reclaim the area, launched by the Independence Hall Association under the leadership of Judge Edwin O. Lewis, [We are honored to have him here tonight.] has been gathering vigor. It is now one of the foremost historical projects in the country, representing a joint Federal, State, and community expenditure of perhaps $30 million.

As to the Federal part, we've been working, as you know. We will continue to work. We hope to put up a Visitor Center to guide visitors from City Tavern to Carpenters' Hall and finally to Independence Hall.

The reconstruction of City Tavern, where Paul Revere brought the news of the closing of the port of Boston, and where delegates to the First Continental Congress met to do their politicking, is vital to the interpretation of the park story.

Carl Schurz would have been delighted with City Tavern. Those men had faith and courage and high intelligence. They were in love with the words "Liberty" and "Freedom" and "Democracy." And like him, they were spoiling for a fight.

I've had a personal lift learning about Carl Schurz. As a tough-minded and dedicated Secretary of the Interior, he wrenched my Department off its old ways and set it moving ahead on a path of progress. His lofty aims in the park and recreation field are an inspiration today, when we have nearly run out of time in which to save the wild and beautiful open spaces from the bulldozer. His vigilance in sounding the alarm for the vanishing forest lands set off a clamor that finally resulted in corrective action.

This German-born agitator was the essence of Americanism. It is fitting that we pay tribute to his memory tonight here at the birthplace of America. We need to be reminded of what he did and why.

The Festering Finger of Fidel

EXTENSION OF REMARKS

OF

HON. JAMES A. HALEY

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1961

Mr. HALEY. Mr. Speaker, I have asked permission to extend my remarks so that I may place in the CONGRESSIONAL RECORD an editorial entitled "The Festering Finger of Fidel," which appeared in the Auburndale Star, of Auburndale, Fla.

Editor John Lopp expresses his deep concern that if Cuba remains in the hands of Fidel Castro and the Communists then "the sands of time will have all but run for a free Western World." Mr. Lopp brings out facts which have not been readily available to the American people, but facts which should be heeded. The editorial follows:

THE FESTERING FINGER OF FIDEL

(By John D. Lopp)

Sixty-some-odd years, a handful of wars and a lot of old-fashioned ideas and ideals have moved into the limbo since an American ensign carried a message to Garcia and a mine went off under the hull of the old battleship *Maine*.

There remain alive to tell of their exploits only a few of the boys that battled their way through Cuban jungle and swamplands and charged up San Juan Hill despite dysentery caused by poorly pickled pork and contaminated drinking water, despite the sweat of subequatorial sun and winter issue uniforms and despite malaria and yellow jack and the hail of Spanish bullets.

Now threescore years later, these United States are confronted with the necessity of another Cuban adventure.

Pattern of action may be disclosed before this column appears in print—or perhaps, the administration will drag its heels hoping against hope that something less drastic than a blockade of the island—if not an actual invasion—will become possible.

But one thing is almost certain. The United States cannot permit a Communist government supported, directed, and supplied by the connivers in the Kremlin to operate a scant 100 miles off the Florida coast.

This is not the time for recriminations. Whatever blame there is—and there appears to be plenty for all to share—must now be forgotten as the United States extricates itself from one of its most critical crises since the Russian bear turned red and learned to walk like a man.

At the risk of precipitating world war III, at the peril of invoking a new Berlin blockade combined with a renewal of conflict in Korea, a new attack on Matsu and Quemoy and brush wars around the globe, the United States must stamp out the newly created Communist center in the New World.

And that will not be an easy task in itself—even if the rest of the world remains quiet.

There are many facts that we as Americans must recognize.

And in the opinion of this column the first and major fact is this.

Castro's triumph was not part of an economic revolution. Its goal was not the creation of a more equitable economy for an oppressed and downtrodden people.

The workers of Cuba were not serfs held in near bondage under an archaic feudal system. Cuba was not a backward nation with rich and powerful landowners exploiting the impoverished peasants.

Neither was Cuba a land where foreign industrialists grew fat and rich while oppressed workers lived in dire and repugnant poverty.

That picture, painted during and after Castro's "ordeal in the mountains" by dogooder propagandists, followed to the letter the long existent Communist line. Many an American reporter—either unintentionally, or with an affinity for the left—followed that line—just as they did when the Chinese Communists were gobbling up all of what was ancient Cathay.

Back in the days of the Red Chinese conquest the phrase "agrarian reform" was born. The Red Chinese were not "really Communists," the readers and listeners of this Nation were assured. They were, instead, gentle "agrarian reformers," out to battle against the poverty and helplessness of the poor coolies who pulled rickshaws by day and scrounged meager handfuls of rice for their daily subsistance.

That same siren song was sung for Castro as he played "Robin Hood" in the mountains of Oriente and even after he seized power and began carving up the lands and nationalizing the sugar mills and cane fields and oil refineries and all the other industries which in recent years had made Cuba the third richest and prosperous country in the Western Hemisphere.

Readers in the United States hadn't been told that Cuba's national income in 1957 was a whopping $2,300 million, a figure surpassed only by Brazil, Argentina, Mexico and Venezuela—all nations 10 times the size of Cuba.

They were not told that the Cuban per capita income was $360 a year, or that that figure exceeded by almost 30 percent the average of Latin America and placed Cuba third in the hemisphere behind only the United States and Canada.

Readers here were not told that Cuba had one radio for every five inhabitants and a television set for each 18 of its 6,674,601 citizens.

We in the States were not told that Cubans operated almost 175,000 automobiles, 55,000 trucks and 5,000 buses or one automobile for each 39 inhabitants. Argentina has one car for every 60 and Brazil one for every 158 of its population.

The record on telephones, miles of railway, electrical and gas consumption, refrigerators, oil usage and all the other yardsticks by which an economy of a nation is judged, are almost identical in their contrast.

In 1958, Cuba's 38,000 industrial and farm centers employed 960,770 workers and another 250,000 found work in commercial centers. The total value of Cuba's industrial output in 1958 was more than $3 billion.

But statistics grow boring and those already quoted should serve their purpose in proving that Castro's revolution was not economic.

Instead, it was political, inspired by and directed by the Kremlin as a great experiment.

If communism—under the guise of "agrarian reform"—could triumph in wealthy, busy, well-fed, prosperous Cuba, the rest of Latin America would be a pushover. So reasoned the Kremlin.

And thus far that experiment has paid off, aided by those who have pictured the bearded butcher as a modern-day Robin Hood, purloining from the rich to give to the poor.

If Cuba stays Communist—if Castro retains control of the bedeviled isle, or if others of his like are returned to power by a sudden coup of the military, or by the aid of American intervention—the sands of time will have all but run for a free Western World.

From the Cuban beachhead, the Kremlin connivers stand where the Conquistadores of old once stood, with the whole of the southern continent before them ready for exploitation.

If the United States moves—and in the opinion of this column that move will come quickly—Communists around the world will raise the cry of Yankee Imperialism.

This column says let them raise it.

And then let's answer that Communist canard with facts and figures.

In 1939 American interests owned more than 60 sugar mills in Cuba, producing 55 percent of the islands output. Cubans that year controlled 56 mills.

In 1958, just before Castro, there were only 36 American-owned sugar mills representing a meager 36.6 percent of the output as compared to the 121 mills controlled by Cubans, with a production of 62.13 percent.

In 1939 American investments in Cuba amounted to $1,660,555,000. Twenty-eight

years later those investments had dropped to approximately $800 million.

On the basis of the total Cuban industrial investment, valued at more than $2 billions in 1958, the total of U.S. holdings in the island represented a minute 20 percent of the overall figure.

Adlai Stevenson might well ask the clamoring Communists of the United Nations if a nation would be imperialistic if it were to consider a war that would cost millions daily to protect an infinitesimal $800 million investment.

Those figures alone should prove that the United States, when it acts, is not playing at Yankee imperialism.

Neither is it indulging in an orgy of American idealism.

Any action contemplated, or taken, will result from hardheaded Yankee realism.

The United States cannot long exist as a bulwark of freedom, with a festering Communist hangnail pointing directly at the Florida coastline, a finger that threatens all of the Americas from the Bering Sea to Tierra del Fuego.

What Will the Harvest Be?

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the RECORD, I am pleased to include a letter to me under date of April 27, from a typical, good American farm wife, Mrs. Jack W. Hester, of Honey Creek, Iowa, who speaks for herself and her husband, along with my letter in part to them asking their permission to have their letter printed in the CONGRESSIONAL RECORD, and their reply.

Mr. Speaker, the letter to me dated April 27 sets out in plain, scholarly, understandable language the position which these good, hard-working American farmers fear they will experience in complying with the 1961 feed grain law. Of course, thousands of our farmers are in the same category with the Hesters, who it appears have no choice but to sign up, or else. The letters follow:

HONEY CREEK, IOWA, *April 27, 1961.*

DEAR MR. JENSEN: For several years now we have been asked to write our President and Congressmen, how we feel about different Government legislation. Little attention did we give to it until the last couple years, when the agricultural controversy got to the place it is making even more satisfied farmers feel poverty stricken.

Jack and I are 32 and 28 years, respectively. We have four children ranging from 7 years to 3 months. We live on a rented 173 acres which has both bottom and hills. With lots of work and modern farming practices we have averaged over 80 bushel an acre corn. We aren't specializing, but milk cows, sell some eggs, and our main source of income is hogs.

We would like to point out we started farming in 1953, with a Farmers Home Administration loan. We are not debt free, but feel we have gained a lot not only in material assets, but in doing what we enjoy.

Please don't get the idea we feel we've reached our goal, as we're working toward the day we can buy the land we now rent. If we can accomplish this and raise our family with hopes of college for them, we don't feel we have room to complain. We feel we can reach this goal without the Federal Government giving it to us.

We do not like the present farm plan, but what choice is there when the landlady has to seal her corn. The corn program came out saying to put 20 percent and 40 percent in diverted acres. You would receive 50 percent of your average yield on first 20 percent. When we received our papers, we got a 65 bushel average yield. Where did our other 15 bushels go?

The television program out of Ames on the farm plan said the main purpose of the program was to increase farm income. Does this mean the farmer with the initiative to improve his farming practices takes the penalty for someone who doesn't try? Was it just a snow job for farmers, figuring they wouldn't know any better?

As far as the soybean support price is concerned, more people will raise them. Then another excess crop. We have always sold them for more than support prices. After this is there going to be complete control, too?

We are definitely against the Government controlling everything as suggested by the long-range farm plan. What initiative (the one thing our country boasts about) will be left if everything goes to bushel, pound, etc., measurements? The Government telling us to raise so much and no more.

We believe our country is the best, but the only difference in this policy and the Russian is they are told to raise more and we will be told exactly how much less to raise. Either way the Government takes over.

What do we have left to work for if the Government tells us what we can do? Then they take care of us through old age with social security and medical aid. At this rate all we got left is to say we'll be glad when we're 65 years, as so many are saying. Of course, someone is going to have to pay for all these so-called benefits. There are some people you can give everything and still they want more.

We realize the surplus problem is bad and something has to be done. We believe in the soil bank, with high enough rates, based fairly, and used to get rid of the surplus is still the solution. With high enough payments and lower prices why wouldn't farmers be better off cooperating? Using this system until the surplus is gone. Then give it a chance to take care of itself.

Have been reading where Secretary of Agriculture Freeman is overjoyed with the sign up on the present plan. I do hope he realizes there are a lot of us that had little choice.

Would like to thank you for your time taken to read this.

Sincerely,
Mr. and Mrs. JACK W. HESTER.

MAY 11, 1961.

DEAR MR. AND MRS. HESTER: Your letter to me about the feed grain law for the 1961 crop year is the best I have received in that you explain in more detail the effect which the law will have on your income, etc.

Therefore, I feel your letter deserves the wide publicity it would receive by having it inserted in the CONGRESSIONAL RECORD.

Please know I would not have your letter made a part of the CONGRESSIONAL RECORD which is mailed each day to over 68,000 people in the United States, without your approval. May I have your approval to do so?

Sincerely yours,
BEN F. JENSEN,
Member of Congress, Seventh Iowa District.

MAY 16, 1961.

DEAR MR. JENSEN: In regard to your letter of May 11, we'd be honored to have our letter printed in any publication.

We feel very proud and happy to find out that an individual still has a chance to be heard in our great country. Thank you.

Sincerely,
Mr. and Mrs. JACK W. HESTER.

Success Story of the A-G Cooperative

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, the A-G Cooperative at Arcadia, Wis., has made great progress during a time when many small agricultural industries have suffered financial reverses. Under leave to extend my remarks, I would like to include in the RECORD an article from the Buffalo County Journal, Alma, Wis., that details the success story of this farmer cooperative:

DAIRY CO-OP MEETS CHALLENGE

Here's the success story of a local farmer cooperative that made good during difficult times.

The A-G Cooperative of Arcadia, Wis., organized in 1924 as a merger of two small creameries, has been studied by farm economists Henry H. Bakken and Luis Mejia-Mattei of the University of Wisconsin.

They were interested in this cooperative because it has made big strides forward during the last 10 years while many small agricultural industries and businesses have undergone financial adjustments and slowups.

The farm economists point to the growth in size and importance of the A-G Cooperative, especially during the last 10 years, as a result of the co-op's efforts at integration and diversification of its activities and its willingness to take on new enterprises.

For instance the co-op launched a large scale integrated broiler operation early in 1951. First the cooperative installed facilities for hatching chicks and distributing feed and other supplies. Later facilities for processing broilers we also developed. It now also runs two feed mills.

As a result of this expansion, some farmer-members in the community are specializing in the production of eggs for hatching purposes. Others are raising broilers or supplying grain for milling.

In the broiler setup farmers receive supplies from the association on a credit basis and pay for them with their products. The association exerts some control over the activities at all stages of broiler production, but the farmer-members in turn have control of the association by means of their votes. This makes for an effective and yet flexible balance, the economists say.

Bakken and Meja-Mattei say the cooperative has proved its success by growth in output and higher than average returns to the members. The cooperative processed more than 24 million pounds of broilers from 1957 to 1959. That represents one-eighth of the total output of commercial broilers in the State. When patronage refunds are considered, the price received by the broiler growers have also been substantially higher than the average for the State.

Another move toward vertical integration during the last 10 years has been a tie-in with Dried Milk Products Cooperative at Eau Claire, now renamed Dairy Maid Products Cooperative. Dairy Maid Products is a federated association of dairy plants through

which A–G Cooperative can market much of its output of dried milk and part of its butter production.

The expanded business interests and new markets raised the total sales volume of the A–G Cooperative to more than $8 million in 1959.

A–G employs more than 140 persons and gives part-time work to about 60 more. More than half the cooperative's income is still from the processing and sale of dairy products. But the other operations help avoid periods of slowdown and layoff when dairy products drop in price.

A Decade of Army Experience Under the Uniform Code of Military Justice

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. WILSON of California. Mr. Speaker, the April issue of the Federal Bar News, the monthly magazine of the Federal Bar Association, carries a thought-provoking article concerning a report recently issued by an ad hoc committee which studied the Uniform Code of Military Justice in the light of the 1961 needs of the Army. The committee was appointed by former Secretary of the Army Wilber M. Brucker.

The article was written by Capt. Julian B. Garrick, Jr., JAGC, USA, and 1st Lt. Francis J. Larkin, JAGC, USAR, both of whom are now assigned to the Army Judge Advocate General's Office in the Pentagon. The Judge Advocate General, Maj. Gen. Charles L. Decker, USA, was a member of the ad hoc committee, as was my distinguished constituent, Maj. Gen. George W. Hickman, Jr., USA, retired, former Judge Advocate General of the Army, who now is professor of law at the University of San Diego.

Through the courtesy of the editor of the Federal Bar News, Mr. Marion Edwyn Harrison, himself the author of several articles on administrative and military law, include, under unanimous consent, article in the Appendix of the RECORD as a portion of my remarks:

(The editors of the Federal Bar News congratulate Captain Carrick and Lieutenant Larkin upon writing and making available to the News as a "scoop" the following discussion of a very important report of interest to all military lawyers. The following views are, of course, those of the coeditors.)

A DECADE OF ARMY EXPERIENCE UNDER THE UNIFORM CODE OF MILITARY JUSTICE

(By Francis J. Larkin and Julian B. Carrick, Jr.)

On May 31, 1951, with the enactment of the Uniform Code of Military Justice, there came to pass the most significant milestone in the history of American military justice. The Uniform Code, in addition to consolidating the disciplinary law of all the services, made sweeping and elaborate changes in trial and appellate procedures as well as material changes in substantive law. It was widely hailed as bringing meaningful improvements to the field of military justice.

The first decade of administering military justice under this system is now drawing to a close. However, despite the wealth of publicity accorded the uniform code, until the later part of 1959 no service had attempted a truly comprehensive survey of its effectiveness in operation. As experience frequently illumes pitfalls in the most seemingly perfect precept, and as changes in internatonal conditons during the past decade have produced a significant shift of emphasis in nearly all aspects of American defense policy and defense planning—a shift whose deflecting considerations ought assuredly be assimilated in any effective and equitable system of military justice—a survey of the effectiveness of the uniform code appeared both desirable and necessary.

CHANGE IN TACTICAL CONCEPTS

The provisions of the Uniform Code of Military Justice were enacted against the tactical background and military experience of World War II. There the accent was on massive, comparatively stationary armies which fought a particular battle within the relatively narrow confines of a specific geographic area. In this type of battle, the forward element of the unit was rarely significantly separated from its immediate headquarters for any extended period of time. Currently, however, military tacticians universally predict that the battlefield of the future will undoubtedly extend over a vast area—an area occupied by widely dispersed groups which, although relatively small in size, will have at their disposal firepower, modes of transportation, and independence of action on a scale undreamt of a decade ago. Any future war, whether limited or global in nature, must place a conspicuous emphasis on the necessity for independence of action and a concomitant emphasis on complete tactical and administrative integrity within the smaller unit. An effective system of military justice, capable of functioning in war or peace, must assuredly accord due emphasis to these and other relevant nonlegal considerations. For to be effective, criminal law and procedure must accurately reflect the underlying conceptions of the social system with which it is connected and from whose total environment it cannot be split without being mutilated.

APPOINTMENT OF AD HOC COMMITTEE

Thus, convinced that sufficient time had elapsed to provide a broad range of experience and judicial action under the code, in October of 1959, former Secretary of the Army Wilber M. Brucker appointed an ad hoc committee of nine general Army officers to undertake a searching study of the effectiveness and operation of the Uniform Code of Military Justice and its bearing on good order and discipline within the Army. The committee was directed to survey and analyze any inequities or injustices to individuals or the Government resulting from the practical application of the code and the judicial decisions stemming therefrom. It was further directed to inquire into any improvements that should be made in the administration of justice, by legislation or otherwise.

Lt. Gen. (now Gen.) Herbert B. Powell, then commanding general of Continental Army Command, served as president of this committee. The committee members each had a wide variety of Army experience. All had commanded troops; all but one had been either a commander authorized to appoint general courts-martial under the Uniform Code or had served as the chief legal adviser for such a commander.

The committee's first concern was to obtain the widest and most representative sampling of the Code's impact on the Army Establishment from those persons intimately concerned with its day-to-day workings. In short, the committee sought to assess the effectiveness of the Code in terms of its impact on persons and not merely through an examination of its provisions. To this end, all of the 96 commanders who exercise general courts-martial jurisdiction in the Army were asked to answer specific questions calculated to measure the effectiveness and equity of the Code. Moreover, the Adjutant General, under the guidance of the committee, undertook a comprehensive survey of the opinions of a wide range of battle group, battalion and company or battery commanders. Further, some 2,000 enlisted men, of varying grades and experience, were also asked to answer specifically devised questionnaires on the Code's impact on the enlisted ranks. Finally, the Judge Advocate General obtained the views of a cross section of more than 200 judge advocates, including some 50 judge advocates particularly selected because of extensive experience as defense counsel. All of the surveys were oriented toward measuring the effectiveness of the Code in terms of four basic criteria which the committee had initially determined must exist in any truly effective system of military justice. These criteria were:

1. Does the code aid the commander in directing his unit toward success in peace or war?

2. Does it emphasize the rehabilitation of offenders into effective soldiers?

3. It is an effective means of disposing of criminal charges?

4. Is it accepted as fair and equitable?

While this survey was proceeding, the committee drew on extensive professional assistance to review the evolution of the code and the manner in which it had been interpreted and applied.

FINDINGS AND RECOMMENDATIONS

After 3 months of intensive hearings and investigation the committee submitted its findings and recommendations which have recently been made public. The committee found that while, on the whole, the code had demonstrated certain advantages over prior systems of military justice, there was a very real necessity for changes of considerable sweep and scope as well as material conceptual modifications. It found not only that these changes are needed under the conditions obtaining in the world today, but, more importantly, that the need would become acute if the system were to operate practically and effectively under combat conditions.

TOO FREQUENT RECOURSE TO COURTS-MARTIAL

One of the most significant of all the committee's findings was that commanders of individual units did not possess sufficient authority to correct soldiers without resort to trial by courts-martial. Indeed the most frequently recurring complaint was the narrow limitations on nonjudicial or company punishment under article 15. The principal basis for dissatisfaction was that the action which a commander can take to correct a minor offender is in many instances inadequate or inappropriate. As a result, offenders were frequently tried by courts-martial for relatively minor offenses, and if found guilty, would thereafter bear the onus of a criminal conviction. Because of their limited nonjudicial punishment power, commanders have utilized this power far less frequently than was anticipated when the code was adopted.

A THREE-TIERED SYSTEM OF COURTS

The Army has a three-tiered system of courts: (1) A summary court-martial which is a one-officer court with jurisdiction to impose a partial forfeiture of 1 month's pay and up to 1 month's confinement; (2) a special court-martial, composed of at least three members and counsel for both sides, which can impose a partial forfeiture of 6 months' pay and confinement for 6 months; and (3) the general court-martial, composed of at least five members, a law officer (trial judge), and service-lawyer counsel for both sides, which can impose any punishment authorized by the code, including punitive dis-

charge and death. The committee found that, in the main, the offenders coming before general courts-martial had committed a criminal offense whose seriousness indicated that the offender was beyond the rehabilitation resources and ability of local unit commanders; while, on the other hand, the offender who comes before summary and special courts is a soldier in whom the local commander sees a definite and immediate rehabilitation potential.

It was felt that in these situations the present system, emphasizing conviction and sentence, was not in the best interests of the accused. Conviction by a court-martial creates a criminal record which, upon the soldier's return to civilian life, is a serious handicap.

This result assuredly need not and should not be, particularly if it is conceded that but for the narrow limitations and inflexibility of article 15 punishment, a great many cases which are tried by special and summary courts would be regarded not as matters for criminal courts but as matters for correction by a commander. Civilian experience affords a happy analogy to a more enlightened treatment of this class of offenses. Under civilian systems, juvenile offenders ordinarily are not dealt with as criminals. Instead, the circumstances of offenses are investigated by case workers attached to the court, and the judge deals directly with the offender and his parents. The objective of these procedures is to foster in the young offender the awareness of the unacceptability of certain behavior and to inculcate in him a desire to conform to the standards of society—not to label him a convicted criminal. In philosophy and procedure, modern civilian treatment of youthful offenders resembles nonjudicial punishment by a military commander.

COMMANDER'S CORRECTIVE ACTION

Indeed, it is undoubtedly more accurate to refer to nonjudicial punishment as commander's corrective action. Before taking action against an offender the commander advises him that he may demand trial by court-martial in lieu of action by the commander. If the soldier has actually committed an offense, he will usually accept the corrective measures prescribed by his commander rather than request a trial. As long as the correction is generally accepted as commensurate to the offense, the probabilities are that it will be effective. The offender will feel that he has been fairly treated, and his fellow soldiers will recognize the transgression did not go unpunished. Most significantly, while the action will have a salutary effect upon the individual and on unit discipline, the offender will bear no stigma of criminal conviction.

The committee found that the necessity of referring the great majority of disciplinary problems to a summary or special court-martial underscored another infelicity in the present system. It is mischief which derives in part from the very conceptual basis of the tripartite codal classification of courts-martial and, in part, from judicial interpretations which have construed the legal radiations therefrom. It may be said that the general orientation of the uniform code emphasized the fact that nonlawyer aegis of general courts-martial belonged to a former day. Thus the code provided that a law officer, a lawyer certified by the Judge Advocate General as competent to perform such duties, must serve on every general court-martial. This officer has been said to occupy a position roughly equivalent to that of a Federal district court judge. In addition, in general courts-martial, counsel for both the accused and the Government must be officers who are lawyers. In short, the general court-martial, as well befits a tribunal exercising jurisdiction over serious offenses and capable of imposing stringent sentences, is amply supervised and administered by legally trained personnel.

However, as previously noted, Congress did not stop when it created the general court; it also created special and summary courts-martial for less serious offenses. With respect to these latter tribunals, however, there was no requirement that they be supervised by lawyers at the trial level or that counsel for the accused or Government be attorneys.

While the Congress thus drew a conceptual dichotomy between the lawyer-oriented general courts-martial and the lay-oriented special and summary tribunals, it made no distinction between these three forums in terms of the standards and rules to be applied. Thus, in the beginning, even under the code, the day to day administration of military justice in inferior courts continued to depend on the rules and regulations embodied in the Manual for Courts-Martial, Article 67 of the code, however, also established the U.S. Court of Military Appeals, composed of three civilian judges. This tribunal reviews all cases in which the sentence extends to death or affects a general or flag officer, cases forwarded for its review by the Judge Advocate General and cases in which, on petition of the accused, it has granted review.

Since its establishment, the Court of Military Appeals has continually asserted a prerogative to develop military law through the decisional process and to hold these decisions paramount to any contrary presidential regulations expressed in the manual. Moreover, gradually, the court's tendency has been to exact from courts-martial of lesser jurisdiction full compliance with all codal standards. The impact of this proclivity is being felt increasingly in the case of the special court-martial. Here the layman president must not only instruct the members of the court on such items as the elements of the offense charged, presumption of innocence, rule of reasonable doubt and burdens of proof, but also, when raised by the evidence, to instruct on such complex legal matters as affirmative defenses, lesser included offenses, insanity, capacity to entertain specific intent, and many others. In essence, he must give the same instructions concerning relevant legal principles as those which are given by a qualified professional law officer in a general court or an experienced civilian trial judge in a criminal case. To compound this almost quixotic situation, in 1957 the court ruled that the Manual for Courts-Martial—which had been designed to assist the lay-officer in the performance of his military justice duties—could no longer be used by court members other than the president during a special court-martial, thereby severely restricting the access of the members to their traditional procedural and legal guide. In an atmosphere where nonlawyer personnel are constrained to play the part of lawyers but their guidebook is taken from them it is not surprising that congeniality to confusion and the commission of error abide.

RELUCTANCE TO CONVENE SPECIAL COURTS

From the viewpoint of the smaller tactical unit and because of this situation, the committee found that battalion and battlegroup commanders were either unable or reluctant to convene special courts-martial with the officers available in their units. They have felt it increasingly necessary to refer their disciplinary problems to higher headquarters where legal expertise is available. Decentralized operation has become difficult. This result, perforce, derogates the effectiveness of the subordinate unit commander as a leader, and is antithetical to a concept of self-sufficiency and integrity within the individual unit—the oft-cited sine qua non of any future combat operations.

ELIMINATE SUMMARY AND SPECIAL COURTS

To improve the situation the committee recommended a basic conceptual change aimed at eliminating the summary and special courts-martial and granting commanders additional power to correct members of their command without resort to courts-martial. It would be the commander's responsibility to determine whether an offender represents a disciplinary problem which he has the means to dispose of, or whether his case is of sufficient gravity to forward to a general court-martial as a serious criminal charge. Company and batter commanders would be authorized to prescribe loss of pay or restraint for short periods, commensurate with the sentence of the present summary court. Older and more experienced commanders of larger units would possess graduated powers to impose sanctions roughly equivalent to the average sentence actually served under a sentence by a special court-martial. The graduated powers of commanders would permit them to achieve a requisite disciplinary effect without using criminal processes.

Of course, provision is made for any accused to decline the commander's corrective action and to elect trial by court-martial. Moreover, the person who accepts the commander's correction would have a right to appeal to the next higher commander concerning the appropriateness of the corrective measure taken.

It was the committee's feeling that such a change would have three predictable and salutary effects. It would increase the sense of personal responsibility and awareness which a commander should feel in the discipline and welfare of his unit. It would foster discipline through correction which was prompt and predicated on a soldier's voluntarily accepting it in preference to being tried by court-martial. Finally, but most significantly, the lasting effects of a criminal conviction would be avoided.

Fundamental to the committee's foregoing recommendations was the premise that only a general court-martial, with its pervasive legal panoply, could competently function as a tribunal equipped to follow the constantly changing twists and turns of criminal law and impose criminal convictions as sanctions. Nonetheless, while espousing this principle, the committee found that certain modifications would greatly improve the effectiveness of the general court as an instrument of swift and sure justice. Again, this need for modification has stemmed from the fact that certain of the procedures in the code have proved to be unnecessarily cumbersome, while other refinements, introduced by judicial interpretation, have tended to dilute its efficiency in support of military operations.

Two committee proposals designed to simplify the proceedings before a general court-martial follow.

Under the present code, a general court-martial does not come into being until the members of the court (the jury) are present, subjected to challenge and sword. The members must stand by while the law officer disposes of preliminary motions and other interlocutory matters that arise during the trial. The committee discovered that an inordinate loss of man-hours resulted from this procedure. It concluded that this situation could be remedied by an expanded and more effective use of the law officer. It proposed that the law officer, without convening the members of the court, be permitted to conduct preliminary hearings on all exclusively legal questions. Under the proposed procedure, such a matter as ruling on a request for the attendance of a witness located at considerable distance from the site of the trial would be determined before the actual convening of the court. In addition to the

man-hours thus saved, it was felt that the members—the fact finders—would be better able to determine guilt or innocence on the basis of a cogently integrated development of competent evidence, devoid of the distracting interruptions that now arise because of arguments on such legalities as the admissibility of documents and arguments on motions.

TRIAL BY LAW OFFICER ALONE

The committee also recommended that upon the express request of an accused, approved by the convening authority, a trial by general court-martial could be conducted by the law officer alone, without any members on the court. This proposal not only adopts the familiar civilian practice of allowing a criminal defendant to waive trial by jury, but it results in freeing at least five officers, usually senior grade, for military duties—another gain in the Army's continual struggle to use its manpower efficiently.

DESIRABILITY OF INDETERMINATE SENTENCE

In their consideration of the question of sentences, the committee discovered that while courts-martial announce sentences to confinement in terms of fixed periods, as long as the offender remains under military control, these sentences are, in effect, indeterminate in nature. It was recommended that sentences, as announced, henceforth indicate this indeterminate nature as an added incentive to foster individual rehabilitation. This opportunity is perhaps more appealing to the military prisoner than it is to his civilian counterpart, since the restored soldier has guaranteed gainful employment awaiting him, whereas the civilian's employment future is likely to be fraught with difficulty because of his criminal record.

ESTABLISHMENT OF A SENTENCE CONTROL BOARD

To take full advantage of the indeterminate sentence program, the committee recommended the establishment of a sentence control board to administer all aspects of the disposition of prisoners serving an indeterminate sentence to confinement. Under present practice, the functions essential to the effective operation of an indeterminate sentence system are divided between boards of review, appellate bodies which consider not only the legality of court-martial proceedings but also the appropriateness of the sentence, and the Secretary of the Army, who has the power to remit or suspend the sentence and restore the offender to duty. The sentence control board would bring together in one body, direction of all activities essential to an efficient and equitable sentence and rehabilitation system. The board would have authority to suspend or remit sentences, power to grant parole or to give an unconditional release from confinement, power to effect the return of demonstrably worthy individuals to military service, and the authority to substitute an administrative form of discharge for an unexecuted punitive discharge. Finally, it was recommended that in exceptionally meritorious cases when the board restores a soldier to duty, it could also provide for the eradication of the record of the conviction from the record of the soldier after an appropriate period of exemplary performance of duty.

THE COURT OF MILITARY APPEALS

Undoubtedly, one of the most arresting provisions of the Uniform Code was the creation of the Court of Military Appeals as the supreme court of the military. During its 9 years of existence, the court has created a body of military law of uncommon excellence. However, it was found that in two principal areas, the decisional pattern of court opinions does not harmonize with the societal texture of the military community. The first of these areas relates to the tendency on the part of the court to place a sometimes impermissive emphasis on civilian rules of practice, without according due weight to the peculiar exigencies of military service. As an illustrative example, recently the court, in reversing a conviction for usury in violation of article 134, the so-called general article, held "since military law in general, and Army regulations in particular provide no legal rate of interest, the exaction of any given rate (in the case at bar, 100 percent per month) cannot be described as illegal and therefore, usurious. The interest alleged * * * may indeed be unconscionable but it is not unlawful." This decision has the practical effect of condoning a practice that has been prohibited by the military services since before the War of 1812. On the procedural side, the Army is now faced with serious problems in the trial of cases because of a decision of the court which precludes use of testimony obtained through the use of written interrogatories not obtained in the presence of the accused. To illustrate, a far too frequently occurring offense, both in military and civilian life, is that of writing bad checks. Where a serviceman stationed overseas draws such an instrument on a stateside bank it is now necessary to send the witness having knowledge of the status of his account overseas for the purpose of giving testimony, to return the accused to the States so that he may be present at the taking of the deposition of this witness, or, as the least favorable but most practical alternative, dismiss the charges. The committee felt that these and similar decisions were not conducive to the maintenance of effective discipline in the service.

The second generic area of the court's decisions which concerned the committee involved that tribunal's pronounced tendency to downgrade the standing of the Manual for Courts-Martial, a presidential regulation, and, in effect, to declare that many provisions of the Manual are invalid exercises of the President's authority as Commander in Chief of the Armed Forces. This tendency has been particularly marked in the sentence and punishment area but it has extended to many other fields. The committee found it absolutely essential to the maintenance of discipline and good order that the court not interfere with the President's constitutional and statutory power to state authoritatively general policies governing extent of military penalties, customs of the service, minimal standards of conduct for particular grades and, in general, to promulgate rules essential to the maintenance of discipline in a fighting force as distinguished from a civilian community. The committee called for a legislative reaffirmation of the traditionally accepted power of the President in this area.

CONCLUSION

In conclusion, it should be noted that while the committee's findings are based solely on Army experience, the principles underlying the recommended changes—fairness, simplicity, decentralization and stability—are no less relevant and no less vital to the other services. The fact that the first decade of experience under the uniform code disclosed imperfections is not at all discouraging. Such was to be expected. As Dr. Alfred North Whitehead, noted philosopher and mathematician, has stated while speaking in a scientific context: "When we survey the history of thought, and likewise the history of practice, we find that one idea after another is tried out, its limitations defined, and its core of truth elicited * * *. The proper test is not that of finality, but of progress."

A Peace Corps Critic

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1961

Mr. PELLY. Mr. Speaker, without coming to the Congress with a request for authorization and the funds to organize a Peace Corps, the President with characteristic impetuous vigor turned this meritorious sounding idea over to his brother-in-law to initiate.

I said at the time if I were a university student I would embrace the idea, but if I were the parent of such a student, I would have misgivings. But in any event, as I said, it was my belief that the President should have set guidelines and spelled out the objectives and details of the Peace Corps plan to the Congress and the American people before the project was started.

At first blush, there was rapturous enthusiasm over the program. Only a few politicians and members of the press failed to respond favorably. One or two articles appeared referring to the Children's Crusade in the year 1212 when 30,000 innocent children marched through Europe singing hymns headed for the Holy Land to rescue the true cross from the infidels. The history of their failure and tragic results, it was implied, might be repeated.

Generally, however, in the face of the popular wave of endorsements which were given the idea of a modern Peace Corps, doubting Thomases kept their views off the record or to themselves.

One such doubter has spoken out. Of course, he is not a politician and is willing to express himself regardless of public opinion. The views of this individual are described in the following news article which was printed in the May 15, 1961, issue of the Seattle Times. I suggest members of the committees having jurisdiction over foreign affairs read it:

PEACE CORPS VIEWED AS BOOMERANG

President Kennedy's Peace Corps is likely to prove a boomerang in the U.S. efforts to win friends, in the opinion of a ship-line executive who has spent much of his life trying to improve the Nation's position abroad.

The fear was expressed by Lee Worley, district manager of the Moore-McCormack Steamship Co. in Bahia, Brazil.

Worley, a University of Washington graduate, came here to spend Mother's Day with his mother, Mrs. Nellie Worley of Bothell.

Worley speaks of international relations with 30 years' experience in them. He entered the Foreign Service in 1931 and spent 8 years in service on three continents, then resigned to marry a Brazilian girl whom he had met in Bahia.

Shortly after returning to Bahia with Moore-McCormack in 1940, Worley was one of the organizers of the Brazilian-American Cultural Association.

The organization has helped send nearly 3,000 Brazilian students to American universities.

"I'm afraid the Peace Corps is going to boomerang," Worley said.

"You can't tell these young people what to say and what not to say—especially what not to say."

Worley gave an example.

An American university, seeking to improve international relations, sent 14 of its students to the University of Bahia for their senior year. Worley and an officer in the Brazilian Navy had lunch with one of them.

"The student," Worley said, "in his inexperience asked a question on a very delicate subject.

"To the student, looking at it as an American, it was a logical question.

"But the instant he asked it, the Brazilian officer's face showed the effect.

"The student didn't know that what he intended as an innocent question will be remembered by that officer, perhaps forever, as an insult to his country.

"When a mistake like that is made by a member of the Peace Corps, in a foreign country under the sponsorship of the State Department, the effect will be worse."

And every mistake which an American makes in a foreign country, Worley said, provides ammunition for the Communists.

"The Communists," Worley said, "don't ever talk communism in Latin America.

"The Communists have just one theme: 'Hate America.'"

Nation of First Spaceman Is Up in Air Over Lack of Goods

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1961

Mr. BROOKS. Mr. Speaker, while Russia has sent the first man into space, Russia is not first in many things. Perhaps it is fitting that we should sympathize also with the great mass of Russians who do not know where their next pork chop, meat grinder, or television set is coming from.

It seems that the nation which was able to send the first man into space cannot fill the daily needs of its earthbound citizens. I insert in the CONGRESSIONAL RECORD an interesting report from a correspondent of the Baltimore Sun on consumer shortages in the land of the proletariat:

NATION OF FIRST SPACEMAN IS UP IN THE AIR OVER LACK OF GOODS

Moscow, April 19.—The nation that produced the first spaceman has not been able to produce enough television sets and refrigerators to satisfy public demand. Neither, for that matter, is the Soviet Union making enough frying pans or garden shovels.

There are constant cries about the quantity and quality of all types of consumer goods * * *.

Storages are daily phenomena of Soviet life.

STORE OUT OF MEAT

Moscow's largest store, GUM, has not been able to fill an order of beefsteaks or pork chops for a week.

Mothers and grandmothers stand in line for hours to buy expensive but poorly made children's clothes in the highly propagandized "children's world" department store which must be the most crowded, most uncomfortable store ever built.

A load of liver at the collective farm market draws a queue 40-woman long in minutes.

Food is plentiful if you are willing to confine your vegetable diet, for example, to potatoes, carrots, and cabbage and several other roots. Variety has not been discovered in Moscow's winter markets.

Still most Russians in Moscow privately complain about problems in buying television sets, refrigerators, pianos, and any type of home electrical equipment.

But Moscow is the showplace of the country. In other cities, you cannot buy meat grinders, pans, kitchenware, locks and keys, most types of sport equipment and shovels.

These are just spot items. The list could be extended.

Production of consumer goods here naturally takes last place although Soviet officials are increasing the investment year by year.

Kunkel U.S. Army Reserve Center

EXTENSION OF REMARKS
OF
HON. ROBERT E. COOK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. COOK. Mr. Speaker, on Saturday, May 13, I had the pleasure of attending the dedication ceremony for the new Kunkel U.S. Army Reserve Center on the grounds of the Lordstown Military Reservation in Lordstown, Ohio.

The new Reserve center was named in honor of S. Sgt. John H. Kunkel, who gave his life for our country during World War II. At the dedication ceremony, the major address was given by the Honorable George H. Gentithes, an attorney of Warren, Ohio. His remarks were very appropriate to the occasion and expressed a viewpoint as to the world situation that was both timely and inspiring. I am inserting his remarks in the RECORD for the information of the other Members of Congress.

Mr. Toastmaster, General Beauchamp, distinguished guests, fellow Americans, the high purpose which brings us together on this day and in this place is solemn in character and twofold in nature. On the one hand, we are met here to pay tribute in some small measure to the hundreds of thousands of our fellow citizens who so gallantly and with such devotion serve in our country's Armed Forces. On the other, we meet on this day and in this hour to signally honor one out of these many thousands. It is one who, having given his last ounce of devotion, has earned richly the right to be immortalized both in our hearts and in this imposing edifice.

A special sense of pride fills the hearts of all of us who call Trumbull County our home. This, because we are privileged to solemnize the national event of Armed Forces Day and simultaneously to dedicate one of Ohio's finest Reserve installations to the memory of a hero who, during his life, was close to many of us. Let us, therefore, review the events in that heroic life which made possible this great moment.

The official award of the Distinguished Service Cross to S. Sgt. John H. Kunkel recites his extraordinary heroism at Bougainville and discloses that he occupied a pillbox which was flanked at close range by enemy forces. It related how with calm courage he defended the dangerously exposed key position for 3 days and killed a Japanese soldier who had crawled on top of the pillbox during the night. Though wounded twice, he refused evacuation and though under constant enemy bombardment he constantly relayed important information to his headquarters and directed mortar fire which effectively harrassed the enemy. Despite his wounds he re-entered combat when he learned the enemy launched another attack against the pillbox he so gallantly defended and he halted the enemy attack with machinegun fire. He spurned further medical treatment and instead guided fresh troops into position for a large-scale counterattack which completely defeated the enemy and fully restored the lines.

"His leadership and heroic actions," concludes the citation, "were important factors in removing an enemy threat to the vital Empress Augusta Bay perimeter." What the award, however, does not tell is that his captain described him as a man of extraordinary courage—a man with "real guts" as he put it and a soldier who consistently volunteered for hazardous missions far beyond and above the call of duty. Nor do we have here his lieutenant's summation of this valiant soldier when he said "He really was a one-man army who inspired his buddies to perform acts of heroism that they never thought they could." In addition, his colonel wrote, "Sergeant Kunkel was an outstanding example of an American citizen-soldier with boundless courage and faith. He faced every challenge that a particularly vicious phase of warfare placed in his way. * * * I am humbly grateful that for a few brief moments during the holocaust of war the fleeting life of John H. Kunkel brushed mine."

Nor can the award tell the warmly human story of a young soldier boy who bid a fond farewell to his wife never knowing that this was to be their last goodby and never knowing that she would bear him a daughter whom he would never see. Nor can it tell of the feelings of that pretty daughter who, being in our midst today, reflects upon the fate that denied her the warm touch of her father's lips and the comfort of his paternal embrace. I ask what heart among us here today can truly fathom the depth of the emotions now surging through the minds and hearts of his daughter, his loving parents, and sister as they stand here before us to bear witness to the love, the admiration, and respect we here today are feebly trying to show him.

But just as mere words cannot make us truly know the greatness of his deeds or the depth of his sacrifice, so the dedication of this brick and mortar in his name cannot possibly begin to do sufficient honor to him and to the others who paid the highest price for that commodity which has no price—freedom. If truly we wish to honor his memory and the cause for which he fought there is one way and one way only.

That way is not through speeches, ceremonies, memorials, or high resolves, but through action. But action, if it is to be purposeful, should start by some deep soul-searching into our national heart of hearts. This we should do to determine what has happened and is happening to us as a people since Sgt. Kunkel gave his life in order that we may more intelligently decide just what that action ought to be.

If, therefore, we were to take a moment for some honest uses introspection we will find, I fear, many things which would do dishonor to the Sergeant's memory. We will find for instance that many of our people have been and still are beset with doubt about the soundness of our way of life, confused and perplexed by the events in Cuba and Laos, worried about a rising tide of American unpopularity, apprehensive over the outflow of American gold, pathologically fearful of Russia's lead in the space race and in general gobbling up indiscriminately all kinds of prophecies of national doom. It is

not my purpose to belittle those who are genuinely trying to alert us to the clear and present danger which we face from communism. Quite the contrary, for it is my personal conviction based upon some first-hand experience in these matters that Mr. Khrushchev's vow to bury us is not mere bombast. Indeed, all our responsible leaders have been emphasizing that the hour is quite late, the peril deadly, and that our Nation may already be at the point of no return. As a matter of fact, so certain am I of communism's unalterable, inexorable, and irrevocable plans to conquer and to communize the world that I for one would advocate drawing the line now and permitting no further encroachment upon free world soil. In addition, and simultaneously with drawing such a line, I would advocate that we Americans so revise our thinking on the moral concepts of the cold war that we would support our leaders to the limit in using whatever tactics would implement our national policy and keep us free.

It is quite difficult for a moral and religious people such as our own to favor the use of methods which we find reprehensible in others, but let's please remember we are not playing parlor games. We must therefore not only approve and support, but become proficient in, and make use of such hitherto shunned methods as subversion, infiltration, revolution, guerilla forces, slanted propaganda, sabotage, espionage and all the other "dirty" methods which so far we have been too proud and too honest to employ fully. I could not help but shake my head in bewilderment when one President of the United States publicly apologized for the U–2 incident and another confessed almost apologetically that we aided the cause of freedom in Cuba. I was always taught that a spy once caught was renounced by his country and I was further taught that giving meaning and substance to the Monroe Doctrine is a duty America would never shirk.

Continuing our soul searching, therefore, we will find unfortunately additional attitudes and traits in some of today's Americans which would both sadden and dismay the valiant soul of Sergeant Kunkel. There are those for example, who in an apparent effort to goad this Nation into greater effort in its own defense, resort to the expedient of selling America short by belittling its accomplishments, its capabilities, its revered institutions and its preeminence among the nations of the world. There are others who, through fear, ignorance or misguided good intentions constantly play down and what's worse apologize for our country's proudest achievements. There are those for instance who feel that we must apologize to the rest of the world because we are wealthy. This they do although everyone concedes that we have helped more people with that wealth than any other nation in the history of the world. Then there are others who apologize to the world for the social and economic injustices which still exist within our borders without, however, noting at least in passing that under our form of Government these injustices affect fewer and are less harmful than under any other form.

These fainthearted apologists fail to recognize how inconsequential are our shortcomings when we're compared with some of the largest beneficiaries of our bounty. These beneficiaries, I might add, are often our foremost critics and are people who nourish ironclad social classes and caste systems, or indulge in the art of political assassination or of deporting and annihilating minorities, or suppressing all the freedoms we so cherish. Finally, these apologetic Americans completely forget that the last three wars were fought by us not for gain or glory to ourselves, but to liberate victims of aggression and oppression. I say emphatically, therefore, that it is a grave disservice to the men and women of the Armed Forces whom we honor today as well as to the heroic memory of Sergeant Kunkel to feel apologetic or contrite about the preeminence of this great land of ours in the family of nations. I further say that we should renew unashamedly our old intense patriotic pride in what our country has accomplished, and what it stands for. Let us ever be mindful that whatever we have done has been through hard work and ingenuity. Let us recall that since our founding we have produced more of human happiness and we have made greater contributions to the arts, sciences, and to the economic prosperity of the world than all the despot states of previous centuries combined.

So let's not feel that it is old fashioned to gaze upon Old Glory as it waves proudly in the breeze and to feel our eyes grow misty from deep feeling. Nor is it out of fashion to feel a tingle in our spines when during this afternoon we watch the flower of America's manhood go marching by on parade. On occasions such as these we should all feel confidence and pride—soulfilling, inexpressible, profound pride and not reticence or contriteness as some would have us feel.

Let us therefore not merely dedicate this building to the hallowed memory of Sergeant Kunkle but let us also dedicate ourselves to the great task of revitalizing our Nation, or reaffirming our faith in its great traditions, and above all of truly honoring its valiant Armed Forces. Let us with pride and yes, deep, old-fashioned patriotism ask not that our country give to us, but we to our country and let's seek not the freedom which is freedom from responsibility but as self-reliant citizens let us dedicate and use ourselves for the good of this great land. Together, let us nourish and keep bright the flame of this kind of freedom on our soil and if we do, somehow, someday, with God's divine help, its light will penetrate into and throw brightness upon the many distant darkened corners of the world. Until then, I know you join me in a proud straight-from-the-heart salute to our valiant soldiers, sailors, and airmen and through the dedication of this magnificent structure you join me in giving expression to the prayer. "Eternal be thy memory Sergeant Kunkel."

Administration Farm Bill To Receive Full Scrutiny

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1961

Mr. QUIE. Mr. Speaker, the entire country generally and farm groups in particular are busy these days analyzing the proposed administration's omnibus farm bill. I have expressed my concern over this bill, and the powers it seeks to entrench in the Secretary of Agriculture on several occasions—both in the Agriculture Committee and on the floor of this House. The May 25 edition of Hoard's Dairyman commented editorially on the proposed farm bill, and I believe the observations made in their editorial merit the attention of the members of this House:

FARM BILL BEARS SCRUTINY

Now that the administration's farm bill has been introduced into Congress, the debate begins. Thus far, we see the Farm Bureau and the Cattlemen's Association in opposition, and a large group of general farm and commodity organizations in favor.

As we go to press, it appears that the National Milk Producers Federation will neither give blanket endorsement nor flat objection. Instead, it will present a careful analysis, supporting those portions of the bill it thinks desirable and opposing sections which it does not approve. We think this is the course of good judgment.

Our reading of the bill and several analyses leaves us with a mixed feeling of encouragement and uneasiness. We favor the approach of permitting dairymen to work out their own program for stable and profitable markets. But the following points, among others, give cause for caution:

1. The dairy advisory committee will not be elected as previously indicated. Instead, nominees will be named by county ASC committees and farm organizations from which the Secretary of Agriculture will make appointments. We would far prefer nominations to the advisory committee by a direct election process where only dairy farmers would be permitted to vote.

2. Wide discretionary authority is given the Secretary. His powers are so broad that they disturb us greatly. We have no reason to question that the authority of the Secretary will not be exercised with good judgment. We simply oppose in principle any appointed public official being given such executive discretion without safeguards which more directly reflect the desires of dairy farmers themselves.

3. Specifically, we strongly oppose the authority to use direct or compensatory payments.

If enacted, this bill (H.R. 6400) can affect dairy farming for years to come. Surely, then, careful scrutiny and deliberate analysis are warranted now. This is no time for hasty action.

Dry Bean Utilization Research

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1961

Mr. CEDERBERG. Mr. Speaker, recently Frank J. Eisengruber, acting executive secretary of the Michigan Bean Shippers Association, and others appeared before the Agriculture Subcommittee of the House Appropriations Committee requesting more funds for utilization research on dry beans. Many Members of Congress, including myself, also appeared because we feel that the dry bean industry is entitled to this modest support from the Department of Agriculture.

Mr. Eisengruber is well informed on production and marketing of dry beans. For 6 years he was a director of the Michigan Bean Shippers Association and for 2 years served as president of the organization. He spent 40 years with one of the largest bean companies in Michigan and when he retired in 1959 he was a director, executive vice president, and general manager of the company.

With this fine background and obvious extensive knowledge of the bean industry he can speak with authority and for that reason I would like to include in the RECORD the statement presented by Mr. Eisenbruber to the Appropriations Subcommittee. I think the Members will find it interesting reading:

First, I would like to explain the National Dry Bean Council. It is the nationwide organization for the dried bean industry. It is an organization composed of the five regional associations. They are the New York Bean Shippers Association, the Michigan Bean Shippers Association, the Rocky Mountain Bean Dealers Association, the Western Bean Dealers Association, and the California Bean Dealers Association. These associations include in their membership the growers, the cooperatives, the processors, the dealers, and the shippers in the domestic dry bean industry. It is safe to assume that these people handle 90 percent of the dried bean business in this country. The membership is representative of the industry from coast to coast in more than 14 States.

Although it is not realized by many people, the dried bean industry is a very integral part of our agricultural economy. The farm value of dry edible beans in 1959 amounted to $127,187,000. These are the most recent figures available.

The dried bean industry is a large industry whether taken from the viewpoint of its contribution to the national agricultural economy, the economy of individual States, or the economy of the United States as a whole. We feel that we merit consideration in the Congress comparable to that afforded other agricultural commodities, and I feel that consideration will be given. Seldom have we called on the Congress for any specific assistance, but we feel that this year we have a legitimate request, and, therefore, I am here to present it.

BEAN INDUSTRY HAS DONE RESEARCH

It would be logical for you to ask at this point why, if the bean industry is as large as I have indicated, they have not attempted to solve the problems of the industry. We have, through our State associations, contracted for research projects of various kinds to assist the dry bean industry. The Idaho Bean Shippers, the California Lima Bean Board, the New York Bean Shippers Association, the Michigan Bean Shippers Association, and other groups have all given financial assistance to research projects over the years. This project which we are requesting today, however, is beyond our financial capabilities so we need the assistance of our Government, which we believe has a financial interest in such a project.

One of the major problems in the dried bean industry lies in the field of utilization research. In the past, this subcommittee, the Congress, and the Department of Agriculture, have given us some assistance in this field and now we would like to prevail upon you for some assistance which is not provided for in this year's budget, at least partially, because we were not prepared to launch this program when this year's budget was being prepared. What we are requesting is an additional $100,000 to be used for research by the Department of Agriculture, the land-grant colleges or by private contract to remove the flatulence and other gassy elements from beans. Perhaps a little explanation will be in order, then I believe I can justify the need for these funds.

Each person's digestion is as peculiar to himself as his own toothbrush. Each person suffers discomfort or digestive distress on eating certain kinds of foods or mixtures of foods. The reason for the discomfort is related to the bacterial flora present in the intestines. If a person eats a food which is only partially digested, it activates organisms when it reaches the lower part of the small intestine which finish digesting the remaining food. These finishing bacteria form hydrogen and other gas in the process, and individual discomfort depends on the amount of this gas.

In an effort to solve this problem the Idaho Bean Commission with the help of the U.S. Department of Agriculture sponsored a research project. It was found that beans in many individuals produce hydrogen and methane which is detectable by chromatograph which is an instrument for determining the amount of gas resulting in distress by having the subject breathe into a plastic bag. Because intestinal bacteria breed on undigested food in the stomach, future digestion problems are increased. This research project, it must be emphasized, solved the problem for an individual, and with such individual analysis, it may become possible to control the number of undesirable bacteria. This research, fine as it was, however, did not solve the problem of the bean industry, since not everyone is going to get tested to determine whether their bacterial presence is such as to permit them to eat beans.

The Department of Agriculture has had a contract with Dr. F. R. Steggarda, of the University of Illinois, who has been conducting a study of the physiology of flatulence and now we feel that since he has completed his work, emphasis should be placed on isolating and removing from beans the undesirable characteristics.

This subject is technical and I am not a scientist so there are many questions in this field which I cannot answer, but I am certain that Dr. B. T. Shaw, Dr. George Irving, or Dr. Sam Hoover at the Department could give you the answers to any of the technical aspects of this type of research.

I believe that the budget request for research for dry beans includes $56,700 for marketing research; $156,600 for production research, and $121,800 for utilization research. All of these are important, gentlemen, but I would like to quote from President Kennedy's agriculture message to Congress of March 16, 1961. He said:

"We should not only continue our research activities directed toward better production and lower costs, but we must expand research into marketing, nutrition, and especially utilization. Today approximately two-thirds of our agricultural research is directed toward improved production and only one-third toward utilization. Yet these small expenditures have resulted in the past in developing such items as frozen orange juice, potato flakes, and other foods which have vastly increased food demand and made possible the use of an estimated 500 million pounds of additional animal fats in livestock feed, an additional 250 million pounds of additional fats in the manufacture of plastics, and an additional 800,000 bales of cotton for washable cotton fabrics. The proportion of our effort directed that food and fiber utilization should be increased."

This research project certainly is not so dramatic as launching an Atlas or putting a man, dog, or monkey into space, but it is more easily attainable and will contribute more to the older and needy people of the United States and friendly foreign nations than the more dramatic projects. In addition, this project will not cost as much as it probably cost to get Ham psychologically prepared for his trip into space.

WOULD BENEFIT CONSUMERS

I say this project will have a more direct benefit on more people than those other projects because it will assist in improving the diets of many, many people who are now nutritionally starved both at home and abroad.

We feel that this request is reasonable for two reasons. First, many in this country have inadequate diets because they cannot afford the more nutritious foods or their inability to digest those nutritious foods which are inexpensive such as beans. We have in mind here the older folks on pensions, the unemployed, of which there are over 5 million, and low income families. Second, we feel that this expenditure would be reasonable because of the use of our food supplies in the food-for-peace program. Later I shall discuss briefly the prevalence of inadequate diets throughout the world and the efforts we are making to raise the nutritional standards. We feel that providing a less expensive but more digestably acceptable product to these foreign countries would be of a benefit to the United States.

In the 1959 Yearbook of Agriculture it is stated that about one-tenth of the families in the United States have poor diets. One reason for the domestic diet inadequacy is caused by inability to obtain high food value at low cost because of inadequate pensions. I am speaking now only of the United States and I should like to point out that in 1959, the Yearbook of Agriculture stated that in a 1955 survey about 3 households in 10 did not have as much calcium as recommended and if milk and milk products are not considered not 1 household in 10 had sufficient calcium in their diets. Taking other Department figures and extending them, family diets not providing amounts of 8 nutrients recommended are as follows: 7 percent of the family diets in the United States are deficient in protein, 20 percent of the family diets in the United States are deficient in calcium, 10 percent of the family diets in the United States are deficient in iron, 16 percent of the family diets in the United States are deficient in vitamin A, 19 percent of the family diets in the United States are deficient in riboflavin, 9 percent of the family diets in the United States are deficient in niacin, 24 percent of the family diets in the United States are deficient in ascorbic acid.

BEANS A GOOD BUY

As mentioned a few minutes ago, statistics show that 7 percent of the family diets are deficient in proteins. The only better buy from a protein standpoint is flour, which costs only 3 cents per cup and provides 16 grams of protein. Those having higher protein value generally cost twice or three times as much as beans and do not provide the proteins required. Many of those contributing fewer proteins cost more. As noted previously, it was found that 29 percent of the diets in the United States are deficient in calcium. A 3.5-cent cup of beans provides 74 grams of calcium, which ranks it right behind nonfat dry milk and cheese.

Food today is being used as an offensive tool against the spread of communism and for humanitarian purposes. The food-for-peace program is predicated on the idea that each night half or more of the world's families go to bed malnourished. In Latin America the recommended caloric intake considered necessary to maintain health and physical activity is 2,500 calories per day.

In Bolivia, however, the estimated intake is 1,880; in Ecuador 1,935, and in Peru 2,040. The minimum standard in the Far East is 2,300 calories per day, whereas in Pakistan the intake is only 2,030, and in India 2,050. Also these diets are poorly balanced as to food values. In Pakistan nearly three-fourths of the calories are provided by rice alone. Such a diet is not balanced by proteins, fats, vitamins, and minerals and other nutritive elements. Such imbalance produces diseases. Beans almost by themselves could put these diets back in balance and at a low cost, but first we must attempt to provide beans which are digestible by all.

The point is that the removal of this gas from beans would provide a better, more digestible product which could be used by a greater number of people both at home and abroad.

There have been no definitive studies made by the Department of Agriculture, but in the bean industry it is generally felt that consumption of beans declines precipitously when people reach the age of 40 to 50 because of the digestive problems. A recent publication from the Department did point out, however, that dietary requirements in later life are adversely influenced by the extent to which changes have occurred that affect food intake and metabo-

lism such as difficulties in chewing and inability to digest or absorb food efficiently.

The point is that many older people are unable to eat beans because of the gas problem and as a result they are missing one of the most nutritious foods they could get at reasonable price.

SEEK FLATULENCE CLUE

The problem of the diets of older folks has come in for some consideration by the National Institutes of Health. In addition to its research programs in the chronic diseases, the Public Health Service is conducting and supporting a number of studies on the processes of aging. This work should and must be supported, but the nutritional standards of the older folks, being too low because of their inability to digest nutritional food, the types of foods made available to them should be expanded. Beans would provide many of the nutritional requirements at a price pensioners and retirees could afford to pay.

Along this same line I should like to point out that this problem of the aging is going to multiply in the years to come. The U.S. News & World Report in a recent issue reported that the number of persons 65 and over would increase by 12 percent in just the next 5 years. The statistics presented show that currently about 9 percent of our population is over the age of 65. Americans over 65, by 1966 will number nearly 19 million, 12 percent more than now, and about double the number in 1942.

Mr. Chairman, I hope this subcommittee will see fit to include an additional $100,000 for research in the field of bean gassiness. I have tried to point out that the bean industry is a large industry and makes substantial contribution to the agricultural economy of this Nation. The bean industry has not, we feel, imposed on the Congress or the executive branch in the past, but has been content to try to work out its own problems. We feel if Congress sees fit to appropriate this money it will be an investment repaying many dividends in providing more adequate diets for all the American people and will give us a more acceptable weapon in the food arsenal to aid friendly foreign countries. Naturally, this will mean an expanded business for the dry bean industry, but we feel that money spent to increase consumption is better spent money than that spent to provide Government storage for our bean production and the cost of storage. Then, too, if through research we can solve this flatulent problem, imagine what it will mean, both to the producer and the consumer. For the producer it will provide the opportunity of a greater market, and the ability to replace acreage now producing surplus commodities. For the consumer it will mean nourishing food for a minimum amount of the food dollar. As is so often said, food is for consumption, not storage, and we want to do all we can to try to assure that beans go into consumption and not into storage.

Cuba Through British Eyes

EXTENSION OF REMARKS
OF
HON. ROBERT W. KASTENMEIER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1961

Mr. KASTENMEIER. Mr. Speaker, often it is difficult to see ourselves as others see us. However, a recent editorial in the London (Engand) Times may give us a hint as to the way our present position vis-a-vis Cuba is regarded abroad.

This eminent and conservative paper, which is generally considered to be closely in touch with the British Government, concludes that "so far as Cuba itself is directly concerned, the apprehensive spectators of this revolution can do little but be patient and stick to a policy of nonintervention."

I think that other Members who may not see the Times regularly, may agree that its analysis of the Cuban affair and the ensuing problems deserves our thoughtful attention:

[From the London Times, May 4, 1961]

CUBA'S COMMUNISM

Dr. Castro's dismissal of elections must seem a further step away from western democracy and all it stands for. To many it will be taken as proof of another move toward a Communist society. Like all conclusions reached about Cuba this inference may be overhasty. The rejection of elections was a remark thrown off in the exchanges of a May Day parade; it was not the careful exposition of a revolutionary doctrine such as a Communist might make. All the innovations under Castro's rule, ominous as many are, show the same response to events and impulses. To define Cuba in terms of established Communist power, or to deny that such power is established, is to oversimplify the complexity of a still fluid course of change.

In type Cuba's revolution comes closest to China's, where a guerrilla movement came to power with peasant support intent on agrarian reform. Like the Chinese, the revolution has moved from the countryside to the towns. Agrarian revolution—a revolution of the masses—is the basis of its popular support and much follows from this. The parallel impulse was to overthrow American economic domination and political influence. All too soon, American suspicion of the regime was aroused. The sorry course of events since then, culminating in the foolish counter-revolutionary landings last month, poses the question how far have developments in Cuba been a response to growing American nostility and how far were they inherent in the manner of the revolution and the emotions of its leaders? The answer must be "both."

Where does the revolution stand today? Its links with the Communist bloc are undeniable. Supplies of arms; aid and trade; publicly expressed sympathies coupled with repeated diatribes against Ameri an imperialism all make Cuba look very pro-Communist. Short of actual adherence to the Communist bloc or the establishment of a Communist military base (which looks improbable) or some kind of political base for Communist operation, this may be disturbing but no more. It is the character of the revolution as it has developed that seems to point to Cuba's becoming outright Communist. Opposition tends more and more to be defined as counter-revolution. Such other features as the embodiment of the young in a militia; the growing conflict with the Church (not at first solidly opposed to revolution); the disappearance of any critical newspaper; the summary trial and execution of opponents; the organization of public vigilance against counter-revolution—all these, while readily explained by events, suggest a character which will not easily be reversed in a liberal direction.

To say this is not to deny the evident progress and wide support the regime enjoys; or even to imply that such a revolution can settle into an orderly democracy less than 3 years after coming to power. So far as Cuba itself is directly concerned, the apprehensive spectators of this revolution can do little but be patient to stick to a policy of nonintervention. This is hard counsel for the United States, which has suffered intensive attack and great material loss. The prospect of a Communist foothold in the American hemisphere must arouse all the deeply held fears of alien ideologies that are fundamental in the American belief. Perhaps America has now learned the bitter lesson that exiles rarely succeed in counter-revolution but only make more extreme the revolution they want to redirect. The important question now is not Cuba itself but its influence on Latin America.

Off Again, On Again, Gone Again

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1961

Mr. ALGER. Mr. Speaker, what is our foreign policy? Does anyone know?

We have extended aid to Communist nations. Now our President thinks dignifying Mr. Khrushchev with another summit meeting is a good idea. It looks like another dose of the same arsenic we've taken before, pushing us closer to the point of no return.

Maybe there's a reason, some good sense to a summit meeting. Maybe there is some logic supporting our permitting Castro further to consolidate his economic and military strength. Maybe we should give aid and comfort to our dedicated enemies, in other times defined as treason. The reason escapes me. I see no logic or sense in our foreign policy.

Why cannot our Chief Executive give us some clues as to our foreign policy?

For some thought along this line I commend to the attention of the Members the following editorial from the Chicago Daily Tribune:

OFF AGAIN, ON AGAIN, GONE AGAIN

Now that the Kennedy-Khrushchev summit conference has been fixed for Vienna in the first days of June, President Kennedy's hesitations and flirtations with summitry present something of a puzzle. During last year's campaign, he was scornful of gadabout diplomacy and promised to be a stay-at-home President.

"I want," he said, "to be known, not by tours and conferences abroad, but by vitality and direction at home. My opponent promises, if he is successful, to go to eastern Europe, to go perhaps to another summit, to go to a series of meetings around the world. If I am successful, I am going to Washington, D.C., and get this country to work."

Now Mr. Kennedy is going to a summit himself, in what could be reasonably called a place in eastern Europe, and his dates with De Gaulle in Paris and with Macmillan in London add up to a series of those tours and conferences of which he was lately so scornful.

But the contradiction is even more striking in view of the White House response to a suggestion made soon after Kennedy took over the Presidency by Adlai Stevenson, his ambassador to the United Nations. Stevenson, in a press conference last January 27, hazarded the "guess" that Kennedy would be glad to become acquainted with Khrushchev, adding that he himself "would be delighted" to meet the Soviet boss again.

The White House reaction was prompt and frigid. Mr. Salinger, the President's press spokesman, curtly said that Stevenson was expressing his own personal views. The Secretary of State, Mr. Rusk, summoned a press conference and spoke of the virtue of using regular channels of diplomacy, although, he said, he did not exclude summit conferences "on principle." Mr. Kennedy, when asked if he was implying he did not want a summit meeting, replied that Rusk would first prefer to explore "more traditional exchanges."

The record discloses that at no time did Mr. Kennedy display much enthusiasm for a personal confrontation of Khrushchev, but now he has switched around to the position which originally drew down a rebuke on Stevenson. One may inquire the reasons for the switch, and the obvious answer is that foreign relations have not been faring well for Mr. Kennedy. First Cuba, then Laos, then the protracted stall at Geneva on permanent suspension of nuclear testing, with Berlin and Vietnam perhaps next on the agenda of trouble.

When, a week or so ago, former Vice President Nixon suggested that a summit might help serve notice on Khrushchev that Kennedy and the United States refused to be pushed around, we said that the only effective way to impress Khrushchev was to demonstrate in action that he could expect to be thrown for a loss every time he tries to exploit a soft looking spot in his probing operations.

Instead, we are to look forward to an effort by the President to match him in a "shell game." That has been tried before, and it has yet to succeed.

Michigan Week: The Michigan Story

EXTENSION OF REMARKS
OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1961

Mr. RABAUT. Mr. Speaker, each year since 1954 the citizens of the great State of Michigan have set aside 1 week in the year as Michigan Week. It is a period when we Michiganites reaffirm our pride in our State and rededicate ourselves to its future growth and prosperity. Michigan Week this year will be observed May 21–27. As a native and lifelong resident of Michigan, I would like to say a few words, in the spirit of Michigan Week, about some of the reasons why the people of Michigan are proud of their State.

Of course, Michigan is proud that it is first in the Nation in the production of automobiles. In Michigan's automobile industry, the manufacturing revolution which is now sweeping over the underdeveloped world came to maturity. The industrial genius of Michigan made Detroit the "arsenal of democracy" in World War II. Without the mass production techniques that emerged out of the auto industry, America could not have reversed the Nazi-Japanese tide.

But Michigan is out front not only in the production of motor vehicles and parts. Michigan's unmatched industrial know-how and the world's finest labor force, representing almost every skill listed by the U.S. Census Bureau, have placed Michigan first in the Nation in the production of mobile homes, boats, conveyors, internal combustion engines, metal stampings, steel springs, machine shop work, gray-iron foundry production, public building fixtures, hardware supplies, sporting and athletic goods, padding and upholstery filling as well as salt and cereals. Michigan leads all other States in the value of its manufactured products per worker. We have justly earned our reputation as the industrial capital of the world. Few areas in the United States can compare with Michigan as a State in which to locate industry and business.

Michigan believes that it has a mission of providing the same leadership in the space age as it did in the automotive age. As evidence of this, the booster chosen for the momentous flight into space of astronaut Navy Comdr. Alan B. Shepard, Jr., on May 5, 1961, was the Michigan-built Chrysler Redstone. Indeed, Michigan is taking its place on the frontier of the forces that are shaping the modern world. To the greatest pool of labor skills and managerial brains in the world, Michigan has added first-rate research facilities. The University of Michigan's Institute of Science and Technology is the Nation's first State-supported space age research endeavor. High resolution radar was designed at the University of Michigan. The Bomarc missile was designed and developed at the university. The ultra-high performance Rambler rocket was conceived in Michigan, designed in Michigan, and can be built by Michigan companies with Michigan products. Atomic power installations are already under construction by Detroit Edison and Consumer Power companies.

During the past few years electronics companies have been showing increasing interest in locating in Michigan to take advantage of the research and consultant talent our universities are making available. The Greater Ann Arbor Research Park, now under construction, will provide a most fertile base for extending the partnership between industry and the university for the development of new and startling research and products for the space age. Yes, the people of Michigan are proud that their State is not a status quo State, not resting on past laurels—that it is a State on the move.

We are proud that Michigan is known all over the world as a great industrial State. We are equally proud of our preeminence as a great agricultural State. The first land-grant college in the United States emerged on the campus of Michigan State University at East Lansing. From the technical and scientific achievements of such colleges American agriculture was transformed. In Michigan, agriculture is one of the three principal sectors of the State's economy. Only a handful of States can boast of such a varied and successful agriculture. In all, 44 different fruit and vegetable crops are grown commercially. Michigan leads all other States in the production of strawberries, sour cherries, cantaloupes, late celery, cucumbers for pickles, and field beans. The famous bean soup served in the U.S. Senate and House dining rooms is made from Michigan beans. The sale of products from Michigan farms totaled nearly three-quarters of a billion dollars in 1958—the latest year for which statistics are available. In addition, the volume of business directly connected with the processing, storing, distribution, and transportation of farm products amounted to $1,880 million. More than half of Michigan's 83 counties rank among the top 100 counties in the Nation in the production of field crops, fruit, and livestock. Despite Michigan's magnificent industrial and agricultural accomplishments, Michigan still has about 40 percent of its land area available for development.

Michigan's bountiful natural and physical resources are another source of great pride to the citizens of our State. Michigan's location in the greatest iron ore producing region of the world places Michigan second among the iron ore producing States in the Union. Michigan is still a major lumbering State with 19 million acres of forests which serve Michigan's furniture, paper and pulp industries. Michigan is first in salt production in the Nation. Michigan has the world's largest limestone quarries and deposits of gypsum. Michigan ranks sixth in the production of copper and is high in the annual production of oil. Michigan's abundant quantities of sand and gravel make possible one of the finest highway systems in the country.

All of these natural resources are helping build a chemical empire in Michigan. There has been amazing progress in this industry in the last few years and there will be additional developments in the near future. The value added by manufacture in our new and rapidly developing chemical industry is now in the neighborhood of $600 million.

Michigan is proud of its roadbuilding program. In our State we are constructing freeways at the rate of 1 foot a minute. By the end of 1962 people and products will be able to travel nonstop from the Ohio border to the Mackinac Bridge and from Detroit to Muskegon over superb modern roads. This highway system will make Michigan's recreation areas more easily accessible than ever before.

Most people know how much wonderful fun it is to vacation in Michigan, but relatively few know the extent of the tourist industry in Michigan and the vital role it plays in our economy. There are some 28,000 individual businesses serving the wants of people who come from all corners of our Nation for refreshing and restful holiday fun in Michigan. Michigan is bordered by four of the Great Lakes and has the longest shoreline of any State except Alaska. We have more than 11,000 inland lakes, 36,000 miles of rivers and streams and 19 million acres of forest land in which are situated 61 State parks and recreational areas. We have more ski areas than any other State in the Nation. Last year Michigan tourism grossed more than $650 million and provided employment for about 100,000 persons.

Sales and use tax receipts from the tourist and resort industry have reached an annual figure of $40 million and this figure is expected to rise to $46 million this year. The U.S. Department of Commerce figures show that money spent by an average of 24 tourists a day equals the economic impact of a manufacturing plant with a $100,000 annual payroll. This places in sharp focus the importance of tourism in the Michigan economy.

One of Michigan's unique assets for industry, health, and pleasure is her ever-abundant supply of fresh water. It is an asset envied by many other States which are faced with a critical water situation. Because of Michigan's geographical location, bordered by four of the five Great Lakes, our relatively level topography, our porous soil, our water-holding geological formations and our heavy and uniform rainfall, we have in Michigan the largest continuously available supply of fresh water in the world. In Michigan we do not use water, we only borrow it. By a relatively simple and inexpensive practice of water conservation we are capable of returning the same quantity and quality of water we receive back to its source. Water emptied anywhere into our 36,000 miles of streams is returned to its source, the Great Lakes. We do not have the costly problem of tapping water for use and later returning it to the same watershed. Michigan is indeed the "Water Wonderland" of the Nation.

In the area of industry, agriculture and recreational resources Michigan is a proven leader. The people of Michigan are also proud of another great accomplishment—the continuing development of its human resources through one of the finest eductional systems in the Nation. Michigan ranks fifth among the States in its support of public education. Since 1948 Michigan has spent a billion dollars for school construction. Enrollment in elementary and secondary schools last year reached almost 1,700,000. In the Nation in 1958, State and local expenditures for all public education averaged 35.5 percent of the general expenditures of State and local governments. In Michigan it constituted 40.7 percent. The estimated current expenditure per pupil in average daily attendance in Michigan for 1959–60 was $425 in contrast to the national average of $369. The expenditure of $425 per pupil is a 93.6 percent increase over the same expenditure in Michigan in 1949–50. During this decade, only two other States had a higher percentage increase in current expenditures per pupil. State aid per pupil in average daily attendance in 1957–58 in Michigan was $206 as compared with the national average of $162. Michigan is rated among the top 10 States for its program of educational excellence. Michigan's colleges and universities are recognized for the excellence of their programs, facilities, and graduates.

Michiganders point with pride to many other tangible advantages and accomplishments, to the fact that Michigan is located in the heart of the Great Lakes consumer market which has an annual retail sales of $43.5 billion; that in transportation Michigan is serviced directly by the St. Lawrence Seaway, 32 railroads, 190 trucklines, 14 major feeder airlines; and that Michigan leads the Nation in homeownership with a total of almost 70 percent.

Yes, Michigan is a great State. We are proud of our great physical and human resources and of the splendid use to which they have been put. But we are not too proud to realize that we must be even greater in the sixties, that we must set new goals of attainment in every area of endeavor not only for Michigan, but for the Nation and the future of the entire free world. It is in this spirit that we launch Michigan Week—1961.

Students Weld Ties With Costa Rica

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor of April 28, 1961.

Dr. Franklin D. Murphy, now chancellor of USLA, established a cultural exchange program between the University of Kansas when he was chancellor there, and the University of Costa Rica, that is absolutely unique. Mel Mencher, of the William Allen White School of Journalism and Public Information at the University of Kansas, has participated in that program and has written a story about it for the Christian Science Monitor. I take great pride in bringing to my colleagues' attention that story about the cultural exchange between the two universities—one located at San Jose, Costa Rica, and the other in my hometown, Lawrence, Kans.:

STUDENTS WELD TIES WITH COSTA RICA

(By Melvin Mencher)

SAN JOSÉ, COSTA RICA.—The school year for 10 young Kansans in Costa Rica began March 6. They make up the second group of students sent to Central America in a unique exchange program between the University of Kansas and the University of Costa Rica.

There is nothing new about American students studying abroad, and faculty members in U.S. universities and colleges have been going abroad in large numbers since the end of World War I.

But this interchange between a midwestern university in the heart of what used to be described as the isolationist belt and a small Central American university is different, so different that it may set a pattern for other academic exchange programs. It already has prompted an official of the Indian Government to ask the University of Kansas if it could set up a similar program with his country.

SPECIAL PROJECTS

What makes this program so different from others? Briefly, it is based on a deep cultural penetration of the foreign country and a close, somewhat permanent bond between the two countries. It consists of student study in Costa Rica, Kansas faculty members and administrators working with the University of Costa Rica, Costa Rican graduate students studying for their doctorates at Kansas, and administrators from the University of Costa Rica visiting Kansas.

The students and faculty members go to Costa Rica with a knowledge of Spanish and a background in the customs of the country. While there, the emphasis is as much on living the life of a Costa Rican as it is on pursuing academic work.

Each student is given a special project to carry out during the school year, a project that thrusts the young men and women into the daily life of San José, a thriving city of 100,000 persons astride the country's central plateau. Each student lives with a Costa Rican family, and an effort is made to place the student in a family which can aid the student's project.

In the first group, which recently returned from a 9-month stay in San José, Mary Grauberger, of Kansas City, Kans., rented a room in the home of Mr. and Mrs. Rodolfo E. Carrillo, a photographer for one of the San José daily newspapers. Her project was a study of the Costa Rican press.

MONEY NOT PLENTIFUL

The family Jane Tasker lived with became involved in her project, too. So did everyone else, for that matter. For when Jane decided that her project would be to teach handicrafts once a week in a rural school near San José and she selected San Antonio de Escazú, she learned a basic fact about Latin America:

Money is not plentiful. Even in Costa Rica, which devotes a large part of its national budget to education, there is barely enough money for the necessities.

This did not daunt the young North American. Each week she and her friends set out on what Jane called her scavenger hunt.

A friendly lumber mill manager donated plywood, a factory owner loaded the students down with tile and tossed in some porcelain paste. After hearing Jane's story about the youngsters at San Antonio de Escazu, three San José shoemakers happily packed three sacks full of leather goods.

PRISONS VISITED

At the university, everybody was saving popsicle and ice cream sticks for Jane. Between semesters, when Jane and the other Kansas students visited Panama, everyone helped to gather sea shells for the shell sculpture and jewelry which the children were making.

The children returned their teacher's enthusiasm.

"It was almost impossible to get them to leave the classroom for the recess (recreo)," a Costa Rican teacher said.

The townspeople knew Jane, too. Often they would gather in the morning to watch her, shoes in one hand, a bag of odds and ends in the other, trudge uphill to town from the bus stop a mile away.

"I learned something about the problems of rural families in Latin America," Jane said.

Among the 20 students in her class, only 3 will go on with their education after they complete their 6 compulsory years of schoolwork. The others will work, the girls at home, the boys on the coffee fincas.

Jo Ann Brauchi, a serious young woman from a small Kansas community, worked on a project that sent her up and down the country visiting prisons and social-welfare institutions.

During her visit to the women's jail, the Buen Pastor, high in the mountains above San José, she saw how Costa Rica handles its delinquent women. And the women were amazed that someone from the United States should be interested enough in them to travel all the way to visit them.

DISCUSSIONS HELD

And Carolyn Caskey of Independence, Mo., found herself nominated for the title of Beauty Queen of the University of Costa Rica. She finished second in an energetic campaign managed by a member of the Uni-

versity of Costa Rica's small Marxist group.

Carolyn's contact with this student led to discussions between the Kansas students and faculty members and leftwing Costa Rican students.

One night in the home of one of the Kansas students' Costa Rican "families," a Costa Rican student was telling the North Americans what was wrong with the U.S. foreign policy, especially as it involved Latin America.

"When we need money to expand our industries, we borrow it at 6½ percent from your banks, while we could be getting it at 2½ percent from the Soviet Union," he said.

Then he attacked the American-owned United Fruit Co. for paying low wages.

A Kansas faculty member who had been studying the country's economic situation pointed out that the average banana worker earns about $2 a day, while the man who works on the Costa Rican-owned finca makes about half this.

OPINIONS EXCHANGED

And so it went during the evening, back and forth, until well past midnight, when the Costa Rican student rose, extended his hand, and said that he was happy to see the interest the North Americans were taking in Costa Rica's problems.

"While we do not share the same ideas on how to solve them, we are grateful to you for listening to us," he said. "I think we both benefited."

This constant interchange of facts and opinions benefited the faculty members from Kansas as well as the Costa Rican and Kansas students, for the faculty members were new to Latin America. None of them were specialists in the area. None had visited Costa Rica or Central America before. Indeed, none could speak more than a few words of Spanish before the program was set up.

While the faculty-exchange program has a specific aim for members of the University of Costa Rica faculty—they will study toward advanced degrees at the University of Kansas—Kansas faculty members have no such particularized program.

MORE THAN ACADEMICS

This is the key to the difference between the Kansas faculty program and the usual foreign study program. In the ordinary type of faculty exchange, a professor applies for a grant for a specific purpose. He may wish to do research at a foreign university, or he may be selected to take a specialty to a foreign university and give lectures in his field. His work usually is within the foreign university's academic clime.

The University of Kansas program is more generalized. Its purpose is simply to send abroad a group of faculty members with different disciplines and to let them soak up knowledge of the foreign country while at the same time offering assistance to the host university abroad.

Thus, the interchange is not restricted to the academic level.

In fact, this restriction, inherent in most faculty programs of study abroad, led Franklin D. Murphy, former chancellor of the University of Kansas, to conceive the Costa Rican project.

Dr. Murphy said he wanted "to create a long-term relationship with the University of Costa Rica itself, a relationship in depth, one that will put the University of Kansas (and indirectly the United States) in continuing touch with all aspects of the country, its cultural, intellectual, economic, and political life."

An essential part of this program, Dr. Murphy felt, was that the entire family accompany the faculty member. This meant eight faculty members, eight wives, and a score of children make the trip.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

The Cost of Health Care

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23, 1961

Mr. ANDERSON. Mr. President, I ask unanimous consent that a review which appeared in the Washington Post of May 21, be printed in the Appendix of the Record. It was written by the junior Senator from Oregon and relates some of the most significant points in "Doctors, Patients, and Health Insurance," by Herman Somers and Anne R. Somers. I also ask that a news report on this book from the Washington Post of May 22, be printed in the Appendix of the RECORD.

There being no objection, the review and news report were ordered to be printed in the RECORD, as follows:

TOTTING UP THE COST OF HEALTH CARE

(Reviewed by MAURINE B. NEUBERGER)

Medical and health care costs now total over $25 billion annually and take 5.4 percent of our Nation's total gross national product.

These figures are likely to rise, with medical care costs since World War II increasing far more rapidly than the general cost of living. In the last decade the increase was twice as fast as all prices and between June 1958 and June 1960 the rate was three and a half times. The American people are showing a growing concern with the organization and financing of medical care.

To help supply some of the answers in this complex field, Mr. and Mrs. Herman Somers have written a particularly valuable and penetrating analysis of the organization, distribution, and financing of personal medical care. I do not believe that anyone should argue the pros and cons of the Kennedy administration's proposed health coverage legislation for the retired under the social security system until he has read this book.

The problem of providing adequate health coverage for the aged has aroused public opinion and controversy. The aged in the population are increasing at the rate of more than 1,000 per day and by 1970 there will be nearly 20 million persons 65 and over.

Three-fifth of the aged had less than $1,000 in total income in 1958, according to the Bureau of the Census, and nearly four-fifths had income of less than $2,000 the same year.

In a well-reasoned chapter the Somers argue that the social security financed health coverage will best meet the needs of the aged. They point out that meaningful insurance must meet at least 75 percent of an aged person's health expenses and should embrace 85 percent of the aged population. They also argue that it is unreasonable to expect older persons to spend more than 12 percent of their incomes for medical care, which is double the national average. The husband and wife team says:

"The probable average level premium required for 75 percent protection with 12 percent of income would exclude more than three-quarters of this age group. This makes no allowance for the additional 25 percent costs to be met out of pocket. Even allowing a substantial margin for error, the situation reveals a dead end."

Dr. Basil C. McLean, recently retired president of the Blue Cross Association, is quoted as saying that "a lifetime's experience has led me at last to conclude that the costs of care for the aged cannot be met, unaided, by the mechanisms of insurance or prepayment as they exist today. The aged simply cannot afford to buy from any of these the scope of care that is required, nor do the stern realities permit any carrier, whether nonprofit or commercial, to provide benefits which are adequate at a price which is feasible for any but a small proportion of the aged."

One of the most interesting and rewarding sections of the book deals with the changing pattern of medical practice and the doctor-patient relationship. The technological revolution in medicine, growing specialization in the profession, the role of clinics and combined practice have all done much to change the image of the traditional doctor-patient relationship.

The authors conclude that an inversion of some popular slogans with respect to the relationship between the quality of medical care, medical financing and the optimum doctor-patient relationship is clearly in order.

Federal employees will be reassured by the comments on the Federal employees health benefits program administered by the United States Civil Service Commission. The authors also endorse the closed-panel, group practice type of health coverage such as is operated by Group Health Association in the Washington area, Health Insurance Plan of New York and the Kaiser Foundation health plans on the west coast.

The entire varied field of personal health care is carefully explored with chapters devoted to the role of modern hospitals, the drug industry, the growing doctor need and shortage, health carriers and the strengths and needs in the medical insurance industry. The book is well documented by extensive footnotes, tables and charts.

The authors carefully chart the pattern of change and direction in medical care and have produced a valuable study in a highly complex and controversial field. I am sure this volume will be carefully read by all those dealing with medical care problems.

STUDY BACKS EXPANDED MEDICAL AID

(By Lewis Hawkins)

Mounting public pressure for providing adequate medical care to all Americans makes expanded Federal aid inevitable, it was reported in a research study released yesterday.

Part of this aid should be old age health insurance under the social security system but this is no sound basis for alarm among physicians or private insurance systems, the book says.

"Doctors, Patients and Health Insurance," released by the Brookings Institution, is a 534-page volume resulting from 3 years research by Herman M. Somers and his wife, Anne M. Somers. Somers is head of the political science department at Haverford College, Haverford, Pa., and was a member of President Kennedy's pre-inauguration Task Force on Health and Social Security.

FORD BACKED STUDY

Research and publication were financed by the institution with assistance from the Ford Foundation. Brookings is a private organization engaged in research and education in the social sciences. As usual, the institution notes that the conclusions reached in studies it finances do not necessarily represent the institution's views.

Much of the book is devoted to reviewing the problems of medical care including mounting costs, especially those in the drug field; the shortages of doctors and supporting personnel; the actute lack of "parahospital" facilities—nursing homes, outpatient clinics, rehabilitation centers, etc., to care for patents now being sent to regular hospitals.

Advances in private insurance plans are praised but it is reported that about 49 million persons—28 percent of the population—remain without any protection. Most of these are in the medically indigent group who are otherwise self-supporting but cannot provide for medical care.

GENERAL AGREEMENT

Insofar as the aged are concerned, the authors find there is already general agreement on the need for public action. The main question is said to be whether it should be under Federal-State subsidy or private insurance—as provided under a 1960 Federal law—or insurance within the present social security system—which is what the Kennedy administration seeks.

The authors say:

"The latter appears simpler, more economical and more equitable as well as involving less Government intrusion in the affairs of private carriers, and greater dignity for the beneficiaries."

The Delaware River Basin Compact

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1961

Mr. TOLL. Mr. Speaker, the Council of the City of Phildalephia on May 11, 1961, unanimously adopted a resolution "Memorializing the Congress of the United States and the Legislature of the Commonwealth of Pennsylvania to support and approve the proposed Delaware River Basin compact." The resolution relating the compact was on the Consent Calendar on May 15 and on one prior occasion. The importance of this resolution is set forth in detail in the attached copy which was forwarded by the president of the city council, the Honorable James H. J. Tate. Resolution 161, of the City Council of Philadelphia, is as follows:

RESOLUTION 161

Memorializing the Congress of the United States and the Legislature of the Commonwealth of Pennsylvania to support and approve the proposed Delaware River Basin compact

Whereas the proposed Delaware River Basin compact, framed after years of careful preparation, creates a Commission of five members representing the Federal Government and the States of Delaware, New Jersey, New York, and Pennsylvania, to direct the planning, development and control of the water resources of the Delaware River Basin; and

Whereas the guidance and control of these projects which mean so much to the future of the entire Delaware Valley and the Nation, should be in the hands of the Federal Government and the four States, as provided by the Delaware River Basin compact; and

Whereas before being submitted to the Congress for approval, the compact must be ratified by the Legislatures of the four States. Affirmative action has been taken by the Legislatures of New Jersey and New York and it has been endorsed by the Governors of the four States and the mayors of New York City and Philadelphia; and

Whereas the planned development and allotment of the water resources of the Delaware River is vital to the future of the port of Philadelphia, and to the implementation of the $437 million program of the Army Engineers for the creation of dams and reservoirs, recreation sites and hydroelectric powerplants in the Delaware River Basin; therefore

Resolved by the Council of the City of Philadelphia, That we hereby memorialize the Congress of the United States and the Pennsylvania State Legislature to support and approve the proposed Delaware River Basin compact.

Resolved, That certified copies of this resolution be forwarded to the Speaker of the House of Representatives and President pro tempore of the Senate of the United States, the Speaker of the House of Representatives and president pro tempore of the Senate of Pennsylvania, and to the members of these legislative bodies from the Delaware River Basin area.

The Television Teacher

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23, 1961

Mr. WILEY. Mr. President, currently, Congress is engaging in extensive debate over the needs and how to meet them in education.

In my judgment, the future of the Nation will depend to an ever larger degree upon our educational system, to provide the well-trained people required by our complex age.

As we know, the Nation faces serious deficiencies in both classrooms and teachers. These must be supplied in adequate quantity and quality to meet the ever-increasing enrollments.

To meet the challenge, then, we need to devise—as we are now attempting to do—equitable formulas for distribution of costs and responsibility between the local, State, and Federal governments.

As time progresses, however, we can fortunately expect some aid from technology. Television, for example, will, in the future, prove to be of ever greater usefulness to education.

There will of course need to be some adaption, not only in the educational system, but in television itself, to carry out this objective. Nevertheless, progress is being made. The Nation, I believe, will benefit by moving ahead as rapidly as possible.

Recently, the Saturday Review of Literature published a thought-provoking editorial by the education editor, Paul Wooding, entitled "The Television Teacher."

Reflecting upon the problems and challenges in this medium—particularly as these relate to the teacher—I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EDUCATION IN AMERICA
(By Paul Woodring)
THE TELEVISION TEACHER

Several hundred teachers have appeared before television cameras this year for the first time. A few are famous musicians, artists, or scientists accustomed to large audiences, but the great majority are elementary and secondary teachers, fresh from the classroom, selected for their known competence as teachers. For them, television teaching is a new experience—an exciting and arduous one.

It takes courage for a professional teacher to appear on television. So long as he remains in his own classroom he is relatively anonymous; his work is known and judged by only a few children and an occasional supervisor. If his facts are mistaken, or his judgments naive, the children rarely know the difference and can do little about it anyway. If he fails to prepare for the day's activities he can get by somehow. If he does not know his subject he can still ask questions of the children and pretend he is using the Socratic method, or he can urge them to look it up. If his presentation is dull the children will merely sigh and accept the dullness as one of the normal hazards of the academic life. Tenure laws protect him unless his work is exceptionally bad.

When the teacher goes before an open-circuit television camera, all this changes. Now both his scholarship and his teaching skills will be rigorously judged by an audience of thousands that, in addition to the children, will include parents, educational experts, academic scholars in his own field, other teachers, and a wide variety of critics who are looking for the worst in educational television. His judgments and opinions will be widely questioned and discussed. The slightest factual error will be picked up by many viewers. A few slips in English will make him a laughingstock. A dull or ineffectual presentation will no longer be tolerated. There is no tenure on TV.

Many teachers whose success in the classroom was far above the average will not survive this new scrutiny. Those who do survive will deserve rewards and recognition far beyond those of teachers who confine their activities within classroom walls, and they will get it. It seems probable that the emergence of a few teachers into the open, where their work will be subjected to an evaluation comparable to that given the work of writers, actors, artists, and musicians, will bring a new dignity to the teaching profession and a new public respect for it. Such respect is well deserved because teaching is a high art and great teaching is probably as rare and as difficult to achieve as greatness in any other field.

We salute the television teacher and wish him well. The success or failure of educational television rests with him. He will not replace the classroom teacher—the two will complement each other—but television teaching will add an important new dimension to the profession.

Views of a Newsman Who Went Through the 1960 Presidential Campaign

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1961

Mr. HIESTAND. Mr. Speaker, the interest in the 1960 Presidential election is still with us and it will be for a long time.

Herbert G. Klein, editor of the San Diego (Calif.) Union, and ex-Press Secretary to former Vice President Richard M. Nixon, earlier this month touched on this subject when speaking before the Springfield, Ill., Lions Club.

The views of a newsman who went through the rigorous campaign last fall are of timely interest:

Three months after a change in administration we find both President Kennedy and former Vice President Nixon more popular than they were when they divided 68 million votes on November 8, 1960. This sounds strange, but it is true.

Polls show that more than 70 percent of the public believes Mr. Kennedy is doing a good job. This figure probably has dropped considerably since the Cuba fiasco, but the percent still is well above the 50.1 percent of election day.

I have seen California polls reflecting Mr. Nixon's great popularity and have noted other national samplings. He is more popular today than ever before. Consider the fact that a change of 15,000 votes in four States would have made him President and it is evident that he benefits from great public acclaim. Even today he receives about 2,000 letters and several hundred speaking invitations each month. Mr. Nixon is far and above the most popular of all active Republicans.

If a poll were taken, like that asked regarding Mr. Kennedy, there is little doubt that the public would have confidence that he could do a good job as President today. In a nutshell, looking at the post-election popularity of both Presidential candidates, I am sure that if the situation were reversed, Mr. Nixon's poll rating also would be above 70 percent.

The present Kennedy-Nixon popularity is unparalleled and perhaps as close as it was on November 8.

Looking at the Republican side, Mr. Nixon has the public popularity needed to unite his party in 1962 and behind whoever is the nominee in 1964. At this point, I know of no one else who can do this.

On the subject of 1964, there is too much Republican gloom. There is no basis for any factual forecast today as to who will win 4 years hence.

As a newsman, I have been interested in what has happened to some of the issues of 1960. If there was an election today, the Republican candidate could run on the Democratic issues and the latter would be

in the position of defense. This is one of the quickest turns of the century.

Prestige was an issue in 1960. It is unfortunate but true that 3 months after Mr. Kennedy has taken office, U.S. prestige is at a new low. As Americans, we pray this will change, but as a newsman, I must assess current facts.

Golf was mentioned. The only difference I see is that Mr. Kennedy insists that when he allows a picture of a golf game, he will have no clubs in his hands. I wish I could shoot as well as either Mr. Kennedy or Mr. Eisenhower—or Mr. Nixon for that matter—below 100 that is.

Leadership was emphasized. The record shows that Mr. Kennedy has been unable to lead the Congress. His program has stalled to the point where he was in Chicago Friday to seek public support. Mr. Kennedy has a heavy Democratic majority in both Houses. The record shows Mr. Eisenhower did not have this.

Judging from the events, not the words, of the first 100 days, I would conclude that the biggest obstacle to a Republican victory in 1964 is present party gloom and the danger of splinter factions.

Realistically, the political tide will change many times in the months ahead. The real test of both parties will be 1962. This could be the critical year, for if the Democrats win, they will be on their way to a 1964 victory. A Republican victory could reverse this.

I will touch on just one more current subject. This is one of grave concern for all Americans.

I believe the Kennedy administration is preparing to launch a major attack against newspapers. The President hinted this last week when he implied that news stories were endangering American security. He asked that each story be weighed on the basis of national interest.

This is an impossible test. It is not in the national interest to publish a story about a scandal in any administration. It reflects against the United States. But American strength comes more from the spotlight of publicity on public affairs than from the judgment of each news story on the basis of how someone in the Kremlin or in Paris will read it.

The press has a responsibility, and I believe it is cognizant of it. I am not as sure the President realizes his responsibility to give the public the facts when the situation is adverse. He has been willing to provide the positive propaganda but not always the deeper news. I would urge him to reassess his views.

Of even greater public concern is a threat from the Justice Department to apply antitrust laws against newspapers who own television stations and against multiple newspaper ownership.

At a recent Women's National Press Club "trial balloon" dinner, Mr. Edwin Guthman, Special Assistant to Attorney General Robert Kennedy, said antitrust laws "should be applied to prevent newspapers from owning radio and TV stations and vice versa." He also urged the application of the laws against group newspapers.

This is blackmail, raw blackmail. The implication would be that those newspapers who are considered friendly to the administration would be spared, but there is a club to be held over the heads of the large newspaper operators who may be critical of young Bobby or his brother.

The trial balloon has been launched. I now would challenge the Attorney General to state his views directly. Is he to blackmail the newspaper, or did his press spokesman comment out of turn? The public which reads and relies on newspapers is entitled to know just how great the Justice Department pressure will be against their home publications. Does Attorney General Kennedy desire to make them knuckle under?

There is no greater censorship than that of Government blackmail.

Activities of Groups Urging Appeasement

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23, 1961

Mr. THURMOND. Mr. President, the May 16, 1961, issue of the News and Courier of Charleston, S.C., contains an excellent editorial suggestion which I take pleasure in calling to the attention of the Senate. The editorial is entitled "Public Should Protest Activities of Groups Urging Appeasement," and I ask unanimous consent that it be printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PUBLIC SHOULD PROTEST ACTIVITIES OF GROUPS URGING APPEASEMENT

Only a few years before Hitler's Luftwaffe rained fire bombs on London, a group of students at Oxford University issued a pronouncement saying they would not fight for king or country.

This stain of disloyalty was washed away in the blood of English soldiers, sailors, and airmen who played so noble a part in turning back the Nazi hordes.

But the Oxford statement is a reminder that every nation has weak individuals in its midst. Americans are beginning to realize that the United States also has those who refuse to stand up for their country.

Thirty-six American students at Oxford have sent an open letter to President Kennedy protesting what they call the "continuing hostility" of the U.S. Government toward Fidel Castro in Cuba. The students, some of them Rhodes scholars, come from 18 States and the District of Columbia.

In New York City, more than 2,700 persons jammed Carnegie Hall last Friday at a peace rally declaring all-out war on the use of nuclear weapons. Dr. Linus Pauling, American scientist with a long record of participation in Communist front organizations, was the principal speaker.

In Ann Arbor, Mich., Historian Arnold Toynbee tossed barbs at the United States and the Western nations concerning the world power struggle. He said the diminishing dominance of the West is a return to normal historical conditions. Dr. Toynbee, darling of the leftwing intelligentsia, said the actions of the Central Intelligence Agency in Cuba were another example of governmental gangsterism.

In New York City, James Wechsler, editor of the leftwing New York Post and former member of a Communist youth organization, said the real disaster of Cuba is the mounting evidence that our Government palpably violated its own commitment with respect to nonintervention and that it cruelly lied to the American people. Mr. Wechsler was addressing the Americans for Democratic Organization. This group approved a resolution calling for a halt to aid for Cuban foes of Fidel Castro.

To these shameful incidents may be added a recent statement signed by more than 60 Harvard and Boston area professors urging appeasement of Castro.

All the signs point to a mammoth coordinated campaign to get the U.S. Government to adopt a soft posture toward world communism at the very time the Soviet Union and its allies are making enormous gains in Cuba and Laos.

To find a parallel one must go back to the activities of the German-American Bund in 1939 when the Nazi propaganda apparatus was selling Hitlerism as the wave of the future. The same type of massive campaign has been launched to undermine the American will to resist.

Alien forces are at work in this country. The President should call on the FBI to probe every one of these pro-Castro and antinuclear weapons groups. The American people should counter the appeasers' campaign by a campaign of their own, by writing to the President and their Congressmen expressing indignation at those who counsel surrender.

Interstate Compacts for Library Service

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1961

Mr. FOGARTY. Mr. Speaker, I have today introduced a bill which would grant the consent of Congress to interstate agreements for the purpose of developing or operating library facilities and services.

Libraries, like all other governmental agencies, are searching for ways to provide service effectively and economically for all people regardless of where they live. While State, county, town, and municipal library systems are serving a large segment of the Nation, population expansion and shifts within recent years have created new groupings, bound by economic, topographic, and social considerations, but separated politically by the intrusion of State lines. Like transportation and other public services, most efficient library operations in many cases would follow these natural patterns rather than those of the more artificial political boundary lines. Interstate planning is the next step which should be taken in many localities. It appears timely, therefore, that Congress give consent in advance so that progress may be encouraged and it is for this purpose that I have introduced the bill.

Article I, section 10 of the Constitution of the United States has apparently been a deterrent to States joining in projects for mutual benefit yet it appears that educational and library service projects cannot in any way be a "clear and present danger to the sovereignty of the United States"; in any way affect the powers delegated to the National Government; or, affect the political balance within the Federal system. However, some attorneys general have ruled otherwise, and many States appear to be reluctant to pass legislation which

will permit joint action on library matters.

There are two distinct areas where library service might be improved through interstate agreements—one is the great metropolitan district, and the other sparsely settled rural areas where boundaries hinder development of an area large enough to provide modern library services.

Of the 25 largest metropolitan districts 12 are on State borders. The large metropolitan library, chiefly supported by local taxation, is faced with demands for service from the entire area. Developing library service programs for the entire area could be best undertaken by the large metropolitan library and would result in a well coordinated and strengthened service for the entire district but a compact of some type would appear to be necessary.

The general statute, New York General Municipal Law, sections 460–473—supplement—interlocal agreements with governmental units of other States, in its statement of purpose clearly defines the problem for both rural and urban areas:

To permit local governmental units to make the most efficient use of their powers by enabling them to cooperate with governmental units of other States on a basis of mutual advantage and thereby to provide services and facilities in a manner that will accord best with geographic, economic, population, and other factors influencing the needs and development of local communities.

Since the great change in transportation, and especially since the automobile has become a regular means of private transportation, populations have shifted to a point where the self-contained local village hardly exists. Shopping centers have made great changes in our way of life, as has the development of industrial centers centralized and decentralized.

We have discovered that a village library cannot provide all the information and books its residents need and desire. Television and other media are arousing interest in many subjects and problems our onetime small towner was willing to let others be informed about. Now it is necessary for the library to have greater resources than local taxes could ever provide. The centralized reference service at the State library and the bookmobiles which move from town to town leaving collections of current books of interest to all ages and groups are permitting our towns to provide the needed broader library services.

Since State boundaries are artificial at best and frequently ignore topographical limits, as well as population distribution and economic developments, it seems appropriate that every opportunity taken be given for successfully bridging these boundaries.

There are many library services which are possible on an interstate basis. Those of the large metropolitan district may be somewhat different but many of our smaller cities might effectively expand service to more rural areas in neighboring States.

A group of small libraries on a State border could jointly employ a cataloger, pool their book funds and buy and catalog their books not only with a saving of money, but with an improvement in the quality of the cataloging.

Every library of any size particularly if it is a reference library has a stock of books and journals which should be preserved but which are seldom used. In small States such as ours a depository could be established by several States for these seldom used materials and operated for the benefit of all. This would release valuable shelf space and permit disposal of all but one copy or set of these resources.

There will be many problems for individual States to work out ranging from methods by which State aid is to be applied to a service jointly operated at the local level, the selection of governing boards for these agencies and tax support. But if we have cleared the way by achieving the consent of Congress, then we can tackle the purely local problems.

Kennedy-Khrushchev Meeting Is Necessary, Editor of West Virginia Newspaper Believes—Great Powers Must Continue Efforts To Find Way Out of Nuclear Dilemmas

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23, 1961

Mr. RANDOLPH. Mr. President, I have said before in the Senate that I believe the success or failure of personal diplomacy ultimately rests on an imaginative, flexible foreign policy rooted in the realities of this changing world. And I repeat, also, my affirmation of conviction that President Kennedy and his advisers are in the process of developing such a policy.

Concerning the forthcoming scheduled meeting between our President and Premier Khrushchev of the Soviet Union in Vienna, I state again that President Kennedy is the best person to effectively convince Mr. Khrushchev of the determination and the resolve of the United States to resist the encroachment of communism.

In the May 19, 1961, editions of the Charleston (W. Va.) Gazette, an editorial entitled "Kennedy-Khrushchev Meeting Is Necessary," there is a cogent discussion of the pending meeting from the standpoint of the possible results of the conference on the "frustrating efforts of the great powers to find a way out of their nuclear dilemmas."

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial to which I have referred.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KENNEDY-KHRUSHCHEV MEETING IS NECESSARY

The only possible objection that can be lifted against a personal meeting of President John F. Kennedy and Premier Nikita Khrushchev in some neutral capital city is that such summit meetings in the past have raised hopes among peoples all over the world disproportionate to the results later achieved.

This, however, is not sufficient reason to keep the two leaders of the world's strongest powers apart, because unless these men can in some manner fashion an understanding between them, reconcile their differences and reach an accommodation on issues and principles which separate them the world is in danger of experiencing another frightful war—this time with nuclear weapons that scientists tell us have in their capacity the total destruction of nations if not the seven continents and the seas surrounding them.

President Kennedy, should he visit in June with Premier Khrushchev, would be coming directly from conferences with France's President Charles de Gaulle, who to date has been keeping his thoughts on world problems pretty much to himself and charting for his beloved country an independent course.

What the people of the world consummately wish is an agreement among nations to control nuclear armaments, but aside from the ordinary difficulties of negotiations between clashing ideological powers, there are the additional complicating questions of where Red China and France fit into these negotiations.

The Soviet Union has demanded that the United States and Great Britain persuade France to stop conducting nuclear tests. Otherwise, the Kremlin authorities note they will be forced to resume their own tests. The demand is reasonable, even though it may prove impossible to fulfill, and the logic of their intentions, many find it a threat, in the event the demand is unfulfilled is inescapable.

Let us put ourselves in Russia's place. What would be our reaction to effecting a nuclear agreement with the Soviets if we saw their allies, the Red Chinese, testing nuclear bombs in Manchuria?

It is a fact, whether we like to accept it, that if there is to be a nuclear agreement it must include all the nations of the world. Perhaps the President and the Premier can agree on that necessity and then discuss means and methods of carrying it out. Unfortunately, agreeing to it and implementing it are two different propositions, because both France and Red China have demonstrated repeatedly that their friends have but a limited power over them.

It is, however, important that the great powers continue their frustrating efforts to find a way out of their nuclear dilemmas, and a Kennedy-Khrushchev conference is the obvious next step.

Federal, State, Municipal Cooperation—An Address by Joe L. Evins, Member of Congress from Tennessee

EXTENSION OF REMARKS
OF
HON. JAMES B. FRAZIER, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1961

Mr. FRAZIER. Mr. Speaker, my friend and colleague, the Honorable JOE L. EVINS, recently addressed a meeting of the Tennessee Municipal League in my hometown of Chattanooga. His remarks were particularly fitting and they are significant for the great

amount of information regarding Federal spending in Tennessee and for the excellent illustrations of Federal-municipal cooperation contained in them.

Mr. Speaker, I ask unanimous consent that the remarks of our distinguished colleague be reprinted in the RECORD.

The address follows:

REMARKS BY HON. JOE L. EVINS, OF TENNESSEE, TENNESSEE MUNICIPAL LEAGUE, CHATTANOOGA, TENN., MAY 15, 1961

President McInturff, Mayor Olgiati, Judge Frost, distinguished guests, members of the Tennessee Municipal League, my fellow Tennesseans, and friends, certainly it is a pleasure to be able to meet with you again. When your able and energetic executive secretary, Herbert Bingham, invited me to meet with you again, I accepted without hesitation for I had never forgotten my enjoyable visit with the Municipal League here in Chattanooga a few years ago. I consider your invitation for this repeat visit as indeed a compliment.

I always enjoy the bracing air of Chattanooga and certainly am pleased to visit in the hometown of my colleagues, Tennessee's senior Senator ESTES KEFAUVER and Congressman JAMES B. FRAZIER, both of whom represent Chattanooga, this district and our State so ably in the Congress.

I respect the membership of the Municipal League of Tennessee. This organization is composed of a body of men who are among the leaders of our State and experts in the science of Government.

There are those who say that we in the Congress have not introduced scientific methods in the Federal Government, that we are falling behind and slipping backward.

We have our debates and difficulties and, like you, our problems, but I take the affirmative side that we are moving forward and making progress.

This year, in just a few months, we have succeeded in passing a lot of legislation and even in putting a man into space.

However, we all recognize there is much yet to be accomplished.

I must confess that perhaps the greatest satisfaction of serving in Government is found among your group, those on the local level who see progress each day, who see great programs put into effect and materialized. We in the Congress deal in policies and plans, programs in the abstract, and, I should add, appropriations. Whereas you, our mayors and municipal officials, see many of these programs materialize. It is you who put them into operation and actually see the improvements completed.

Our cities and towns are being improved with interstate highway systems and municipal airports constructed.

Many additional projects are financed by both the local and Federal Government. The building of great housing projects, programs of slum clearance, urban renewal, sewage disposal plants, local National Guard armories and yes, many local industrial developments are aided by federally financed programs. All are made possible by local initiative, some local financing, but largely by appropriations passed by the Congress, all to serve our people, the public needs, through matching fund programs and cooperation.

As you know, there are those who attack the Congress and those who cry against Federal aid and Federal spending, but in this day I believe that the mayors of our cities recognize perhaps more than others that it takes the combined energies, imagination and dedication of all our elected officials, at all levels of government, cooperating and working together to achieve progress and to advance freedom in our civilization.

While we speak nationally of New Frontiers, I know that here at home in Tennessee we have our own new frontiers—problems pressing for solution. Our work and efforts are so entwined, the destiny of the people we represent are the same, so there exists a real need for a closer cooperation, better working relationships at all levels of government and particularly between our municipalities and the Federal Government.

With the complexities and the problems of our day, perhaps the best Government that can be evolved in America is a partnership government, involving partnership action between our cities and State officials and the Federal Government.

I must admit a partiality toward our municipal officials and interest in city government.

My father, who for 16 years was mayor of my hometown of Smithville has had a very great influence on my attitudes, naturally.

He gave me an early start toward the forming of philosophical ties with individuals whose principal concern is the building of the community. My interests, growing out of this experience, have been of inestimable value to me in my work as a Member of Congress. They have served to focus attention constantly on the basic consideration of government, whether it be in Washington, Chattanooga, Smithville or elsewhere, and that basic consideration is that what is happening on the local level is what is important. How our laws and programs affect the local community is of the greatest importance, for local government is the bedrock of our society.

As you gentlemen are aware and know all too well, there has been an increasing demand over the years from locally elected officials for more and more programs of aid and assistance from the Federal Government. This has grown out of the fact that the local tax base has to a large extent been exhausted and because there exists a need for additional skills and finances to provide the services which our modern-day cities and municipalities require and the public demands.

While we have had change, one thing has not changed, with which I am sure you will all agree, the demands for more service and more appropriations.

I am reminded that our position collectively as a city and a nation is like the multimillionaire who, on being interviewed, was asked about his good fortune and he commented, "I never hesitate to give full credit to my wife and her assistance." "In what way did she help," the reported asked, "Well, if you want the whole truth," the man replied, "I married her because I was curious to find out if there was any income she couldn't live beyond."

Many of our cities are requested to provide services which require living beyond their incomes and they are calling on the Federal Government for help and assistance. It is only in recent months that some say that this era of Federal aid has been enhanced.

In almost every bill that comes before the Congress the question is raised, How will it affect our States and cities and municipalities?

In the consideration of legislation we are interested in knowing what you are doing, what you are thinking, and what our municipal leaders are planning and accomplishing. Your programs have a tremendous bearing on legislation in Congress.

The Appropriations Committee on which I serve, and yes, the House Select Committee on Small Business, on which I also serve, are almost daily made aware of the growing concentration of problems facing our local communities and States. These problems of local governments—on an increasingly extensive scale are reflected in the many requests for Federal appropriations.

When I spoke to the Municipal League several years ago, our country was engaged in the Korean war, and the Federal Government necessarily was concerned with measures affecting our war effort—shortages, rationing, priorities and allocations.

Today we are engaged in the cold war and a war on slums, poverty, unemployment, surplus labor in our cities and idle plant capacity.

AREA REDEVELOPMENT ACT

The Area Redevelopment Act is the most recent example of dual action, action which calls for increasing our joint energies to help solve these problems, to arrest unemployment, to provide for a greater and more satisfactory rate of national growth.

This new act, recently signed into law by President Kennedy, sets up a fund totaling $394 million for use in treating some of our Nation's economic ills.

The Depressed Areas Act is largely a loan program, and essentially a local self-help program.

The Federal Government has been directed by Congress to carefully confine its participation to measures which will encourage local initiative and stimulate local leadership in this effort over the next 4 years.

The new law, considered in perspective, provides a relatively small mount of money to do a large and vitally important job. For example, the total outlay authorized represents less than half of 1 percent of our total Federal budget, and about one-tenth of what we have been spending on foreign aid annually for many years. It should be pointed out that this measure is designed to help our own country and will provide assistance in alleviating our own problems in distressed areas and underdeveloped areas throughout the United States.

From the marshaling of such attention will come large benefits not only to the communities receiving direct assistance but to all America.

The Secretary of Commerce is authorized to cooperate with leaders in designated areas of need for a well-planned attack on the increasingly complex problems of local communities.

It puts a new challenge to every community to make more careful assessment of community needs, to make larger plans, to exert greater efforts for public improvements, to organize its own industrial corporations.

The new law focuses attention upon the needs, opportunities and rewards of local industrial development.

It provides aid and expert advice for the development of long-range planning at the local level.

It encourages the local community to engage in the important work of technical training and retraining, which is increasingly essential in this day of automation.

In a word, the Area Redevelopment Act is designed to give real impetus to industrial decentralization which must be speeded up in the interests of a stable national economy and to promote our free enterprise system.

This program has been rather aptly described as operation "seed corn" for the American community. Federal loan funds are provided in cases where adequate private financing is not available, and Federal grants are authorized in cases where communities are unable to finance public works for themselves.

Specifically, the bill provides $100 million for each of two revolving funds, one to be used for loans in industrial areas and the other for rural areas.

Community and regional development agencies may borrow up to 65 percent of the cost of clearing land, building plants, and, in special cases, the cost of equipment and machinery to attract new plants.

The new legislation also permits the Federal Government to make grants to pay up to two-thirds of the net cost of clearing

slum areas. This supplements the urban renewal program previously in effect.

In addition to making the urban renewal grants, the Secretary of Commerce is empowered to make up to 10 percent of any future capital grant for urban renewal for nonresidential slum clearance projects in designated areas. This will make it possible for these communities to provide industrial sites and to bolster their tax bases.

SMALL BUSINESS ADMINISTRATION

The Small Business Administration, now a permanent agency of the Government, with a loan authority of approximately $1 billion serves our cities and small business communities in an increasingly wide range of public service.

The SBA has been empowered to make loans to State and local development corporations for plant construction, conversion, and expansion. This authority was about to expire in 6 weeks but the Congress included a proviso in the Area Redevelopment Act removing the time limitation, and thus extending this program which is beginning to be more widely understood and appreciated.

Congress has thus made available some valuable tools for municipal use. These programs are not imposed upon anybody. They are simply available and cities may use them if they wish to do so. If any of you experience any difficulty in obtaining information as to how to participate and take advantage of the provisions of SBA services, let me know and I shall try to be of helpfulness.

A few figures from the Small Business Administration will serve to show how the services of this agency may be locally utilized.

SBA has well been called a little RFC. Loans are made available direct to small business, to local development corporations, and in times of disaster, to all residents of the community.

Since 1958, when this Agency was created, direct loans amounting to $17.5 million have been made and another $26.5 million in loans committed; for a total of approximately $43.5 million.

In Tennessee alone, SBA has made business loans exceeding $21 million.

Recently, SBA Administrator John E. Horne announced the lowering of interest rates to 4 percent on loans to companies located in surplus labor areas, and pointed out that funds were available to local industrial development companies for this purpose. He urged and invited wider use of this type of financial assistance.

The State and local development companies have not used the credit facilities of this agency as much as expected. Mr. Horne, SBA Administrator, tells me that to date 123 industrial development corporation loan applications have been received, 99 have thus far been approved for a total of about $12 million.

The House small business committee has exerted constant pressure for greater use of the Small Business Administration's capacities in this and other phases of our economic life—and now a heartening change has come under the new administration. Fresh vigor and broader purpose are being evidenced in all SBA operations under the direction of the new Administrator, John E. Horne, a native of Alabama.

Real opportunties which exist for the development corporation is illustrated by the experience of a development corporation of North Carolina, which borrowed $1 million from SBA. This loan made up about one-fifth of the corporation's financial backing, the remainder coming from commercial banks, life insurance companies, building, savings and loan associations. Since 1956 this one industrial development corporation has approved 131 loans for $16 million for new plants and expansions, and for purchase of machinery and equipment. The new business activity sparked by this enterprise resulted in maintaining employment for at least 8,000 persons and created jobs for 14,000 more, a total of 22,000 jobs resulting from the work of this one development corporation.

SBA's major function, that of providing financial assistance to small firms, is now being brought into the full exercise which the Congress prescribed for it.

The Subcommittee on Organization and Operation of the Small Business Administration, which I have the honor to serve as chairman, held extensive hearings during the last session of Congress. We attempted to focus the spotlight on the deficiencies in SBA's loan policies. Our hearings were significant in pointing up the negative loan policies and the many instances of discouragement offered business and community initiative.

Our congressional committees spearheaded a drive to reverse policies of the last administration under which the small business share of total military purchases of goods and services declined from 25.3 percent in 1954 to 16 percent in 1960.

Today I believe this trend has been reversed and conditions have improved.

Now there is both congressional and administrative support for steps giving small business a larger voice in Government procurement policy.

The President has set as an administrative goal an increase of at least 10 percent in the amount of defense work, defense contracts going to small business.

Only last week in hearings before our Appropriations Committee I heard and saw evidence of this policy being put into effect. The Chief of Engineers testified that the number of construction contracts awarded to small business are being stepped up and that the Corps of Engineers is now setting aside for small business virtually all construction contracts under $500,000.

ASSISTANCE FROM OTHER FEDERAL AGENCIES

There are other Federal agencies, as you gentlemen are aware, which offer both financial and technical assistance in community development programs—such as the Housing and Home Finance Agency, including especially its Community Facilities Administration, the Federal Aviation Agency, the Department of Agriculture, the Department of Commerce, among others.

The Federal Interstate Highway System is one of the most outstanding examples of Federal-State cooperation and of the vast benefits which Tennessee and the Nation receive as a result of an excellent program of cooperation.

Since the interstate program was enacted by Congress there has been allocated to Tennessee more than $415 million of Federal funds for the highway program in our State. Last August $80.7 million became available for fiscal years 1961–62 alone.

Two weeks ago we passed in the House a bill authorizing funds to complete the 41,000-mile Interstate Highway System and put the program back on schedule. Seventy-eight million dollars additional has been earmarked for Tennessee for fiscal 1963.

The services of the Community Facilities Administration, Housing and Home Finance Agency, is well known to you gentlemen. Certainly much has been accomplished thorough the advances made available for public work planning and loan programs of this branch of our Government which is especially set up to assist and serve the needs of our cities and municipalities.

During this year, the Community Facilities Administration has approved or now has before it for approval 21 loan applications from cities in Tennessee.

This Agency is asking for an appropriation of $4 million for next year for payment to the revolving fund out of which planning advances to cities are made.

Grants are made by CFA for drawing of architectural plans for a variety of types of community improvements, including water or sewer, health facilities, public buildings, roads and streets, among others.

The U.S. Public Health Service also has a program of making grants to cities, but specifically designed for another purpose; namely, water pollution protection and community public health needs.

So far during the current year, the Public Health Service has made grants of $1,286,000 for nine projects in Tennessee which will cost $6 million plus when completed.

The very recently enacted Water Pollution Control Act is designed to augment the work of the Public Health Service and increases the authorization for sewage treatment plants from $50 to $100 million annually.

The demand and need for this increase has been clearly shown and demonstrated in the public interest.

The Public Housing Administration, under the Public Housing Act of 1949, has certified 164 low rent housing projects for Tennessee. There are today in our State 57 local housing authorities serving 70 communities with grants to our large- and medium-sized communities.

The latest figures show that currently there are 18,018 units completed and under local management, with 550 units under construction and 1,685 additional units in the planning stage.

Local housing authorities in our State have received more than $30,700,000 in contributions and, in fiscal year 1960 alone, payments have exceeded $4.5 million.

The urban renewal program has also been well received by the cities of our State.

On the national scale more than $1,871,-million has been spent for urban renewal programs with more than $67.7 million going to 21 cities in Tennessee for 31 urban renewal projects. President Kennedy in a recent message to the Congress called for acceleration of this program to help clear our cities of slums. He has requested an authorization of $2.5 billion to be used over the next 4 years. Since 1949 total expenditures for urban renewal projects have been $1.8 billion. The President's new program thus calls for a 30-percent increase in this field during the next 4 years.

This money is matching-fund money and will require the city and State combined to match available Federal funds for urban renewal projects.

Federal grants for airport construction in Tennessee have amounted to almost $15 million.

Thirty-one airports in our State have been built or partially built by Federal grants.

There are a number of uncompleted and planned other airport projects for Tennessee.

FAA's revised budget for 1962 calls for an appropriation of $75 million for an accelerated airport modernization and improvement program on a matching fund basis.

We in Tennessee are all familiar with and certainly proud of the work and contributions of the Tennessee Valley Authority.

One of the brighter aspects of the new Washington picture appears in the field of conservation and water resource development.

New long-range policies on water and power development and conservation are in the making.

The "no new starts" era has ended. The TVA spirit is soaring. The 1,000-mile-long Tennessee River with its many untapped and unused industrial sites should, in my view, be acquired and made ready for future industrial growth needs. Our cities and State should purchase these sites in cooperation with private industry and the TVA to insure requirements for the future.

The revised budget of the Corps of Engineers and the Bureau of Reclamation calls

for 57 new starts and the completion of 36 other great dams and reservoir projects throughout the Nation.

The Department of Agriculture's small watershed project program and the rural development program is encouraging and assisting some 200 such projects in 40 States, including 10 in Tennessee.

Many large-scale programs having an immense bearing on the future of our cities, towns, and rural areas are now before the Congress.

Today our cities are offered challenging opportunities for planning for future growth needs.

With initiative, imagination, and a spirit of cooperation and working together we can move forward to eliminate slums and depressed areas, revitalize underdeveloped areas, promote industry and employment, beautify our cities, raise the level of our community life and make our cities more prosperous and a better place in which to live throughout our beloved State.

Our future progress will depend, to a large degree, on the extent of cooperation we each give to our several levels of government. Each is interrelated to the other. All local, State, and Federal agencies are concerned for the common good and the promotion of health, education, safety, and welfare of all our citizens in Tennessee.

I find myself among old friends, those who are interested in public affairs and dedicated to public service. This makes it abundantly clear that our joint purposes will not falter nor fail for lack of local leadership.

I take from you increased purpose in our mutual task of community building. Best wishes as you go forward in community building.

Thank you very much.

Guidelines for the Peace Corps

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23, 1961

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an excellent review by Harry Pollak, AFL–CIO International representative, of the booklet entitled "An International Peace Corps—The Promise and Problems," written by Prof. Samuel P. Hayes, be printed in the Appendix of the RECORD.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

ROOTED IN PAST—PEACE CORPS STUDY SETS FORTH GUIDELINES

If there is to be a historian for the Peace Corps, a likely candidate could be Dr. Samuel P. Hayes, professor of economics at the University of Michigan.

His little book, "An International Peace Corps—The Promise and Problems," examines all aspects of the Peace Corps, its origin, its aims and purposes, and suggests ways it should operate.

While there is no question that such leaders as President John F. Kennedy, Senator HUBERT HUMPHREY, the late Senator Richard Neuberger, Representative HENRY REUSS and others gave the Peace Corps life and scope, it is important to remember, as Hayes emphasizes, that other imaginative and practical idealists saw a similar vision of the future in the miseries of the past.

The American philosopher, William James, at the turn of the century called for a moral equivalent of war in the form of an army which would conscript youth for useful social good and, in the process, send them back to society with healthier sympathies and soberer ideas.

Hayes has described the sweep of enthusiasm that engulfed the college campus following the introduction in Congress in early 1960 of the Reuss-Neuberger bills to provide a study of a point 4 Youth Corps. The public at large was also sympathetic to the idea. Hayes, as a good historian should, also credits some of American labor's early support for the Corps.

Hayes argues that the Peace Corps has a special role to play in providing middle manpower, such as teachers for the schools and technical institutes, surveyors, blueprint readers, data collectors, aids to foreign technical experts, to USIA, ICA, and other Government agencies. He is clear to the dangers of possible competition with nationals of the less-developed countries and warns the International Peace Corps should produce more jobs, not take away jobs. The volunteers should engage in work which nationals of the host country are unable to do. Nothing would give the Peace Corps a black eye faster than for idealistic young volunteers to flood into underdeveloped countries and be seen as taking away jobs which the nationals of those countries think they can and want to do. Quite the contrary, each * * * project should open up some opportunities to nationals right away, as counterparts or coworkers with Peace Corps volunteers."

These and many other facets of the Peace Corps are examined carefully and Hayes does not hesitate to give his own strong views.

He wants it internationalized, he favors a large operation and even calls for Peace Corps projects in the United States. Some of the points he makes are debatable or have been resolved by the establishment on March 1, 1961, on a temporary basis of the Peace Corps by Executive order of President Kennedy.

The emphasis on youth, for example, has been tempered by the call for older experienced hands as well. Many of these problems are still being discussed from every angle by a hard-working cadre of administrators and staff who burn night lights at Peace Corps headquarters in Washington.

This book helps to clarify thinking about the Peace Corps form and substance. Whatever the form, procedure or method finally worked out, Kennedy has set the tone in his belief that the goals of the program will not be reached quickly, that there are great obstacles ahead, but that the Peace Corps offers Americans an opportunity to take an active role in what he calls a long twilight struggle * * * a struggle against the common enemies of man: tyranny, poverty, disease, and war itself.

("An International Peace Corps—the Promice and Problems," Public Affairs Institute, Washington, D.C., $1.)

A Memorandum to Mr. Johnson

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1961

Mr. YOUNGER. Mr. Speaker the following is an editorial from the Hong Kong Standard of Monday, May 15, 1961, in the form of advice to our Vice President, Mr. Johnson:

[From the Hong Kong Standard, May 15, 1961]

A MEMORANDUM TO MR. JOHNSON

DEAR MR. VICE PRESIDENT: We, the people of Hong Kong, want to offer you our warm welcome—a welcome which may be somewhat different from receptions which you usually receive when you travel abroad as the Vice President of the richest and strongest country in the world.

We greet you with open arms, symbolic of our friendliness and goodwill, and not with upturned palms.

The warmth of our hospitality, we want you to know, is not kindled by our desire for American aid money or for American arms.

We want nothing from you except your friendship, your goodwill and your understanding. And in return, we want you to bring back to the United States the good neighborly greetings of our people.

Although your visit here is regrettably brief, we hope you will enjoy our city and the many splendored things it has to offer; we hope you will have the rare opportunity of relaxing during your arduous travels in the serenity of our orderliness.

We also hope that while you are with us, you will glean from the people you meet and the things you see some of the fascinating and uncommon features of our uncommon city.

Many of the salient aspects of the so-called Hong Kong story are familiar to you and to the world.

You know, for instance, that we have somehow contrived to live and make some notable civic progress despite the explosive pressure created by the unabated flow of refugees.

You have heard often that although we are Red China's nervous neighbor, we have managed to achieve a degree of tranquillity by learning to maintain a delicate equilibrium.

You have also heard that the people and the government of Hong Kong are proud of our unique record of self-help: that we take pride in our ability to tackle our own problems, to earn our own way, and to foster, in the meantime, some measure of social progress for our people.

All this may indeed sound easy the way we tell it.

But for a city our size, loaded with the dynamite of our political and population powder kegs, the job of safeguarding our livelihood and our freedom is a daily struggle of almost titanic proportions.

You saw when you arrived, Mr. Vice President, a clean, prosperous city. You saw the breathtaking view of our busy harbor.

But we can also show you the squalor of our refugee-packed tenements, the tears and sweat which mark our road to survival.

Our battle to stay alive is not dependent today on American financial assistance: we hope we shall never have to ask what we do not ourselves honestly earn.

But we do look to you and your country for your sympathetic understanding of our problems. We ask that you do not deny us our daily bowl of rice; that you do not snatch from us our opportunity to trade.

In your country, Mr. Vice President, an overwhelming pressure is being brought against your administration to curtail the import of Hong Kong's cotton textile goods, the major industrial product of our city.

If your Government should now bow to this pressure, it would not merely be a major blow to your country's long and ardent advocacy for freer world trade, but it would also crush Hong Kong's already precarious economy.

Nearly 40 percent of our factory workers are employed by our textile plants. Of our

total exports last year, 54 percent consisted of cotton textiles of one type or another—garments, cloth, gloves, toweling, and yarns.

These figures will give you some idea, Mr. Vice President, of the dependence of our economy on oversea textile markets. We must export to live; our livelihood rests on our ability to compete freely in the American and other oversea markets.

You have undoubtedly heard often your textile protectionists' charge that Hong Kong is the source of a monstrous threat to the American cotton industry and to the job security of American textile workers.

This charge is exaggerated and distorted.

Despite the sharp, even phenomenal, rise in recent years of our textile exports to the United States, our total capacity and our share of the American market are both lilliputian—in the same way as Hong Kong itself is lilliputian when compared with the size of your country.

We have today a total of 600 spindles, or about 2.5 percent of the total capacity of America's 24 million spindles.

If we put all our 600,000 spindles and 17,000 looms in 1 plant they would just about equal the total capacity of a single large textile mill in America.

Hong Kong's total installed capacity is also dwarfed by those of other exporting countries: Japan has 9 million spindles, India has 13 million spindles, the United Kingdom has an estimated 15 million spindles in operation at this moment.

These figures, we hope, will give you some idea of the potential size of our "threat."

Our portion of the American market is equally microscopic.

Last year, we sold a total of 86 million square yards of cloth to your country. This was about 0.8 percent of the total American production of 10,000 million square yards.

If we take into consideration Hong Kong's garment exports to America, the picture is not significantly changed.

Last year, America imported cotton garments equaling in yardage to a total of 400 million square yards.

This means that the grand total of all cotton goods imports into the United States in 1960—cloth, cotton garments, and all other types of made-up goods—came to 9 percent of America's aggregate production.

And Hong Kong's total share in this was 2.5 percent in terms of American production.

You can see, Mr. Vice President, from this presentation of your Department of Commerce statistics that our share of your market cannot be a threat to your industry; it is a flea bite.

If we volunteered today to close down every singe one of Hong Kong's textile mills, weaving sheds, and garment factories, the depressed state of your textile industry would not be materially improved.

The cruel fact that the textile industry in your country is in a state of decline is the result of many longstanding and complex factors.

A protectionist policy of quotas and import restrictions would not save the industry; they would merely make your textile factories progressively less competitive and increasingly less economical in relation with manufacturers in other countries.

And in the end, your consumers would suffer: they would have to pay higher prices for shirts, sheets, blouses, and overalls.

To solve the critical problem facing your textile industry and to meet the pressure of the protectionists, your President Kennedy made a statesmanlike approach in his recent seven-point proposal.

He called for various domestic measures of assistance, and in addition he proposed an international conference of textile importing and exporting countries so that a fair and constructive solution can be evolved.

The people of Hong Kong, Mr. Vice President, applaud your President's proposal and we hope that your Government will follow through with your positive approach.

We hope that your proposal for an international textile conference was motivated by your desire to combat economic nationalism—that you would not use it to institute protectionism.

We feel that your country's position of international leadership would be irreparably compromised if the international conference which President Kennedy proposed should be used as a deceptive device to impose import restrictions under the guise of voluntary quotas, thus barring the struggling nations from your market.

Needed: Stronger Effort To Halt Expansion of Communism

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23, 1961

Mr. WILEY. Mr. President, today, the free world is, as it should be, reexamining its policies designed to halt the outspreading of communism.

In Laos, Cuba, Vietnam, and elsewhere, we are witnessing the devious tactics employed by the Communists.

Over the weekend, I was privileged to discuss the situation over radio station WGN, Chicago.

During the address, I reviewed some possible ways in which we might strengthen our policies to halt Red aggression.

I ask unanimous consent to have the text of the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF SENATOR WILEY'S ADDRESS OVER RADIO STATION WGN

Around the globe the Communists are engaging in a powerful offensive to further their aims of world conquest. They control about one-third, or nearly 1 billion, of the people of the world.

In Laos and Cuba, the Reds are strengthening their grip on the reins of government.

Will Thailand, Vietnam, Cambodia be next?

How long can the non-Communist nations permit this gobbling up, piece by piece, of more people and territory?

If this expansion continues, the scale of world power, and voting strength in the United Nations will eventually tip toward the Reds. We must not forget Mr. Khrushchev's threat to bury us.

Now what can be done?

We must "stiffen our backbone."

We must take a new look at Communist aggressions, particularly their success, and determine how to cope with the Red offensives.

Should we adopt Monroe Doctrine type policies with our allies for areas like southeast Asia? What would be involved? The following steps:

Determine a defensible line against Red aggression;

Provide forces capable of stopping the Communists at that line;

Warn the Reds that if they commit aggression against such territories, either political, military, or economic, they can expect to pay a price, war;

Develop a capability for more effectively fighting brush-fire wars;

Increase the capability of NATO, SEATO, CENTO and ANZUS to expand political, so-social and economic efforts to strengthen the free world and assist noncommitted nations to ward off the attempted inroads by the Reds;

Finally, but most important, create a more effective nonmilitary counteroffensive involving (1) designing blueprints for freedom for the nations of the world to counter communistic blueprints for takeover; (2) more strongly challenge the Reds' control of subjugated people behind the Iron and Bamboo Curtains; and (3) engage in a more effective political, economic, social, cultural offensive on all fronts.

Regrettably, the free world alliances, including SEATO, have not yet developed the kind of firm, strong policy that would evoke confidence for example of the southeast Asia nations in warding off the Red offensive. Currently, countries such as Thailand are reportedly toying with the idea of adopting a "neutralist" policy.

To me, this is untenable. Why? Because a small nation, in my judgment, by itself cannot repel the concerted military, economic, political, social pressures which the Communists will be concentrating for a takeover. For the Reds, a declaration of neutralism is a sign of "open hunting season."

While India, a large country, has been able to maintain a policy of relative neutralism, she has stiffened her backbone.

In the East-West contest, the Reds have been substantially helped by lack of realistic workable plans of the West for the triumph of freedom.

In Laos, let's face it, the Reds have the upper hand.

* * * * *

While we are talking about Laos and Cuba and South America, don't forget to keep our powder dry and our eyes also focused on Berlin and the rest of the world.

Hope for Our Migrant Workers

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1961

Mr. MACHROWICZ. Mr. Speaker, just as our Nation faces great challenges abroad, so it faces great challenges here at home. The two areas, foreign, and domestic, are closely related, and problems in one area often affect problems in the other. One important result of such a relationship is that before we can expect people in other lands to have faith in our way of life, we must show them that we continue to live up to our own ideals here at home. In this regard, one of our most serious domestic problems is the condition of our domestic migratory farmworkers, who live and die with little or no opportunity, as forgotten people.

It is encouraging to note that the New Leader, published weekly by the American Conference on International Affairs and devoted to an analysis of international problems, recognizes the importance of domestic issues to foreign affairs through its editorial column, "On the Home Front," by William E. Bohn.

In the May 9, 1961, issue of the New Leader, Mr. Bohn's column was entitled, "Hope for our Migrant Workers." It discussed succinctly the long unsolved migratory farmworker problem and the timely legislative headway that has been made in meeting this problem by Senator HARRISON A. WILLIAMS, JR., and the Subcommittee on Migratory Labor, of which he is chairman. Mr. Bohn noted that:

Last week in Washington, I discovered that relief is in sight * * * for the poor devils who are forced to make their living on the road. * * * Senator HARRISON A. WILLIAMS, Jr., Democrat, of New Jersey, had brought together in a hearing room a group of Government officials and experts to see what could be done about these forgotten people * * * and he's the sort of person who starts things and keeps them going.

Senator WILLIAMS is indeed this sort of person, and his careful legislative efforts to bring equitable solutions to the workers, farmers, and communities affected by this problem deserve the support of us all.

I ask unanimous consent, Mr. Speaker, to include Mr. Bohn's editorial in the RECORD at this point:

HOPE FOR OUR MIGRANT WORKERS

(By William E. Bohn)

One day, some years ago, my wife and I were driving along the roads of Delaware. I don't even remember where we were or what highway we were on, but I do recall that it was a lovely summer day. The birds were singing and gaily tinted flowers bloomed on all sides. Edith and I were in a jolly mood, telling stories and recalling our childhood days. We were driving slowly, taking in every little thing.

And then, suddenly, there they were, lined up behind a wire fence so close to us that we could almost have reached out and touched them. The group included a few slatternly, skinny and discouraged-looking women: I suppose they had remained in the camp to care for the children while the husbands and older youths worked in the orchards and fields. But most of them were children. They weren't laughing, or talking, or running, or playing games. They just stood there in ragged and skimpy clothes, their sad eyes telling the story of their lives. The eyes followed us solemnly as our car slowly rolled along. Then, as suddenly as it began, the exhibition of misery ended and we were left breathless.

"Oh," we said, "migrant workers—it's too bad." I suppose the whole thing didn't take more than a minute, but in all the years since then I have never forgotten those people. I think of them at night as I am going to sleep or they come to me when we are particularly happy riding through this blooming and fruitful land. I never feel safe from the possibility of again seeing such a group. And I say to myself, "Who has a right to be happy when so many fellow citizens are so drearily miserable?"

Last week in Washington, I discovered that relief is in sight both for the poor devils who are forced to make their living on the road and for fellows like me who have this thing on their consciences and have never known what to do about it. Senator HARRISON A. WILLIAMS, JR., Democrat of New Jersey, had brought together in a hearing room a group of Government officials and experts to see what could be done about these forgotten people.

WILLIAMS is chairman of the Subcommittee on Migratory Labor, and he's the sort of person who starts things and keeps them going. He was elected to the Senate in 1958, and his energy and intelligence have already made a substantial impression. He seems to have a special gift for getting hold of the right people and making them pull together. In this hearing room were 30 to 40 men and women who have been battling with the problem for the last two decades.

All together there are more than 1 million migrant workers in this country. In the East, many come from Puerto Rico and other West Indian islands, but most of them are southerners. Out West, most come from Mexico. It ought to make us blush for shame that foreigners are treated better than our own people. They have their governments behind them, while our people have nobody to protect them on a regular basis. These people are vastly different in character, education, habits and the conditions under which they travel and live.

They speak numerous languages; many of them know little English; most of them can't read or write. They live, for the most part, in miserable shacks and know little about health or sanitation.

The farmers who hire migrant workers need them. Our economic system requires their labor. But nobody wants them around. They stay in one place only a few weeks at a time, and they are generally not accepted anywhere—not even in church. To be sure, there are some places where Christianity still survives in this country: There are villages and towns where churchwomen have done wonders, but the effects of their work don't last long. If reform had depended upon me, I should have been tempted to say: "I can't do a thing; let it ride; in time we shall get better machines and get along without these migrants."

But Senator WILLIAMS has gathered around him social workers with stout hearts and long experience. He has worked out a program of 11 bills designed to have the Federal Government attack this evil. Many States have already attempted some relief. But States must compete in selling their farmers' crops, so they naturally hold back in passing legislation. The main impetus must come from Washington.

The Department of Labor is to spearhead the effort with the Secretary of Health, Education, and Welfare helping in areas which fall under his competence. The proposed laws cover education, housing, health, transportation, and other aspects of a very complicated set of problems. Almost every witness who appeared before Senator WILLIAMS' committee had some suggestion to make and the chairman listened respectfully and asked questions about every item which seemed to have any value. When these measures are enacted—and some of them will be enacted—they will be the results of the joint labor of countless experts who gave the subcommittee the benefit of their experience.

Education First, Then Independence Says African Here

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, May 23, 1961

Mr. ANDERSON. Mr. President, no one will deny that the greatest hindrance to many of the depressed and enslaved countries of the world is a lack of educated leaders. In most cases, this is no reflection on the countries themselves for they have done the best they could under the circumstances. We have a great obligation to sell democracy to these underdeveloped and underprivileged countries. It can best be done by providing them with educated leaders. Many times a need as important as this is greatly emphasized by visits by individuals from some of these countries.

I have just received a fine letter from Mr. Lewis A. Phillips, of Carlsbad, N. Mex., enclosing a story from the Carlsbad Current-Argus about the visit of Trevor Mbozi, a 28-year-old African from Northern Rhodesia, who is here under a Fulbright exchange scholarship. Mr. Phillips also enclosed an editorial from the Carlsbad Current-Argus of May 14, 1961.

I ask unanimous consent to have Mr. Phillips' letter, the news story and the editorial printed in the Appendix of the RECORD.

There being no objection, the letter, news story, and editorial were ordered to be printed in the RECORD, as follows:

CARLSBAD, N. MEX.,
May 15, 1961.

Hon. CLINTON P. ANDERSON,
Senator, State of New Mexico,
Washington, D.C.

DEAR SENATOR ANDERSON: After reading a recent article in our Carlsbad newspaper, I am wondering if we are spending our dollars for peace and continuation of the American way in the most effective way. The enclosed article concerns a visit by Mr. Trevor Mbozi, a native of Northern Rhodesia, to our local mining operation. The item that is of primary interest to me is he is one of only seven natives in his country who hold master's degrees. Seven in a country twice the size of New Mexico.

It seems to me that the educated of today will be the leaders of tomorrow. If this is true then it would appear that whichever system, capitalism or communism, trains the most educators and leaders of a newly emerging country the greater the probability of that system prevailing. An example of the power and influence of the young educated is in the leadership of the Hungarian and first Cuban revolutions.

Russia has special universities in which they are educating, in mass, Africans and Asians in their native languages. Our answer to this is Fulbright scholarships. This is noble but appears to me to be woefully inadequate. This inadequacy has manifested itself today in Cuba, Laos, Belgian Congo, and Egypt. Tomorrow it may be all the countries of southeast Asia and many of the new countries in Africa. To date, our answer to this problem has been not to recognize it.

What would be the influence of returning 100 to 200 educated natives each year to each of the countries of Africa? This question has no answer. However, I feel that we would have a great many fewer worries today if we had inaugurated a foreign education program of this magnitude in say 1946. Imagine the impact and influence of 1,500 to 3,000 U.S.-educated natives in the Congo, in Algeria, in Nigeria. Let us not let history repeat itself. We have entered a long struggle in which education and economic well being may be deciding factors in the competition between communism and capitalism. I would suggest that we immediately launch a "crash program" in quantity of students and quality of education to provide tomorrow's leaders in capitalism.

What about the cost? Tuition in many of our land-grant colleges runs about $100 per semester. Could not some program be arranged whereby the Federal Government need pay only the equivalent of resident

tuition fees for foreign students? Travel and living expenses would then provide the bulk of expenditures. A ball park guess at a 5-year education might be $2,500 per year per student. Total annual cost for 200 students from each of 30-odd African countries would approximate $15 million. Asia and South America could be included if the pricetag was set at $30 to $40 million. In today's budget of billions, this would be the best investment possible.

This education in numbers, in addition to scholarship programs now in effect, will get the American story firsthand to our foreign friends. Word of mouth (by natives) is the best possible advertising of our way of life.

This letter has been long but my convictions are longer. I hope that some way, somehow, you might see fit to initiate action in the immediate future to make such a program possible. May God be our guide.

Very truly yours,

LEWIS A. PHILLIPS.

[From the Carlsbad (N. Mex.) Current-Argus, May 14, 1961]

DESERVES STUDY

A number of Carlsbad business and civic leaders late in the week got a good, close-up look at the battle for men's minds in the ideological world struggle.

A young native of Northern Rhodesia visited Carlsbad. He was a guest of a local potash company, whose parent company has interests in copper mining in Northern Rhodesia.

The young visitor is an official of one of the copper mining operations in his native country, and while in this country is familiarizing himself with various mining operations.

Young Trevor Mbozi, somewhat shy, was a little overwhelmed at the reception he received in Carlsbad.

He is well educated, having studied in this country for the past 2 years under a Fulbright scholarship. He is one of seven natives of Northern Rhodesia to hold a master's degree.

Obviously, he is destined for greater things in his home country, providing he is not caught up in a political maelstrom during and following the country's process of securing its final independence from Britain.

He has been impressed with America and the free enterprise system. He said he personally favors the free enterprise system, but foresees the need of some government control and regulations in developing his own nation. That is undertsandable, up to a point.

Young Mbozi frankly admitted that after seeing America, he wants to see and study the Soviet system. That, too, is understandable, as far as the study for the purpose of comparing the two systems is concerned.

One disturbing point in his presentation was his impression with the progress made by the Russians since the Bolshevist revolution in 1917.

Now, the question is, has this country in which he was provided a scholarship, given him the type of education that showed him the true advantages of a free enterprise system over a Communist State? Are other foreign students in our institutions of higher learning getting "the full treatment" they should?

If we do not sell those future leaders of now underdeveloped countries on our system, the road is going to be a lot rougher in the years ahead. On the other hand, if we are doing everything we can, and it is to no avail, are we justified in providing such educational opportunitits to them?

It's food for thought.

EDUCATION FIRST, THEN INDEPENDENCE, SAYS, AFRICAN HERE

"Political independence coming after nearly a century of colonialism is heady stuff and must be tempered with considerable caution and careful preparation."

So spoke a visitor to Carlsbad this past week, here for a firsthand view of potash mining operations as a part of his 2 years of study in the United States under a Fulbright exchange scholarship.

The visitor was Trevor Mbozi, a 28-year-old African from Northern Rhodesia. He left Carlsbad Saturday for a brief visit to some mining operations in Colorado. Next month, a master's degree in industrial and personnel relations from the University of Indiana to show for his 2 years in the United States of America, Mbozi returns to his native land and, he hopes, a career in the thriving mining industry there and, eventually, a place in "our own government."

Mbozi, he pronounces it "Boyzee" has been impressed by what he has seen and experienced in the United States. And he is appreciative of the opportunity granted him under terms of the Fulbright program. Much of what he has seen lived up to his expectations; some of it did not. Other experiences and observations left some deep questions in his mind as regards the actual workings of a capitalistic democracy.

Mbozi comes from a country which has been a part of the British empire since 1889, although British influence there predates that time by more than a quarter of a century. His homeland, more than twice the size of New Mexico, shares a common border with one of the Congo provinces much in the news at the moment, Katanga.

CONGO WATCHED

What has happened in the Congo—the political upheaval following independence from Belgian rule—has held Mbozi's interest throughout most of the 2 years he has been in America.

"Obviously," he says in his clipped British accent, "the Congolese were not adequately prepared for independence."

To the question, "Is Northern Rhodesia ready for independence?" Mbozi had a ready "No."

"I say 'no' simply because too many of our 3 million African population have not had the education to prepare them for independence."

"Our people, naturally, want to achieve political independence, but I am sure, when it comes, it will be achieved in an orderly sort of way. Too, I'm equally sure we shall choose to remain within the British commonwealth of nations."

The slender young African readily admits that he is one of the favored few among his people—favored by the fact that both his father and mother were educated people. His father, now dead, was a schoolteacher, hence young Mbozi, and later a sister, were eligible to receive an education.

"There is no such thing as universal education in Northern Rhodesia," he explained.

"That is something we and the British are striving for and we hope to achieve it by 1965. But right now there simply aren't enough schools nor enough teachers. The result is a screening of applicants. Those from educated families have the priority; those without family connections, government positions, or some wealth simply don't get a chance to go to school."

The obvious result: More than 50 percent of the Africans remain illiterate.

PRAISE FOR BRITISH

Overall, Mbozi believes the British have done a good job in administering Northern Rhodesia, especially since 1950.

"When it became apparent that colonialism, as practiced for generations before, simply could not endure much longer, the British accepted the fact. They began preparing us for the day when we could stand on our own feet, politically and economically."

Has communism been able to make much headway among Rhodesia's 3 million Africans?

"No. The British have been firm on that score. Known or suspected Communists, always Europeans or Asians, have been quietly deported. The rank-and-file of my people probably don't know even the word 'communism.'"

Has the educated class of Africans shown any interest in communism?

"In an academic way, yes. We study about it at the college and university level," Mbozi replied.

Would you like to go to Russia, he was asked.

"Yes, I think so," was his reply. "I'd like to spend some time there to study the other major economic-political system and compare it with the capitalistic system. But I must hasten to add that I don't think I'd like to live under a Communist form of government, nor do I think that that type of government would serve my country and its people."

In a limited way, native Africans have a strong voice in the Rhodesian Government now. Each passing year, Mbozi said, "the African voice grows stronger, its influence greater."

VOTING UNIVERSAL

The right to vote is universal, but with a catch: Two voting registration rolls are maintained. Roll A is for Europeans and those Africans who own property, work for the government or who possess a certain amount of education. Roll B is a registration for all other males and females over 21 years of age.

Mbozi explained how the system works: "It takes three B votes to equal one A vote."

A voter on the B roll can move up to an A status by acquiring property, by marrying an A registrant, or by examination establishing a satisfactory educational level.

Political parties, contrary to Western conception, are not drawn on the color line.

"An African political party may include Europeans, or a predominately European party may include Africans," he explained.

During his 2 years in the United States of America, Mbozi has had the opportunity to travel rather extensively. Much of what he has seen has impressed him.

"The vitality, the energy of this country is truly amazing," is his observation.

ONE SOUR NOTE

One sour note in his memory of travels: In one of the Deep South States he encountered Jim Crow laws. He didn't like it, although he had been briefed on local custom.

The American Negro, Mbozi said, "is fortunate in some ways, unfortunate in others. His color identifies him as a member of a minority group, his historic background of one-time slavery marks him with a complex. He finds it difficult to overcome custom and attitudes that tend to frustrate him."

Mbozi admits he found it difficult to "break the ice" with American Negroes with whom he came in contact.

"They regard me with some suspicion, perhaps because of my British accent," he observed with some humor.

"And I wasn't sure, talking with them, whether they would resent questions I felt I had to ask."

On the whole, though, Mbozi found most American Negroes warm and friendly once

the normal barriers that exist between strangers had been broken down.

"They are deeply conscious of their ethnic origins and I think they take pride in the fact that Africans of their own racial group are becoming independent and taking their place as equal partners at the political table. They interpret this development as an assist to their own aspirations within the framework of America's democratic institutions."

H.R. 591 Prohibits Unjust Discrimination in Employment Because of Age and Should Be Enacted Into Law

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. VAN ZANDT. Mr. Speaker, for the past several years legislation was introduced in Congress in an effort to assist older persons in securing employment. The subject of providing employment opportunities to persons over 40 years of age has become a problem of national importance and concern.

During the 85th Congress I introduced a bill to prohibit unjust discrimination in employment because of age. The bill was reintroduced in the 86th and 87th Congresses and is now known as H.R. 591. It is pending before the House Committee on Education and Labor.

Because of the widespread reluctance to employ persons over 40 years of age, 4 years ago the Fraternal Order of Eagles, of which I am a member launched a spirited and determined campaign to awaken this Nation to the imperative need for promoting a more rational attitude toward our aging population.

The Eagles' campaign known as "Jobs after 40" is directed by the Grand Aerie of the Fraternal Order of Eagles and is participated in by all lodges in the United States commonly referred to as local Aeries. My membership is maintained in Aerie No. 286 in my hometown of Altoona, Pa.

The long and proud history of the Fraternal Order of Eagles is replete with the organization's dedicated efforts to improve the health and welfare of all Americans and in particular the Nation's wage earners and their families.

Such legislative milestones as America's first workmen's compensation law in 1908 and the first mother's pension law in 1911 were due in a large measure to the efforts of the Fraternal Order of Eagles. The organization also played a leading role in advocating enactment in 1923 of the old-age pension law and the Social Security Act in 1935 with its subsequent amendments extending coverage and increasing benefits.

It was due to the widespread effect of the "Jobs after 40" campaign of the Fraternal Order of Eagles that public attention was focused on the compelling need for legislation prohibiting unjust discrimination in employment because of age. Four years ago, as a result of studying the facts and figures presented on the subject I was convinced of the need of legislation and sponsored my first bill in the 85th Congress.

The Fraternal Order of Eagles through the Eagle magazine has continued to keep the spotlight of publicity on the urgent need for legislation to end the existing unjust discrimination in the employment of persons over 40 years of age.

We are all familiar with the term "old age," but we would do well to familiarize ourselves with the term "economic old age." It is not a new term, merely one that has received very little attention. By "economic old age," I mean the problem a worker faces when he passes his 40th birthday, and for some reason has to seek employment. Unfortunately we have reached a point where many employers judge a man's ability not by his previous work experience, or his capability, or his desire to work, but by his chronological age.

Some progress has been made in showing the shortsightedness of this type of thinking. Various groups and individuals have concerned themselves with the problem of economic old age. The Congress has held hearings on the problems of the aged, and the effects of continued unemployment upon the older worker. Recently several States have enacted legislation to prevent job discrimination caused by age. We cannot, however, expect the State governments and private businesses to act if the Federal Government merely talks piously about the problem and fails to act. I feel that it is imperative that the Congress demonstrate in an affirmative manner their interest in this problem.

For that reason I am appealing for action on H.R. 591. My bill H.R. 591 entitled the "National Act Against Age Discrimination in Employment" would eliminate age discrimination for all of the Nation's employees within the limits prescribed by the Federal Constitution. It is fully realized that H.R. 591 will not be a panacea for all situations where unjust discrimination because of age exists. We can, however, by enacting H.R. 591, make great strides toward combating this wasteful practice.

It is my belief that my bill should be of particular interest to the Congress, because I would safely venture to guess that the great majority of us would be considered to be economically old. Yet I am sure that none of us feel that because we have celebrated a 40th birthday we are incapable of serving our constituents and our Nation. If political old age and economic old age were synonymous this great body would be sadly depleted.

We are all familiar with the story of the middle-aged worker with children still in school—who, suddenly, because of technological unemployment, factory relocation, or structural unemployment, finds himself without a job. What recourse does he have? Only one: he must seek new employment if he intends to continue to meet his financial obligations. However, compared with the younger worker the odds are greatly against his getting new employment either as quickly or at a salary that will compare with his last job, and the major reason—age. To reiterate what was said earlier—it does not seem to matter what the individual's previous experience was, or what ability he has, or that he desires to work—these are seldom taken into consideration—what really counts is the arbitrary yardstick—chronological age.

We can see what a serious economic problem this has become and will pose in the future by the fact that today out of a labor force of 73 million the age group 40 to 65 is the fastest growing segment of our population.

The question most frequently raised is, Why cannot these individuals obtain new employment as easily as the younger worker? The answer is because of prejudice and ignorance—ignorance of the true facts, and a reliance on medieval concepts and beliefs about older workers. Many firms and individuals are still convinced that older workers are more accident prone, that their absenteeism is higher, that because of age they are less productive, and also that they are more apt to leave their jobs to seek new employment. The cost and restrictions of industrial health and pension plans are often given as further justification for a hiring age limit.

Let us examine these archaic concepts in the light of modern fact. The Special Senate Committee on Unemployment Problems of the 86th Congress, reported in their findings, by both the majority and minority, that older workers have fewer accidents, that absenteeism decreases proportionately with age, and that these workers seek new jobs less frequently than younger workers. Perhaps they may not be as strong physically as the younger worker, yet their experience and training make them a more valuable asset. As to the allegation that the cost of health and pension plans greatly increases for the older workers, the same special Senate committee reported that the overall difference may be minor as a part of the total employment cost. Thus in the overall picture these so-called arguments appear to carry very little weight.

Frankly, it is time for action by Congress in approving legislation that will dispel once and for all the fallacious concepts that encompass the older worker. My bill H.R. 591 does not give the older worker an unfair advantage over his younger fellow employee; it merely attempts to make him an equal.

We all remember the Biblical quotation "render unto Caesar the things that are Caesar's and unto God the things that are God's." Now is the time to render unto the older worker the things that are rightfully his—an equal opportunity for employment.

Many years ago a great English statesman, Benjamin Disraeli, Earl of Beaconsfield, said "Let us hope that the heritage of old age is not despair." I am sure if alive today he would join all of us in saying "Let us hope that the heritage of economic old age is not despair." We can avert the continued despair of persons over 40 years of age by enacting H.R. 591, thus curbing an employment policy based on age that is highly discriminatory, economically wasteful, socially harmful, and morally wrong.

Federal Tax Liens: Association-Sponsored Bills Reintroduced

EXTENSION OF REMARKS
OF
HON. JOHN W. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1961

Mr. JOHN W. DAVIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and the article from the American Bar Journal which is enclosed. This very excellent statement of my longtime and respected friend, George P. Shaw, coupled with the penetrating article by William T. Plumb, Jr., of the District of Columbia Bar, brings into sharp focus a situation that urgently demands the attention of this body.

The letter and article follow:

Hon. JOHN W. DAVIS,
Congressman, Seventh District, Georgia,
House of Representatives,
Washington, D.C.

DEAR JOHN: I enclose herewith an article appearing in the American Bar Association Journal issue of May 1961. You may find it of interest.

I have been fretting about Federal tax liens since I discovered several years ago that upon sale of the LaFayette cotton mills to a new corporation, the mill was unable to operate and LaFayette was deprived of its payroll for more than 1 year. The mill was sold upon foreclosure of a security deed which was executed several years prior to the record of a Federal tax lien for income taxes which accrued a comparatively short time and for which the lien was recorded only a very short time before the sale and after default upon the security deed. The property brought more at the sale under the security deed than it was perhaps worth, certainly more than should have been expected at a forced sale. But the United States had the right to levy its tax lien, even after sale under the security deed, resell the property at auction and apply the proceeds of that sale first to payment of the security deed holder, or our purchaser, then to Federal taxes.

Under this situation, we could not safely reopen the mill at an expense of some $20,000, being faced with the possibility that operations might have to cease upon levy of the Federal lien. Although the Government could have possibly not expected to recover anything to apply upon taxes, the tax collectors were placed in the position of being able to say "we refuse to make any move now, but you are threatened that we may do so at any time within the Statute of Limitations unless you, who owe us nothing, pay a sum of money to the United States". After a year's negotiations, we finally made "a gift" of $5,000 to the United States to cancel its lien.

Not only that, but prior to failure of the LaFayette cotton mills, and contributing to its failure and local loss of its payroll, was the filing of a Federal lien, subsequently canceled, which not only covered the property in existence but as a lien upon future products of the mill made it impossible to factor the mill's product and raw materials could not be obtained to turn into cloth. We argued, release the product of the mill from your lien, you will lose nothing because there is nothing now there, you will gain, because the mill in operation is worth more to your lien than a mill standing idle and deteriorating. It was no use, the mill shut down. Yet, as I have stated, many months later the tax lien was canceled.

The referee in bankruptcy has been complaining for years that the Federal Government often fails to assert its claims in bankruptcy cases. We lawyers, sometimes forgetting the Federal tax lien, none being of record nor any notice thereof available, liens of which even the bankrupt has no knowledge, are not discharged by bankruptcy. I remember an instance where the bankrupt estate was more than sufficient to pay all Federal taxes and still pay a good dividend to all creditors. Where the district collector failed to asset his claim in the Bankruptcy Court and it was only with some difficulty that I was able to get the Federal taxes paid and thereby save my client from an uncharged tax lien which would have dogged his life even though he expected a fresh start through bankruptcy. And remember that in such cases it can happen, and does, although there is more than enough to pay the Federal tax.

I sincerely hope that I have not unduly burdened you with this additional reading material, for I know that you have more than your share to read.

Please do not feel that it is necessary to respond to my occasional letters upon various subjects. I know that you will give them due consideration without burdening you with a reply.

Yours very truly,

GEORGE P. SHAW.

FEDERAL TAX LIENS: ASSOCIATION-SPONSORED BILLS REINTRODUCED

(By William T. Plumb, Jr., of the District of Columbia Bar)

Henry Lawyer is angry He has just been through a very difficult and time-consuming lawsuit for a client and has recovered a handsome judgment. He had looked forward to collecing a good fee for his efforts. State law protected him with a charging lien on the recovery, but he had made doubly sure by taking a partial assignment of the cause of action at the time he accepted the case. Today, however, he learned that while the case was pending a Federal tax assessment had been made against his client, and the Government proposes to take the entire proceeds of the judgment, in preference to the claim of the lawyer whose efforts brought the fund into existence. Henry looked up the law, and found that (at least under the more recent decisions) his charging lien is ineffective against subsequent Federal tax liens. His assignment, on the other hand, might have prevailed, if only he had completed his work before the Federal tax was assessed and became a lien. But even an express assignment is vulnerable until the case is completed, because the assignment is regarded as inchoate as long as the recovery on the assigned right of action is uncertain and the attorney has not furnished the full consideration for the assignment (his services)—and inchoateness is a fatal condition for those competing with after-arising Federal liens.

Henry takes some comfort in an intermediate State court's decision allowing the attorney priority (where he has an assignment and not merely a lien) to the extent of the value of his services performed to the date of the filing of notice of the Federal tax lien; the assignment becomes choate by degrees as the consideration is furnished. Thus, under that decision, all the lawyer needs to do to protect himself is (a) to take an assignment of an interest in the client's claim, rather than relying on his charging lien; and (b) to check the Federal tax lien records before and during each major effort on the case so that he may know the point beyond which his work will not be paid for. That may not be a wholly satisfactory solution, however, since (a) many causes of action are not assignable and (b) knowledge that a lien has moved in ahead of the recompense for his further efforts may not protect him when he must complete the case or risk collecting nothing for what he has already done.

MECHANIC'S LIENS SUBJECT TO THE SAME FATE

But why should lawyers complain? As one court has aptly pointed out, Henry Lawyer is no worse off than his client, John Contractor. Relying on his mechanic's lien rights, John erected a building on some land, the title to which was perfectly clear. Then the property owner got into Federal tax trouble and also defaulted in paying for the work. John filed a timely mechanic's lien and commenced timely action to foreclose it, even before the United States assessed its tax claim and established a lien. But the building John erected was sold to pay the tax claim, and John went unpaid. As John's lawyer, Henry hesitates to explain to John, in the words of a supporter of the Government's position, that John's loss was his own fault (or Henry's) because it simply was not sound business for John to rely for his security on a statutory lien, when any prudent businessman may provide by foresight for security by contract. John doubtless would reject that explanation for he knows as well as Henry that State legislatures have unanimously recognized for a century that it is not practicable to protect contractors, labor, and material men by having them take a mortgage, and that reliance on an efficient statutory substitute is essential. Further, if John had taken a mortgage, it might equally have been subject to attack as inchoate until the work was completed.

John's friend, Harry Subcontractor, is today better off than John, although it is no thanks to the Federal tax litigators. If the tax collectors had had their way, Harry would also have gone unpaid if the prime contractor had become delinquent in his own Federal taxes. Happily, the Supreme Court found a technical legal distinction which spared Harry. Whereas John was held to have no property right in the building he had erected so that his mechanic's lien was vulnerable to later liens for the owner's Federal taxes, the property theory was turned in Harry's favor. On the ground that the delinquent prime contractor has not earned the right to be paid by the owner, so long as unpaid subcontractors may have a lien or other direct right against the owner, the Supreme Court found that there was no property to which the lien for the prime contractor's taxes could attach. Hence, the retained contract proceeds are available to the subcontractors. For this favor, Harry is duly grateful.

THE TROUBLES OF ELMER BANKER

Another client, Elmer Banker, like others whose business is moneylending, is complaining bitterly that he is misused. He granted an open line of credit to Joe Storekeeper, who pledged his inventories and accounts receivable to secure advances to be made under the agreement. Elmer complied with all the requirements of State law, under which the bank was entitled to continue making advances, without constantly searching the lien records, until it was actually notified of an intervening lien. But Joe fell behind in his Federal taxes and a tax lien was filed, unknown to the bank, which went merrily on financing Joe's operations. Elmer is quite upset to learn that the bank is subordinate to the intervening Federal lien. He is the more disturbed when Henry tells him that the mortgage department confronts a similar problem in loaning on open-end mortgages, and to be safe it must make a new search for Federal tax liens before each advance.

Elmer's choler rises when Henry also tells him how insecure is the security of a loan he made to John Contractor to enable John to perform a construction contract. The bank took an assignment of the moneys to become due under the contract, an as-

signment that was perfectly good under the law of the State. Yet Henry has to advise Elmer that, if John should lose his shirt, leaving Federal taxes unpaid (whether or not the taxes arise out of the job, and whether or not they were incurred subsequent to the assignment), his assignment is subordinate to the Federal tax liens, which will be satisfied out of the proceeds of the job in preference to the bank. How can that possibly be, Elmer asks, when the bank obtained a valid assignment for a full present consideration, at a time when there were no Federal liens of record? Are not secured lenders—"mortgagees" and "pledgees"—expressly protected by Federal law against Federal tax liens which are not of record when the loan is made? Henry patiently explains to Elmer that the courts hold that only those security interests which are "choate" are intended to be protected, and that an assignment of the proceeds of an executory contract creates an inchoate interest so far as Federal law is concerned. He soothes Elmer hardly at all by explaining that, if his bank were in Pennsylvania, New Jersey, or Delaware, he could take comfort in the view of the court of appeals for the third circuit that one who finances a transaction by which property is produced should be entitled to look for his security to the acquisition he makes possible, and that the tax lien would defeat its purpose if it impeded the assignment of future earnings to secure the loan of funds needed to produce the earnings.

Elmer still pursues Henry with his complaints. Recently Elmer's bank foreclosed on a mortgage. Since real estate taxes were preferred over the mortgage, under State law, the bank paid them in order to protect its interest. As provided in the mortgage, the bank added the property taxes and also its legal expenses of foreclosure to the mortgage debt. But, in the interim since the mortgage was recorded, a Federal tax lien had arisen. And the court ruled that the bank's contractual right to add the taxes and expenses to the debt secured by the prior mortgage, even though the outlay was essential to the preservation and enforcement of the security, was inchoate and subordinate to the intervening Federal lien.

Elmer, who seems to be a chronic complainer, brings up another case in which the bank made a personal loan to a customer with an agreement that, in the event of a levy upon the customer's bank account, the bank should have a right to set off the debt against the account. But when the Federal tax collector levied and the bank sought to exercise the right of set-off, the court allowed the Government to recover the full amount on deposit, holding that the right of setoff was inchoate and ineffective against the Federal lien.

THE SAD CASE OF SAM SURETY

Henry sends gloomy Elmer on his way because he has an appointment with Sam Surety. Like Harry Subcontractor, Sam has been able to view Federal liens with some detachment because his company has fared rather well. The surety is able to reach the contract proceeds withheld by the owner, in preference to Federal tax liens against the prime contractor, because the contractor, being in default on the contract, has no right in such proceeds to which the Federal lien can attach. This time, however, Sam tells Henry the proceeds withheld will not cover the surety's loss. Nevertheless, Sam is not concerned, for his company provided against that danger by taking an assignment of the proceeds of other contracts which the contractor has now fully performed. The assignment antedates the existence of any Federal liens, although the liens arose before the surety made payment on the bond. Sadly, Henry tells Sam that he has no case—that even though the surety company, when it took the assignment, was firmly bound to pay any loss there might be, its security was inchoate until the loss was paid.

As Sam sadly departs, Henry tells himself, without conviction, that risks like that are what Sam and Elmer and John are paid for bearing; and if, as a result, they have to raise their rates or decline to take risks, to the detriment of the economy, that is a sacrifice that must be made to the imperious needs of the revenue. Taxes are, as Mr. Justice Holmes said, the price we pay for civilized society, and if the person liable does not pay them, why should the businessmen who deal with him insist on their selfish security and object when their property rights are taken to satisfy another's tax obligation?

Still, Henry cannot get out of his mind the case of poor Ben Homebuyer. Ben bought a house in a suburban development on contract. He paid $2,000 down and moved in, and he met his payments regularly. He was not to get title until he had paid half the price. Henry had carefully ascertained when Ben entered the transaction that the seller had a good title, free and clear of all liens. But thereafter the developer overextended himself and became delinquent in his taxes. The court deprived Ben of his home, saying that, as he did not yet have title, he was not a purchaser protected by law against Federal tax liens—not even against those that did not exist even as secret, unrecorded liens when possession was taken and payments were made. To compound Ben's discomfiture, the court denied him a vendee's lien for the recovery of the payments he had made for a title that failed, holding that this lien was inchoate and ineffective against the Federal lien. If Ben had lived in another jurisdiction, he might have fared better, although he would still have had to go through a lawsuit.

Henry could go on, ticking off the landlords and warehousemen whose liens were subordinated to after-arising Federal tax liens—even if, like prudent businessmen, they had bargained for contractual (but unhappily inchoate) security. He thinks of sellers of land, who relied (pursuant to standard local practice) on statutory vendor's liens, only to have the property for which they had not been paid taken for Federal taxes subsequently incurred by the purchaser. The instances are too numerous to recount.

Henry's mind wanders back to his own problems, and he thinks of some of the things the Federal lien has done to make his law practice more difficult. He is grateful to the unpredictable majority of the Supreme Court for finally establishing that, if State law permits him to enforce a mortgage or deed of trust by nonjudicial sale, he will not be compelled to assume the burden of a judicial foreclosure merely in order to discharge junior Federal liens. But there are times when Henry has to go to court to foreclose, and then the problems multiply. In order to discharge the junior Federal liens, he must name the United States as a party to the suit, and describe its interest "with particularity" in his complaint. If there are no such liens of record when suit is commenced, he will be unable to do so. Yet there will hang over him the possibility that Federal liens may arise or be filed after foreclosure is commenced but before the sale, and therefore (although clearly junior) may remain to cloud the title thereafter. For one of the still controverted questions is whether the Government is bound by the doctrine of lis pendens. Furthermore, even when the Government is joined and its junior liens are thus discharged, the Government has a 1-year right to redeem the property from the sale, despite State laws denying that right to junior lienors generally.

Henry also recalls occasions when a client has been confronted with conflicting claims to a debt the client admittedly owes. The creditor has assigned the claim to a factor, but the claim has also been levied upon by the Federal tax collector, who disputes the priority of the assignment. With an innocent bystander's natural reluctance to become involved in the disputes of others, Henry has interpleaded his client's creditor, the assignee and the United States. The Government then has moved to have itself dismissed as a party, on the ground that the consent of the United States to be sued in interpleader has not been granted by Congress. Then, having put Henry to that trouble and procured its dismissal as a party, the Government has turned around and—unless the dismissal deprived the court of jurisdiction of the action—has intervened in the suit in order to reach the fund. Such shenanigans run up the expenses of the innocent stakeholder, and, to make it worse, the usual rule that the stakeholder's expenses in interpleader are to be reimbursed out of the fund does not apply unless the fund is sufficient first to satisfy the Federal claim in full.

"THERE OUGHT TO BE A LAW"

Such musings may ultimately lead Henry, as they have led others, to the conclusion that "There ought to be a law." Of course, there is a law—a few "short and simple" provisions of the kind which many feel should comprise our Internal Revenue Code. The tax is a lien on all property of the taxpayer. It arises at the date of assessment and continues until the liability is satisfied or becomes barred. (The assessment is an internal procedure of which there is no public notice, and which Internal Revenue personnel are forbiden, under criminal sanctions, to disclose to third parties.) The lien is, however, not valid against mortgagees, pledgees, purchasers or judgment creditors until notice of the lien has been duly filed. Those few words sum up the present statutory law, which is unexceptionable. It is the gloss that the courts have put upon those rules that is harmful. They have concluded, in effect, that Congress intended to prefer the Federal lien absolutely, in every situation not expressly negatived, and have put the narrowest possible construction on the few express concessions to private economic interests. There is no remedy for that attitude except detailed statutory specification of the rules intended to be applied.

On February 23, 1959, the house of delegates of the American Bar Association concluded that "There ought to be a law." It unanimously adopted the recommendations of a special committee on Federal liens which deal in detail with the problems covered herein, as well as many others. The terms of the proposal have heretofore been reviewed in these pages and need not be discussed herein. The bills embodying the recommendations made no progress in the 86th Congress, but have been reintroduced at the present session. The House Ways and Means Committee has before it identical bills by Chairman WILBUR D. MILLS, of Arkansas (H.R. 4319), and the ranking minority Member, Representative NOAH M. MASON, of Illinois (H.R. 4320). The Senate Finance Committee has before it an identical bill (S. 1193) introduced by Senator CURTIS, of Nebraska, for himself, Senator HRUSKA, of Nebraska, Senator BEALL, of Maryland, Senator BENNETT, of Utah, Senator BRIDGES, of New Hampshire, Senator BUTLER, of Maryland, Senator BYRD, of Virginia, Senator CARLSON, of Kansas, Senator EASTLAND, of Mississippi, Senator ERVIN, of North Carolina, Senator HICKLENHOOPER, of Iowa, Senator JAVITS, of New York, Senator KEATING, of New York, Senator METCALF, of Montana, Senator MILLER, of Iowa, Senator

RANDOLPH, of West Virginia, Senator SCOTT, of Pennsylvania, and Senator TALMADGE, of Georgia.

If you too think "There ought to be a law," say so.

Kowtowing to Khrushchev

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1961

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following splendid editorial by David Lawrence, which appeared in the May 29, 1961, issue of U.S. News & World Report:

KOWTOWING TO KHRUSHCHEV

(By David Lawrence)

President Kennedy has disheartened millions of Americans by his willingness to sit down with Nikita Khrushchev—the man who insulted the preceding President of the United States.

Mr. Kennedy said during the last campaign that he was willing to express "regrets" to the Soviet Government because of the U–2 incident. This was widely interpreted at the time to mean that he was ready to apologize even though this might make it appear he was repudiating an act of military necessity—protection of the American people against surprise attack.

Mr. Kennedy also said—as he was trying to get the votes of his countrymen—that he didn't think summit conferences should be held with the Soviet Premier unless there had first been preparations at the diplomatic level indicating some area of agreement.

There has been no such agreement. Instead, the situation between the East and West has since worsened.

What possible good then can come from kowtowing to Khrushchev? The same old argument is made that it will "clear the air" and that "we shall know where we stand."

On May 30, 1955, on this page this writer said:

"Those in government, here and abroad, who know the inside story of all the futile efforts thus far to obtain from Moscow, through the customary diplomatic channels, some evidence of a sincere desire to negoiate peace must have a troubled conscience as they accept the enemy's propaganda trick—a spectacular meeting with Bulganin (at the 'summit')—and arouse false hopes everywhere about the prospects for peace.

"A third world war must be avoided if it is humanly possible to do so, because the destruction of cities by atomic weapons is too horrible to contemplate. But it is precisely because of a policy of weakness and craven surrender of basic principles invites attack that those who are crying for peace at any price can turn out to be the very ones who bring on a terrible war.

"Whence comes this strange delusion that by a four-power conference good faith can be established where there has been none before? And when will we learn to take our stand on principle and adhere steadfastly to it no matter what the sacrifice? For there is only one way to deter any enemy government from aggression, and that is to persuade the people behind it that their rulers are endangering their lives—and, if this fails, then to make sure our force is adequate to defend ourselves against any attack that may come.

"Governments that wish to preserve freedom must steer by the compass of basic principle. They cannot surrender to the whims of expediency now without risking the surrender of their liberties later on."

Commenting on the "summit" conference idea 6 years ago, on May 5, 1955, the writer said on this page:

"The people of Soviet Russia and of China want freedom just as we do. We must not tighten the hold of their oppressors on them. We must open the way for their liberation by refusing to deal with gangster governments. For those governments constantly threaten the peace of the world, and there can be no safety for anybody as long as they remain in power.

"There is but one way to force the disintegration of the Communist empire. It is by forgetting four-power conferences and imposing a complete quarantine on the Communist regimes. This means extermination of their agents and conspirators from all free countries.

"These enemies must be driven from within our gates. It makes no sense to endeavor to negotiate with the master minds of world conspiracy."

In the past several months, the Soviet Government has vigorously waged a cold war everywhere.

Khrushchev has refused to cooperate with the United Nations in the Congo.

Khrushchev has tried to wreck the United Nations by seeking to dissolve the office of Secretary-General.

Khrushchev has virtually taken over the Castro government in Cuba, just 90 miles from our shores.

Why then does the Preesident of the United States feel that he must go to Europe to see Khrushchev and thereby give the world the impression that he is kow-towing to him?

Why should our Government place credence in the word of a Communist ruler who has broken faith on every occasion—a tyrant who ordered the brutal murder of the people of Hungary and who today is conniving in Laos and in South Vietnam to undermine the forces of the free world?

It is pertinent to recall the words of George Santayana, the famous philosopher, who wrote:

"Those who refuse to learn from history are condemned to repeat it."

Once it was the arrogant Kaiser Wilhelm. Appeasement failed, and then came World War I.

Next it was the insane Hitler. Appeasement failed, and then came World War II.

Will the intransigent Nikita Khrushchev now misconstrue our continued submissiveness and thereby bring on World War III?

What Can You Do To Help America?

EXTENSION OF REMARKS

OF

HON. CHARLES E. GOODELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1961

Mr. GOODELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial, which I believe accurately reflects the thinking of many of the people of this country who feel that they should look to themselves for advancing the American economy rather than to more aid from the Federal Government.

The editorial follows:

[From the American Weekly, Apr. 1, 1961]

WHAT CAN YOU DO TO HELP AMERICA AND AREA?

In his Inaugural Address, the President said, "Ask not what your country can do for you—ask what you can do for your country."

To this we wholeheartedly subscribe.

The United States of America is a land of the present and a land of the future. The American people have always been ambitious, industrious, capable, forward-looking, productive. They are a free people with creative ideas. They love their country. They have always been ready and willing to do whatever is best for their country. And now America needs their help, your help.

In recent weeks we have heard much about our faltering economy, and the talk has created fear—at a time when our savings have been growing at a dramatically accelerated rate; installment accounts are being paid off faster than new ones are being created; and our industrial institutions, merchants, insurance companies, and banks are financially stronger than ever before in their history.

The potential for growth in America, in other words, has never been greater. During 1960, America enjoyed its first $500-billion economy. It is estimated that 1961's economy will reach $520 billion, and that by 1975 we will have reached a trillion-dollar (1,000 billion) economy.

Our population has been growing at a stupendous rate. We now have more than 180 million people. It is estimated that this figure will reach 200 million by 1965 and 300 million by 1980. Our ingenuity, creative ability, and research are at all-time heights of technical and scientific advancement. Our industries and the Government are spending more money than ever before to increase our strength, invulnerability, and general well-being.

In virtually every line of human endeavor, there have been great advancements in producing the things we need in our daily lives and the things we want to improve our way of life.

Then why, why do we find ourselves talking gloom, acting scared, saying we're headed for trouble?

Back in 1933, Franklin D. Roosevelt said, "The only thing we have to fear is fear itself." It was true then. It is even more true now.

This is the time for positive thinking. There is a time to stint and a time to save; there is also a time to buy—and the time to buy is now.

The Government has been trying virtually every way it knows to prime the pump. This article will not attempt to evaluate the wisdom of Government policy.

For our purpose, it is sufficient to note that the President is endeavoring to pump money into the arteries of distribution in an effort to speed up the economy and promote greater employment.

We think this should not be an obligation of the Government but rather something that can be better accomplished by the people.

The people have more than $300 billion in savings. Let us then use a small portion of our vast personal resources to lift the economy over its temporary hurdle and on to accomplishments of unprecedented abundance. More buying by the public right now will put people back to work who, in turn, will put others to work.

With the economy again in a strong upswing, we can look forward to a greater, more abundant America—and we can't afford to settle for anything less.

Here, then, are our recommendations: Look around for opportunities to spend as

much as, not as little as, you feel you can afford. Spend for goods or services you need and want and which you can put to good use. In other words, spend, spend now, and spend wisely.

If you need a new car, buy it now. Modernize your kitchen, enjoy the advantages of the new wonder appliances. Remodel your home, build that extra room, install that extra bathroom or modernize your present one. Paint and decorate your home, refurnish or refurbish it; plant a garden, a hedge, a new tree; build a garage. Spruce up your wardrobe; buy some new clothes for every member of the family. Plan a "See America" vacation and spend your money here at home. You may need a trailer, camping or fishing equipment, a new outboard motor or a new boat.

There are a great many knowledgeful people who feel that our economy is already heading upward. If you buy the things you need and want now, you will be giving it an added push forward.

It is unique to recommend spending rather than saving, but this is a time for spending and spending wisely. We dare to suggest that spending wisely is not only our pleasure, but our patriotic duty.

And all of us have another duty—to stop talking gloom.

Let us in our conversation and in our daily needs live positively, talk confidently, and build our future fearlessly. Let us remember that America belongs to its people—to all of us who are privileged to support its purposes, advance its destiny and share its blessings.

Persuasion of the Amish (To Join Social Security)

EXTENSION OF REMARKS
OF
HON. HERMAN T. SCHNEEBELI
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. SCHNEEBELI. Mr. Speaker, many of us have been made aware of the recent seizure and sale of the horses owned by an Amish farmer in Pennsylvania. This act, undertaken by the Internal Revenue Service to collect delinquent social security payments was a matter of concern so that I requested the Commissioner of Internal Revenue to explain the action. I have just received the Commissioner's reply and I believe that, because of the interest which the case has stimulated, this correspondence should be called to the attention of all Members of Congress.

For the benefit of my colleagues, I submit the following letter to Commissioner Caplin, the Pittsburgh Press editorial referred to in the letter, Commissioner Caplin's reply, and an excellent editorial from the Berwick Enterprise of May 2, 1961.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., May 9, 1961.

Hon. MORTIMER M. CAPLIN,
Commissioner of Internal Revenue,
Washington, D.C.

DEAR MR. COMMISSIONER: I am writing to you in regard to recent action by the Internal Revenue Service against Mr. Valentine Byler of New Wilmington, Pa., in regard to a Federal tax lien amounting to $308 for unpaid taxes under the Federal Insurance Contributions Act.

I am enclosing herewith an editorial from the Pittsburgh Press of Wednesday, May 3, 1961. One of the things not mentioned in the editorial is the fact that some of Mr. Byler's fellow citizens have joined together to help him with his spring plowing.

I recognize that the payment of this tax like all other taxes is mandatory and that you and your associates have the responsibility for enforcing the payment of any Federal tax liability. However, I am very concerned with the manner which this particular problem was handled. I particularly question the timing—during the plowing season—and the particular property confiscated. I believe that you may well be concerned that this is an instance where the Federal Government got its tax dollar but where very serious damage has been done to the public attitude toward our Federal tax system. I would sincerely appreciate receiving from you some information as to the endeavors made to collect this tax prior to seizing Mr. Byler's horses. I would also like to know the reason for the timing of this particular seizure and the reason for selecting the particular assets that were involved. Your comments on the extent to which recognition was given to the restrictions on levy contained in section 6334 of the Internal Revenue Code will be appreciated. Whether or not you regard draft horses as livestock is another question that I would like to have answered.

In closing I would make it clear that I am not criticizing anyone for enforcing the law, but I am seeking information as to the rationale for doing it in the particular way that it was done.

Sincerely yours,
HERMAN T. SCHNEEBELI,
Member of Congress.

U.S. TREASURY DEPARTMENT,
COMMISSIONER OF INTERNAL REVENUE,
Washington, D.C., May 16, 1961.

DEAR CONGRESSMAN SCHNEEBELI: This is in reply to your letter of May 9, 1961, concerning the collection of the delinquent social security taxes of Valentine Y. Byler for the years 1956 through 1959.

As you are aware, Public Law 761, 83d Congress, which became effective on January 1, 1955, extended social security coverage to additional groups of self-employed persons, including farm operators.

For religious reasons a minority group of Amish farmers were opposed to paying the tax on self-employment income, although they properly reported such tax on their income tax returns. The Service, being aware of the sincerity of these individuals' convictions, undertook a program of education and persuasion by which we hoped to collect the taxes involved on a voluntary basis.

In the fall of 1956 the District Director in Cleveland held meetings with Amish farmers and their church officials in an effort to solicit cooperation and voluntary compliance with the 1954 amendment. The major point which was stressed at these meetings was that the social security levy was a tax rather than an insurance premium, and that the Revenue Service was responsible for the enforcement of this legislation.

As a result of these meetings and of letters sent to the individuals involved, emphasizing their duty to comply with the tax laws, payment, in the majority of cases, was voluntarily remitted. Out of the 2,000 to 3,000 Amish farmers filing taxable returns there remained a number whose refusal to pay continued, and in approximately 130 cases over the last 2 years, collection was enforced by levying on bank accounts and from the proceeds of farm produce. In a few cases enforcement in this manner was not possible, because of the inability of Internal Revenue officials to locate bank accounts or sources of income subject to the levy process.

The instant case arose with respect to one of the more conservative members of the Amish faith. Mr. Byler, at the time of the recent seizure, owed the following self-employment taxes:

Year	Tax	Interest
1956	$82.60	$19.91
1957	76.57	17.08
1958	32.98	7.05
1959	65.63	7.14

For some time efforts to secure voluntary payment of the above taxes had been made without success. On July 13, 1960, a duly executed summons, requesting Mr. Byler to appear before a revenue officer to answer questions concerning his financial condition, was issued. Mr. Byler failed to respond to this summons. On August 2, 1960, an assistant U.S. attorney wrote Mr. Byler with regard to the summons, but there was no compliance. Subsequently, a civil contempt proceeding was brought before the U.S. District Court for the Western District of Pennsylvania. After a number of continuances, this proceeding was dismissed on motion of the U.S. attorney on January 20, 1961.

On April 18, 1961, a notice of seizure was handed Mr. Byler. In seizing the horses recognition was duly given the provisions of section 6334 of the Internal Revenue Code concerning property exempt from levy. The Internal Revenue officials who handled this matter were as considerate as possible of Mr. Byler's interests in seizing three of his six horses in deference to other personalty. At all times it had been the intent of the Service to avoid the imposition of any undue hardship which might arise.

On May 1, 1961, a sale was conducted in accordance with the provisions of section 6335 of the Internal Revenue Code. The gross proceeds of the sale amounted to $460.

The expenses (drayage, boarding, insurance, and advertising) amounted to $113.15. Since the liability amounted to $308.96, the surplus, $37.89, was refunded to him.

The collection of the Federal self-employment tax from Mr. Byler and other Amish people who are opposed to social security coverage for themselves has been an unpleasant and difficult task for our people. With patience in their dealings, however, we have been successful in persuading most of them to pay their taxes voluntarily. I have been advised by our attorneys that there is nothing under the present law which would represent an exemption for individuals who would otherwise be covered, who are opposed to participation on grounds of religious belief. Since the Internal Revenue Service has no authority to relieve the Amish farmers of their liability for the Federal self-employment tax, when Mr. Byler remained adamant in his refusal to pay the tax, it was incumbent on the Pittsburgh office to proceed with collection enforcement.

I can personally assure you that the seizure of Mr. Byler's property was not timed with any malice in mind. It was merely the culmination of extended administrative proceedings. As you are aware, the Amish do not surround themselves with many of the comforts of our present-day society, so that the choice of property to levy upon was not an easy one. The selection of three horses was based upon the fact that Mr. Byler owned six horses at the time.

In recognizing the status of property exempt from levy, the revenue officer seizing the property set aside to Mr. Byler that portion of property aggregating $500 in value under section 6334(a)(2). Therefore, the question as to whether draft horses are regarded as livestock was never reached. Al-

though the word "livestock" is not defined in section 6334, common usage would imply the inclusion of draft horses. This, of course, would be restricted to the $500 limitation set out in the section.

If additional information is desired, I would be most happy to accommodate.

Sincerely,

MORTIMER M. CAPLIN,
Commissioner.

Hon. HERMAN T. SCHNEEBELI,
House of Representatives,
Washington, D.C.

THE STUPIDITY OF THE LAW

You don't have to go behind the Iron Curtain to find an example of the heartless and inhuman use of the power of government against the individual citizen. You need go no farther than New Wilmington, Pa.

It was there that the power and majesty of the Federal Government was invoked to show one Valentine Byler the necessity of conforming to the dictates of the Central Government.

Mr. Byler is a member of the Amish sect, whose way of life is part of their religion. They are a frugal farming people who eschew modern machinery and use horse-drawn equipment. Their religion forbids them to make war or to accept anything from government. In case of need, they take care of their own. They are entirely self-reliant.

Among other things the Amishman won't touch is the social security system. In their way of life, there is no need for old-age pensions, and some 250 Amish families around New Wilmington therefore make no payments into the social security trust fund.

But the Government contends that, as self-employed farmers, they are obligated by a 1955 law to pay 4½ percent of their gross earnings into the social security fund. In essence, this contention is that they must save for their old age whether they want to or not and whether they ever draw a nickel's worth of benefits, which no Amishman will do.

So, one W. K. Shaw of the regional Internal Revenue Service, figured out a way to teach the Amish obedience to the law. He selected Valentine Byler as the first candidate and seized his three workhorses on a lien of $308.

The other day the animals were sold, harness and all, for $460. Not a single Amishman was present at the auction sale. The IRS plans to proceed in a similar manner against other members of the Amish sect.

This is a legal atrocity and it calls for review by officials of the Internal Revenue Service, or by higher Government officers. And if relief from such a stupid enforcement policy cannot be gained that way, Congress should act promptly to amend the law.

For what the Government is saying to Valentine Byler and his neighbors is: "You'll join the social security system whether you want to or not, and if you refuse we'll take away the horses you need to make a living by tilling the soil."

This is on a par with the old vaudeville skit of a Communist orator declaiming that "Come the revolution, the workers will eat strawberries and cream." When one bystander objected that he didn't like strawberries and cream, the orator persists: "Come the revolution, you will eat strawberries and cream and you'll like strawberries and cream."

The Federal Government will look just as ridiculous if it continues seizing the horses of peaceful Amishmen to dragoon them into a forced welfare system.

[From the Berwick Enterprise, May 2, 1961]

AN OUTRAGE

Another outrage has been perpetrated in our socialistic state, and it is socialistic, whatever you care to think.

The latest outrage is the confiscation of three fine horses, owned by an Amish farmer, at New Castle, in default of $308 in back social security payments.

The Amish and Mennonites, we have said before and we repeat again, are our most admirable Pennsylvanians in these crackpot days. They pay their own way, live sensibly and ask no favors of anyone. Their beliefs do not permit them to become wards of the State in any manner, not even to the extent of social security.

Now understand, we have no fault to find with social security and we only hope there is still some of it available for pension use when we reach pension age. However, we don't feel that social security or any other socialistic idea should be forced upon those who do not want it and the Amish do not.

A tragic angle of this is that at least a dozen Amish families in the New Castle area have decided they have had enough, not only of Pennsylvania but of the United States itself, for it is the Federal Government which is attempting to force social security taxing on the Amish. So those dozen-plus families are going to sell their Pennsylvania farms and move to Canada where people still enjoy some of the freedoms that those who had the spirit of '76 fought for.

There are a lot of citizens we could well do without but the Amish are not among those. The State government has made a mess of things in attempting to force our school ideas on these people. Now the Federal Government is making a mess of things by attempting to force social security on them.

Somewhere there should certainly be a lesson in all this, but what's the use. The powers that be wouldn't believe it anyway.

Tourism—The New Economic Frontier for West Virginia

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23, 1961

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I was privileged to make before the second annual travel clinic, sponsored by the Upper Monongahela Valley Association, at Blackwater Lodge, Davis, W. Va., on May 12 of this year. The glories of my State of West Virginia are so many that I believe Americans in all walks of life should have the opportunity to become acquainted with them, and I trust that a reading of my remarks will spur them to do so.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

When God created the earth, He richly endowed West Virginia with natural resources, not the least of which is an abundance of scenic beauty, with unparalleled mountain views, cool green forests, sparkling streams and lakes, and fertile valleys. He also gave it four distinct seasons, for He must have had in mind that these would one day provide for the people who inhabited this area a variety of opportunities for the development of a recreational center for the eastern half of these United States.

And God is infinitely wise and farseeing, for today 55 percent of the Nation's population is within a 500-mile radius of the borders of West Virginia, and I, for one, believe that all of those millions of people would welcome the opportunity to see God's handiwork in West Virginia. It remains for us to find the ways and means of stimulating them to do so.

The tourist and recreation industry in the United States is big business. Although complete statistics for recreational expenditures are not available, the size and importance of the industry is evident from the estimates of annual recreational spending, which vary from $18.3 billion to $42 billion, depending on the definition of what is to be included as recreational expenditures.

It is interesting to note, however, that in 1959, the latest year for which statistics are available, American workers took 77.7 million weeks of vacations, compared to only 54.3 million weeks in 1949. All the signs point to further increases in leisure time and all types of recreational spending. The outlook for the sixties is for an additional population of about 30 million persons, a gross national product expanded by about $256 billion, a total employment of more than 80 million compared to the present 64.5 million, and comparable increases in per capita and disposable family incomes.

Moreover, the United States is shifting from a production oriented economy to a consumption oriented economy, with increasing emphasis on services, cultural activities, travel, and recreation of all types.

Outdoor recreation, in particular, has a larger role in the life of most Americans. The tremendous increase in usage of Federal parks, State parks, and other public recreational facilities in the last decade clearly illustrates the growth trend in outdoor recreation. From 1950 to 1958, attendance at public parks and recreation areas increased as follows: National parks, by 76 percent; national forest lands, by 150 percent; Bureau of Reclamation projects, by 195 percent; Corps of Engineer reservoirs, by 492 percent; State parks by 108 percent; TVA lakes by 120 percent; and wildlife refuges by 165 percent.

The actual use of these public recreational areas has far exceeded the planning estimates made over 10 years ago, and there is every indication that this growth will continue and probably accelerate. In 1959 alone, the number of people visiting national parks and national monuments had surpassed the highest pre-World War II total by about 14 million.

Americans have taken to spending more time and money in a variety of outdoor recreational pursuits which include: hunting, fishing, boating, skiing, and swimming. In 1955, a U.S. Fish and Wildlife Service survey estimated that there were 25 million sportsmen in the United States. The executive secretary of the Sport Fishing Institute, Mr. Robert N. Pavel, estimates the number of fishermen in the United States today at 28 million. The Fish and Wildlife Service survey showed that there were one or more sportsmen in one out of every three households, and that 18 percent of all persons over 12 years of age in our country fished, and that 10 percent hunted. Today, collectively, the Nation's sportsmen spend from $2 billion to $10 billion a year on this form of recreation.

The rise in the number of fishing and hunting licenses issued annually is another indication of the growing number of people who have joined the ranks of the country's sportsmen. Since 1950, the number of fishing licenses sold increased by 30.4 percent nationally, and the number of hunting licenses rose by 20.2 percent. In addition, more sportsmen are going outside their home

State to pursue these sports. This is attested to by the fact that the number of nonresident fishing and hunting licenses sold during this same period increased by 40.9 percent and 132 percent, respectively.

Boating has been called the Nation's fastest growing family sport. Between 1948 and 1958, retail expenditures for boating increased by 167 percent, the number of recreational boats in use increased by 144 percent, and the number of participants in recreational boating increased by 196 percent. A 1960 Department of Commerce estimate placed spending on boating in our country at $2.7 billion, and the average annual expenditure of each boatowner at $146.

A number of factors are responsible for the boom in all types of outdoor recreational activity. In addition to the population explosion expected in this country in the next decade, during which some 30 million more persons will be added to our population figures, there is a trend toward shorter work weeks, toward longer vacations, toward earlier retirements, and a longer life span. Then, too, higher standards of living give further impetus to the growth of a recreation industry.

What does all of this mean, and what should all of this mean to West Virginia? To answer this question, I think it is important that we examine what tourism means to some of our neighboring States. Travel expenditures amounted to $654 million in 1960 in Virginia, and $360 million in North Carolina. Maryland expects to reach a $300-million tourist business by the end of this year, and says that $12 million of this will be in sales of gasoline, out of which the State will also realize taxes and fees. In West Virginia, the State industrial and publicity commission estimated that tourists spent $270,569,477 in 1959. The commission is now the department of commerce.

The figures which I have just quoted show that our State experienced a smaller income from tourism than did our neighboring States, despite the fact that West Virginia has far more to offer in the way of scenic beauty and water resources than our neighboring States.

In West Virginia, the number of visitors dropped from a high of 8,115,429 in 1955, to 7,378,218 in 1958, and then increased slightly to 7,450,625 in 1959. There are several indicated reasons for the fact that there has been no substantial increase in tourism in our State, at a time when our neighboring States have been enjoying solid spurts in this business.

One major deficiency is the fact that our State lacks adequate accommodations for tourists either inside or outside the parks and forest areas—and this includes 20 State parks, 12 State forests, 2 national forests, 2 reservoir areas, as well as 63,000 acres in public hunting areas which are owned or leased by the State conservation commission. In 1959, 114,313 visitors stayed overnight in the State parks, which was a substantial increase over the prior year. But, although attendance at State park and forest areas now exceeds two million annually, there are overnight cabin accommodations for only 1,200 people. Tent and trailer camping facilities are also desperately needed, but at present there are only about 150 sites available.

As a result of these shortcomings in accommodations, hundreds of people must be turned away from West Virginia's recreational areas for lack of overnight lodging facilities. In comparison, I might add, California has furnished some 30,000 camping sites for its citizens and tourists.

Another major problem confronting our State, insofar as tourism is concerned, is the pollution of our streams and rivers. Although the State issued more than 487,000 fishing and hunting licenses in 1959, this number could be substantially increased if the ugly pollution in our water resources were remedied in some parts of the State.

West Virginia has many public land areas stocked with an abundance of game—deer, bear, quail, and wild turkeys, to mention some. But out-of-state hunters have been finding it difficult to arrange for sleeping accommodations during hunting season. A few years ago, a program was started to encourage farmers and other local residents to provide housing for sportsmen during hunting season. This program needs to be augmented by an educational campaign, because every additional sportsman we can accommodate means anywhere from $50 to more than $100 spent in our State.

The historical attractions of West Virginia are surpassed only by its impressive scenic beauties. But here again, full use has not been made of the potentialities of, say, the Civil War sites around Keyser and in other sections of the State, nor of the antebellum homes and other historic attractions. Better roadside markings and more publicity on West Virginia's rich heritage might bring many more visitors to our State, particularly during this Civil War Centennial period. Moreover, the establishment of a national monument near Parkersburg, Point Pleasant, and Charles Town, would further emphasize the historic significance of our State and its valleys since before the Revolutionary War days.

Other possible means of attracting tourists to West Virginia include augmenting the spectator sports facilities of our State. These now include four horse racing tracks, and various baseball, football, and basketball events. However, ice hockey, and skiing, which are becoming more and more popular, offer excellent opportunities for expansion of the off-season tourist trade. West Virginia is one of the few States south of the Mason-Dixon line which offer skiing on a commercial basis, and I want to say that the management of Black Water Lodge has done a notable job in acquainting out of staters with the excellence of ski slopes hereabouts.

An equally notable job in attracting tourists to West Virginia has been done by the communities and organizations which sponsor local festivals. I have in mind the Buckhannon Strawberry Festival, the Spencer Walnut Festival, the Forest Festival at Elkins, the Folk Festival at Glenville, and the Preston County Buckwheat Festival. These events are unique to the culture and resources of West Virginia, and every effort should be made to advertise them more widely, at least throughout the eastern half of the United States.

In connection with advertising, one possible explanation for the decrease in the number of visitors to the State since 1955, is the lack of adequate promotion or advertising. State appropriations for this purpose amounted to $375,000 in North Carolina, $501,000 in Virginia, and only $20,000 in West Virginia, according to the American Automobile Association. Moreover, additional amounts are spent in adjoining States by private interests in the promotion of tourism. This is a matter which I am certain Governor Barron's administration will correct. But beyond what the State may attempt to do, I believe that more can be done through an association of all resorts, hotels, motels, and restaurants, because in the final analysis they get the largest share of the tourist dollar.

Finally, I want to say that if the construction of the proposed scenic highland road through the Monongahela National Forest can be undertaken and completed, the tourist potential of West Virginia will increase by leaps and bounds. The road would open up scenic panoramas of breathtaking beauty, and would afford access to presently inaccessible streams and lakes, camping and picnic sites, richly gamed hunting areas, and numerous other attractions.

The existence of the Skyline Drive in Virginia, is said to be largely responsible for that State's having grossed approximately $645 million in tourist business last year. I feel that if our scenic highland road becomes a reality, tourism will suddenly become the biggest business in our State. But until ways and means are found for the task of getting this road built, let us concentrate on the many little ways of increasing tourism in West Virginia—for if we take care of all the little ways, the growth of tourism and its effect upon the economy of our State, may prove to be the greatest of all blessings which the natural resources of West Virginia have afforded our people.

Continuation of Mexican Farm Labor Labor Program

SPEECH

OF

HON. CLEM MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 10, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 2010) to amend title V of the Agricultural Act of 1949, as amended, and for other purposes.

Mr. CLEM MILLER. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I take this time to ask the gentleman from Iowa [Mr. COAD], the author of this amendment, about this situation: I represent a district of small farmers. The average size of their farms is under 100 acres, and it is the major single industry of the district I represent. The farmers in my district depend on Mexican migrant labor for about 30 percent of our crop. One of the things the farmers of my district have been concerned with is the matter of the regulations and their enforcement, particularly enforcement. May I ask the gentleman from Iowa what is meant by the operation of farm equipment? Does this mean the moving of irrigation pipe which the farmers in my district have been stopped from doing? Does it mean turning on valves, which the farmers have been prevented from doing? There are a number of us who might be sympathetic to the position of the gentleman from Iowa who find it impossible to go along because of the method in which these regulations have been enforced in the past. I should like the gentleman from Iowa to address himself to what he means by his amendment as it applies to the operation of these mechanical means of farming.

Mr. COAD. The gentleman did not hear correctly, perhaps, the wording of the amendment. It did not state "mechanical." The words were "operating power-driven machinery." Power-driven machinery refers to the actual operation of a tractor or a combine. I would certainly state for the legislative record on this that irrigation where the water flows by power pumping, that the handling of irrigation pipe, certainly

would not qualify; but if he is the operator of a power station that pumps the irrigation water, then it would come under the power-driven concept.

Mr. CLEM MILLER. I thank the gentleman from Iowa. I think this should be plain in the RECORD. It is very difficult in the assignment of agricultural labor to know just when something can be done and when it cannot be done. This means penalizing the efficient operation of those farms. I believe the legislative record should be absolutely explicit for those of us who might be in favor of the amendment otherwise.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. CLEM MILLER. I yield to the gentleman from North Carolina.

Mr. COOLEY. I would like to ask the gentleman from Iowa if under his amendment a Mexican national could even assist in changing a tire on a tractor. His amendment refers to working on machinery. If the laborer is working on a tractor he is working on machinery.

Mr. COAD. The operation is work on power-driven machinery.

Mr. COOLEY. You would not let him operate it or work on it in any way. Even if it broke down in the field and they had to move it along the road and they called in some Mexican nationals to help, they could not even touch it? That is how we think the amendment is.

Mr. POAGE. Mr. Chairman, will the gentleman yield?

Mr. CLEM MILLER. I yield to the gentleman from Texas.

Mr. POAGE. Would not the Mexican bracero have a right to haul cotton to the gin?

Mr. COAD. On what?

Mr. POAGE. If he did not use a cart, and we do not have many carts left, naturally he would haul it on a truck.

Mr. COAD. No, I do not think he has a right to drive a truck and haul it to the market.

Mr. POAGE. Can he help load it on the truck?

Mr. COAD. Certainly he can.

Mr. POAGE. Is not that the operation of power-driven machinery?

Mr. COAD. No, certainly not.

Mr. POAGE. How are you going to get it on there without operating machinery? How are you going to get the end boards off without operating on the power-driven machinery?

Mr. COAD. I think anybody can drive anything to the point of ridiculousness, and I appreciate the gentleman's doing it.

Mr. CLEM MILLER. May I ask the gentleman, in this answer to the gentleman from North Carolina, does he mean operation?

Mr. COAD. That is exactly it, it is the operation.

Mr. COOLEY. It says work on power-driven machinery. It does not say operate, it says work on it.

Mr. COAD. That is your point, and as I said, it goes to the point of ridiculousness, the same as the gentleman from Texas.

Mr. COOLEY. And it is a good point.

West Virginia Tractor Firm Offers To Supply Small Farm Tractors to Cuba Without Profit in Exchange for Prisoners; Employees Agree To Work Extra Day Per Week Without Pay

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23, 1961

Mr. RANDOLPH. Mr. President, I have received from John F. Somerville, president of the Tiger Tractor Corp., Keyser, W. Va., a copy of a message he has sent by cablegram to Cuba's Fidel Castro offering to supply 500 to 1,200 small farm tractors to the Government of Cuba "at the net cost and at no profit to Tiger Tractor," with the implements offered to be "in exchange and indemnification for 1,200 prisoners of war" held by the Castro regime in Cuba.

In his message, the president of the West Virginia tractor manufacturing concern also calls Premier Castro's attention to the fact that—

The employees of Tiger Tractor Corp., have agreed to work 1 extra day per week without pay until completion of the contract.

And he added:

We believe this offer to be an exemplification of the highest ideals of American democracy and an example of American management and labor in cooperative efforts.

The executive head of this firm deplores the "trafficking in human misery" and to this statement I give complete approval. I am against blackmail in this case in Cuba. Ransom is repulsive in dealings between peoples or nations.

Mr. President, so this offer may be made a matter of record in the Senate, I ask unanimous consent to have printed in the Appendix of the RECORD the text of Mr. Somerville's message to the head of the Cuban Government as it was transmitted to me.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

KEYSER, W. VA.,
May 23, 1961.

Senator JENNINGS RANDOLPH,
Senate Office Building,
Washington, D.C.:

Have cabled Fidel Castro, Premier of Cuba, today as follows: "Deploring as we do trafficking in human misery, the management of Tiger Tractor Corp., Keyser, W. Va., hereby offers to supply 500 to 1,200 small farm tractors to the Government of Cuba at the net cost and at no profit to Tiger Tractor. Tractors supplied to be in exchange and indemnification for 1,200 prisoners of war held by your Government. Details to be worked out with Tractor for Freedom Committee. This offer is being confirmed through the offices of the Governor of West Virginia, West Virginia Representatives in Congress, Mr. Cardona, Mr. Reuther, Mr. Eisenhower, Mrs. Roosevelt, and Mayor Robert Wagner of New York. The employees of Tiger Tractor Corp. have agreed to work 1 extra day per week without pay until completion of the contract. We believe this offer to be an exemplification of the highest ideals of American democracy and an example of American management and labor in cooperative effort. We recommend acceptance of 1,200 of our 10-horsepower tractors adaptable to agricultural conditions in Cuba and capable of all farming operations on plots of land 5 to 20 acres. Please reply promptly.

(Signed) JOHN F. SOMERVILLE,
President.

Bulgarians Like Us, but Not Their Government

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article from the New York Herald Tribune of May 15, 1961. This is one of a series written by Gaston Coblentz on the countries of Eastern Europe presently behind the Iron Curtain:

THEIR PEOPLE LIKE US, BUT BULGARIA SET MOB AGAINST U.S. EMBASSY

(By Gaston Coblentz)

SOFIA.—The attack on the U.S. Legation in Sofia during the Cuban crisis appears, like that in neighboring Rumania, to have received less attention than it warranted.

Rarely has an American mission abroad been left at the mercy of a hostile crowd for as many hours as was the case in Bulgaria, where the Government refused to reply to requests for protection for some 6 hours.

The singular venom of the Bulgarian Government's action has not until now been adequately reported.

Despite the strong pro-American sentiment which prevails among the Bulgarian population—a phenomenon evident to observers here—the Sofia regime assembled a crowd of several thousand persons in the streets outside the U.S. Legation at 10 a.m.

During the next 6 hours of rock hurling, about half of the windows on the legation's first three floors were smashed. Worse, American personnel were virtually imprisoned in the building and were unable to obtain assistance from the Bulgarian Government.

STAYED AT HIS DESK

This became apparent after Minister Edward Page Jr., a Foreign Service officer with thirty years' duty, instructed his staff to telephone the Bulgarian Foreign Ministry. Throughout the turmoil, Mr. Page remained at his desk, a few feet from a third-floor window.

A call was first placed to the Foreign Minister. The reply was that he was not available. The Legation asked to talk to a deputy Foreign Minister—also not available. The Legation asked to talk to a second deputy Foreign Minister—also not available. The mission sought, in turn, virtually every Foreign Ministry official with whom it has dealings. None would come to the phone.

Simultaneously, the government extended the scope of the affair by filling the windows of the Bulgarian National Bank building across the street with more shouting demonstrators. Still others climbed from neighboring houses onto the roof of the Legation and draped placards and paraphernalia onto its flagpole.

The American flag was not flying at the time. During a similar demonstration in Bucharest, Rumania, on the same day, it was torn down and desecrated by an African Negro.

After 6 hours of siege, the Bulgarian Government finally provided militia to force the crowd back from the legation and enabled Mr. Page and one or two officials to leave the building.

MOB TRIES TO ENTER

At this point, the mob began to dwindle. However a few hundred persons, including African students, returned 2 hours later with renewed violence. On this occasion, they tried for the first time to force their way into the legation, but were dispersed by the militia.

One result of the day's attack was the demolition of all window panes of the reading room on the ground floor. The exhibits in its windows were popular with the Sofia public. They had attracted hundreds of passers-by daily from the time the reading room was reopened last summer, 3 months after the reestablishment of United States-Bulgarian diplomatic ties in March 1960.

Relations were revived on that occasion on Bulgarian initiative, following a 10-year break that dated from the Stalin era. The pro-Castro attack on the legation brought to a climax a period of several weeks, starting with the death of Congo leader Patrice Lumumba, during which the Bulgarian Government had progressively been tightening the screws on all Western missions in Sofia.

The Lumumba and Castro crises are believed by many observers to have been used by the Sofia regime as a pretext for reversing its policy of the previous year, which consisted of permitting somewhat expanded contacts among the Bulgarian population and Westerners.

ACCEPTED BIDS DECLINE

In the last half of 1960, Western diplomats were able to do a fair amount of entertaining of Government officials and private Bulgarians. However, in recent weeks, the number of persons in either category who have accepted invitations from Western missions has dropped to a dismal level.

Bulgarians who provide various elementary services to Western diplomats seem to have been warned off. Sofia residents of the same buildings with westerners clearly have been instructed to refrain even from normal courtesies.

The cause seems to be that the previous relaxation was too successful. The Bulgarian population, despite its historical links with Russia, has a notably strong desire for contact with the West and inevitably compares what it is able to learn of Western developments with the mess in which it is being forced to live.

This is as unmistakably true of the younger generation of Bulgarians as of the older, and applies equally to Sofia residents and to the large peasant population. There is little indication that Government propaganda has made any substantial inroads on the Bulgarian people's attitude.

READING ROOM "PROTECTED"

Characteristic of the new curtailments of contact with the West, the Bulgarian Government, since the attack on the U.S. legation, has been "protecting" the American reading room in a way that prevents pedestrians from approaching.

The windows have been repaired. New exhibits are on display, currently, one about an Antarctic expedition. However, police barriers painted in the Bulgarian national colors (red, white and green) have been placed athwart the sidewalks. Those who attempt to walk up to the windows are waved away brusquely by the militia.

American Medical Association Propaganda

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23, 1961

Mr. McNAMARA. Mr. President, I think it is time to call a halt to the attacks by the American Medical Association's propaganda warfare office on individuals and organizations supporting the President's proposal and my own proposal for financing the medical care costs of the aged under social security.

I say this because the AMA has now reached such a state of hysteria that it has begun to blast the National Council of the Churches of Christ. In February, the general board of the national council passed a unanimous resolution favoring the social security approach, and only after 3 years of intensive study, debate, and discussion. The resolution was no impulsive act. The resolution was accompanied by a detailed and factual background paper, showing the logical and moral basis for the general board's action.

Now the AMA has begun a campaign of typical tirade against the council, which received not 1 negative vote from the 376 members of its committees working on the problem of health care and its high costs for the aged. Physicians and prominent civic leaders served on these committees.

At the meeting of the general board voting the resolution, 105 members appeared, representing 23 member denominations. I urge all of my colleagues to read the resolution, which I am sure they have by now received, along with the factual background paper. I will be glad to provide them with copies if they have not.

But the attacks by the AMA have been so outrageous and unfounded that the executive director of the national council's department of social welfare, Rev. William J. Villaume, has felt it necessary to prepare a defense of the general board's resolution endorsing the social security principle of financing medical care for the aged.

I ask unanimous consent that selections from the text of the council's statement be printed in the Appendix of the RECORD at the conclusion of my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF THE NATIONAL COUNCIL OF THE CHURCHES OF CHRIST

An article in the AMA News of April 3 which expressed disapproval by the executive vice president of the American Medical Association with reference to the resolution of the General Board of the National Council of Churches in "The Economics of Medical Care for the Aged" brought about 20 letters to my desk, each of which posed about the same questions. I have read each letter carefully and have noted especially that some were from stalwart church members who wrote because of their deep concern for the church, the Nation, and the health of older people.

Because I am preparing to leave for a European conference in a few days, I cannot reply to all unless I do it in a composite letter. Because each deserves a full reply, will you kindly pardon me for not sending you an individually typed letter. Please be assured that I have your letter in mind as I write and accept my sincere gratitude for your understanding indulgence.

Dr. W. W. Bauer of the AMA staff wrote "to protest and to disavow your highhanded claim to speak for the members of your several denominations, especially in matters which do not concern Christian doctrine." Let us begin with the last clause. Do the churches and their agencies have a right to be concerned about the health of older people? Does the Council have the right to speak about meeting urgent social needs?

THE COUNCIL'S RIGHT TO SPEAK ON CONTROVERSIAL ISSUES

The church's duty to be concerned for health is set forth briefly in the two statements by the General Board which are enclosed in printed form. But when issues of public policy become involved, should not the churches refrain from speaking? Dr. Bauer writes: "My concept of the church is that it is put in the world to spread the Gospel of Jesus Christ and not to engage in political jockeying."

In December 1958, the General Board of the National Council adopted a resolution, the second paragraph of which reads in part as follows:

"What has often been said must be said again. The Christian churches of the United States and their councils not only have the right but also the duty to study and comment upon issues, no matter how controversial, in the realm of politics, economics, and social affairs, in view of their common faith in Jesus Christ as both Lord and Saviour. For all matters of concern for human beings are matters of concern to the churches and to the churches' Lord."

Protestant churches in the United States were a leading force in the condemnation of slavery and were roundly denounced for it, frequently by very sincere Christians. Early in this century the Protestant denominations, and the Federal Council of Churches as an agency of many of them until it merged with other interdenominational agencies in 1950, made pronouncements on such matters of public policy as conditions in industry and agriculture, organized labor, and child labor. These statements of the Protestant conscience were influential in the improvement of our society, although many Christian industrialists denounced them at the time.

In recent years, marked by emergence of many social problems and attendant suffering by millions of people, the Protestant denominations and the National Council of Churches have made numerous statements on such topics as agriculture, alcoholism, atomic energy, conservation, crime, delinquency, education, family life, health, immigration, industrial relations, international relations, race relations, social welfare, etc. The member churches of the national council hold that the judgments of the church should not be withheld from any area of life where moral, ethical, or spiritual values are involved.

THE STATUS OF THE COUNCIL'S OFFICIAL STATEMENTS

Let us return to the first portion of Dr. Bauer's sentence, his protest of "your highhanded claim to speak for the members of your several denominations." Of course, the National Council of Churches has never

claimed to speak for all 40 million members of the constituent denominations. The council is a representative body. It is governed by a general assembly, and between meetings of the assembly by a general board. With regard to the status of official council statements, the general assembly set forth the following statement on December 8, 1960, which seems to reply adequately to Dr. Bauer's protest:

"Many people in our constituency are not clear about the status of the resolutions and pronouncements made from time to time by the National Council of Churches through its general board or through its general assembly. Some members of our churches are troubled by the statements often appearing in the public press in connection with controversial actions, namely, that they are made by a council representing so many millions of Protestant and Orthodox church members. Some say: 'They did not represent me.'

"In response to this understandable attitude and questioning, let us remind ourselves that this council under its constitution is basically governed by a triennial assembly made up of the elected representatives of the churches. These representatives are sent here to deliberate and decide upon matters regularly brought before them by members, churches and by repesentative committees or departments of divisions. In this restricted sense, and in this sense only, every act of this assembly is representative of the 33 churches which compose the council and of their 40 million members.

"The pronouncements, resolutions, and other actions of a general assembly have precisely the status and weight of being actions of such a representative assembly: no more, no less. They will be useful as a guide and help to the churches and their numbers and to the Nation and the world, in finding God's will and doing it.

"It may be further asked, 'What is the force or authority of an action of an assembly upon a church or upon an individual member, especially if the church or individual disagrees, perhaps conscientiously, with the action taken?'

"The answer is that within the context of responsible freedom every church and every member not only has the right, but also the duty, to express dissent as vigorously as the occasion appears to demand, but within the context of our commitment to Jesus Christ as Divine Lord and Saviour and of our commitment to each other."

While the council does not presume to reflect the views of all the members of all constituent churches, it does, by virtue of its structure, represent the majority judgments of the official appointees of these member churches to the general board and to the governing committees of the various units of the council which prepare most of the statements which come before the general board. "A recent canvass of the executive leadership of 12 member denominations revealed almost complete unanimity of judgment that the official statements of the council have been an accurate reflection of the leadership of the churches, including local church ministers and better informed laymen," reported the general secretary to the general assembly last December.

HOW THE RESOLUTION ON MEDICAL CARE WAS FORMULATED

Most of the letters spread before me as I write to you raise questions concerning the process by which the resolution on the economics of medical care for the aged came to be written and adopted. It has already been noted that the initial request came from a national board of a member denomination. The request was accepted by the General committee of the Department of Social Welfare, the members of which serve at the pleasure of their respective denominations and are specially qualified to supervise the work of this department. The project was assigned to the department's Commission on Issues and Policies in Health and Welfare, composed of 37 members of the general committee. In the meanwhile a similar request had been received by the Department of Church and Economic Life (chairman: Charles P. Taft), which appointed a subcommittee to study the subject. Subsequently, the two departments collaborated in study and in preparation of a draft statement. The draft was discussed and revised at a long series of meetings of subcommittees and was ultimately mailed in advance to the 376 members of the general committees of the two departments. It was adopted by both departments at regularly stated meetings after thorough discussion. There was not one negative vote nor one abstention in either of these department meetings.

The proposed statement was then sent by both departments to the executive board of the division of Christian life and work, which has authority over eight departments of the council. Presented to the executive board by Roscoe P. Kandle, M.D., one of the physicians who has membership on the general committee of the department of social welfare, the statement was again passed without dissent or abstention.

On February 22, 1961 the statement was presented to the general board of the National Council of Churches by the division of Christian life and work. Dr. Kandle made the presentation in behalf of the division. In the hands of the members was a background paper which I had prepared as a result of our study of the problem. I am pleased to enclose a copy of this paper. With the revision of only a few words, the members of the general board assembled at Syracuse, adopted the resolution (as printed) without dissent or abstention.

WHO ADOPTED IT? AND WHY?

There were 105 voting members, representing 23 member denominations, in attendance at the meeting of the general board. G. P. McArdle, M.D., of Omaha asks if "they were the pink-tinged group on your board." The minutes show that among those present were the highest executive officers of the United Presbyterian Church, United Lutheran Church, Evangelical and Reformed Church, Congregational Christian Church, Disciples of Christ, Church of the Brethren, Moravian Church (Northern Province), American Evangelical Lutheran Church, Five Years Meeting of Friends, and others of equal stature. Five bishops of the Methodist Church, several bishops of Negro Methodist denominations, and bishops of other churches were also in attendance.

On April 21, the Erie (Pa.) Council of Churches held an open forum on medical services at which Russell Roth, M.D., speaking for the county medical society, said, "It appears that the general board has been naively gulled * * *." Is it reasonable to believe that hundreds of highly respected Christian leaders, representing many vocations on department, division and general board levels were "gulled"? Or that this was a "scheme," as suggested in a letter I received from a physician in San Diego?

The Right Reverend William Crittenden, Episcopal bishop of Erie, who was unable to attend the meeting at which Dr. Roth spoke, submitted the following statement regarding his position on the resolution of the general board on "The Economics of Medical Care for the Aged":

"I attended the meeting of the National Council of Churches where this resolution was approved and voted in favor of it for the following reasons:

"First, at the meeting the resolution was ably presented and explained by Dr. Roscoe Kandle, commissioner of health for the State of New Jersey. It seemed to me that by the very nature of his work, he was in a position to see the total problem of care for the aged perhaps more objectively than the average local general practitioner. He was decidedly in favor of the council's resolution and seemed to me to represent competent medical opinion.

"Second, let me quote; what is to me, the relevant section of the council's resolution. 'As previously noted, the general board has stated, "If voluntary prepayment plans cannot accomplish the desired ends, the Government should protect the health of people by making possible the prepayment of health services." This is precisely what the social security system would be able to provide efficiently through the mechanism of old-age, survivors, and disability insurance. Therefore, the National Council of Churches supports in principle legislation which will extend the benefits of old-age, survivors, and disability insurance to include adequate health care for retired aged persons.' Commenting on this section, I would say that the phrase 'in principle' should be underlined. Before any final legislation is passed, I would assume that competent persons in the medical profession would be constantly consulted and the advice of such persons carefully weighed in considering the total problem of care for the aged.

"Third, I agree with the general position of the resolution that adequate medical care literally for millions of the aged is not being provided, that the present voluntary system of health insurance is necessarily greatly limited and cannot move forward fast enough, and that the use of the social security system is the fairest way to overcome the problem.

"Fourth, I would like to point out specifically that the proposed extension of benefits is only for the aged and in no way presupposes a general medical care Government plan for all ages. At the present time, I am not prepared to say whether I would favor such a plan. At least, it seems to me that such a plan would not be feasible within the near future.

"Fifth, it is my belief that the entire problem of caring for the aged is summarized well in the statement by Dr. David D. Rutstein, professor of preventive medicine and head of the department at the Harvard Medical School, in his recent article in the Atlantic Monthly. I quote him directly: 'Congress has clearly recognized that voluntary health insurance cannot meet the need, and financial assistance by the Government for payment of medical bills for some of the aged is now a reality. But the present law also does not meet the need, and furthermore fosters direct local political control over the aged sick. Passage of a law under the Social Security Act would protect the aged against bankruptcy due to illness. It would, also, in one fell swoop, do away with political control, debasing means tests, and complex, expensive administration, and would be self-supporting. Let us hope that Congress acts promptly.' "

ARE THE AMA ADVERTISEMENTS "MISLEADING"?

Inasmuch as all but one of the people who have written the national council and will receive this reply are physicians, may I conclude by expressing my personal disappointment with the full-page newspaper advertisements of the AMA, characterized as "misleading" by Secretary Ribicoff. I am sure the AMA is fully aware that prepayment of health care via social security for the years of one's retirement is not "socialized medicine." Will the AMA really convince people that the proposed legislation will put physicians on Government salaries, which is basic to socialized medicine, or will intelligent people react negatively to tactics which are unworthy of the medical profession? Why does the AMA publicly advertise that people will

lose freedom to choose their own physician, when the various legislative proposals expressly guarantee freedom of choice of both physician and hospital? On what basis in any of the proposed legislation does the AMA make its claim that the Federal Government will enter "the privacy of the examination room"?

I fully share the concern of physicians that the doctor-patient relationship and the free choice of physician be preserved, but I cannot understand why physicians permit their professional association to make obviously exaggerated statements which undermine the faith of the public in doctors. What is happening to the "image" of physicians as men who are trained in the precision of exact science? What dangers does the changing image of physicians pose to the doctor-patient relationship?

If the AMA were to set forth certain basic principles essential to good medical care as a constructive guide for the Nation in changing times, I believe the organization would be widely supported. I mean such principles as the following:

1. All people who need health care should be able to receive such care in a manner that respects their dignity.

2. Free choice of physician is one of the basic rights to be respected in any system of medical care.

3. To the maximum extent possible, the cost of medical care should be paid by the patient.

4. The licensed physician's freedom to treat a patient in his individual way should be protected.

How much better an approach of this nature would be than to have the AMA bluntly accused on the floor of the U.S. Senate of "misrepresentations, distortions, and outright lies." The AMA claim in its newspaper advertisement that the Kerr-Mills benefits are "unlimited, with medical aid authorized for any person over 65 who needs help" is not true. Only seven States had adopted the program as of April 17. It was subsequently pointed out on the Senate floor that one of the States sets a maximum limit on hospital care of only 3 days "and even this much—along with any other benefits—is denied to anyone with a gross annual income in excess of $1,000." Why does the AMA, speaking for 180,000 physician-members, tell the public that "benefits are unlimited"?

SOME EXCERPTS FROM THE AMA RECORD

In 1930 the AMA condemned the Sheppard-Towner Maternity and Infancy Act which provided Federal grants to aid States in reducing infant and maternal mortality as "unsound in principle, wasteful and extravagant, unproductive of results, and tending to promote communism" (Digest of Official Actions, 1846–1958, AMA, p. 92). Its principal provisions were incorporated in the Social Security Act over 25 years ago. In the eyes of the American public these provisions have not tended to promote communism, nor have they been proved wasteful, extravagant, or unproductive of results.

In the Journal of the AMA, December 30, 1939 (p. 2428), the platform of the AMA opposed "all forms of security, compulsory security, even against old age and unemployment" and said they "represent a beginning invasion by the state into the personal life of the individual, represent a taking away of individual responsibility, a weakening of national caliber, a definite step toward either communism or totalitarianism." It would be difficult today to find thoughtful critics of old-age or unemployment insurance benefits under the social security program who would seriously believe that over the past 21 years these measures have brought this Nation closer to communism or totalitarianism.

In December 1949, the AMA opposed inclusion of disability benefits in the social security program as "another step toward nationalization of medical care and socialization of the practice of medicine" (Journal, December 17, 1949, p. 1156). However, the disability insurance provisions have worked so well that at the last session of Congress the 50-year age limit was removed without opposition from either political party or any substantial portion of the public.

Even voluntary health insurance, which the AMA now supports, was regarded as "socialistic" by the association when first advocated. The editorial entitled "The Committee on the Costs of Medical Care" in the AMA Journal of December 3, 1932 (pp. 1950–1952) belittled a favorable report on group medical practice and voluntary health insurance as "representing the great foundations, public health officialdom, social theory—even socialism and communism—inciitng to revolution." Today the AMA accepts both of these aids to medical care. Hospitals, journal of the American Hospital Association, December 1949, stated, after a review of AMA positions: "It is a sad fact that through the 1930's and early 1940's, the American Medical Association did not believe in voluntary sickness insurance, and did almost everything possible to prevent its development" (p. 60).

Most of the AMA's present-day objections to the financing of medical care for the aged through social security are based on fears expressed in the past which most Americans would say have not been justified. Should not the physicians insist that the AMA objectively weigh all the data relevant to health problems of the increasing number of older people and make constructive proposals to meet their needs?

IS THERE REAL NEED? CAN IT BE MET WITHOUT SOCIALIZED MEDICINE?

The U.S. Senate Subcommittee on Problems of the Aged and the Aging reported on January 27, 1961:

"Without question, the primary problem of our increasing population of retired older citizens remains the question of meeting the costs of basic health care at a time when their income is low, potential or actual illness or disability at its peak, and the relative cost of health services, enormous."

The National Council of Churches has, in its statement, supported the growth and expansion of voluntary health insurance and urged the States to avail themselves of the Kerr-Mills provision in the Social Security Act—but the council has also recognized that millions of older people cannot meet their health needs under either of these plans. With the proper safeguards their health can be protected by using the instrument of social security to make possible the prepayment of health services needed in old age.

If the AMA continues its campaign in the face of the growing millions of retired people over 65 who cannot meet the rising costs of health care, might it not be possible that the AMA will drive Americans to accept socialized medicine as so many other nations have done? Socialized medicine is repugnant to most Americans today. If the AMA would give more constructive leadership in meeting the Nation's health needs, it would help mightily to avoid socialized medicine in this country.

Some physicians of high repute have concluded that the use of social security is the most effective way to avoid socialized medicine. So has Business Week, the New York Times, Life magazine, Walter Lippmann, Governors of over 30 States, Marion B. Folsom (former Secretary of Health, Education, and Welfare in the Eisenhower administration, currently a director of Eastman Kodak Co.), and many reputable national organizations. They cannot all seriously be suspected of any preference for socialism or communism.

There may be a better way to meet the present needs of older people. If such a method is proposed by the AMA or anyone else, I am sure it will be widely supported because most Americans are very reluctant to involve Government unnecessarily.

Thank you for writing to the national council. If you cannot agree with the position taken, I hope that I may have convinced you that the council is not in favor of socialized medicine; but is greatly concerned about the health needs of millions of older people, even as you are. Let us pray that the Lord will guide our Nation as it faces this difficult problem.

The Freight Forwarding Industry and Our Foreign Trade

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1961

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD an article of mine which is published in this week's issue of Brandon's Shipper and Forwarder, official weekly publication of the New York Foreign Freight Forwarders & Brokers Association. This issue is devoted to World Trade Week, which begins on Monday, May 22, and will continue through Saturday, May 27.

The title of my article is "The Freight Forwarding Industry Must Not Be Destroyed." It deals with the plight of this industry at the present time and also discusses my bill, H.R. 5562, which I introduced on March 14, 1961, containing several proposals aiming to protect the industry and our foreign trade.

The article reads as follows:

THE FREIGHT FORWARDING INDUSTRY MUST NOT BE DESTROYED

(By Hon. VICTOR L. ANFUSO, of New York)

When President Kennedy launched his New Frontier several months ago, he called on the American people to face up to the problems of this new era. One of these frontiers is world trade, an area in our national life which is extremely important not only to the prosperity of our Nation, but also to its economic security now and in the future. Moreover, it is vital to the economic welfare and the political strength of our allies in the free world.

International trade has been defined as "the lifeblood of the free world's economy." That is very true, especially as it concerns the United States. Trade with the rest of the world provides us with vital raw materials for our industry and security; we, in turn, provide those countries with manufactured goods, industrial products, farm commodities, and others which we ship abroad.

Let us also not overlook the fact that world trade is one of our largest industries. It is worth emphasizing that the value of U.S. goods marketed abroad annually is greater than that of consumer purchases of automobiles, or the value of home construction, or of gross receipts by all our farmers from their crops of livestock. The value of U.S. exports is about equal to that of our entire production of minerals and almost as much as the retail value of all clothing and shoes purchased by American consumers. And one other fact: Some 4,500,000 Americans are employed in industries associated

directly with our foreign trade—or about 7 percent of the total labor force of the Nation.

It is clear, therefore, that the promotion of wholesome trade relations with other countries serves the best interests of our country. Anything that will expand and improve such relations will simultaneously strengthen our economy and our security, and as such must be encouraged.

Naturally, there exist certain abuses and practices which should be corrected. This is something for the experts to examine more closely. I merely want to dwell on one particular subject, i.e., the forwarding industry, which is of such vital importance to the economy of New York and the large shipping industry in our greatest port.

Freight brokerage and ocean freight forwarding is an ancient profession dating back to the early days of the sailing vessel. When a ship arrived in port, it sought the aid of intermediary to obtain cargo for the ship and the commission paid for this service became known as "brokerage." As international shipping grew and became more complicated, governments adopted tariffs and other laws regulating foreign trade and shipping. This required new services for both shipper and carrier.

Thus, an expert was needed to guide exporters in their foreign transactions, as well as to insure prompt dispatch of their shipments. The forwarder developed into this kind of an expert, serving both shipper and carrier. They included the cost of the forwarder's services in their rates, prices and quotations, the shipper paying a fee to the forwarder and the carrier paying a commission or brokerage. In this way, the forwarder became an integral part of our foreign commerce.

This relationship between shipper, forwarder and carrier continued satisfactorily and worked efficiently for many decades prior to World War II. In 1943, the U.S. Maritime Commission entered the picture, and since then there has developed a situation which is gradually driving the forwarding industry to the point of bankruptcy. In that year the Maritime Commission issued a long questionnaire to the forwarders, resulting in a court challenge of the Commission's authority and a ruling by the U.S. Supreme Court in 1946 that forwarders were "other persons subject to the Shipping Act."

Now a series of investigations of New York freight forwarders began, followed by succeeding dockets and regulations regarding brokerage and its practices. Reams of testimony were accumulated from various persons directly concerned with foreign commerce, and the overwhelming concensus was that forwarders are essential to the smooth flow of our foreign trade and that both shippers and carriers were willing to pay for their services. Finally, the Federal Maritime Board, successor to the Maritime Commission, issued in March 1957, a proposed revision of the forwarders' regulations which would have rendered impossible the continued existence of the forwarding industry and would have seriously affected the flow of our foreign trade.

As was to be expected, a storm of protest arose in all parts of the country, including shippers, carriers, State and local governments, port authorities, chambers of commerce, export groups, and others. Of some 500 comments received by the Maritime Board, all but two condemned the proposed regulations. By this time, the forwarding industry realized the futility of endless litigation and turned to Congress for help to avert its total bankruptcy.

Bills were subsequently introduced in Congress to license, regulate, and protect the interests of the forwarders. One of these bills, H.R. 8382, was passed by the House in 1958 but the Senate failed to act on it due to lack of time when the session was adjourned. The legislation was reintroduced in the next Congress and after a long, drawn-out process, both Houses approved the measure—but in different versions. This required a conference to work out a compromise, but again adjournment intervened and final action did not take place.

Consequently, on March 14, 1961, I introduced a bill, H.R. 5562, contained the same or similar proposals as H.R. 5068 which came so close to adoption in the previous Congress. Specifically, my bill would do the following:

1. It would eliminate certain abuses and questionable practices with which the forwarding industry is being charged, notably:

(a) The "dummy" forwarder, who is set up and controlled by an exporter as a means for collecting the brokerage compensation from carriers. The bill seeks to eliminate the "dummy" forwarder by defining the independent forwarder as a person in the forwarding business "who is not a shipper or consignee or a seller or purchaser of shipments * * * nor directly or indirectly controls or is controlled by such shipper." Thus, licensing will be confined only to independent forwarders.

(b) The collection of unearned brokerage fees. The bill specifies six types of services which the forwarder may perform for the carrier, and he must perform a minimum of three of these services in order to be entitled to compensation. The maximum compensation is limited to 5 percent of the freight cost. This should eliminate the abuses in this field. The six services are: Solicitation of cargo for the ship; coordination of moving the cargo to shipside; preparation and processing of the ocean bill of lading; preparation of dock receipts or delivery orders; preparation of consular documents or export declarations; and payment of ocean freight charges on such shipments.

2. By requiring the forwarder to certify the services performed as a condition for receiving compensation, the carrier will now have an adequate guide to proper brokerage fees and the administrative agency will have a strong weapon for prosecution of any violations.

3. The ocean freight forwarding industry would be brought under strict but fair licensing and regulation.

4. The forwarding industry would be freed of the constant costs of litigation and the dire threats to its existence.

5. The clear and unambiguous language of the bill makes it an instrument for easy enforcement and inexpensive administration.

These changes and innovations are long overdue. This is the only and most logical way to save this industry. At a time when this country is seeking to restore its economic equilibrium, we cannot afford to destroy industries or to drive them to the edge of bankruptcy.

The ocean freight forwarding industry should be given a full opportunity to devote its time and effort to the performance of its duties as an integral part of our Nation's foreign commerce and as an indispensable link between shippers and carriers. The interests of our world trade and its expansion in the years ahead require it. At a time when both industry and labor in this country are complaining about the effect of increased imports on the economy of the United States we ought to encourage our export trade to every extent possible.

I certainly will exert every effort to have this beneficial legislation passed.

Address by Representative Frank Boykin, of Alabama, at Dedication of Jackson Lock and Dam on the Warrior-Tombigbee Waterway, April 7, 1961

EXTENSION OF REMARKS
OF

HON. ARMISTEAD I. SELDEN, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1961

Mr. SELDEN. Mr. Speaker, the completion of another vital step in the modernization of Alabama's Warrior-Tombigbee Waterway was observed on April 7, 1961, with the dedication of the Jackson lock and dam on the lower reaches of that great river system. On that important occasion, Representative FRANK BOYKIN, dean of the Alabama delegation in the House of Representatives, made the main address at the dedication ceremonies held before an audience of several thousand interested Alabamians. Included below are the timely remarks made by Congressman BOYKIN on this occasion:

We are gathered here this afternoon to commemorate a major step forward in the modernization of one of Alabama's most important, most valuable and potentially most useful natural resources—the Warrior-Tombigbee Waterway. The river system, more than 460 miles in length, extends from the deep-water port of Mobile into the very heart of the State. It has been a significant factor in the growth and development of this area since the earliest pioneer settlement, but its greatest value and service are yet to be realized.

Jackson lock and dam which we dedicate today is one of the keys that will open the way for maximum utilization of the Warrior-Tombigbee Waterway and transform it into a fully productive, wealth-creating instrument of progress. Jackson lock and dam is an essential and integral part of the master plan conceived by the Army's Corps of Engineers to harness the river system to the needs of Alabama and the Southeast for the next half century or more.

The program envisioned by the Army Engineers, carried to a successful completion, will pay enormous dividends. It will provide an efficient, low-cost avenue of transportation; it will give us new sources of hydroelectric energy; it will assure greater supplies of water for home, farm and factory; it will alleviate floods, abate pollution, and create unexcelled opportunities for healthful recreation.

The vast impact of the waterway's development already is being felt. Construction of new industrial plants and the expansion of existing manufacturing and service facilities along the Warrior-Tombigbee are taking place at a multi-million-dollar pace. Announced investments for capital growth by industry in the Warrior-Tombigbee Basin have totaled more than $380 million over the past 6 years, and this amount does not include additional millions spent for improvements to transportation systems, expansions by utilities and the construction of military installations.

These investments are of benefit, directly and indirectly, to the entire State. In addition to the generation of additional tax dollars for much needed enlargement of essential public services, they have produced

several thousand new jobs in many fields and skills for our people.

The economic expansion fostered by the modernization of the Warrior-Tombigbee is not concentrated in one area. Rather, it is occurring throughout the valley, and is being carried on by a variety of industries. During the past few years, we have seen new coal mines opened along the Upper Waterway; we have seen the establishment and growth of paper-producing plants at Tuscaloosa, Naheola, Demopolis, and Mobile; we have seen more than $150 million invested in chemical plants in the Washington County area; we have seen a major steam electric generating plant built at Barry; we have seen the lumber, shipbuilding, textile, and metal fabricating industries increase their productive capacities.

Yet, even with these gratifying developments, we have hardly scratched the surface. Other areas of the Nation are growing at an even faster rate—as evidenced by the fact that we shall lose one of our Congressmen on the basis of the 1960 census.

Yes, we still have a lot of catching up to do. And if we are to move ahead, one of the things we must do is press for the wise conservation, development, and use of the water resources Nature has so abundantly bestowed on Alabama.

Our State is practically framed by rivers. To the north is the Tennessee, which carries more than 12 million tons of commerce annually. To the east is the Chattahoochee, a part of the Apalachicola-Chattahoochee-Flint system which is now under development. To the west are the Mobile and Tombigbee Rivers, and to the south is the Gulf Intracoastal Waterway which, while not a river, is an improved navigation channel. And running diagonally across the State is the Alabama-Coosa system.

In all, Alabama has 1,500 miles of authorized waterways with depths of nine feet or more. Of this total, approximately 750 miles have been completed.

We must press forward with all our energy to ensure that the remaining mileage is improved as rapidly as practicable. We cannot afford to do otherwise.

This is not a matter of concern for the few. It is a matter of concern for every man and woman who lives and works in Alabama. All of us must remain keenly alert to the progress being made in the conservation, development, and use of our water resources. We must all gives these programs our active support, for only this way can we hope to accomplish our objective.

As General Barney has indicated, considerable progress has been made in recent years in carrying out the modernization of the Warrior-Tombigbee Waterway. Demopolis lock and dam was completed in 1955 to eliminate four obsolete navigation projects; the Warrior lock and dam between Eutaw and Greensboro was finished 2 years later to remove two deteriorated, inadequate structures, and today we dedicate still another new facility.

In the headwaters of the Warrior River, the Alabama Power Co., always in step with the needs and ambitions of the State, has built with private capital the Lewis Smith Dam on the Sipsey Fork, thereby becoming an active partner in carrying forward the waterway's improvement. The Alabama power project, representing one of the three headwater dams urged several years ago by the Corps of Engineers, was designed and built so as to fit into the comprehensive program for the Warrior-Tombigbee.

Our next step in modernizing the waterway is construction of Holt lock and dam in the district of my colleague, Armistead Selden. By replacing four old locks and dams, it will extend above Tuscaloosa the modern waterway dimensions which the Warrior, Demopolis, and Jackson projects provide between that city and Mobile.

The Corps of Engineers will be in a position to use initial construction money for Holt lock and dam in fiscal 1962, which begins July 1. We are encouraged by the fact that the budget now being considered by Congress recommends $750,000 for that purpose. But let us remember that it's a long way between a budget recommendation and an appropriation. And even then, we will have money only for the first year's construction. It will be necessary for us to fight year by year for subsequent appropriations to complete the project in an orderly manner.

The urgent need for Holt lock and dam is demonstrated by the Warrior-Tombigbee's steady growth in commerce, which has more than doubled during the past decade, reaching 5,756,227 tons in 1959 to set a record high for the 7th consecutive year.

Accompanying the continued rapid growth in movements has been a change in the pattern of traffic that makes early completion of the Holt project even more vital. In 1949, only a little more than 800,000 tons or 38 percent of the Warrior-Tombigbee's total commerce moved in that reach to be improved by Holt lock and dam. In 1959, however, this portion of the river carried almost 2,900,000 tons or 50 percent of the total.

Major difficulty encountered by navigation above Tuscaloosa is caused by the small size of the existing locks, built between 1905 and 1915. These structures are only 52 feet wide and about 285 feet long, as compared with lengths of 600 feet and widths of 110 feet at the new locks.

Only four 500-ton barges can transit these four locks at one time, and as a consequence multiple barge tows must break their formations and transit the structures in two or three operations. A double lockage tow spends about 1½ hours in passing each of the structures or a total of 6 hours. A triple lockage spends a total of more than 9 hours in lockages alone.

The Holt lock and dam with its single large chamber will accommodate all size tows in one operation of about half an hour.

Overall, it is estimated that the new project will save an average tow more than 21 hours per voyage. Such economies will make the waterway still more advantageous for the transportation of bulk commodities and heavy finished and semifinished goods, and thereby greatly improve our position in attracting industry.

Construction of Holt lock and dam is the next logical step in the waterway's modernization and unless we obtain an initial construction appropriation for the coming fiscal year a serious interruption will occur in our timetable. The Corps of Engineers has carefully studied the need for the project and has solid proof of its economic merit. We have made and shall continue making every effort to see that it is undertaken without delay.

I assure you that the Alabama congressional delegation is unanimously behind the plan to improve the Warrior-Tombigbee Waterway. I can say without fear of contradiction that no other State in the Union has a congressional delegation that is more dedicated to the development of our natural resources. And I can say that we in the delegation will work for every meritorious program to make all of Alabama's rivers fully useful and productive.

But to do this, we need your help. With your assistance and your interest, we shall surely succeed.

U.S. Errs in Canceling Atomic Plane

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. PRICE. Mr. Speaker, Mr. George Carroll, Hearst Headline Service aviation writer, gives an accurate appraisal of the mistake the United States makes in canceling its aircraft nuclear propulsion program in an article which was released by the Hearst Service on May 16, 1961.

I concur wholeheartedly in Mr. Carroll's opinion that the United States should press on with the atomic-powered plane project. I hope there will be a reconsideration on the part of the administration and that orders to cancel the project will be rescinded and that a directive will be forthcoming to restore the program.

Under leave to extend my remarks, I herewith include Mr. Carroll's article:

BILLION INVESTED, U.S. ERRS IN DUMPING ATOM PLANE

(By George Carroll)

After 15 years of hard, often frustrating work and an investment of a billion dollars, the Government has scuttled America's nuclear-powered plane project just as it was reaching the edge of success.

It was, in the opinion of many, including this writer, a profoundly wrong decision. Worse, it could be politically disastrous.

It could give the Russians a powerful propaganda triumph if they beat us to the punch in flying nuclear power.

Defense Secretary Robert McNamara scrapped the project despite the fact that General Electric, the principal engine contractor involved, promised it could have an A–plane aloft by 1963 and test-flown by 1965 if another $197 million were allotted.

McNamara, and the others who helped shape or supported his decision, contended there was no immediate prospect of a "militarily useful plane."

Having followed the program since its inception in 1946, this writer is absolutely convinced the United States should press on with the project.

We have already invested a billion. We can and should invest another $197 million to prevent Russia, in effect, from backing into a triumphant first that should have been ours.

Others agree. Aviation Week magazine, the most authoritative trade journal in the aircraft industry, assailed McNamara in a double-spread editorial for his "monumentally unsound decision."

Declared Aviation Week's editor, Robert Hotz:

"It falsely proclaims to the world that we have failed technically in another field where the Soviet Union is certain to publicly demonstrate its success soon."

The magazine's editorial took cognizance of the "militarily useful" argument and disposed of it as follows:

"Some of the Pentagon experts who kicked the ANP (Aircraft Nuclear Propulsion) program around had a philosophy that would have demanded the Wright brothers be required to solve the problems of super-

sonic flight before they launched their machine at Kitty Hawk."

Hotz declared both GE, which has put many ground test hours on a mocked-up plane engine powered by the atom, and Pratt & Whitney, working on a more sophisticated type of engine, have supersonic designs, not just the slower-than-sound blueprints spoken of by the Defense Department.

Soviet Premier Khrushchev linked the flight of a Red A-plane with the first Russian Moon probe. He made good on his latter promise but not the nuclear plane part. There are unsubstantiated reports that one experimental Soviet A-plane blew apart.

This year our Central Intelligence Agency received information the Russians had a supersonic A-plane capable of staying in the air 3 months with rotating crews and adept at sneaking undetected through the Soviet Union's best radar defenses.

Almost unlimited endurance on a single charge of uranium fuel would be the big asset of any workable atomic-powered airplane.

Future rockets and satellites are certain to have nuclear power and A-plane proponents insist we should learn all we can about it by harnessing it to aircraft at the earliest possible moment.

President Kennedy obviously has been sold a different bill of goods by the technical experts who have his ear.

Lyndon Johnson Goes Shopping

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1961

Mr. YOUNGER. Mr. Speaker, a constituent of our district traveling in Hong Kong was in that city when Vice President LYNDON B. JOHNSON visited there and sent me a copy of the Hong Kong Standard, an English-printed newspaper, of Tuesday, May 16, 1961. The following is a page 1 box description of at least one of the Vice President's days in Hong Kong. Perhaps the Vice President is prompted by a false desire to increase employment in this country and stop the outflow of gold:

LYNDON JOHNSON GOES SHOPPING

What did U.S. Vice President Mr. LYNDON B. JOHNSON do after his arrival at Kai Tak Airport at about 3.15 p.m. yesterday?

At 3:30 p.m., the U.S. Vice President, accompanied by U.S. consulate officials and a motorcade of members of the security force, arrived at the recently opened Ambassador Hotel in Tsimshatsui.

At 3:50 p.m., Mr. JOHNSON, looking fresh and sporty in a spotless, white Hawaiian shirt emerged from the hotel accompanied by Mr. Sam P. Gilstrap, officer in charge, U.S. consul general here. A motorcade of policemen followed him and the party about 50 yards behind. When Mr. JOHNSON noticed that he was being followed, he stopped the car, alighted and waved at the policemen indicating to them not to follow.

At 4 p.m., the U.S. Vice President arrived at a tailorshop on Carnarvon Road, where he spent the next hour or so selecting materials and getting measurements taken for suits. Later, he proceeded to the Miramar Hotel Arcade and bought some shoes.

At 6:05 p.m., Mr. JOHNSON arrived at the Peninsula Hotel where he spent the next 3 hours at the Dynasty and "bought 24 of these shirts and 24 of those," according to a clerk of the shop. Hotel waiters were seen to go into the shop many times with trays of drinks.

At 9:02 p.m., the Vice President emerged from the Dynasty and returned to the Ambassador through a side door.

Dr. Jesse McNeil Moves on to Greater Community Service

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the RECORD an article which appeared in the Michigan Chronicle of Saturday, May 20, 1961, on Dr. Jesse Jai McNeil, a dedicated public servant, community leader, and churchman of our city of Detroit who is leaving our city for new responsibilities in another part of the country.

As one of his friends and admirers I join all of our people of Michigan in sadness at his departure.

The article is as follows:

DR. JESSE MCNEIL MOVES ON TO GREATER COMMUNITY SERVICE

The decision of Dr. Jesse Jai McNeil to resign his post at Tabernacle Baptist Church and assume full-time responsibilities with the Department of Christian Education of the National Baptist Convention takes from our community one of the men who has symbolized the competence and leadership with which our town has been blessed during the past 15 years or so.

A dedicated theologian and scholar, Dr. McNeil threw himself into the broad arena of civic and community activities from the beginning of his ministry here. Through the Detroit Round Table, the Minister's Alliance, and the Council of Churches, the broad educational background and experience of Dr. McNeil gained early recognition. The weight of his influence and his clear view of social direction soon emerged in the policies and procedures of these organizations.

At the same time, Dr. McNeil gave recognition to the need for community organization as a means of promoting social progress. He threw himself, therefore, into the task of building the community house at Tabernacle and developing a program of activity for the institution including the now well-known Forum Series.

Through this medium there was developed on Detroit's Westside and throughout the city a greater awareness of the problems facing the people of the community.

Simultaneously with the development of these programs, Dr. McNeil found time to participate in the political life of the community in which he lived, thus demonstrating by his example that a good citizen is a well-rounded one who does not hesitate to use his talent and time in every phase of community life.

In a short time his contributions to politics were recognized and he received an appointment to the Corrections Commission of the State of Michigan.

This appointment had significance beyond the realm of mere politics. It placed a Negro for the first time on a very sensitive and important commission. It also gave an opportunity for a man with deep Chritsian understanding and training in psychology and sociology to work with the problem of rehabilitating those who have made mistakes in our society.

An extensive world traveler and author, Dr. McNeil never stopped the process of his own education and development. By so doing he was able to bring to those with whom he came into contact an ever changing and fresh approach to the myriads of problems with which we are all concerned.

And now after several years of thought and searching, he has come to the conclusion that a great challenge for service lies in the National Baptist educational program and through the medium of writing. There can be no question that he has chosen an area for greater service.

Detroit is naturally sorry to see one of its great community leaders move on to new fields. But we are proud that the record made by Dr. McNeil in Detroit has brought him to the attention of leaders on the national and international scene. We know he will do well in his new efforts. We wish for him every success.

The Deal for Cuban Prisoners

EXTENSION OF REMARKS

OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1961

Mr. BRAY. Mr. Speaker, we have all been fascinated by the latest affront to this Nation by the Cuban dictator, Fidel Castro, in which he asks us to ransom Cuban rebels by giving him 500 bulldozers. There seems to be no end to the gall of this Communist leader.

In this regard the front page editorial of the Indianapolis News, May 22, 1961, edition, is of interest and I herewith submit it for insertion in the Appendix of the RECORD:

WHAT GOES ON HERE?

As of this writing, self-appointed private citizens' groups—the most notable headed by Eleanor Roosevelt, Walter Reuther, and Milton Eisenhower—are raising money for the release of some 1,200 Cuban rebels, captured during the recent unsuccessful attempt to rescue their homeland from Communist rule. The money, $20 million, will be used to purchase tractors or bulldozers for Fidel Castro's Red regime.

One newspaper, supporting the idea of a trade with Castro, declared in a front-page editorial that it believes "a human life is worth more than a machine," and so do we. But, if, for the purpose of preserving human lives, we submit to Castro's brazen blackmail attempt, we will be opening the door to every future tyrant and bully boy, large or small, who decides to make a laughing stock out of the United States. Also, there is the little matter of the law, conveniently overlooked by the State Department, prohibiting private citizens from negotiating with foreign governments. The activities of these self-appointed committees, unofficially supported by our Government, are unprecedented in our own history or in the history of international diplomacy.

Castro is not offering this deal because he especially needs 500 tractors, although he certainly could put them to good use in helping to solve his dire farm problem. He offered the deal precisely because he and his Communist bosses want to see exactly how far they can push the United States before it stops acting like a sniveling coward and once again flexes its national muscles. Why else did Havana radio gloatingly announce that Castro would deal only with the United States—and remember, the 1,200 prisoners are Cubans, not United States citizens—and not with a neutral country.

What happened to the national pride we displayed in 1797, when after the unsavory French Foreign Minister Talleyrand demanded a bribe as the price of negotiating with the United States, our envoy Charles C. Pinckney replied with his memorable, "Millions for defense, but not one cent for tribute." What happened to the courage displayed by our Nation in 1853, when, after Austria kidnaped a former citizen who had since taken out his first U.S. citizenship papers, an American war sloop pulled into the harbor of Smyrna (where the prisoner was being held) and its commander ordered the Austrian commander to return the man or face immediate consequences? (Naturally, the man was returned.)

How different today. It's bad enough we supplied the push to the rebel invasion of Cuba, and then lacked the courage to see it through to victory. It's bad enough that we allow Castro to insult our Nation, and publicly declare his island a part of the Soviet bloc. But to pay blackmail to his Communist government, just days after both our President and our House of Representatives agree that it constitutes a clear and present danger to our sovereignty, is nothing short of fantastic.

Patrick Henry once asked his fellow men, "Is life so dear or peace so sweet as to be purchased at the price of chains and slavery?" Today, 186 years later, during which time we have grown from an infant nation of unlimited courage to a mighty nation which appears suddenly to have lost her national conscience, we might ask whether life is so dear or peace so sweet as to be purchased at the price of blatant blackmail? We think not.

Shades of George Washington, shades of Patrick Henry, shades of Thomas Jefferson, shades of Capt John Paul Jones, shades of Admiral Farragut, shades of Abraham Lincoln, shades of Teddy Roosevelt, shades of Iwo Jima and Anzio.

What in heaven's name goes on here in the home of the free and the land of the brave?

Food Stamp Whisky

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1961

Mr. DORN. Mr. Speaker, the following is an example of what can happen when the Federal Government gives the people something for nothing. This philosophy destroyed the Roman Empire and if continued will destroy the United States:

U.S. SURPLUS CORN USED TO MAKE LIQUOR

GASTONIA, N.C.—A 500-gallon moonshine still raided by Federal agents and police near here Saturday was being fed by a mash made from cornmeal distributed under the Federal surplus foods program.

The ground around the still in a wooded section of the Union Church community was littered with empty paper bags bearing this label:

"U.S. Department of Agriculture. Surplus commodities program—5 pounds yellow cornmeal."

The defendants, Noah T. Thomas, 60, of Gastonia and Dorus W. Sisk, 50, of Route 1, Clover, S.C., were ordered bound over to the October term of U.S. district court in Charlotte by U.S. Commissioner B. W. Craig.

Midwest Research Has Only Begun To Grow

EXTENSION OF REMARKS

OF

HON. ROBERT F. ELLSWORTH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. ELLSWORTH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following news article and editorial from the Kansas City Star.

Scientific research is one of America's main businesses—and it is just beginning to grow. The University of Kansas at Lawrence, the Linda Hall Library in Kansas City, the University of Kansas Medical School in Kansas City, and Midwest Research Institute—these are just a few of the outstanding organizations, situated in my area, that make midcontinent America a vital center for development of the thrust into the future. With this in mind, I invite my colleagues attention to the news report of a speech by Dr. Charles N. Kimball, president of Midwest Research Institute, and the editorial comment about Midwest Research Institute.

[From the Kansas City Star, May 1, 1961]

POINTS TO NEW ERA IN SCIENCE GROWTH—PRESIDENT OF MIDWEST RESEARCH INSTITUTE IN REPORT TO TRUSTEES—IN SECOND GENERATION—ROLE OF KNOWLEDGE SEEKERS CHANGING RAPIDLY, DR. KIMBALL SAYS

Scientific research is one of America's main businesses—and the curve for its requirements, in brains and dollars, is going upward steadily.

That outlook was painted by Dr. Charles N. Kimball, president of the Midwest Research Institute, in giving the president's 16th annual report to the institute's trustees today at the Hotel Muehlebach.

IN GREAT EXPANSION

Dr. Kimball pointed out that research in the United States expanded from $800 million in 1940 to $13 billion last year and will probably hit $14 billion this year—making research as large as the automobile business.

Developments now occurring in research, he predicted, will have a profound effect on the future of the Nation.

"Large scale research is entering its second generation in this country," Dr. Kimball said. "Some revolutionary changes are occurring that are altering the traditional role of scientists and science."

The speaker listed six major changes. Foremost, he said, is the tremendous accumulation of scientific knowledge.

"Each day throughout the world," he said, "scientific papers are now written in such number as to fill seven complete sets of the Encyclopedia Brittanica. One day's output."

Scientists face a mountainous problem of making the most practical use of all such knowledge, he said. New projects to study scientific literature, now being carried on jointly by Midwest and the Linda Hall Library, may provide helpful answers.

A second great scientific change, Dr. Kimball said, relates to the growing need for "interdisciplinary skills"—that many complex modern research problems cannot be solved by a chemist, or an engineer working alone. The interchange of skills among all scientific fields becomes more important.

A third major factor relates to the rising cost of research. The expensive equipment and increasing salaries of topnotch professional workers affects not only Midwest Research, but all similar labs across the Nation. More efficient use of scientific equipment and manpower is an aim of research executives and administrators.

NEED NEW CONCEPTS

Other important changes in research, Dr. Kimball said, relate to needs for more accurate measurement systems, and improved ways of evaluating results of research. Of particularly basic importance, he said, was a final major challenge—the need for new ideas and new concepts affecting the entire research field.

Dr. Kimball stressed the tremendous future that still lies ahead in science.

"Recognized research experts claim that national expenditures for research and development will exceed $20 billion by 1970. I don't know where the limit lies," he said. "It may exist only in the lack of availability of capital with which manufacturing plants can be erected to manufacture the products of research."

Dr. Kimball pointed out also that Midwest Research had a highly productive year in 1960, with a total research volume of $3,248,000, and currently is working for about 100 sponsors.

He revealed also that W. N. Deramus recently had made an additional gift of 10 acres to the Deramus Feld Station near Grandview.

[From the Kansas City Star, May 2, 1961]

AT 16, MIDWEST RESEARCH HAS ONLY BEGUN TO GROW

In the 16 years since it began operations in a rented room of a bakery, the development of Midwest Research Institute has been impressive. It made possible the splendid reports at yesterday's annual meeting. The more than $3¼ million in research volume last year alone exceeded the total for the institute's first 7 years. The institute is expanding in new fields and with new facilities. The addition of 10 acres to the area of the already busy Deramus field station is an example. Altogether, the institute added roughly $200,000 in new equipment last year.

There is no doubt that the Kansas City institute has established an excellent national reputation. Scientists, educators and industrialists look to Midwest for results on tough technical problems.

Obviously, the institute is a tremendous local asset, as well. It puts Kansas City on the scientific map of the Nation.

In his annual report, Dr. Charles N. Kimball, president, told the story of a great variety of scientific projects that indicate the range of scientific talent at Midwest. The diversity includes several projects in space travel. There are "farm belt" surveys, such as an inquiry into calf ailments, and a study of agricultural surpluses. Economic studies seek information on prospects for

industrial development here. More on the humanitarian side is the institute's extensive cancer program. This is a laborious effort that may eventually yield important results for the human race.

Dr. Kimball, now in his 11th year as Midwest president, must receive much of the credit for the institute's swift development. A sincere and energetic group of trustees—from all over the Nation—also deserves praise. But, basically, the day-to-day contributions of the staff of 300 technical people must rank at the front. These chemists, physicists, engineers and mathematicians produce the results that have meant success.

Research in the United States is changing rapidly. The decades ahead will present new problems to the staff at the institute and elsewhere. Research costs are rising swiftly. More expensive equipment must be bought. Skilled people demand higher salaries. In certain fields, shortages of some qualified people create difficulties. But industry and Government recognize the importance of research. Kimball predicts that national expenditures for research will exceed $20 billion within 9 years.

Kansas City, largely through Midwest Research, is sure to have an important role in these developments. This is a community facility that has admirably fulfilled the vision of its founders. It serves the Nation's heartland—and the Nation.

Civil War Centennial Conceived in an Absent-Minded Moment: 1954 Court Decision Celebration More Appropriate

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following letter which appeared in the New York Herald Tribune of May 21, 1961. Justice Hofstadter, one of America's most distinguished jurists, makes a point which we should all think about with reference to the centennial of the Civil War:

FORGET THE CIVIL WAR, HAIL THE COURT DECISION

To the NEW YORK HERALD TRIBUNE:

It would seem sensible quietly to abandon the celebration of the centennial of the Civil War, which was conceived in an absent-minded moment, and to memorialize, instead, the 17th day of May, which would fittingly exemplify its spirit. On that day in 1954, a unanimous Supreme Court rendered the fateful decision in *Brown* v. *Board of Education* effecting school desegregation.

The complex of civil liberties decisions beginning with the Brown case at long last have honored, in truly implementing, the promise of the 14th Amendment. That enactment had formalized and broadened the Proclamation—and the proposition that all men were born free and equal. The 14th Amendment articulated a grand promise which apparently the Nation was unprepared to fulfill at once. Even three decades later the Nation would not fulfill its covenant of equality, a covenant which really went back to the Declaration of Independence.

Faced with the problem of equal protection as to public passenger transportation, the court enunciated the compromise doctrine of "separate but equal" in *Plessy* v. *Ferguson*, in 1896, notwithstanding the sublime fact as the first Justice Harlan put in dissent: "The Constitution is colorblind." The Court was uneasy with its principle of compromise. Thus, it retraced its steps from time to time, in a series of cases which eroded the Plessy formulation.

In *Buchanan* v. *Warley*, it voided a city ordinance requiring Negroes to live in one part of town and whites in another. And in *McCabe* v. *Atchison, T. & S. F. Railway*, a law permitting a carrier to provide sleeping and dining cars only for whites was invalidated. *State of Missouri ex rel. Gaines* v. *Canada* held that a State which established a law school within its borders for whites must do likewise for Negroes.

Sweatt v. *Painter* held that legal education in a separate law school was not equal, and *McLaurin* v. *Oklahoma State Regents* held that enforced segregation of a Negro student admitted to the graduate school was invalid, as it handicapped him in the pursuit of graduate studies. Finally, in inevitable sequence, *Brown* v. *Board of Education* in a historic opinion by Chief Justice Warren held in 1954 that segregation of public schoolchildren solely on the basis of race, even though physical facilities and other tangible factors may be equal, deprives the children of minority groups of equal opportunities, and is therefore unconstitutional.

The court quoted from Gunnar Myrdal's great sociological treatise on the Negro, "The American Dilemma," as well as from certain works in the field of psychology. Treatises do not make the law but analyze conditions out of which law grows. The law has been frequently influenced by nonlegal sources: socioeconomics, science and literature. Such examples come to mind as the influence of Dickens on England's child labor laws and of Charles Reade on laws relating to mental institutions and penology. Forty years ago Cardozo had already noted that the "force which is becoming the greatest of them all is social justice which finds its outlet in the methods of sociology."

Though the segregation cases may have strained State-Federal relations for the time being, in an ultimate view they make for increased national well-being and strength—in harmony at home and influence abroad. They may have a significant impact on our country's leadership of a free world which includes Asia and Africa. They will continue to have political and social implications of the greatest import for us and the world at large.

Some historians and legal scholars recognize that the Brown decision was a heroic step forward and a necessary one, and that consummate leadership went into securing the necessary unanimous ruling. But they suggest that it could have been a much more cogently written and thought-out opinion, and it would have been a more lawyer-like one. The writer dissents from this view. It is not inartistic to paint with a broad brush when the subject matter is sufficiently broad to require it. The Brown case was the grand climax of the complex of cases which turned away from Plessy. A compelling pronouncement of judicial statesmanship was greatly to be preferred to a professional dissertation, however well documented.

Plessy was the polity formulation of compromise—and expedient of its time. Brown is also polity formulation in the perspective of the changing climate of opinion—a triumph of the American ideal of freedom and equality under law.

SAMUEL H. HOFSTADER,
Justice, Supreme Court of the State of New York.

Returning Fiscal Control to Congress

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1961

Mr. PELLY. Mr. Speaker, on May 22, 1961, the Christian Science Monitor carried a thought-provoking editorial which pointed up certain facts and gave its conclusions on the subject of backdoor spending.

One aspect of the practical legislative procedure regarding this debated method of financing programs was not mentioned by this worthy newspaper; namely, that if the Rules of the House of Representatives gave one committee exclusive jurisdiction over spending bills, the emergency or special case could always be allowed by the Rules Committee. All it would have to do is report a rule on a bill which waived all points of order. Otherwise, all regular appropriation legislation would have to come from one committee which would evaluate the need of programs as against the available revenue.

However, until mere editorials like this stimulate public opinion, I suppose the Congress will continue to forego its constitutional responsibility to scrutinize all Federal expenditures.

Under leave to do so, I include the editorial in question:

BACKDOOR SPENDING; FRONT-DOOR AID

The fight made by financial conservatives in Congress against one feature of the area redevelopment bill appears due to be repeated on a possibly intensified scale against President Kennedy's expected plans for aid to underdeveloped countries.

The feature most in issue is a mode of financing which bypasses the congressional appropriations committees and authorizes governmental units to borrow from the Treasury for their expenditures. This in turn forces the Treasury to borrow and the debt may or may not be paid off. Critics call it back-door spending.

The record of such operations is partly good, partly bad. It began with the Reconstruction Finance Corporation during the depression 1930's. After that came the Commodity Credit Corporation, Export-Import Bank, Home Owners Loan Corporation, and many other agencies. Of such lendings, totaling some $108 billion, about half have been repaid, nearly one-fourth have had to be canceled or made up by appropriations, and more than a fourth are still owed.

The area redevelopment bill added $300 million to the lending authorization. This was stubbornly resisted in the House of Representatives, but the House authorized more than 10 times that much for veterans' housing loans and farm surplus disposal without serious objection.

As to the foreign aid program, the administration, it is understood, will ask authority to borrow $7.3 billion from the Treasury over a period of 5 years. This in turn will be loaned for long terms and at low interest rates to countries presenting acceptable development programs.

If the recent "soft-term" credit to Honduras, the first announced by the new International Development Association, is a criterion, even full repayment after 50 years

will not cover the entire cost to the United States. The only "interest" charged is a three-fourths of 1 percent service charge, whereas the Treasury has to pay around 4 percent to borrow long-term money.

Thus there is an expense to the United States in supplying capital to emerging nations even on a supposed repayment basis. Just how much altruism or political consideration can be afforded in this role of world banker is something the United States and other advanced non-Communist nations must weigh.

Treasury Secretary Douglas Dillon recently estimated that the "basic" or hard-core deficit in America's international balance of payments is about $1.5 billion a year. This, if not more, must eventually be covered by increased export sales or a reduction of overseas outgo. Yet he rejected the proposition that aid programs should be curtailed, pointing out that "most of our foreign economic assistance is in the form of U.S. goods and services" which would otherwise back up on the domestic market.

Part of the controversy over "back-door spending" is related to the debate over whether the United States should have a "capital budget" as well as a current income and expenditures account. It does not seem likely that long-term lending programs will be brought under the congressional appropriations process, but it does seem that the Government should have somewhere what is at the heart of any well-ordered bank—a capable and responsible investment committee.

Detroit: America's Good Right Hand

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. BROOMFIELD. Mr. Speaker, although we in Oakland County, Mich., sometimes refer to Detroit as our "suburb to the south," we are more than a little proud of the energy, the ambition, the skills, and the human compassion of this great city.

Most of us picture Detroit as the auto center of the world, which it is. About 23 percent of the Nation's automobiles are assembled in the Detroit area and our State of Michigan builds over 2 million cars a year.

But there is more to Detroit than simply automobiles. There are broad superhighways, beautiful homes and an opportunity for recreation and just plain good living unequalled in any other spot on earth.

Recently, the Detroit News in cooperation with the mayor's committee for economic growth prepared a supplement about our mother city which I would recommend to anyone who is interested in a lesson in dynamic democracy and individual effort.

The first article in this excellent brochure is an editorial by Martin S. Hayden, editor of the Detroit News, entitled "America's Good Right Hand" which I am inserting in the RECORD at this point for your enlightenment:

AMERICA'S GOOD RIGHT HAND

To varied peoples Detroit means many things: Historians note it as a city predestined when a wise Frenchman named Cadillac convinced a cabinet minister named Pontchartrain that a junction point of land and water routes on the strait between Huron and Erie would become the fortress and trade key to an opening continent.

Statistics record it in 1960 as a mass of 3,762,000 people, the vast majority homeowners, in a metropolitan area grown by 25 percent in the last decade.

To economists it is a region with 6,438 plants manufacturing everything from gelatin capsules and milk carton machinery to electronic computers, space missiles and—of course—automobiles an item which (while employing only 15 percent of the work force) has made the town famous for having put the world on wheels.

Market researchers not that its population had a 1959 personal income of $9.18 billion and an average family income of $7,980 (with half the families earning more than $7,250 a year.

Conceding it a first in available skilled labor, plant site experts count other Detroit assets:

While many industrial cities fight neighbors for water to prevent summer drought, Detroit taps only 3 percent of the water supply nature gave it.

Detroit is the only North American city connected to all three great sources of natural gas (Texas-Oklahoma, Louisiana, and Alberta).

Detroit is one of the handful of cities whose electric utility is building an atomic reactor to investigate the cheap power hope of the future.

Publicists may observe that, with the possible exception of Texas, from the time of Henry Ford's $5 a day Detroit has been the country's most successful stealer of headlines. It wasn't really the "Arsenal of Democracy"; it just turned out more war-winning tools than any other city in the world. It probably isn't the Nation's best sports town, though it does have more pleasure boats than any other and (from Ty Cobb to Joe Louis and Gordie Howe) has had its share of champions. While it is true that 55 percent of its manufacturing employes and 10 percent of those in nonmanufacturing employment belong to unions, it truly doesn't rate the attention it gets when a strike that spreads from Newark, Del., to Los Angeles is reported from the negotiation table in Detroit. Actually, in 1959, all strikes cost Detroit a loss of 55/100th of 1 percent of work time.

Finally, to Detroiters themselves, Detroit is something special: a place where roots go deep; a big city with such smalltown characteristics as rigidly honest, nonpartisan city government that is often a little dull but knows no bosses; a city which along with its industrial smokestacks has one of America's finest art institutes and one of its greatest (and its most stably financed) symphony orchestras. They take pride in it as a place where labor and business leaders have created together the most successful American example of united giving to charity, and as the town which has attracted national attention for its fight against the countrywide problem of central area decay.

This is the city which the editors of the Detroit News present here as "the real Detroit."

Who Killed Atomic-Powered Plane?

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1961

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article which I wrote for the May issue of the national magazine, Aircraft and Missiles:

WHO KILLED ANP?—PSEUDOSCIENTIFIC ADVICE GIVEN TO PRESIDENT ON NUCLEAR AIRCRAFT; DEPARTMENT OF DEFENSE ESTABLISHED DESIGN CRITERIA THEN SHOT HOLES IN PROJECT; CONTINUOUS AIRBORNE ALERT NATURAL APPLICATION FOR ANP

(By Congressman MELVIN PRICE, Democrat of Illinois)

It is extremely unfortunate that the Aircraft Nuclear Propulsion (ANP) project has been canceled. Nuclear propelled aircraft are important to the Nation's future; I therefore believe we will someday develop such aircraft despite this latest executive decision. The decision just injects an indefinite delay that will cost us a great deal in money, and prestige.

DECISION INPUTS

I admire the President for his ability to make forthright decisions, although I question his decision relative to the nuclear aircraft programs. The previous administration, while pretending to support the ANP program, held back any real progress by their indecision. The Kennedy decision was in error because of incorrect advice provided by his scientific and defense advisers. The same people who have been assembling the information for decisions on ANP provided the input again. Based on my long acquaintance with their behind-the-scenes operations, it's no great surprise to me that again we have an adverse decision. This situation was brought forcefully to the forefront during the Joint Committee's executive hearings on the ANP program early in March. At our hearings we asked the Defense Department and the Atomic Energy Commission to tell us about the technical data and other considerations which supported new criteria which was formulated for the ANP project. We also asked whether, in the development of the latest criteria, the officials in the Joint AEC–Air Force Office responsible for the technical direction of the project, and the contractors responsible for developing the nuclear designs had been consulted.

Unfortunately, we couldn't get adequate answers to our questions. We did find out, though, that certain criteria recently set down by the Defense Department was in direct conflict with the testimony of experts responsible for the technical program. We also found out that the Defense Department did not even consult the experts responsible for the direction of the program and for the development of the designs. It was quite apparent from the hearing that the members of the new administration in the Defense Department relied solely on the advice and recommendations of the same people in the Defense Department who have been against the project for years.

PSEUDO-SCIENTIFIC ADVISERS

What little testimony we could get from these people again confirmed the fact that they were not familiar with the technical developments in the program and had not even attempted to obtain first-hand information concerning the facts of our aircraft nuclear propulsion program. It was most discouraging to again come up against Government career personnel whose actions for years have been—and are—the shuffling and assembly of the same papers and representing the information they contain as the latest facts for the use of those responsible for the decisions. So this time, too, although the decisionmakers were different, they had the same old input of "facts" upon which to reach a decision.

The situation which resulted in the scuttling of the ANP program must be guarded against in the future. Serious errors could also be made in our other vital atomic energy programs unless we learn from what happened in the ANP program. We must take the time to get up-to-date facts. We must look behind the fancy position papers we

are presented with and do whatever is necessary to get at the pertinent facts to guide our decisions.

STATUS OF ANP

I think one of the most unfortunate aspects of last month's decision to stop the ANP project is related to the status of the work at the time. A great deal of important progress was made in the last year. Major experiments were conducted to add a great deal of confidence to the designs. In fact, manufacture of a full-power nuclear aircraft propulsion plant unit for ground testing was ready to start. Many thousands of hours of tests were conducted under reactor operating conditions to prove out the materials and designs. Tests were conducted to the point of breakdown of the materials to obtain complete assurance on the adequacy of design margins. All of the information obtained confirmed the adequacy of the designs and in fact showed that significant growth margins were already in hand in the design. The status of the development, particularly for the direct cycle system which had a considerably greater amount of effort on it, clearly indicated that the next step should be a full-size integrated propulsion plant test. Going back to the laboratory bench, as called for by the new high temperature materials program being started to fill in for ANP, just doesn't contribute anything of significance toward getting on with nuclear flight.

GROWTH POTENTIAL CLICHE

As you know, the ANP program was given a set of design objectives known as the "York criteria" for guidance in developing the first engines. This Defense Department criteria specified a subsonic aircraft since a possible mission was foreseen for such an aircraft and technical data clearly indicated the feasibility of meeting the criteria with the first generation of engines developed. In accordance with this "York criteria," work was going ahead to meet requirements. At the same time, though, within the Defense Department, a talking campaign was being conducted to give the impression that what was really wanted, and what was absolutely necessary to obtain a military useful aircraft, is multimach flight characteristics.

Fortunately, the nuclear aircraft developers had the foresight to look into the multimach growth potential of the individual cycles although their instructions were clear that the goal was, at the time, subsonic operation. The technical data that was developed, which the Joint Committee closely reviewed during the March hearing, indicated multimach potential was clearly present in the concepts under development. Unfortunately the picture on growth potential was not clearly presented, or it may not have been presented at all, to the new administration.

INCONSISTENCIES APPARENT

Consistent with my belief that the facts were not made available to the decision makers are the apparent inconsistencies that now exist between the decision to drop the nuclear aircraft and the characteristics specified for our defense weapons. Take, for example, the Skybolt missile system recently earmarked for additional effort. It is planned to use conventional aircraft with their very limited range to provide a mobile launching platform for the intermediate range Skybolt missiles. A nuclear aircraft with, for practical purposes, unlimited range and endurance characteristics would increase the effectiveness of the Skybolt missile system tremendously.

The recently announced plan to keep one-eighth of our heavy bomber force on airborne alert points up another inconsistency relative to the decision to stop the nuclear aircraft. The unlimited endurance of nuclear energy sources gives a nuclear propelled aircraft enormous advantages in meeting such alert objectives. For the same airborne alert force a nuclear aircraft provides the potential for greatly reduced aircraft, personnel, and support facility requirements.

Obviously the unlimited range which comes from nuclear aircraft endurance characteristics will open up completely new mission capabilities which cannot at present be foreseen. An idea of the military effectiveness which of such a revolutionary system can be obtained from our experience with nuclear submarines. Wouldn't it have been unfortunate if the unimaginative arguments advanced relative to the nuclear submarine turned out to be the controlling ones in that decision as they were in the nuclear aircraft decision?

I have pointed out many times that we could have had nuclear aircraft in flight today if it had not been for the "on again, off again" system of mismanagement by the Defense Department and its scientific advisers.

I can see the same approach creeping into the management of other defense projects and the Rover nuclear rocket program.

Watershed Management of the National Forests

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the CONGRESSIONAL RECORD a speech given by Mr. Richard E. McArdle, Chief of the Forest Service, entitled "Watershed Management on the National Forests." This speech contains pronouncements of policy which I deem to be important for the future use and improvement of the national forests:

WATERSHED MANAGEMENT ON THE NATIONAL FORESTS

(By Richard E. McArdle, Chief, Forest Service U.S. Department of Agriculture, at Eighth National Watershed Congress, Tucson, Ariz., Apr. 19, 1961)

It is appropriate that this meeting consider management of national forest watersheds. Although the national forests in these Western States comprise only one-fifth of the total area, they yield more than half of the streamflow. Several thousand communities, including some of the largest cities of the West, are largely or entirely dependent on national forest water. Two-thirds of the irrigation water of the West comes from national forest lands. Our management of these publicly owned lands therefore has a significant bearing on the general theme of the discussions this morning, "Water for a Thirsty Land."

Someday I am going to add up the number of speeches that I have made about water. I've been talking on this subject for more than 25 years. Well do I remember my first speech on water and the chilly reception I got from a large group of water engineers. But if I were to make the same speech to the same group today, I'm sure the reaction would be quite different. Attitudes have changed.

The reasons are obvious. Our population has increased 45 percent since I made that first speech. Not only do we have more people to use water; we use water in new ways, for purposes undreamed of only a few years ago. Our cities are reaching out further and further, sometimes for hundreds of miles, to obtain water for present needs. In many places future urban and industrial expansion depends in large measure on finding adequate supplies of usable water. The use of water for irrigation has doubled in the past 20 years and for domestic and industrial purposes has tripled during the same period. No longer is there question about our growing need for water and the necessity to do something about getting it.

In years past most of my comment was aimed at alerting the general public to rapidly increasing water needs. Today such warnings are less necessary. I think, in general, the public is now surprisingly well informed on our need for water and is aware of the fact that in many places there are difficult problems to solve in order to meet these needs.

The emphasis today should be on achieving agreement on a clearcut, practical, national water policy—and on putting the policy into effect. I believe that public opinion will support such action. Future meetings of this Watershed Congress might well be pointed in that direction.

Another encouraging development is the growing interest—and it's intelligent interest—in the management of public lands for watershed purposes. The Forest Service welcomes this kind of interest, and we welcome the criticism of our actions which frequently accompanies that interest.

Our own interest in watershed management is as old as the Forest Service. To secure favorable conditions of water flows was one of the major purposes for which Congress originally specified that national forests are established. Congress has reaffirmed this objective, most recently last year. The act of June 12, 1960, however, goes much further than merely to authorize use of the national forests for watershed purposes. It directs—orders—that the national forests shall be managed for multiple use—for water and four other major uses. The act goes still further and directs that management for these five uses shall be on a sustained-yield basis. Legislative authority for watershed management on the national forests is specific and unmistakable.

In the earlier years of national forest administration our emphasis was on watershed protection. The primary objective of protection is maintenance of water quality. The fundamental principle involved is maintenance of a vegetative cover of trees, grass, and brush to hold the soil and to facilitate storage of water within the soil. In the minds of many people watershed protection and watershed management mean one and the same.

Over the years, however, watershed management has come to have a meaning to the Forest Service considerably broader than just protection. Protection with the objective of maintaining water quality is still an integral part of our watershed management policy. But it is now evident that protection alone is not enough. We need to be concerned also with amount and timing of water yield, with quantity as well as quality. Maximum protection of watersheds does not necessarily produce maximum yields of water.

In many places, for example, maximum watershed protection would require maintenance of perhaps the densest possible cover of deep-rooted vegetation. Yet maximum yield of water might be achieved only by removal of the vegetative cover. But this usually would result in rapid runoff with local flooding, little or no deep infiltration to underground storage, and in muddy, unusable water. Neither of these extremes is watershed management, al-

though I have heard each extreme called management.

Watershed management as the Forest Service thinks of it today involves maintenance of an adequate vegetative cover for protection of water quality but altering this cover in such a way as to increase the quantity of water yield. It will not be the same everywhere—depending on the kind of vegetation, soils, topography, and climate. It will vary also with the relative importance of water as against other uses of forest land in a particular area. Finding the best ways to achieve these results is one of the major objectives of Forest Service watershed management research.

The Forest Service began watershed management research in 1910 at Wagon Wheel Gap in the Colorado Rockies. We were trying to determine the effect of forest cover on water yield. In 1912 studies on range watersheds were begun at the Great Basin in Utah. Since the late twenties the Forest Service has taken the lead in watershed management research on forested lands and on wildlands generally.

Some of our watershed research centers doubtless are well known to you. There is San Dimas in southern California, Fraser in Colorado, Great Basin in Utah, Coweeta in North Carolina. The Davis County experimental watersheds in Utah are known worldwide. All told, we now operate field stations at 36 locations where watershed management research is a primary objective.

The scope and character of our watershed management research have enlarged, too. In the early days we gave most attention to measuring the effect of changes in the vegetative cover on water yield, on quality, on periodicity of flow, and on soil erosion. We could measure results, but we didn't know why these results were obtained. Today and increasingly in the future our research will deal with more fundamental laboratory-type studies of the functions of different soils, of climate, of hydraulics, and of different kinds and amounts of vegetation. With basic knowledge of this kind we expect to be able to take the controlling watershed factors in various combinations and judge how a particular watershed will respond to a particular kind of management. Since research is so essential to all aspects of good land management, we are expanding and accelerating research in all subjects including research in watershed management.

If the national forests were managed exclusively for maximum yields of usable water, the task of the Forest Service, though difficult, would be much easier and simpler than actually it is. These public lands must serve many resource needs. They are owned by all the people, not by any one user group. Water is only one part, though an extremely valuable part, of the total resource complex of the national forests. These lands must be managed for a combination of uses.

Use of all national forest resources is increasing rapidly. One reason for this is that until recently these public forest lands were inaccessible. Not many people knew about them, roads were few and far between and people didn't travel around as much as they do today. Another reason is that in some places certain resources outside the national forests have become less plentiful and national forest resources are needed to bridge the gap.

But by far the biggest reason why use of all national forest resources is increasing is simply this: more people. We are beginning to experience what older countries have experienced long before us—the increasing pressures of a growing population on the land, on natural resources that do not increase automatically as population increases but remain constant, increase, or decrease, according to our husbandry.

These resource pressures, will not decrease in the future. They will increase. Large as the national forests are—and 186 million acres is a lot of land—they are not large enough so that every user group, each with some special interest, can have all the land it wants, the particular land it wants, to serve just that one use.

The Forest Service wants these lands to be used. We want them to furnish the greatest possible benefits in products and services to the largest number of people over the long run. The only practical way to do this is not to make an equal division among all uses but over a period of time to achieve the best combination of uses on a particular area. If you want a one-sentence explanation of multiple use, that's as brief a one as I know how to give.

Fortunately, multiple use works very well and from the standpoint of maximum possible use frequently works better than single-purpose use. For example, many national forest areas are accessible to recreationists only because they can travel on roads built primarily to haul timber. The harvesting of mature timber and thinning of immature timber to stimulate tree growth can be done in a way that in some forest types will increase water yields. Reservoirs to impound water are irresistible attractions for recreationists. Good management of forest lands for both water production and timber production is usually the best management for the desires of fishermen. Good timber management and good hunting of certain kinds go together. Improved accessibility means better protection of vegetative cover from damage by fire and therefore safeguards timber, wildlife, forage, recreation, and water.

This interlocking character of good resource management is often of great benefit to watershed objectives. We know, for example, that deep-rooted plants create greater soil-moisture deficits than plants with shallow root systems. We know that these deficits must be replenished before water will percolate through the soil to recharge groundwater and maintain streamflow. On deep soils conversion from deep-rooted to shallow-rooted vegetation will result in more water available for streamflow if conditions for infiltration are satisfactory and precipitation is sufficient to wet down through the root zone. Removal of chaparral and replacement by grass benefits grazing; it also improves conditions favorable to greater water yield. Removal of low-value, water-loving trees along streams and replacement by species using less water benefits both timber production and water yield. Thinning dense coniferous stands on north slopes in areas of heavy snowfall will allow more snow to reach the ground and thereby increase water available to streamflow and at the same time increase timber yield and shorten rotation age.

In attempting to achieve such results as these it is essential that management plans for each use be coordinated with plans for use of other resources on the same area. The four basic principles to be kept in mind when coordinating other uses with water use are: Maintenance of an effective plant cover, maintenance of soil stability, maintenance of maximum infiltration rates, and effective control of surface runoff. In addition, measures to prevent water pollution may need to be taken.
